

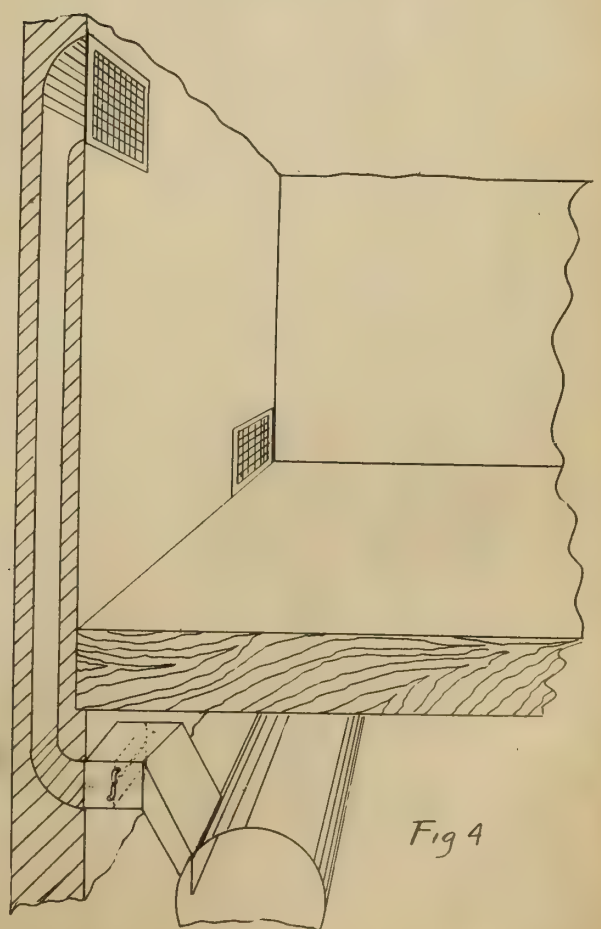

Fig 4

tion in the size of the main ducts after they pass each opening, but it does not follow that in all classes of work that so many reductions in size would be made, because the friction between the moving air and the sides of the duct must be taken into consideration, as well as the amount of air to be supplied, in figuring out sizes, and, as in water and steam piping, the larger the pipes the greater the friction and consequently the larger must be the diameter. For instance, if the distance between "A" and "B" were two or three times as long as it is shown, and the spaces between the other outlets were the same as shown, the pipe between the points mentioned would perhaps be carried through the same size as it is between "B" and "C," the reduction, if any, at "A" depending entirely on its length and diameter between the latter point and "B," and in this connection most complete and easily understood tables dealing with almost every possible condition are procurable by anyone interested in the small, though important details of the system.

The "heater" located behind the fan is usually composed of closely stacked one-inch pipe coils through which steam or hot water circulates, and the action of the fan is to suck the air in through the opening in the wall as indicated by the arrows, and through the heater and drive it through the ducts to the various points of the building to be ventilated.

In order to remove dust and smoke from the air so forced into the building, it is customary to pass it through a filter made of cheese cloth, but, as will be plain, if the cheese cloth were simply stretched straight across the face of the heater, the volume of air would be very largely retarded and in order to overcome this difficulty the filter is constructed in zig-zag form, as shown so that the surface of the cheese cloth is at least eight to ten times as great as the area of the heater, and the more cheese cloth—within reasonable limits—the lower will be the velocity of the air passing through it, with a consequent increase in the amount of impurities removed.

In some plants a water curtain is used to wash the air as it passes into the building, and such a device has the advantage of producing a degree of humidity which so often is lacking in heating and ventilating plants, and in others, where the dry filters are used, steam jets are turned in to the air, preferably at right angles to the travel of the same, for the purpose of providing the humidity necessary.

In Fig. 2 is shown the proper way to take off branches from the main air duct and it will be noted that the branch turns out gracefully and at an easy angle so that the air may escape into it without effort, and in Fig. 3 the same idea in bends is indicated, and it may be said here that it is bad practice to make bends of a less inside radius of curvature than the diameter of the pipe, and this proportion to size holds whether the pipe is round or rectangular.

In Fig. 4 we have illustrated a prospective view of a wall duct, the main supply pipe and the connection between the two, the latter in every case should be fitted with a key or slide damper, preferably the latter.

In ordinary practice it is customary to allow the air to pass through the main duct at a reasonably high velocity, at a much lower velocity through the duct in the wall, but it is not considered good practice to allow it to escape through the register into an apartment (unless the register be very high, as in the case of a church or assembly hall) at a greater velocity than five feet per second, otherwise it will interfere with the comfort of the occupants.

It is very often the case, however, that in order to provide the required amount of air the velocity in the flue must greatly exceed five feet per second, and in such a case it is only necessary to increase the size of the mouth of the flue to the proper size to reduce the velocity to the proper point. For instance, if the flue is 12 inches square and the velocity is 10 feet per second, we have simply to increase the size of the opening to the room to twice the size of the flue, plus, say, 35 per cent., to make up for the obstruction offered by the register face, and the velocity of the air entering the room will be reduced to the proper point, in other words, if the air traveling at a certain velocity through a given sized flue, is sent through a flue of twice the size, the velocity will be only half as great.

Of course, a volume might be written on this subject alone, dealing with the hundred and one details of a complete system, including temperatures, regulators, humidifiers, etc., etc., but enough has been said to give a general idea of the principle on which the system works, and some tables of diameters and resistance, etc., may be given in a future article.

CLEANING GAS FIXTURES.

Cleaning out the arms of gas fixtures when they are filled with a deposit of creosote or other foreign matter is not strictly plumber's work, says a writer in the Metal Worker, but an occasion like this arose in my work not long ago where the gas fixtures were in combination with the electric light fixtures. They were so badly filled up with deposit as to reduce seriously the gas pressure. I told the owner of the building that he would have to send them to the factory and have them cleaned there. This, however, was practically impossible, as it would leave his place of business dark, and this was during the busy season of the year. To clean the fixtures myself I took them down, cleaned out the main pipe with a wire, unscrewed the branches and then made a fitting so I could obtain live steam from the boiler under pressure. By blowing this live steam through the fixtures they were quickly cleaned and the owner suffered no inconvenience, as all the work was done during the daytime.

Making a reducing fitting when one is not readily to he had, as is often the case when a plumber is at a considerable distance from the shop, can be accomplished by taking a coupling from a piece of pipe, screwing it on a nipple chuck and then putting a thread on the outside with a stock and die. In some cases a file will be necessary to cut the coupling down a trifle, but in most instances this will be unnecessary. The same thing also can be done with an elbow or a tee. It is quite a nice trick to cut the thread on the outside of an elbow, but with a little practice plumbers should have no difficulty in doing it.

IMPORTANCE OF VENTILATION.

Ventilation is a vital subject just now. Everywhere one reads articles on the subject and ventilators of great merit are now sold and made compulsory in the construction of modern buildings. In all the new apartment houses, schools and public or private buildings the laws of scientific ventilation must be obeyed. Architects are constantly improving their designs for different buildings and climates and many lives are being saved and the energy of workers conserved by this mighty force for good. Fresh air is quite as important as fresh, pure water, and just now when this country is alive with building activity it is satisfactory to notice that ventilation has a place of paramount importance in the work. Considerable appreciation has been expressed regarding the special contributions published in this paper on the subject of ventilation. Yet it must be remembered that each inhabitant is responsible for the general health. Cleanliness must go with the ventilation and janitors of large buildings as well as the landlords may do much to supplement the builders' art in this respect. What is the use of fine ventilators if they are not made active and effective? It is just as bad as a system that is so complicated that it cannot be enforced

A remarkable invention has been announced recently by the Niagara Electro-Chemical Co., Niagara Falls, and is called Oxone. George F. Brindley, who was for some years works manager of the company, is the inventor of Oxone and it promises to be a powerful agent in supplying pure air to special works that are necessary underground and under water. Oxone itself is a specially prepared fused form of sodium peroxide that has the peculiar property of emitting free oxygen when it comes in contact with carbon dioxide charged with moisture. This fused sodium peroxide is bluish grey in color and is cast in small blocks that can be placed in air-tight cans and in this form transported easily.

By this invention it is claimed that the air in submarine boats may be kept fresh and a constant supply of oxygen supplied so that boats may be retained under water for many hours at a time. Tests have been made at Niagara Falls and have been found satisfactory. Then there are manifold uses for such a splendid discovery. In deep mines and diving work, also in all places congested where fresh air is needed promptly to save life. The physician will be enabled to supply oxygen to dying patients and prolong life during critical periods so that recovery may be possible. In fact the uses of Oxone are without limit, and merely serve as illustrations of the marvellous age in which we live.

MAKING GAS MANTLES.

The process of manufacturing any article is more or less interesting to the uninitiated, but of more than passing interest is the making of a gas mantle, which a representative of Hardware and Metal was privileged to see at the International Gas Appliance Co.'s works, Toronto.

The first step is weaving the mantle from a cotton thread, which is fed from a cop into a knitting machine and turned out in woven tubes. After weaving, the tubes are cut into lengths and placed in a cleansing solution of acids and then rinsed several times in filtered water, as it is absolutely necessary to have the mantles free from all impurities. When they have been dried in a kiln, one end of the tube is gathered up with an asbestos string, a loop of the asbestos being left for attaching to the wire hanger. The mantle being suspended by this loop, it is necessary to have the top of the mantle, as far as possible, impervious to fire, and for this reason the point where the string is attached is treated with a fire resisting solution.

The next step is the most interesting of all, as up to this time the mantles had simply gone through a series of mechanical developments, but here the mysterious commences. They are saturated with chloride of thorium, one of the most costly of metallic elements found in monazite sand and a few minerals, after which they are subjected to a gas fire in which the original cotton is entirely consumed, the thorium only remaining in the pattern given it by the woven thread. They are then shaped round, which is a process requiring much skill and care, by being worked over a tube with a gas jet at its point.

The mantles, having had all the cotton burned out of them, are now in so delicate a condition that they cannot be handled except by the asbestos loop, and to overcome this they are dipped in a mixture of methylated spirits and gun cotton, which protects them during the final handling and shipping, and is ultimately burned off by the user.

The International Gas Company's factory is one of the most modern style, and thoroughly equipped with every known improvement for facilitating the output of goods, and for the comfort of its employes. For the convenience of the girls employed the management have set apart a large, airy sitting room, which will have a gas stove for preparing lunches, and periodicals, etc., to read during the noon hour. A tennis court will be laid out in the rear of the factory during the Summer, which may be used by the employes until such time as the land will be required for further extensions to the factory. The treatment of the employes of the International Gas Appliance Company has evidently been a consideration in the laying out of the works, and the manager, W. M. Campbell, deserves credit for his care and thought.

Mr. Campbell will leave for the Old Country shortly, where he will make arrangements to handle the entire Canadian output of two or three British manufacturers of gas fixtures and appliances, for which his company has built up such an extensive trade in this country.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 11, 1906.

Some large plumbing contracts are now under way here in many of the large structures which were built during the mild Winter. Still others will soon be let for the many factories, apartment houses and residences which are now in process of construction. There are also several fine office buildings to be erected in the downtown section during the next few months, so that there is plenty of work ahead for Montreal plumbers.

Supply houses are doing a tremendous business. Orders for all kinds of plumbing goods are very large and some of the leading firms find their capacity taxed in making shipments.

The only price change noted has been in solder, which has experienced a sharp advance, due to the soaring of tin.

In iron pipe, the large dealers here are still waiting for an advance. They are convinced that present conditions cannot hold out much longer.

RANGE BOILERS—Market conditions are unchanged. We quote: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—There has been no feature in these goods, which continue to sell well. We still give the following discount: 20 per cent. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—We are still quoting discounts on all sizes of nipples up to 6-inch 67½ to 70 per cent.

IRON PIPE—An advance in price seems to be approaching. Conditions are rapidly firming. We still quote: Standard pipe in lots of 100 feet, regular lengths, ¼ inch, $5.50; ⅜ inch, $5.50; ½ inch, $8.50; ¾ inch, $11.50; 1 inch, $16.50; 1¼ inches, $22.50; 1½ inches, $27; 2 inches, $36.50; discounts on black pipe, ¼ inch, 62 per cent.; ⅜ inch, 62 per cent.; ½ inch, 71½ per cent.; ¾ inch and upwards, 73½ per cent. Discounts on galvanized pipe: ¼ inch, 47 per cent.; ⅜ inch, 47 per cent.; ½ inch, 61½ per cent.; ¾ inch and upwards, 63½ per cent. Extra heavy pipe of 100 feet lots are quoted as follows: ½ inch, $12; ¾ inch, $15; 1 inch, $22; 1¼ inches, $30; 1½ inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—Goods in this line are moving freely. Prices are steady, quotations being still given as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER — The remarkable condition existing in the tin market is responsible for a very sharp advance in solder this week. We now quote: Bar solder, half-and half, guaranteed, 25c. to 25½c.; No. 2 wiping solder, 19½c.

ENAMELWARE—Orders are large. We still quote: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.15, special $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2½ inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, May 11, 1906.

Solder has been advanced this week to 27c. for half and half, and 25c. for wiping. This has been contemplated for some time, owing to the high price reached by tin.

There is no change in iron pipe, but prices are firm and being well maintained. There has been considerable cutting done, however, according to reliable reports.

Throughout the country all plumbing supplies are in active demand, but Toronto still keeps a little quiet. It is expected though that now the wage dispute is settled business will increase, as the master plumbers will be in a position to figure more definitely.

LEAD PIPE—Prices remain the same with the usual good business being done. We quote: Lead pipe, 8c., discount 20 per cent.

SOIL PIPE AND FITTINGS—Prices remain the same. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—Prices of iron pipe are now well established and a good demand is felt. We quote: Black, 1 in. pipe, $4.37; galvanized, 1. in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS—All fittings are in active demand and makers are very busy. Prices continue same as previous quotations. We quote as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleabl? unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

GALVANIZED IRON RANGE BOILERS—Business continues fairly active, although this is a little off season.

There are no price changes. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14.00; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

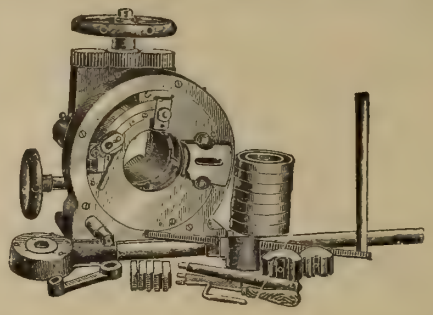
RADIATORS—A fair amount of business is being done. No price changes. We quote: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.

SOLDER—Owing to the high price of tin solder has advanced this week. Bar solder, half-and-half, guaranteed, 27c., and wiping at 25c.

ENAMELWARE—All lines remain the same as regards price, but the demand still keeps the manufacturer on the go. We quote: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

INFLAMMABILITY OF SEWER GAS.

Sewer gas, or, more properly speaking, sewage gases, consist of several gases that are produced by the decomposition of organic matter. Amongst these gases are those of which hydrogen forms a portion in different proportions of combination. One of these is marsh gas, which is known in coal mines as "fire-damp." Enormous quantities are generated in cesspools and septic tanks and also in sewers in which the flow is sluggish, and which retain the sewage until decomposition sets up.



The traps fixed to intercept grease from sinks, and prevent it passing into and eventually choking the drains, invariably give off large quantities of the same gas. The writer has frequently found the gas in explosive quantities in house drains.

When applying a smoke test to old drains it is quite common for an explosion of gases, plus the smoke, etc., from the machine, to take place. In some cases, such as in hospitals and similar places, where the vapors of ether, chloroform, etc., are mixed with the air in the drains, and the latter are not properly flushed and ventilated, it is dangerous to apply a smoke test.

A word of warning to any who have to do with drains, cesspools, sewers or septic tanks is here given: Be careful in the use of naked lights where there is any risk of an explosion of the pent-up gases in such places.—J. Wright Clarke in the English Plumber and Decorator.

The journeymen plumbers of Toronto and the employers have compromised on the wage question by adopting a scale of 37½c. to 42½c. an hour. The scale was originally 35c. and hour minimum, and the plumbers asked for 40c.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

MUELLER PIPE REAMERS

RATCHET HANDLE PATTERN

C-035

When you use different sized reamers that operate by means of a brace or stock, it often takes as long to find the size you want and get it adjusted, as it does to ream the pipe.

When you use Mueller Pipe Reamer you have all sizes in one, with handle attached, ready for operation. You lose no time in hunting for the proper size or adjusting it for work.

Mueller Pipe Reamers ream all sizes of pipe from ⅜ to 3-inch and are made in plain handle and ratchet handle patterns. The reamer illustrated is the ratchet handle pattern.

Each reamer is given an actual working test, bears the Mueller trade mark and is *unconditionally guaranteed*.

Business Getters for Tinsmiths

Are there any defective chimneys in your locality?

Then it is your chance to get business.

THE

ZEPHYR Ventilator

saves the expense of building a high chimney.

It is so constructed as to guarantee a perfect draft, and, therefore, easy combustion.

By using the ZEPHYR, it is possible to burn soft coal with the best results.

The smoke is easily drawn off, enabling an even heat to be generated.

THE ZEPHYR IS STRONGLY PUT UP AND WILL RESIST ANY STORM.

This is what others think of it :

Montreal, February 20th, 1901.

Providence Mother House.

Messrs. Harris Co., Limited, Montreal.

Dear Sirs,—It is with pleasure that I can say your "Aeolian" Ventilator is the best Ventilator we have used on our establishments so far. We have eight (8) of the large sizes put up on our Mother House and on the Hospice Gamelin and they give us entire satisfaction.

Yours respectfully, SISTER MADELEINE, Dep.

We manufacture and guarantee :

The Harris Filter
The Aeolian Ventilator,
The Zephyr Ventilator,
Expansion Conductor Pipe.

The best is what you want.

THOS. BIRKETT & SON CO.,
LIMITED

OTTAWA, ONT.

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS.

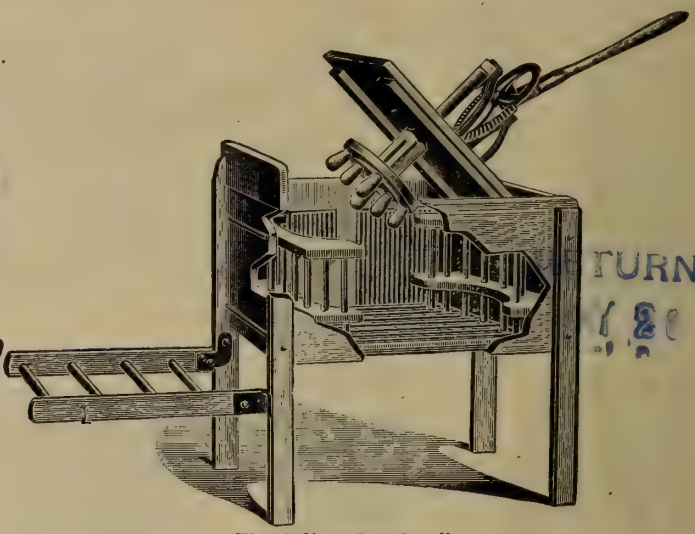
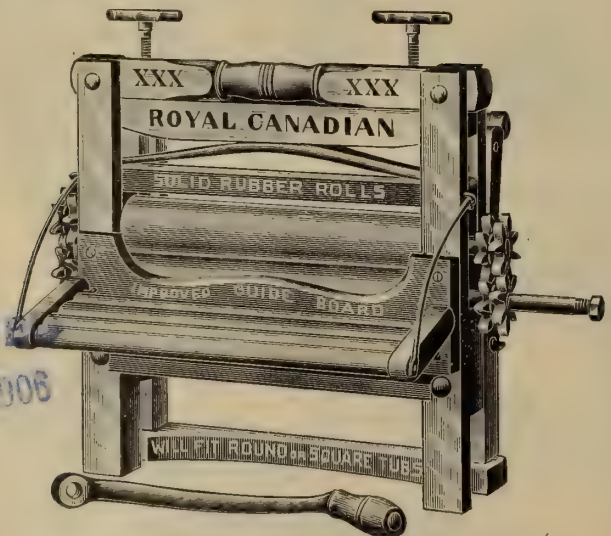
Is Your Store a Woman's Store?

Women are the purchasing agents of the home. Do you handle what they want. Do you keep a full line of the many labor saving devices used in the kitchen? The line is growing in importance constantly.



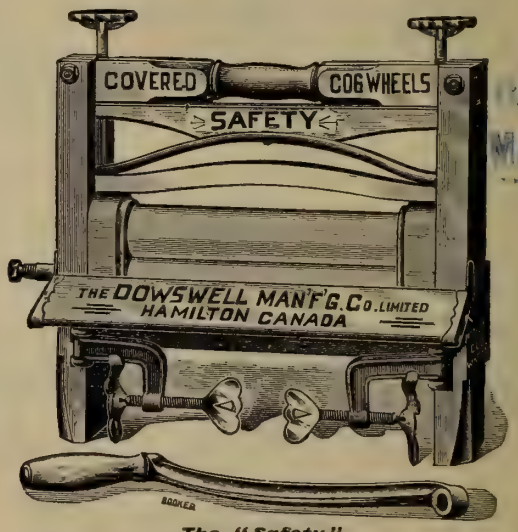
Washing machines and wringers are good lines and will pay you well.

RETURNED
MAY 26 1906



The "Snowball" Washing Machine.

The latest, safest and strongest rotary washer. The cogs are enclosed in a metal globe, a very desirable feature, accidents almost impossible. It is very easy and smooth running and has decided advantages worth looking into.



The "New Leader"

This machine has been before the public for many years, and is a general favorite While in operation it is closed, making no slop and retaining the heat in the machine, which for obvious reasons is greatly to be desired.

The "Royal Canadian"

This popular wringer has been on the Canadian market for a long time and is still one of the best sellers.

The "Safety"

With ball bearings and protected gears. One of the easiest running and safest wringers made.

Louden's Steel King Barn Door Hangers

Always give Satisfaction.

They are perfectly "stay-on," hold the door much closer to the track than others, and are better secured to the door, having three bolts well spread apart, instead of two bolts in the same line and close together, which is liable to split the board and loosen the hanger.

In addition to this, the pivot in all Louden Jointed Hangers is set a little ***outside of the centre line,*** which causes the door to hug the side of the barn, prevents it from rattling with the wind, and gives it more play to pass obstructions.

Manufactured only by

Louden Machinery Co., Guelph, Ont.

The Enterprise Mfg. Co. of Pa.,

PHILADELPHIA, U.S.A.

Mr. Hardwareman, It's up to You

☞ SEE THE SIGN ?

☞ SEE THE LABELS?

WHAT ONE GOOD LIVE HUSTLING AGENT IS DOING WITH PEDLAR'S "OSHAWA" SHINGLE.

Mr. Vrooman only started to handle Metal Shingles late last year (1905), but before taking the sale of this class of goods up at all, he made himself perfectly familiar with all styles and classes that were being offered on the Canadian market, with the result that he applied for and was given the agency for The Pedlar People's Goods. Mr. Vrooman argued in this way:—"Now if I am to work up a good trade in the Metal Shingle business I must get the agency for the best that's manufactured, because a roof, of necessity, must be good, or it's no use besides if I don't get something that my customers can recommend to their friends, I shall do very little or no business."

His arguments were well taken, as the picture will show, because within six months (in the winter) he sold thirteen barn and house roofs, and the illustration shows his thirteen customers taking the goods home. They were applied, in the majority of cases, by the customers themselves, or their carpenters. The goods in this car load of 30,000 lbs, were mostly our 28 gauge "Oshawa Galvanized Shingle No. 600 E, and the shipment calledfor 32,000 square feet, or enough to cover 13 barns, each of say 25 squares. In speaking of this delivery the North Ontario "Times" of March 22, 1906, says:

"Tuesday morning farmers from all parts of Brock Township met at the station and loaded their wagons with the famous "Oshawa" steel shingles. Mr. J. H. E. Vrooman, the agent for the Pedlar Co'y, of Oshawa, entertained them to a dinner at the Brock House. After enjoying a very sumptous and social feast the wagons were lined up on River Street, when a photograph was taken by Mr. S. L. Wright of Uxbridge. This was the largest delivery of the kind ever held in Sunderland, and created quite a sensation, being witnessed by hundreds of people. As this make of Shingle has been much used in this Township since the first year of its existence goes to show that the "Oshawa" steel shingles must be the choice of the people and satisfactory to the builder. The Brock farmer knows what to use. They have the best of buildings. Mr. J. Bagshaw among the others, celebrated the occasion by sitting in with the other boys and had his photo taken. All his buildings are covered with "Oshawa" shingles, and he could not say too much in their favor, having put them on himself. Although the winter has been dull for builders, Mr. Vrooman reports having done a large business in the sale of the "Oshawa" steel shingles, and the outlook for further business is good it being hard to keep a good thing down."

The fact that so many intelligent people, in one locality, used the "Oshawa" Galvanized Shingle, (locked on four sides), should be a very strong argument in favor of YOUR selling this kind of roof covering. There is none better than the "Oshawa," and some of very little use at all.

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

Why You Should Sell THE IDEAL FENCE.

You want to handle a fence that will appeal at sight to your customers, and that will satisfy them after they have bought it. You'd like to have a fence to sell of which you could say to a man, and say truthfully, that it does the fencing job for good and all. There is absolutely nothing that looks better, is better, that will give better satisfaction and that will sell better than this Ideal Woven Wire Fence. You can see from the illustration how it is made; crimped, locked, spaced and stayed. Then just remember, and this is all-important, that these wires are all big, heavy, strong wires, all No. 9 hard steel. And they are heavily galvanized so there's no chance for rust to get a hold. One fence sold always sells more. It's easy to get going. Very little talk required to convince a man who has fence to build. Seeing is enough. And then remember that while you're satisfying your farmer friends and doubling up your fence business, there's enough in it for you to make it an object. We see to it that dealers have margin enough to make them want to push it. If you want to handle that kind of a fence just drop us a card about dealer's prices.

You Don't Have TO ARGUE

When you have sold a man some of the **Martin-Senour Paint** once you don't have to argue him into buying it the next time. You don't have to spend an hour trying to convince him that he's a poor judge of paint and that what you sold him was all right. The **Martin-Senour Paint** speaks for itself and doesn't require any apologies. It's pure White Lead, Zinc and Linseed Oil. Its quality is guaranteed and its something no dealer need be afraid to recommend for any purpose either inside or outside.

To Build Up Trade

There is nothing like handling meritorious goods—goods that back up the manufacturers claim and that give solid satisfaction. That's the kind of an article we offer when we ask you to handle the **Martin-Senour Paint**—a paint that is 100 per cent pure.

Write for our terms and special proposition to agents.

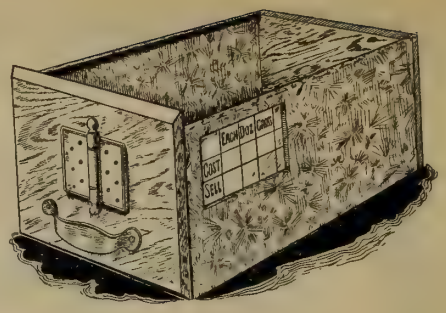
How to Buy Horse Nails

If you are not particular just order the number of boxes and the size required, and take whatever brand the wholesale dealer may have in stock. But—if you want the best made or sold in Canada, **without any exception,** you will not make any mistake in always specifying on your future orders that you want only the **"C"** brand Horse Shoe Nails, made by this Company.



You can do all your farrier trade with the "C" brand. They will fulfil the most exacting conditions required as tests of quality. They are of the best designs, especially made for Canadian use. Have the finest hardened bevelled points, which will penetrate easily into the hardest hoofs. They will not bend in driving, nor will the heads fly off on striking an obstruction. This is because they are **hot-forged** from a special quality of Charcoal Steel Nail Rods, made for our purpose, and imported direct by us from Sweden. **It is the best material known or used in the world for the purpose of making horse nails. We challenge any maker in the world to give better results than are obtained by the use of the old reliable "C" brand,** which has been made in Canada for the past forty years, and has stood every test, and is the standard for quality to day among all its competitors.

All the leading wholesale hardware dealers have them for sale, or should accept orders for same at our d scounts (40, 10 and 7½ per cent.), plus freight to the various points. If you cannot obtain them, on request write us direct. Your orders are respectfully solicited.

Canada Horse Nail Company

MONTREAL

ESTABLISHED 1865

Time is money and space is money. The hardware merchant who has not installed the Bennett metal shelf boxes for displaying his goods is losing money every day.

How can you induce your customers to throw away their old lawn mower and buy a new one with ball bearings which a child can run with ease? How can you induce the farmer to replace his old stump fence with a new locked wire fence which a pig can only get through when it is made into sausages? How can you expect them to adopt the latest improvements when your own store is an advertisement for everything that is out-of-date?

NO INVESTIMENT WHICH IMPROVES THE STORE AND FACILITATES WAITING ON THE TRADE IS EXCESSIVE. When you lose fifteen minutes looking for some articles which you know you have in stock, you not only lose a quarter of an hour yourself, but you annoy the customer. Get a reputation not only for promptness of delivery but for promptness and celer ty in waiting on customers. We live in a busy age and men will deal where they get the quickest service.

GOODS WELL DISPLAYED ARE HALF SOLD. For a hundred dollars or so you can install Bennett Metal Shelf Boxes. They have stood the test. They will be attractive and will often suggest to customers some article which they had not thought of buying.

A veteran hardware merchant at a recent convention remarked that 80 per cent. of the men who failed in business failed because they did not know how to display their goods to advantage and often made what should have been an attractive store look like a second-hand junk shop.

Don't be one of the 80 per cent., and don't run a junk shop instead of a twentieth century hardware store.

Write for our price list. It gives prices of boxes of various sizes. Or give us the space you have available and we will suggest an assortment of boxes and give you our best prices.

HARDWARE CONVENTION A BIG SUCCESS

120 Members from 80 Towns Enrolled as Members of the Association.

It is safe to say that not one member who attended the convention of the Retail Hardware and Stove Dealers' Association of Ontario in Toronto on Tuesday and Wednesday of this week went away disappointed. If there was one he has not been heard from. True it is that there are several reasons for regret, but the reasons for congratulation far outbalance those of an opposite character.

Half a Hundred Present.

The most regrettable feature of the convention was the fact that a dozen more hardwaremen did not attend. Considering the busy time of the year it is an evidence of earnestness to report that nearly one-half of the 120 members of the association made the great sacrifice of time and money necessary to attend the convention. But the presence of only about half a dozen more would have enabled every delegate to have traveled at a reduced railway rate.

There being less than fifty delegates present from outside points the delegates had to pay fare and two-thirds for the round trip instead of the fare and one-third rate promised if fifty or more had attended. Had more of the 275 hardwaremen said to belong to the Retail Merchants' Association come in person instead of accepting Mr. Trowern's invitation to stay at home and send him their proxy votes they would have secured a better understanding of the two associations and the reduced railway rate would have been available.

But as has been pointed out before, none of the delegates have any kick coming and everyone feels that his time and money were spent in a successful effort to uplift the hardware and stove trades throughout the province. Even Mr. Wagg, who came down from Manitoulin Island specially to attend the convention, says he has already got his money's worth out of the association.

The following roll of delegates present is well representative of the trade in the northern and western portions of older Ontario, the eastern portion not being so well represented :

Group photo of about forty of the delegates to the Ontario Retail Hardware and Stove Dealers' Association Convention in Toronto on Tuesday, May 15, 1906.

Weston Wrigley, editor Hardware and Metal, Toronto.

Others present were J. B. MacLean, H. T. Hunter, J. G. Lorriman and Joseph Heale, of the Hardware and Metal staff, Messrs. E. M. Trowern, S. A.

Brubacher, James Eadie, George Nunn and W. H. Doel, representing the Retail Merchants' Association, E. R. Rogers and H. N. Joy, former presidents of hardware associations in Ontario and North Dakota, and several representatives of jobbing and manufacturing houses.

Results of the Convention.

The results of the convention are far-reaching and will be felt by everyone in the trade. Had anyone prophesied six weeks ago that such a convention would have been held and such a membership roll reported the prophet would have been ridiculed. For months there has been talk of organization, but for only a month has there been action. And action counts. Let the action be continued until September so that when the special convention arranged to be held during the time of the Industrial Exhibition is called to order the membership roll will not be less than 500 to 600.

An important action taken was the adoption of a slightly increased membership fee. This was discussed from every standpoint, some advocating as large a fee as $10, the fee charged in Manitoba and the Northwest provinces. Others strongly favored $5, contending that an association that was not worth that sum each year was not worth belonging to. Still others favored continuing the provisional fee of $2 because that is the price charged by the Retail Merchants' Association. The argument finally prevailed that the present association was certain to show results, but to get these results it would be necessary to have enough financial backing to allow the executive officers a chance to carry out the work they are outlining. An organizer cannot be expected to continue to give his labor for nothing and traveling expenses must be provided the executive for their quarterly meetings and for the investigation of grievances reported. The convention in naming the $3 fee chose a middle course and the 36 delegates present on Wednesday morning backed up their decision by paying in the extra dollar added to the provisional fee. The other 80 odd members will not hesitate to follow this example when they catch the spirit of enthusiasm which prevailed at the convention.

The Chief Controversy.

The one really regrettable incident of the convention was the bad tactics shown by representatives of the Retail Merchants' Association present. Undoubtedly they have strong arguments to present on behalf of their proposal of unity, but the vote of 34 to 1 against affiliation is proof conclusive that even a good cause can be damaged or lost by bad generalship.

The honesty of purpose of men speaking against or advocating affiliation cannot be questioned. Mr. Trowern honestly believes his plan of organization is the best and others honestly disagree with him. Now that the hardware association has decided to remain a separate body the matter of affiliation can well be left in abeyance for a year or two until a thorough trial is given the individual plan which has proved so successful in the States. It would be a mistake to bring the matter up again at the September convention.

While Mr. Trowern undoubtedly prejudiced his case by ignoring the hardware convention in his paper and by sending out a circular which, instead of bringing any delegates from the outside, brought, it is said, about 125 proxy post cards, his earnestness cannot be questioned as he delivered an interesting and instructive address and he was broadminded enough to rebuke his organizers when they were making themselves so obnoxious to the convention that cries of "put them out" were heard from various parts of the hall. The convention was exceedingly generous to Organizer Eadie in particular until he made himself so disagreeable that the chairman had to exercise his authority in an emphatic manner.

But too much time and space has already been devoted to this subject. The delegates, in their united wisdom, decided the matter after a protracted discussion and it can well be let alone in future and attention directed to more important subjects which have been forced into the background by the subject of affiliation. Let all unite now in a united effort to better trade conditions and make the new organization the success it promises to be.

List of Members Enrolled.

The following is a complete list of the members enrolled up to the close of the convention :

THE OFFICERS

At this week's Convention of the Retail Hardware and Stove Dealers' Association of Ontario the following officers were elected for the ensuing year; A. W. Humphries, Parkhill, President; W. G. Scott Mount Forest, 1st Vice-President; J. B. Hambly, Barrie, 2nd Vice-Pseident; John Caslor, Toronto, Treasurer; Weston Wrigley, Toronto, Secretary.

Executive Committee: The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich; Frank Taylor, Carleton Place.

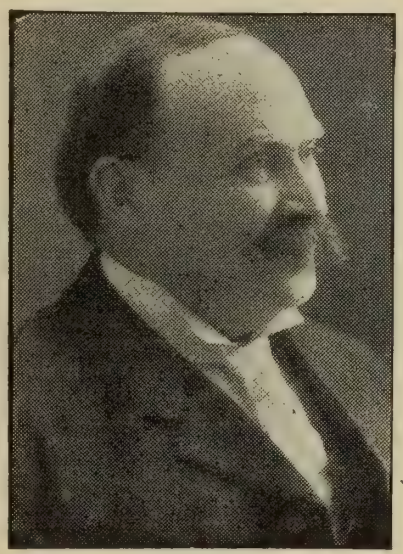
MORNING SESSION.

The minutes of the Good Friday convention were read by the secretary, and after some comment were adopted as read. Mr. Trowern, secretary of the Retail Merchants' Association of Canada, took exception to part of the minutes wherein it was stated that the majority of those present at the former meeting were against amalgamation with the association he represented, but after a little comment the minutes were adopted as read.

The Civic Welcome.

It was expected that Mayor Coatsworth would be present to extend the city's welcome, but through press of work he was unable to attend. Alderman Graham, chairman of the Civic Reception Committee, was there however, and extended the glad hand to the delegates. "He regarded the organization as an important body. This is an age of organization. The trade or profession without it is handicapped in the race of life. There is no question in my mind but that it is a good practice for men in the same business to come together to exchange ideas. The man who has thought out some particular line gives the knowledge to others and the exchange of ideas and benefit of council enable you to carry out your business with profit to yourselves and profit to the community. If we can contribute to your pleasure just use the telephone and we will be glad to do all we can for you."

Mr. Humphries, in replying, said: "I am sure His Worship could not have given us a kinder welcome than has Ald. Graham. We are glad to come to this city. We are proud of it even if we do not live in it. We are glad that you have given us so kind a welcome and we appreciate it very much. We are endeavoring to do something for the benefit of the hardware merchants. We find that every trade has its association, and we think it about time for us to get together."



President's Address.

Mr. Humphries then took up the regular order of business by delivering the president's address, saying: "I need not tell you that I am very much pleased to see so large a gathering of hardware and stove dealers as I see before me to-day. On the 13th of last month a few of us met at the Rossin House in this city and talked over some of the grievances we had in our line of business, and though we had only between 20 and 30 present at that meeting, yet we were all satisfied with our attendance, having spent a very pleasant and profitable time together and organized The Retail Hardware and Stove Dealers' Association of Ontario.

"'Great oaks from little acorns grow' was one of the headlines in my copy-book when I was a small boy at school, and though some people were inclined to joke us about our association being small, I was not discouraged, for I was taught long ago 'never to despise the day of small things.' Now we are larger and more enthusiastic and more anxious than ever to have a first-class association, and even this will be considered a small convention when compared with the next one we hold.

"Our association is not intended to be a combine. It is not meant to oppress the poor or 'hold up' the rich, but to make some arrangements whereby we may obtain a living profit on our goods, and to prevent inroads being made upon us by any company or corporation, or anyone else, and to rectify some of the evils that exist in our trade.

"Almost every line of trade has its association, as far more can be accomplished by concerted action than any one person of firm can accomplish—no matter how large it may be. If I understand it aright this association is not an enemy of the wholesale hardware houses, nor of the stove manufacturers, nor of the commercial travelers. They are our good friends now, and we hope to retain them as such.

A. W. Humphries, Parkhill,
Re-elected President of Ontario Retail Hardware and Stove Dealers' Association.

"So far as I am concerned, this was a spontaneous outburst—the organizing of an association. I had heard of local associations, but they will not stand. I can easily see that, because they must end somewhere, and the man in the next town cuts the price. But if the organization extends over all Ontario, then the limits will be the boundary line of the province, and on the other side of the line every State has its hardware dealers' association.

"Week after week letters were appearing in Hardware and Metal from one part of the province or another suggesting the need of organization, and several men offered their services in assisting to start one, and though this went on for some time, yet no one intimated that there was already such an association, nor did I know that such a thing existed until two or three days previous to our last meeting, when I had a letter that rather surprised me from an organizer of the Retail Merchants' Association, and he gave me to understand that we were stepping on their corns. Then we had Oganizers Brubacher and Eadie and Secretary Trowern at our meeting, where they told us some things that surprised us all regarding their association, and as we did not want to be considered usurpers and wanted to do the honorable thing, as all hardware and stove men do, we proposed that we meet at an early date in the city and invite their members to attend, and so I expect that many that we see before us are members of the Hardware Branch of the Retail Merchants' Association, but as the matter of whether we shall have a separate and independent association or whether we shall affiliate with the Retail Merchants' Association or not will come up later on, it would be unwise for me to discuss the subject at present. The executive has prepared a programme, and on the back are a few reminders, and among them a number of subjects for discussion which, if we make the best use of our time, as I trust we shall, as it will be time well spent, will prove profitable to us all.

"I hope that you may approve of the action of the executive in taking up Mr. Hodson's kind offer to act as organizer for two months without a salary, as he has done splendid work.

"We cannot help but feel happy at the prospect of a banquet at the King Edward this evening, kindly tendered us by the staff of Hardware and Metal, and feel very grateful to them for their kind hospitality. There are many more things that I would like to say, and that I feel tempted to talk about, but it would be taking up precious time that can be used to better advantage by you. So we will now go on with the regular business and hear Secretary Wrigley's report.

Provisional Secretary's Report.

The work done by the hastily called convention on Good Friday was left uncompleted in many respects. No membership fee was decided upon, so this along with other arrangements for a permanent organization and for the May convention had to be taken up by the provisional executive officers. Immediately after the convention had adjourned the secretary entered into correspondence with the executive committee, and it was decided that members would be asked to enroll by paying a provisional fee of $2, the amount of the fee, however, being left open until the present convention. Printed matter was drafted by the secretary and approved by the executive officers, and circulars and membership cards forwarded to between 1,100 and 1,200 hardware and stove dealers in Ontario whose addresses were in the secretary's possession. By correspondence special rates were also procured from the different railway systems allowing delegates to the May convention to return at reduced fares.

The plan of sending a weekly letter to the members of the executive com-

mittee was adopted by the secretary, one of the first matters taken up being that of issuing the call for the May convention. As decided on at the Good Friday convention, the Retail Hardware and Stove Dealers' Association were to

Weston Wrigley, Toronto,
Re-elected Secretary of Ontario Retail Hardware and Stove Dealers' Association.

call the May convention and the officers were to ask the co-operation of the Retail Merchants' Association in inducing as many hardwaremen as possible to attend the gathering. To this end, a call to the convention was issued through the columns of Hardware and Metal signed by the secretary of this association and the secretary of the Retail Merchants' Association. It was arranged that this call would also be published in the Retail Merchants' Journal, but that paper failed to publish the call or to say one word regarding either the Good Friday or May convention. Objection having been taken to the use of the name of the secretary of the Retail Merchants' Association on the call, the matter was referred to the executive committee and they decided that as the convention was called by this association, only the name of the provisional secretary of the Retail Hardware and Stove Dealers' Association should be used on future announcements. The secretary of the Retail Merchants' Association was asked for and promised to supply a list of the hardware merchants who were members of his association, but afterwards declined to give the desired information. Instead of endeavoring to increase the attendance at this convention the secretary of the Retail Merchants' Association apparently did all in his power to prevent those over whom he had influence from attending. In addition to failing to notice the convention in any way in the paper published by his association, he issued a circular letter to the hardwaremen in his association in which many misstatements are made, and the whole tenor of it was to endeavor to destroy confidence in the Retail Hardware Association and prevent, if possible, those who received the circular from attending the convention. Along with the circular letter was sent a postcard, to be returned to the secretary of the Retail Merchants' Association, giving him a proxy to vote on the matter of affiliation at the convention. So that the delegates may clearly understand the situation, paragraphs from the circulars sent out by the two secretaries might be quoted.

Two Circulars Quoted From.

In the circular issued by the secretary of the Retail Hardware and Stove Dealers' Association an effort was made to enthuse the merchants throughout Ontario to attend the convention, the only reference to the Retail Merchants' Association being in the following paragraph:

"The Good Friday convention was overwhelmingly in favor of a purely hardware and stove dealers' association, and rejecting a proposition to organize as a hardware section of the Retail Merchants' Association. This matter will come up for discussion at the coming convention. Read the articles on this subject in Hardware and Metal and come prepared to take the best stand in the interests of the retail hardware trade."

In the circular issued by the secretary of the Retail Merchants' Association, little encouragement was given the hardware merchants to attend the convention, one paragraph reading as follows:

"On Good Friday last, a convention was called in Toronto, by a trade newspaper, Hardware and Metal, which is supported by the advertisements of manufacturers and wholesalers, and which, like all other trade journals, is a private enterprise and cannot necessarily be free to give advice in the best interests of the retail trade, because if they were familiar with retail conditions and if any question ever arose wherein the retail trade was asked to take a firm stand against any practice adopted by the manufacturers or wholesalers, and which is quite likely to occur, this trade journal's hands would be completely tied and its mouth sealed, as no one can serve two masters."

As it is generally known that Mr. Humphries of Parkhill called the convention on Good Friday, the misstatement in this paragraph cannot be considered otherwise than as an attempt to deceive. The statements about Hardware and Metal are so foolish, and the paper and its policy are so well known to the trade, that it is unnecessary to do more than draw the attention of the delegates to them.

In another part of the circular it is inferred that the reason why the Retail Merchants' Association have not attempted to organize the hardware trade is because they have desired to secure members first and elect officers afterwards. Nothing is said, however, of a convention held in Hamilton a couple of years ago, boomed actively by the Retail Merchants' Association and attended by less than a dozen delegates as compared with about two dozen who attended the Good Friday convention on less than a week's notice through Hardware and Metal.

In the letters to the executive officers the secretary brought forward the following questions for discussion: 1. A suggested order of business. 2. Who should have the right to vote at the May convention. 3. Time limit on addresses. 4. Appointment of organizer. 5. Should one membership cover two or more branches of one business. 6. Use of proxys at convention. 7. Appointment of a press committee for the convention. These matters have been threshed out by the executive committee and will be incorporated in another report, a meeting of the executive officers having been arranged to be held before the convention.

Splendid Organization Report.

Organizer Hodson's generous offer to devote two months of his time, without salary, to the work of organizing the association, has enabled the executive officers to make a much better report of progress than they could otherwise have done. Mr. Hodson has under considerable difficulties visited most of the towns and cities in Western Ontario between the Niagara and Detroit rivers, and in addition to securing about 50 members,

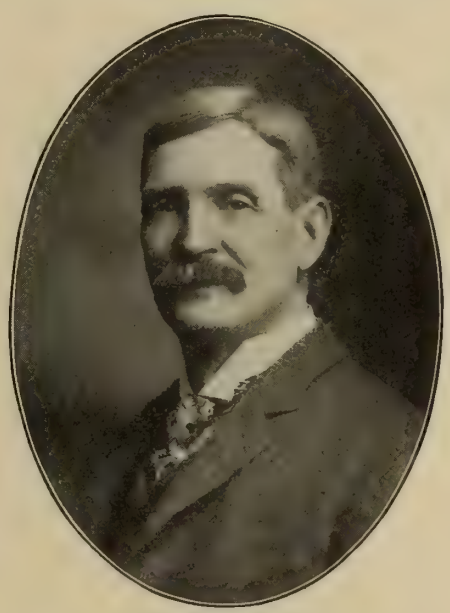
O. M. Hodson, Bolton,
Who will continue to act as Organizer of the Association.

has done much towards bringing the hardware and stove dealers in this district into closer relationship. In several cases he has induced the competing dealers in the same town to come together and adjust prices on various arti-

cles on which there had formerly been no profit for anyone. As Mr. Hodson has only asked for traveling expenses, the expense of organizing has been kept down to a minimum, and Mr. Hodson is deserving of the thanks of this association and of the trade generally for his energetic and self-sacrificing work on behalf of our association, particularly as during the past ten days he has been suffering from a very severe cold which forced him to his bed in Hamilton for a day.

Although no members were enrolled at the Good Friday convention and it took the better part of two weeks before the organizer was put in the field, and circular letters sent to the trade, it is encouraging to note that there are now 120 members in over 80 towns, as follows: Alliston, Ailsa Craig, Arthur, Barrie, Blind River, Blyth, Blenheim, Baysville, Bolton, Bobcaygeon, Bothwell, Brantford, Canfield, Carleton Place, Caledonia, Dashwood, Dundalk, Dundas, Dunnville, Embro, Embrun (Russell County), Essex, Fergus, Forest, Fenelon Falls, Florence, Glencoe, Goderich, Guelph, Hagersville, Hamilton, Harrow, Highgate, Ingersoll, Kingsville, Little Current, London, Markham, Merlin, Midland, Mt. Albert, Mt. Forest, Monkton, Newbury, Newmarket, Niagara Falls, Niagara Falls South, Oakville, Orillia, Oil Springs, Oshawa, Orono, Parkhill, Providence Bay, Ridgetown, Rodney, St. Catharines, Shelburne, St. Marys, Sutton West, St. Thomas, Streetsville, Sudbury, Teeswater, Tilbury, Tiverton, Tillsonburg, Thamesville, Thorold, Toronto, Tottenham, Trenton, Toronto Junction, Uxbridge, Verner, Walkerville, Watford, West Lorne, Woodstock, Woodville, Welland. These are the result of only three weeks' work—a sufficient proof of the general desire for a retail hardware and stove dealers' association and for its future success.

Finances in Good Shape.



Financially, the association is already on a sound basis. Membership fees to the amount of about $260 have already been collected, against which the expenses incurred so far have been about $40 for postage and printed matter used by the secretary, the convention hall, costing $12, and traveling expenses, amounting to $73, incurred by the organizer, leaving a balance in the treasury amounting to about $130. As the delegates present know only too well, it costs money to start in business or to start any organization. It will be seen, therefore, that the membership fees have so far been more than sufficient to meet the expenses of organization. But it must be remembered that all organization work has been done gratuitously so far.

To keep the expenses down in future it will be necessary for every member to do his part by influencing every dealer in his district to become a member of the association. As there will be many expenses necessary in addition to the work of organizing, it will be seen also that in order to make the association as effective as it should be, a higher fee will be required, especially during the first year or two when the expenses will be the greatest.

The executive officers feel gratified that they are able to present such a satisfactory report regarding membership and finances and can turn over the work of the association to such new officers as are elected at this convention with a feeling that they have done their part in bringing about a much needed organization of the retail hardware and stove trades. I wish the delegates two days of pleasure and profit.

Discussion on Report.

It was moved by Messrs. Caslor, Toronto, and Hambly, Barrie, that the report be adopted. Mr. Bruebacher, organizer for the Retail Merchants' Association, took exception to remarks in the secretary's report making mention of the circular sent out by the Re-

John Caslor, Toronto,
Re-elected Treasurer of Ontario Retail Hardware and Stove Dealers' Association.

tail Merchants' Association. Mr. Trowern also spoke and asked the privilege of ten minutes, but as this was out of order, he was promised an opportunity later on.

"When statements are made that we are opposed to your forming an association," said Mr. Trowern, "it is perfectly right that I should meet that charge. I want to say that your secretary has sent out a circular to the trade in which there were things that were untrue. After sending out the untruthful statement that the Good Friday convention was overwhelmingly in favor of an independent association, I sent out our circular, and I defy any man in the room to say that our circular is untruthful. I made the statements that I have in our circular to make the case clear."

Mr. Wrigley, in replying, said: "I would like to ask if Mr. Trowern issued this circular? The misstatement I refer to was made clear in my report. The Good Friday convention, as all the delegates here know, was not called by Hardware and Metal, but by Mr. Humphries. Hardware and Metal, at the request of many dealers, continued to work in favor of an organization until someone was willing to take the initiative, and I contend that my report is correct when I say that misstatements appeared in this circular, signed by Mr. Trowern."

Retail Merchants' Organizer Eadie wanted to rule Secretary Wrigley out of order, but the secretary replied that it had been charged that the statement that former meeting was overwhelmingly in favor of an independent association was false, but he was quite willing to leave it to the meeting to say whether or not his report was correct.

An amendment was then made that the report be referred to a committee, but the amendment was lost and the report was adopted as read.

Executive Committee's Report.

The report of the executive committee was then read, as follows:

1. That only hardware and stove dealers who have paid their fee to this association shall have the right to vote on all questions at this convention.
2. That every retail hardware or stove dealer in Ontario, or his representative, should be given the privilege of the floor at the convention.
3. That a time limit of five minutes be adopted, no one to speak over that limit except by unanimous consent.
4. That the suggested order of business be adopted with the amendments that the convention close its sessions at noon on Wednesday, the automobile ride being dispensed with and the committees to report as soon as possible.
5. That no proxy votes be accepted by the convention.
6. That a press committee be chosen to supply reports to the daily press.

Regarding the first clause that only members who had paid their fees be allowed to vote, D. A. Macnab, of Orillia, said it would be wise to include that they be bona fide hardware or stove dealers. We have in this meeting men who are not dealers and who are taking up the time of the association.

The president replied that Mr. Macnab's suggestion was acceptable, and only members would vote, although any dealer would be allowed five minutes if they wished it.

Mr. Trowern said: "That will put us out altogether, and the best thing for me to do would be to withdraw from the meeting entirely. I do not think you should do this, for we have the right by invitation to be here and take part in this convention. This is a joint meeting."

Mr. Macnab: "As I understand it, this is a meeting of the Retail Hardware and Stove Dealers' Association. Later on it might become a section of the Retail Merchants' Association, but at the present time it is not. By what authority are Messrs. Trowern and Eadie here? They are not hardware dealers. I do

not wish to exclude Mr .Trowern at all, but at the present moment I do not see that he has any right to take part in this meeting."

Mr. Eadie: "When you formed this organization you invited all who were interested in the hardware trade to be here. I presume you know we have a hardware section in the Retail Merchants' Association. There are a number of officials of that association here, and I claim that I have a right to be here."

Mr. Trowern: "We are a joint committee at the present time, and if you will not allow us to vote you had better exclude us at once."

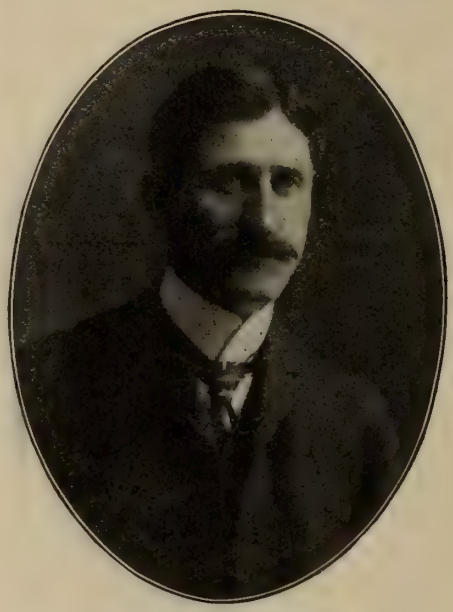
A Clear Statement.

President Humphries: "I really cannot see that this is a joint meeting. In the first place, I was the man who called the dealers together. I did not know Mr. Trowern until Good Friday. I had never heard of him before. I wish to present the case to the house in as straight a way as I know how. At the first meeting we took up a good deal of time with our trade troubles, and there Mr. Trowern told us that they already had an organization, and that they had 275 members in 112 towns in their association with a membership fee paid of $2. Then I thought as I had been moved into the chair, that if that were the case and I did not know it (and no one else there appeared to know it), it would be unwise for us to organize another organization if there already was such a strong one in existence. So we proposed that day to elect provisional officers. Now, when Mr. Trowern told us there were so many of his members throughout the country, we thought it would be a good plan to bring his members here to meet our men. Another convention was to be called which his members were to be invited to attend. Was that right? Yes. Now, I supposed Mr. Trowern would have his members here, but I don't see many of them here to-day. We were to leave it to the meeting whether there would be two associations or one. This is the position of things to-day, and this is the condition that will have to be dealt with by the meeting."

Mr. Eadie: "Mr. Trowern has a list of the men in his pocket."

The Chairman: "Where are the men?"

J. W. Peacock, Toronto: "It seems to me we are starting wrong. I belong to both bodies. We want to hear what Mr. Trowern has to say."



Mr. Caslor thought that only the present members should be allowed to vote and that Mr. Trowern's proxies should not be taken. It was then moved that the matter be left over to the afternoon.

The Secretary: "I consider the report of the executive fair and just. At our invitation we have with us representatives of the Retail Merchants' Association. This is a meeting of the Hardware Association, however. We are granting full privileges to our guests, but the executive contends that only those who have joined the new organization should be allowed to vote."

Mr. Trowern: "I was allowed to take part in the former meeting, and I am here by invitation. Let the motion about the fees be dropped."

Antagonism Regretted.

W. G. Scott, Mount Forest: "I attended the former meeting as a member of both associations, and am here in the same capacity, and regret the antagonism that is observed. We should have a purely retail hardwaremen's association, standing on its own feet, but working with the Retail Merchants' Association for mutual benefit. It was decided at the former meeting to call a meeting here and let this meeting settle whether we were to become a section of the Retail Merchants' Association or not. My view is that we follow the original plan, but I am sorry that

W. G. Scott, Mount Forest,
Re-elected First Vice-President of Ontario Retail Hardware and Stove Dealers' Association.

this discussion has brought out so much animosity. I am perfectly willing that the Retail Merchants' Association be heard at this meeting, and if they can show that it is to the best interests of the hardwaremen to become a part of them, we ought to do it. We are here to do everything for the good of our cause, and while I will be fair, I will fight amalgamation from the word go."

After more discussion and cross firing it was decided that proxies would not be allowed, that only bona fide hardware and stove dealers be allowed to vote, and that all should be allowed time to express their views.

The meeting adjourned at 12.15 until 2 o'clock.

AFTERNOON SESSION.

Upon reassembling after lunch the question of who should vote was again renewed. Some members who were not in attendance at the morning's meeting were on hand, and certain explanations had to be given again so that all would be acquainted with the situation. Questions were asked as to whether there were two associations, and if so, were they both officered, and who composed the officers. These questions elicited the information that the Hardware Section of the Retail Merchants' Association held no meetings but had a secretary, Mr. Trowern, and no other officers. The feeling of the meeting was that they get down to business. A great many had come at the expense of from five to ten dollars besides their time, and they were here for a purpose. However, it seemed that more light was necessary on the subject, and some further discussion was indulged in.

Mr. Macnab said: "We must start right and we must say who shall compose the association. This is the first point, and until this is carried or rejected we are in the dark. I do not think those here who are not members of the Hardware and Stove Dealers' Association should be allowed to vote until the matter of joining the Retail Merchants' Association is carried or rejected. I believe every one here should have free speech, and I second Mr. Paulin's motion to adopt the report of the executive committee."

The meeting was then thrown open to discuss amalgamation. It was decided that twenty minutes be allowed for the presentation of both sides, after which a vote would be taken.

Mr. Trowern's Address.

Mr. Trowern said: "I have been asked why you have never heard of our hardware branch of the Retail Merchants' before? It seems surprising to me that you have not heard of it when it has been in every paper in the country. But I will tell you the reason we have not called you together. We have 275 men enrolled on our list who have signed and paid their membership fee, and I have in my pockets postcards telling me that they are going to stand by the Retail Merchants' Association of Canada. We have a large number of retail sections, and we do not want to experiment on them all. You have heard many things through your journal and from your secretary, but you have not heard through that journal that you are not in a position to do yourselves any good without the strength of the larger body. Why has Hardware and Metal not told you this? Your hands are tied, tied, tied right up tight. The chairman does not seem to know what we have done, but some of you know what work we have done. We cannot cover all the territory at once; we must cover it little by little. You would first want to meet the wholesalers to arrange with them to stop cutting and reduction of prices. Under the present criminal code this means that you can do nothing, and I advise you not to do anything that will land you in the police court. Ours is the only association that can look the magis-

trates and the crown attorney in the face. You have not been told this in Hardware and Metal, because they have not made a study of it. It does not cost us as much to collect our membership fees as it will you, and I want to make the statement that we are out of debt; that we owe nothing; we have our own board room, our own typewriting machines and everything clear. Now, what have we been doing to get our hands free from the criminal code? We have been doing a great deal, and are on the road to success. Gentlemen, you are mistaken if you think you can make successful efforts to set prices. The contract plan is the only way. You can only uphold prices by having a contract with the wholesalers and the manufacturers, and if they do not arrange prices so that you can make a fair profit on your goods, you have no recourse whatever but Hardware and Metal has never told you this, that as yet contracts of this kind are illegal. The plumbers did not know this, but the officers of the Retail Merchants' have been awake to these things. I fancy I see a lot of hardwaremen going to the Premier, headed by Hardware and Metal. He would say, 'Let's see, isn't there something on in tacks just now?' Go to Ottawa with a large body of men who represent all the businesses and they listen to them. They said, 'Give us a good assessment law,' and they were the only ones to get it. Could you get such legislation? No! We went to the Ontario Legislature and got the best assessment Act throughout the Dominion of Canada." Mr. Trowern then read a section of the Act relating to combines wherein is provided penalties from $200 to $4,000 or imprisonment for conspiracy to raise prices or restrict production. What could the hardwaremen do at Ottawa with an Act such as this? Working men go there as organized labor and not as carpenters, plumbers and so forth. Retail men have rights in this country, and I do not want a little separate body of hardwaremen to go down to Ottawa and balk us in our fight. Legislation is one of the most important things you have to deal with. Don't try to arrange prices. Don't do anything that will get you into the police court. We have all the retail merchants in Canada with us, and don't let yourselves be carried away with wrong ideas. Mr. Trowern was asked if there was a paper in connection with the Retail Merchants' Association, and replied that they have a journal that is given to the members. Asked why there was nothing in the paper about either of the hardware conventions, Mr. Trowern said he was not treated with courtesy, and that he was not hurrahing for organizations of that sort.

The Discussion Closed.

W. G. Scott, Mt. Forest, asked: "Why is it that Mr. Trowern and his organizers are so antagonistic to our forming an association? You have been asked to bring your members here and they would have the same right as ours to the floor. Why don't you come and try to form us into an association and let us stand on our own feet? It has been stated here that the prime object of this association is to raise prices. I did not come here with that idea. If you will assist us in forming a strong hardware association of the 1,200 hardwaremen in Ontario, and if we come to the members of the Retail Merchants' Association and asked for co-operation, I don't see why it should not be given, and I don't see why there should be any friction between them. Mr. Trowern says the time is not ripe. When will the time be ripe? I was secretary of the hardware section of the Retail Merchants 'Association in our town and I never had a communication during my term of office until last week. Because we form an independent association surely we are not going to be cut off for all time

J. R. Hambly, Barrie,
Re-elected Second Vice-President of Ontario Retail Hardware and Stove Dealers' Association.

from legislation. Surely the members of parliament will be reasonable and listen to us. I must say that I am fully in favor of the original plan of independent organization."

John Caslor, Toronto: "It was understood that the question of separate organization come up immediately after lunch. It was Mr. Trowern's request that this be done. We should settle this matter now and I move that this organization be a separate and distinct body called the Retail Hardware and Stove Dealers' Association of Ontario." The motion was seconded by C. F. Moorehouse, Toronto.

H. T. Hunter, manager of Hardware and Metal, spoke of the druggists trying to stop the sale of Paris green in hardware stores. The druggists had applied for legislation to that effect and it was simply a matter of whether there were more druggists or hardwaremen. "That is only one of the many things that come up from time to time. How about the churches of different denominations? Because they were not all of one belief they did not refuse to assist or recognize each other. I see no reason why these two organizations should not co-operate, but I can see dozens of reasons why it will be to the advantage of the hardwaremen to have an independent organization. A great deal of price cutting is done by druggists who sell paints and oils without a profit, but who make money on lines people are not acquainted with. Then there is the general store that sells nails and tacks without profit, making their money on other things. Now if you are part of the Retail Merchants' Association you will be dominated by the largest number of men in that association. Mr. Trowern stated that you are a young association and should not branch out. I grant that we do not know much yet about association, but that will come, and I do not think that we should be scared away by what these men have told us."

Mr. Trowern: "My idea is to get you to strengthen us so that we can go as a whole body to the Government and not as a few men."

An Almost Unanimous Vote.

After some other short remarks from different members a vote was taken, resulting in 34 for independence and 1 for amalgamation.

The next order of business was the appointing of committees to report on Wednesday morning, as follows:

Committees Appointed.

By-laws and Constitution—R. J. Walkem, Tottenham; W. G. Scott, Mount Forest; J. W. Peart, St. Mary's; E. P. Paulin, Goderich; F. W. Otton, Barrie.

Finance—O. M. Hodson, Bolton; D. A. MacNab, Orillia; E. S. Hubbell, Thamesville.

Resolutions—J. R. Hambly, Barrie; J. McDonald, Florence; C. F. Moorehouse, Toronto.

Legislation—F. W. Jeffery, Midland; J. T. Norton, Ingersoll; W. I. Wagg, Providence Bay.

Trade Grievances—D. Brocklebank, Arthur; J. W. Peacock, Toronto; A. E. Bottum, Bobcaygeon; C. A. Conn, Tillsonburg; C. E. Noble, Dundalk.

Mutual Insurance—J. Caslor, Toronto; J. F. Moorehouse, Toronto; J. W. Peart, St. Mary's; J. S. Hall, Toronto; D. Brocklebank, Arthur.

BE FRIENDLY WITH COMPETITORS

The routine business of the day being over, E. R. Rogers, Toronto Junction, former president of the Retail Hardwaremen's Association organized four years ago, which joined the Retail Merchants' Association, and has since been defunct or inactive, addressed the meeting.

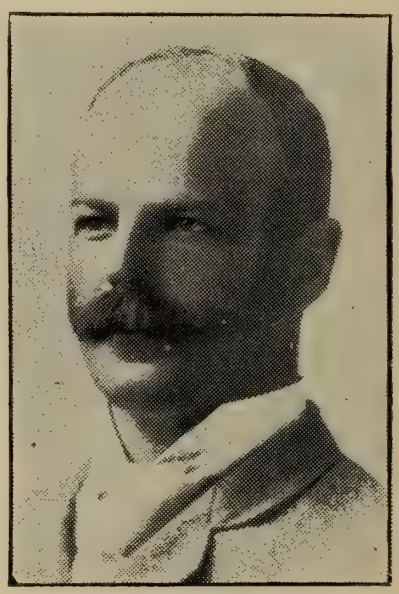
"It has been felt for some time that lack of organization amongst the retail hardwaremen had a very demoralizing effect on business generally, and when the good results that have followed the organizing of manufacturers and wholesalers have been seen, surely the time

has come when the retailers can drop petty jealousies and meet together on one common footing for the welfare of all. The present association is probably the best way to bring together the retailers so that all merchants throughout the country when they meet may feel that their interests are being considered.

"The formation of an association and the meeting together of the local retailers soon brings to the surface the fact that the average retailer is not such a bad fellow when you fraternize with him a little while, and you soon find in your organization that you have been contending against the very evils which one of you thought the other man knew nothing about. Drop your reserve and your selfish personal ideas when you join the association. See what good you can do instead of laughing and sneering at other people's efforts, anh you will find that much good will redound to yourselves after you have expressed your honest convictions and tried to get a better understanding with your fellow hardwareman. The influence of such an association is greater than you have any idea of, and where associations have been in existence for any time many evils complained of have been removed.

"The local hardware trade belongs to the local dealers, and unless you can, through your association, stop a great deal of the selling by so-called jobbers and wholesalers to the public, your trade will be very seriously demoralized. Many jobbing houses justify themselves in competing with the retail dealers because they say that others do the same thing, but this is no justification, and it does not make the wrong any more right because more enter into it. It will be well for the wholesaler when he sees that it is not wise for him to kill the goose that lays the golden egg.

"Many retailers throughout the States are anxious to co-operate with you, and you should be glad to take any advantage you can of this assistance, for good results will come from different associations working together. I would say to ensure good fellowship in business the wholesalers and retailers must work together in all lines. I feel that with the encouragement that has already been extended to this association by the wholesalers it depends upon you and your exertions whether you can get the benefit you hope to derive through organization."



HANDLING GOODS WITHOUT PROFIT.

Fred. W. Otton, of H. H. Otton & Son, Barrie, delivered a most interesting address on the above subject, as follows :

"It is a great source of instruction and profit to us all, as well as a pleasure, to meet in this way and hear addresses from so many prominent retailers throughout our province.

"There are a great many things to contend with in the selling of merchandise, and we have to meet different propositions. We are frequently met with prices from departmental stores, as well as prices from such firms who are retail and wholesale combined, where they take advantage of us by using their wholesale prices to sell to the consumers. There are several hardware firms I might mention whom I come in contact with. The prices these firms supply goods to the consumer are very discouraging to us all. They give this part of their business particular attention. They will even go so far as to sell mechanics in employ of contractors their tools at prices out of ordinary to the regular retail hardware dealer. The result is we have either got to do business without a fair profit or do without the business and get it thrown up at us : 'Can't you sell goods as cheap as they can ?'

"Then we have another institution to contend with, that is, a farmers' co-operative buying agency. Farmers buying from a co-operative buying concern at an advance of 10 per cent. On some lines of goods no doubt they pay a fair margin of profit to the co-operative company, but they are led to believe that they are getting goods at prices away below what they can buy from us, and you know, as is the general custom, the farmer bites very quickly if he thinks he is getting a snap from some agent in this way.

E. R. Rogers, Toronto Junction,

Who was President of the Association organized four years ago and is now Inspector of Asylums for the Ontario Government.

"While we no doubt all feel very much discouraged at having to meet prices from such outside firms, yet when we do meet them, and especially at cost price, which in a great many instances are the actual cost f.o.b. point of shipment, and when we take into consideration the cost of freight charges, packing, etc., as well as the cost of doing business, we are actually selling at a considerable loss. Just in order to meet competition.

Costs Money to Sell Goods.

"We must not forget the fact that it costs money to sell goods. I venture to say there are very few retail hardware dealers who can conduct their business on less than 15 per cent. Therefore, when you take into consideration the selling of nails, say they cost you $2.25 laid down, you have to get $2.60 per keg for them before you make anything for yourself. Take linseed oil, barb wire, wire fencing of all kinds; all of these staple goods which are sold very often at unprofitable prices. If any retailer in this building gave it the thought of adding his percentage of running expenses to the laid down cost of these goods he would find in the majority of cases he was selling them less than cost.

"At our Good Friday meeting Mr. Mowat, of Trenton, said he did $6,000 worth of business last year without profit. I wonder if he figured anything for cost of selling these goods. Probably he did. There is one thing sure, if he did not figure on the cost of selling these goods he lost money. Mr. Mowat would have been far better off without that trade could he have done without them.

"My idea is that this handling of goods without profit can be overcome if we can get our association working as we should. We would be on more friendly terms with one another and get more confidence in one another, so that this price cutting or selling goods without a profit could be done away with as far as one retail man working against another is concerned.

"With respect to the wholesale jobbing houses who supply consumer direct, we shall have to, in a body or as an association, put our grievances before the manufacturer and get him to cut off his supplies to such firms who go after the consumer, and thus prevent the retailer from getting such business as he is justly entitled to. There is no dealer in business to-day for fun. He is in it for the money there is in it, and you'll soon see if our association gets going right that every dealer in the country towns, as well as in the larger towns, will be keen to take hold and take an interest in it.

"There are some goods no doubt we feel disposed to sell without profit some times, such as goods that hang on and get shop worn. Then there are certain lines of goods at the end of a season such as lawn mowers, refrigerators, ice cream freezers, screen doors, gasoline stoves, etc. Goods of this class I think it pays a man to sacrifice rather than store them and have his money tied up from one season to another. Usually they are run down low in stock, odd sizes, etc.

"Then, again, there might be a grievance arise out of this, especially where you may have an arrangement with your other dealers to keep prices on these goods where you all handle the same line. Probably it would be better to call off such an arrangement after a certain date. This is a point I would like to hear discussed. The following poetry is probably appropriate in connection with my remarks :

Profit or no Profit.

To sell or not to sell—that is the question—
Whether 'tis not better in the end,
To let the chap who knows not the worth
Have the work of selling without a profit ?
To take up arms against his competition—
And by opposing, sell without a profit—
To sell, and by selling without a profit
Out of business put the other dealer
Is a consummation devoutedly to be wished.
To cut and slash.
Perchance myself to get it in the neck,

Ay, there's the rub ! for when one starts
To meet the other fellow's price 'tis like as not
He'll find he is up against it good and hard.
To cut and slash is not to end the confusion
And the many evils the trade is pestered with.
Nay, nay, Friend Dealer, 'tis but the forerunner
Of debt and mortgage—such course portends.
'Tis well to get the price the goods are worth
And not be bullied into doing it
For what So and So will do it for.
Selling without a profit doth appear unseeming,
And fit only for the man who knows not
What his work is worth, and who ere long,
By every stress of making vain comparison
With bank accounts and liabilities
Will make his exit from the business.

"I thank you for the valuable time which you have given me, and I sincerely hope and trust that our association may be one of progressiveness, and that we may all have the pleasure of meeting here another year from now with increased membership."

STOVE SALESMANSHIP.

H. N. Joy, of the Joy Mfg. Company, Toronto, delivered an interesting address on stove salesmanship. Mr. Joy is Canadian born, but spent several years in the States, having recently been president of the Retail Hardware and Stove Dealers' Association.

"The fact that stove salesmanship requires some attention is evident by my being called upon to speak to you on this subject. I hear nothing of nail salesmen, and I presume no one is here to address you on this subject. Had there been it would be something like the lady who sent her husband to a department store. He went, like good husbands do, and after standing an hour and a half in a crush of women he was unable to get served. There was only a half hour left for the sale to go on, so he spoke to the floor walker about it, who was a friend of his. The floor walker told him that that particular clerk was highly paid for being slow so that too much of the goods would not be sold. I think this policy would be a good one to carry out in the sale of nails the way they are at present.

"Now there is a difference in stoves. Stoves ought to carry a profit, and if they do not it is the merchant's fault. Someone has said that stove salesmen are born, not made. Although there are clerks who never will become good salesmen, yet it is possible for every clerk, if he will apply himself, to become a good salesman, and he should not be discouraged by statements of this kind.

Good Motto to Follow.

"It is not my purpose when discussing this question to speak of any particular stove. The question that concerns you is to sell your stove. If I were to take a text for a stove sermon I would take this one: 'Know your stove, show your stove ; know your customer, show your customer.'

"Usually a person comes in and asks to see a stove. In a great many cases they are simply pointed out a stove and told the price. It is very rarely indeed that business is done in this manner. How many stove salesmen know their stoves ? One way to know them is by reading literature on the stove. Then take the stove apart and see if it agrees with the manufacturer's description, and if it does not note the points wherein it differs. A stove salesman who does that is fairly well equipped to talk his stove.

"I remember once engaging a new clerk. I had been handling the Crescent bicycle, and made many sales of it. This young man when he came into my store said he could not sell the Crescent bicycle because he had been selling another make that was better. When his first customer came in he made a fizzle of it. I told him the Crescent was the wheel I sold and that was what he must sell. Some other salesmen are like that boy, and do not make good salesmen.

"There is something in the saying that a man can learn to love a woman. I believe that, although I have never had experience. I believe, also, that a man can learn to love a stove. If he does not learn to love his stove he will not do his best as a salesman. Of course when I say love you must not take it in the same sense as loving a woman, but you must have confidence in the stove you are selling.

Don't Run Down Other's Goods.

"He must know his competitor's stove. How shall he get this knowledge ? By reading all about it, by hearing about it, and by listening to remarks that are made about it by those with whom he comes in contact. I call this storing up information, which should not be used except on special occasions, and then only with a great deal of wisdom. I think it is better not to refer to your competitor's stove unless you are compelled to do so. After referring to it get away from the question just as soon as you can. Never speak disparagingly of your competitor's stove. Why ? Simply because your opinion is discounted. You will pardon a personal reference. Last Fall I called on a friend of mine to take a meal. The lady of the house said she was going to get a malleable range. After speaking of different ranges she asked my opinion of them, and then remembering that I was making a malleable range she laughed at asking me such a question, so you see that my opinion, had it been given, would have been discounted. Just as soon as you speak disparagingly of your competitor's goods your own are discounted. If you want to advertise his goods why pull them to pieces.

"Another requisite of the good stove salesman is to know his customers. We hear a great deal about studying human nature. There is such a thing, and the stove salesman must be to some extent a student of human nature. He should be able to size up his customers and to make up his mind just what kind of a stove he requires. You cannot always tell by their dress or by their financial position whether they want to buy the best stove you have or not. It may be that they are comparatively poor, but have been saving up for a long time, and a safe plan to follow is to show the best stove first, as it is well to be on the safe side.

Show the Best Goods First.

"The successful salesman will show the best stove first, but showing the stove is not simply quoting the price. Showing a stove is taking it apart and giving a reason why these parts are so made.

"I remember when the oven door kicker came in and took everyone's fancy. But we do not need to confine ourselves to oven door kickers, which, by the way, are not in use in the drop doors now used. Leave the price until the last. If you quote it first perhaps the customer will become discouraged, but if you show your stove and tell him what others have said about it you will no doubt make a sale.

"Perhaps the best stove salesman of them all are the peddlers. The retailer could learn a great deal from these men and from catalogue houses and departmental stores.

"The manufacturers school their salesmen in this way : The salesmen go out into the country and make their headquarters at some central point. On Saturday night the salesmen meet at this point and spend Sunday in exchanging ideas and in schooling themselves in ways of selling. I am not, of course, advocating doing this work on Sunday. One salesman will get up and show the fault of the range and state every objection he has heard to it during the week. Another salesman then offers objections, and they are all explained away by the demonstrator of the stove.

"I believe it is a splendid thing for the merchant to get his salesmen together and go over all the good points in the stove. The Simmons Hardware Co., of St. Louis, have a school for their salesmen who have been in their employ less than a year, and for others who wish to avail themselves of the lectures. To-day they will take a square. How many hardwaremen here can explain the steel square ? This man explains what the steel square means. The next day they take Stanley's levels and planes, or some other line, and explain what they are for and how used. This is done for one hour every day.

"To be a successful salesman you must know your stove, show your stove; know your customer, show your customer. It is a good method for the manufacturer to bring out the different good points of his stoves in his trade paper advertisements, so that the merchant can instruct his salesmen. We try to do that, and I think every stove manufacturer does the same thing."

The meeting adjourned at 5 p.m. until 10 o'clock Wednesday morning, before dispersing a group photograph being taken of the members present.

WEDNESDAY SESSION.

Promptly at ten o'clock Wednesday morning President Humphries again called the convention to order, and the first order of business to be taken up was the reception of reports from the committees which had been appointed the previous day.

The committee on resolutions was the first to report, their recommendation

being read by J. R. Hambly, as follows :

Resolutions Committee Report.

(1). Resolved, that this association will not purchase goods from a wholesale house that supplies goods to fairs, auction sale rooms, mechanics, contractors, factories and mills, with goods handled in a general hardware store.

(2). Resolved, that the matter of cartage from shipping point charged on freight bills be taken up by this association.

(3). Resolved, that this association take steps to prevent the wholesale prices of hardware being published in the general newspapers.

(4). Resolved, that this association make friendly overtures to the Retail Merchants' Association with a view to affiliation for mutual benefits; hoping, notwithstanding the animosity shown, that on further consideration they will understand why it was necessary that we have an association controlled by hardwaremen only.

Promiscuous Sale of Goods.

Speaking to the first clause, Mr. Hambly referred to the fact that in one instance a dealer of the kind mentioned had sold a granite kettle at 33c., which he could not have sold for 65c. at a profit. The same thing would apply to hawkers of oil. He said the travelers do not sell these people goods, but they write in to the house for them. I think such firms should know that if they continue to sell these people they cannot ship goods to us. I would suggest that our secretary should be notified in such cases, and that he send notice to the manufacturers, saying that our association does not approve of their shipping goods to the man who sells on the open market, or in the small shop. If the manufacturer takes no notice of this the secretary should get out a card to that effect, and let the members know.

W. Holborn, of Sutton West : "A traveler handling saws called on me not long ago and, after getting my order, went over to a little saw mill in the town employing eight or ten hands and sold them a line. This sort of thing should be stopped."

John Coffey, of Barrie, told of firms who got farmers to sign agreements to buy wire fencing, etc., from them. These goods were sold to the farmers at a price considerably under the retailers' cost price. The association should communicate with these firms through the secretary. Regarding graniteware, he knew of an inferior lot of these goods which were sent across to the United States in bond, and then brought back by a Canadian and sold at slaughter prices as American goods. This was a piece of sharp practice, and even those who had distributed this ware did not know by what means it had been obtained.

Mr. Caslor : "Every year there is an auction sale of granite ware, all second-class goods. Department stores sell these seconds away below current price. I got over this cheap graniteware by importing a good quality from Germany. Teach manufacturers that you will buy something that isn't slaughtered every day. We once sent a committee to the graniteware manufacturers to protest against this. They advised us to go to the department stores and buy up all they had."

Second-Hand Dealers.

Mr. Macnab, of Orillia, said : "I think we should go slowly in this matter. The question of selling these people who move every six months does not rest so much with the association and the manufacturers as with the town council, who should exact a license. This would prevent the transient trader from coming in and doing business. A man in our town started a second-hand shop, and before long I saw the traveler for a house I patronized go into his store. When he came into my store I naturally had no order for him, so he stopped visiting the other man. But the house kept sending him goods, and

President Humphries Photographed by our Special Artist.

I kept witholding my orders. Finally the traveler wrote to the house and they courteously informed the second-hand man that they couldn't sell him any more goods. But another Toronto firm took him up, and I began to turn down their traveler, saying that I didn't object to his selling the other man, but I couldn't buy from him under the circumstances. Finally the traveler exerted so much pressure on the house that they tactlessly wrote, saying that the hardwaremen in the town objected to their selling him any more goods. This was his opportunity, and he had a big write-up in the local papers on the subject. Well, another jobbing house who had no customers in the town then came in and sold this man. Regarding oil men, there are so many in the country, and there are not many hardwaremen who buy from the smaller ones. It will be hard to stop them all, as they will say they don't sell us anyway."

J. W. Peacock thought it would be wise to leave this matter over, and he moved, seconded by C. F. Moorhouse, that it be referred to the executive committee, who should take action if necessary, and report to next convention. Motion carried.

Cartage Charges.

The second clause of the report, relating to cartage charges, was then taken up. Mr. Hambly said that while cartage charges run high on goods shipped from most houses, when a shipment comes from those who have spur lines right into their works there is no such charge. He cited an example of this.

President Humphries explained that Mr. Taylor, of Carleton Place, always deducted cartage charges from the wholesalers' accounts.

Mr. Macnab : "Buy your goods f.o.b. cars and they cannot legally collect this charge. At present it seems to be a general one extending all over the country. I would recommend copying on our order forms the words 'f.o.b. cars.' "

It was then moved by John Caslor, seconded by Mr. Dandie of Streetsville, that the matter of cartage charges at shipping points be referred to the executive committee. Carried.

Publication of Wholesale Prices.

An interesting discussion on the third clause followed. Mr. Hambly wished to know who told these wholesale prices, and it was explained that they generally came from somebody connected with one or other of the wholesale houses. A suggestion was made that hardwaremen who were advertisers in, or even subscribers to, papers publishing these quotations should write the editor, asking that they be omitted as being unfair.

One of the members asked if Hardware and Metal was sent to hotels, and was informed that formerly, for the benefit of commercial travelers who would not be home to receive their copy, this was done, but was discontinued when it was learned that consumers were getting at wholesale prices thereby.

President Humphries asked that the members should not leave their trade papers lying around loose so that customers could see them. He instanced a case in which the pages of Hardware and Metal's old numbers had been used as wrapping paper on a dealer's putty counter. In this way one customer, who was a farmer contractor, got at the wholesale prices, and trouble was caused. He suggested that the papers be burnt after they were of no further use. It was decided to leave this matter also in the hands of the executive.

Affiliation Matter Again.

The fourth clause, regarding overtures to be made to the Retail Merchants' Association with a view to affiliation for mutual benefit, was supported by Mr. Hambly, who said that he had no wish to be antagonistic to the association. It had done a great deal, for which all retailers would reap a benefit.

Mr. Peacock moved, seconded by Mr. Clifton of Alliston, that a discussion of this matter be deferred until the next convention.

At this point Organizer Bruebacher of

the Retail Merchants' Association was heard. He referred particularly to the legislation pushed through by his association, by means of which a transient trader's license fee of $250 could be exacted. He also mentioned having received proxies from 125 hardware dealers who wished to remain affiliated with the old association.

Mr. Smith, of Bolton, said he thought that many of these vouchers had been sent in under a misapprehension. There were as good men among the hardwaremen as in any other trade, and they could run a good association of their own.

President Humphries then read a letter from Purvis Bros., Sudbury, strongly opposing affiliation with the Retail Merchants' Association, and returning proxy card marked to that effect. Tne president thought these cards had been sent out for the purpose of forcing the present association out of business.

Mr. Noble, of Dundalk, said he received one of those circulars and cards, and came to Toronto expressly to protest against it. He did not think the Retail Merchants' Association had done the right thing by the hardware section. We can assist each other later on. For the present we hardwaremen must get acquainted.

The motion of Mr. Peacock was then put to the convention and carried.

Executive Session.

A point was then raised concerning who were eligible to attend the sessions of the convention. Mr. Caslor was opposed to the representatives of wholesale houses being present, and Organizer Hodson also thought that only members of the association should be present.

Mr. Holborn, Sutton West: "Let it be an entirely exclusive meeting."

Mention was made of the plan adopted by the association in the United States. At the morning sessions representatives from other associations were invited and made welcome. The afternoon sessions were secret. It was suggested that a representative be sent to the U. S. association meeting.

CONSTITUTION AND BY-LAWS.

J. W. Peart, for the constitution and by-laws committee, then brought in his report. It read as follows:

Preamble.

The objects of the Ontario Retail Hardware and Stove Dealers' Association are primarily to promote, foster and encourage the formation of a strong Provincial Association in Ontario through the medium of which local retail hardware and stove dealers may be brought into closer sympathy one with another, where their annoyances or grievances peculiar to each particular locality may by concert of action through its provincial association be adjusted or eliminated, and for the more satisfactorv adjustment of matters of general interest to the trade with respect to legislation, insurance, freight rates and all questions the better arrangement of which would tend to the mutual advantage of its members.

Constitution.

ARTICLE 1.

Section 1. The name of the association shall be the Ontario Retail Hardware and Stove Dealers' Association.

Sec. 2. The object of the association shall be to promote the interests of and secure friendly co-operation of its members.

ARTICLE 2.

Sec. 1. Any person, firm or corporation in the Province of Ontario engaged in the retail business of selling hardware, stoves, tinware, paints, oils and glass and who carries a general assortment of stock in any of the above lines known and recognized as a regular retail dealer may become a member of the association, all applications for membership subject to approval of executive committee.

ARTICLE 3.

Sec. 1. The officers of the association shall be president, first vice-president, second vice-president, secretary and treasurer, who with six members elected at the annual convention shall constitute the executive committee.

Sec. 2. The officers shall be elected annually by ballot and shall hold office until their successors are elected.

Sec. 3. The treasurer shall receive the funds of the association and dispense them through vouchers signed by the president and secretary.

Sec. 4. The secretary shall be under the direction of the executive committee and his duties shall be assigned by them.

Sec. 5. The executive committee shall pay the secretary and treasurer such salaries as may be deemed necessary and if they see fit a sufficient bond shall be required, said bonds to be paid for by the association.

Sec. 6. In case of a vacancy in any of the offices of this association the same shall be filled by the executive committee until the next annual meeting.

ARTICLE 4.

Sec. 1. The annual meeting for the election of officers and reception of reports and the transaction of general business shall be held on the second Tuesday in March in each year at 1 o'clock.

Sec. 2. The executive committee shall meet at least four times a year at the call of the president for the transaction of all business of interest to the association.

ARTICLE 5.

Amendments of the constitution and by-laws may be made at any annual meeting by a vote of at least two-thirds of the members present provided four weeks' notice of the proposed change has been made to the members of the association.

By-Laws.

ARTICLE 1.

The finances of the Ontario Hardware and Stove Dealers' Association shall be provided for by an annual membership fee of three dollars ($3) which, should circumstances warrant, shall be supplemented by a further fee of two dollars (2), such supplemental fee to be levied by the executive committee.

ARTICLE 2.

A majority of the executive committee shall constitute a quorum for the transaction of business at any meeting.

ARTICLE 3.

Each member shall be entitled to one vote or may in writing appoint a proxy at any meeting of the association.

Order of Business.

At the annual meeting of the association the order of business shall be:

1. Roll call.
2. Reading of minutes of last regular meeting.
3. President's address.
4. Report of executive committee.
5. Report of secretary.
6. Report of treasurer.
7. Report of special committee.
8. General business.
9. Reading of papers and discussion thereof.
10. Election of officers for ensuing year.
11. Unfinished business.

Time of Annual Meeting.

Considerable discussion was called forth by the clause dealing with the time of the annual meeting, and the amount of annual fees.

Mr. Macnab thought that the second Tuesday in March would be the most convenient time for hardware dealers to assemble, and by having the convention open at one o'clock it would allow the executive to meet in the morning and make necessary preparation. He made a motion to this effect, which was seconded by F. W. Otton, of Barrie, and carried

Mr. Scott defended the recommendation to make the annual fee $3, subject to an additional assessment of $2 should the first be found inadequate.

Mr. Brocklebank, of Arthur, thought that even $5 would be too small a fee, and he would like to see the clause changed so as to read $5, with an additional $2 if necessary.

Mr. Caslor advised against making the fee too large. If it is found too small, it can be raised later on. The president also thought it was a matter of educating the trade at first.

Mr. Macnab said that members present could see the advantages of the organization, and there could be no doubt that everyone was enthused. But those who did not come would not appreciate this. He thought the association should first gain strength by letting others in, and a year from now the question of changing fees could be taken up.

$3 Fee Decided Upon.

It was then moved by Mr. Moorhouse, seconded by Mr. Paulin, of Goderich, that the recommendation of the by-law committee be adopted.

Mr. Bailes, of Oshawa, moved in amendment, seconded by Organizer Hodson, that the fee of $2 be retained for the present year, or at any rate until the next meeting. Mr. Bailes said he had been willing to pay his $2 simply as an experiment, and he thought others would do the same. Later on, when they saw the benefits derived, they would be willing to pay $5.

Mr. Scott thought that dealers would be willing to experiment with $3 as readily as with $2. The association could not do its work and pay its debts on any less.

The amendment was lost, and the original motion, adopting the recommendation of the committee, was then carried by a large majority.

Mr. Peart said that he thought a good report in Hardware and Metal would enthuse those who had not attended the convention, and they would be willing to pay the extra dollar.

Mr. Peart then moved, seconded by

Mr. Scott, that the report of the constitution and by-laws committee be adopted. Carried.

Committee on Legislation.

F. W. Jeffery, of Midland, was then asked to present the report of the committee on legislation, which was as follows :

"Toronto, May 16, 1906.

"The Retail Hardware and Stove Dealers' Association of Ontario :

"Your committee on legislation beg to report : They would recommend petitioning the legislature to so amend the statute law and abolish the exemptions in section 180 of the Division Court Act so far as to make small accounts up to five dollars collectable by garnishment by a procedure in the magistrate's court similar to that for the collection of claims for wages, the prosecutor to serve the summons in the case without charge.

"All of which is respectfully submitted.

Mr. Jeffery explained that he had experienced difficulty where the business is with the laboring class. The books get loaded down with small accounts. This would be in a large measure remedied if the exemption of $25 in the Division Court Act re garnishment were done away with. He moved the adoption of the report, which was seconded by Mr. Brocklebank and carried.

Mr. Noble said that he had procured a book on the subject of getting assignments of wages on small accounts. He would send this book to the secretary.

Finance Committee.

D. A. Macnab then presented the report of the finance committee, which recommended :

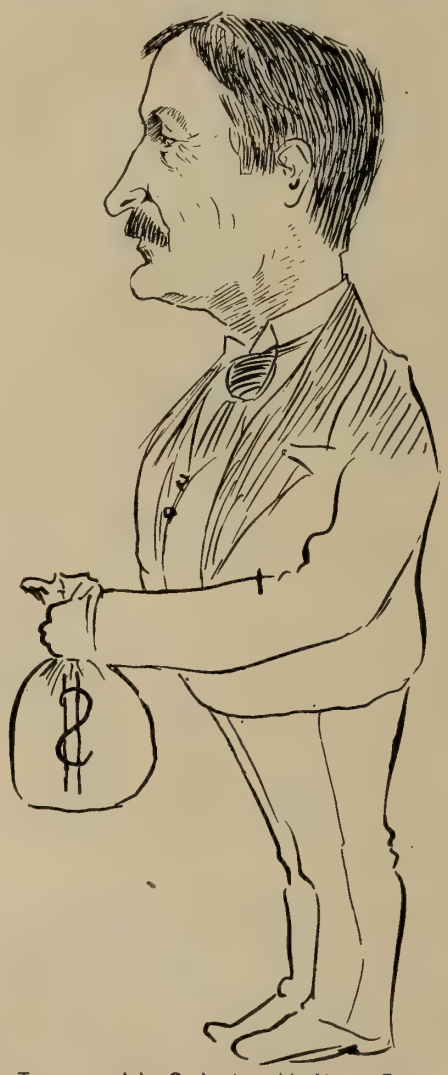
"That an organizer be continued in the field until such time as the executive deem advisable.

"The sum of twenty dollars be paid the secretary, Mr. Wrigley, as a slight mark of appreciation for his active services in organizing this convention.

The adoption of the report was moved by Mr. Macnab, seconded by Mr. Hubbell, and carried.

Great enthusiasm was aroused when Mr. Wrigley announced that a page in Hardware and Metal would be reserved every week for advancing the interests of the association. The offer was accepted unanimously.

It was moved by Mr. Conn and seconded by Mr. Clifton, that the executive be authorized to print copies of the constitution and by-laws and send them to members. Also that they send extra copies where advisable to assist in procuring new members. Carried.



Trade Grievance Committee.

Great interest was shown in the report of the trade grievance committee, which was presented by J. W. Peacock. He announced that almost every wholesaler, manufacturer and would-be jobber was brought on the carpet by the committee. Stoves were first to be considered, and an instance was cited where a small general store had catalogues of most of the stove founders and used the different hardware stocks in the town to show the goods, then ordering as they were wanted.

"2. That one of our wholesalers sent to a private party seven boring machines at a price of $7.50, when the lowest price the hardwareman could get was $7.65. Churns, washing machines, binder twine, nails, are all on the same score.

"3. That a certain lock was being sold for less than we can buy them for ; and even the glass men are found guilty, they selling glass to the consumer at a greater discount in some instances than to the hardwareman.

"4. That Stanley goods were being sold to large retail buyers on a preferred list. In the United States this was the case till the National Hardware Association took the matter up and to-day the United States hardwareman is getting a good profit on that line of goods. Last night Mr. Howland, representing

Treasurer John Caslor and his Money Bag.

the wholesalers' association, and Mr. Hardy, secretary of the different hardware manufacturers' associations, said that if we combined we could compel the wholesalers and manufacturers to put us all on the same footing. In order to remedy these grievances we recommend that an organizer be sustained in the field or that the province be sub-divided and a man appointed to try and settle the grievances among ourselves.

"5. That we try and see that the hardware business be confined to legitimate hardware hands.

"6. That this association look into the contract plan of settling prices—that is, the plan by which the manufacturer settles the jobbing and retail price."

On motion of Mr. Peacock, seconded by Mr. Paulin, this report was received.

One of the members called the attention of the convention to the fact that poultry netting, as it came from the factory, was frequently six or seven feet short per piece.

It was moved by Mr. Conn, seconded by Mr. Clifton, that the grievance committee as appointed yesterday be a committee to report grievances from time to time to the executive. Carried.

Old Officers Re-Elected.

Mr. Peart moved, seconded by Mr. Macnab, that the secretary be instructed to cast his ballot in favor of the executive committee as at present constituted. As President Humphries showed a reluctance to put the motion, Mr. Peart called for a show of hands, and it was found that the meeting was unanimously in favor of the motion.

It was then moved by Mr. Scott, seconded by Mr. Clifton, that the following be appointed to the additional offices on the executive provided by the constitution :

J. W. Peart, St. Marys.
M. R. Marshall, Dunnville.
F. W. Jeffery, Midland.
E. P. Paulin, Goderich.
D. Brocklebank, Arthur.
Frank Taylor, Carleton Place.

It was moved by Mr. Macnab, seconded by Organizer Hodson, that the traveling and hotel expenses of the committee be paid when they attend a committee meeting. Carried.

On motion, Messrs. Peacock and Moorhouse, of Toronto, were appointed auditors.

Organizer Hodson then moved, and Mr. Rudd, of Guelph, seconded, that a special convention be held during the Toronto Exhibition, date to be set by the executive. Carried.

Mr. Noble suggested that all members having grievances should report them to the grievance committee or to the secretary.

An interesting discussion on insurance then arose, and valuable suggestions were given by Messrs. Hambly, Peart and Brocklebank. This was followed by a discussion on the various methods of storing oil, Messrs. Caslor, Hambly and Brocklebank explaining their systems.

Finances in Good Shape.

The secretary reported that he had received letters from over one hundred dealers in the province, regretting their inability to attend the convention. He also announced that there were already enrolled 120 members, of whom 112 had paid up. The financial report showed receipts of $260 and an expenditure altogether of $130 to date, leaving a balance of $130.

Mr. Macnab moved, seconded by Mr. Hubbell, that the secretary be instructed to pay for the expenses of the convention out of the general fund, and to hand statement of same to the treasurer. Carried.

Votes of Thanks.

Mr. Scott then arose and in a neat speech moved a hearty vote of thanks to Mr. Hodson for the very efficient work he has done as organizer of the association. Mr. Becker seconded the motion, which was passed to the accompaniment of prolonged applause.

Mr. Hodson thanked the members for their appreciation. He said that one thing which had impressed him in going

from town to town visiting the hardwaremen was the unkindness frequently shown to commercial travelers. He hoped that members of this association would take the matter to heart. He said that now was the time to keep this association going. He advised them not to let up in their efforts because of the success already achieved.

Mr. Hambly next moved, seconded by Mr. Hodson, that the thanks of this association be tendered to Col. MacLean and the staff of Hardware and Metal for their kind hospitality and the work they have done in connection with the convention. Carried.

Finally, Mr. Macnab moved, seconded by Mr. Dandie, that the president of this association be sent as a representative to the next convention of the United States National Retail Hardware Dealers' Association, at the expense of this association, to learn all he could regarding our sister organizations in the States. The motion was unanimously carried.

On formal motion the convention adjourned, every man present agreeing that it will be a very pressing thing indeed which will keep him from the next convention.

THE BANQUET.

Goodfellowship was the ringing note at the complimentary banquet tendered by Hardware and Metal in the American dining room of the King Edward Hotel, Tuesday evening.

After the viands had been comfortably stowed away by the eighty guests, Col. J. B. MacLean, president of the MacLean Publishing Co., publishers of Hardwaer and Metal, who occupied the chair, rose to give the health of the King, which was drunk with unusual fervor.

In proposing the health of A. W. Humphries, president of the Retail Hardware and Stove Dealers' Association of Ontario, Col. MacLean spoke briefly on the advantages of organization, and complimented President Humphries and his associates on the success of their efforts.

Mr. Humphries rose to reply amid the strains of "He's a Jolly Good Fellow," and thanked the members for their kind reception. He felt himself unworthy to occupy the important position to which they had chosen him. He was a bashful man and not in the habit of making speeches (ironical "ohs"). Proceeding, he spoke of his pride in the large gathering present, as representative of the Retail Hardware and Stove Dealers' Association of Ontario. He wished to make it clear that this association was not arrayed against the wholesalers and manufacturers. "We are their good friends," said Mr. Humphries, "and we will try to retain that friendship." Personally, he was trying to do the best he could in organizing the trade. He felt that the retail hardware dealers were almost the slowest people on earth, for all other branches of trade had previously come together and hardwaremen were the last to see the advantages of this. They were just like the fellow who was waiting for something to turn up and nothing did until he went out and turned it up himself. That was the way he felt about the organization of this association, and it was for that reason that he had done the "turning up" by summoning the first convention. Mr. Humphries on taking his seat was roundly applauded.

Jobbers and Manufacturers.

The next toast proposed was to the representative of the Wholesale Hardware Association, Mr. Peleg Howland, president of the Toronto Board of Trade. He said that it was a pleasure for him to be on hand at the invitation of Hardware and Metal, a paper which meets with the approval of the trade both wholesale and retail. He considered that this organization was greatly needed in the Province of Ontario. The association formed by the wholesalers seven years ago, with the object of making dealers better acquainted and securing

Peleg Howland Giving Fatherly Advice to the Retailers.

for themselves more favorable terms from the manufacturers, had been a source of great benefit to him. Furthermore, the retailers had suffered no harm in consequence. There is a great work for a properly organized and properly controlled retail association, which would be able to regulate the wholesaler and manufacturer who unintentionally do harm to the individual dealers. Its members can encourage one another in trade-winning methods, in making collections and shortening credits, which will assist them in looking after their obligations and will all add to their benefits. They can also educate one another to get profit on lines which are now sacrificed. In conclusion, Mr. Howland reminded his hearers that a great deal could be accomplished by persuasion.

W. L. Edmonds, general manager of the MacLean Publishing Co., in a witty speech, proposed the health of Mr. Hardy, secretary of many of the manufacturers' associations.

Mr. Hardy said that, being connected with about thirty or forty trade associations, he knew the difficulties of organization. He thought that the hardware dealers were proceeding in a sensible way in keeping themselves distinct from the other organization of retail merchants. He suggested that members of the wholesale association should also be invited to become members of the retail organization. He, personally, was not in favor of a preferred list, and thought that the departmental stores were not treated as preferred customers by most of the manufacturers' associations. Keep everlastingly at it was his advice, for a man who is opposed to an idea at one meeting may quietly consider it after he has gone home and finally become favorable to it. When the little trouble, at present existing, had blown over, the manufacturers would be glad to talk over any grievances the retailers may have. Mr. Hardy suggested that the newspapers should publish the retail instead of the wholesale prices.

An Enthusiastic New Brunswicker.

W. S. Fisher, of Emerson & Fisher, hardware dealers, of St. John, N.B., was then most enthusiastically toasted, and he made what was probably the address of the evening. It was full of patriotism and belief in the future of Canada, both east and west. He spoke of the various trade associations in the east, and said they would deem it a great pleasure to welcome their western brethren to the salt air, the scenery and fresh fish of the Maritime Provinces. He declared that the hardware dealers were on the right track, in breaking away from a general retail association. In that way they could keep more closely in touch with new ideas. It was a great benefit of organization to get men together so that they will trust each other. Individually, the hardwaremen could accomplish little. It was a case of being "a good thing to hang together—otherwise they might hang separately."

The next speaker was T. L. Moffat, of Weston, who was received as president of the Stove Manufacturers' Association. He expressed his sympathy with the new association and stated that the stove manufacturers would give all the assistance in their power. In their efforts to obtain a uniform price on stoves and to adjust such difficulties as breakages and transportation, the stove manufacturers would stand right behind them. The assessment which the association made on them would be a mere bagatelle in comparison with its benefits. He instanced a case in which the stove manufacturers, through their organization, had been able to have stoves classified as fifth rather than fourth class freight, thus saving thousands of dollars a year. He was glad to see so many young men present, and he wished them every success in this growing Canada.

The Travelers Heard From.

Mr. Humphries then arose to introduce a toast to the Commercial Travelers, who were represented by Mr. N. Wylie. Mr. Wylie in his reply congratulated the secretary and the committee on their success and devoted a few minutes to speaking of the necessity of the commercial traveler in business life of today. In conclusion, he invited the members to visit the works of the Kemp Manufacturing Co. on the next day.

H. T. Hunter, of Toronto, then proposed the Officers of the Association, and in his remarks dealt particularly with the opportunity hardware dealers had of talking quality rather than price. The big hardware stores of every town and city had been built up on this principle.

The Executive Toasted.

W. G. Scott, of Mt. Forest, in reply, referred to the banquet as a happy conclusion to a very active day. He thought the association had started in the right way. It was not formed for the purpose of advancing prices, but it was nevertheless a shame that goods which are the meanest to handle should be without profit. Hardwaremen who were competitors should be able to greet each other affably, and the association would do a great work in this particular. He would like to see the hardwaremen abstain from thinking that jobbers are to be cut out, as a result of this organization, while retailers buy direct. On the other hand, the jobber is the salvation of the retail trade, as he collects the goods and distributes them at a much smaller expense than the retailer could hope to do.

J. R. Hambly, of Barrie, said he had come down to the convention under difficulties, as he had been ill for some days. He spoke of the unanimity existing among the hardware dealers of Barrie, because of meetings held there. Especially was the benefit of this organization felt in the case of customers who wanted reduction for quantities. They could not get it any place in his town, and this strengthened the position of every dealer. His advice to the association was "aim high."

John Caslor, of Toronto, referred to the effort which was made to organize the hardware dealers five years ago, when they had amalgamated with the Retail Merchants' Association. He thought they were on the right road now, and price-cutters would soon be won over.

Secretary Wrigley opened his remarks by referring to a sight commonly seen in California where a hundred insane patients are often seen improving the roadways near the asylum grounds and guarded only by half a dozen caretakers. When wonder was expressed that further precautions were not taken that the guards would not be overpowered, the reply was given: "Oh, there is no danger—lunatics never organize." Mr. Wrigley congratulated the retail hardware and stove dealers of the province for having proven their sanity by organizing an association, adding, further, that the work would not be completed until each county, district or city had its own local association.

The Individual Members.

J. G. Lorriman, of the Montreal staff of Hardware and Metal, in proposing a toast to the individual members of the association, told of the growing feeling among hardwaremen in Eastern Ontario for organization. Frequent calls were made at the Montreal office by these men and co-operation and support was assured by them.

Mr. D. Brocklebank, of Arthur, expressed himself as thoroughly in sympathy with the work that had been done and that was yet to be done to help the hardwareman in his efforts to get living prices.

Mr. Brewer, of Parkhill, was another who was willing to put his hand to the wheel and help along the good cause.

W. S. Fisher, St. John, N.B.,
Who represented the Maritime Provinces at the Banquet.

If we have the proper spirit in our work, said Mr. Peacock, of Toronto, we are bound to succeed and make this organization of the greatest benefit to those in the trade.

D. A. MacNab, of Orillia, spoke of the pleasures of the evening as contrasted with the strife and toil of the morning. He spoke of the way discounts had been reduced during late years and was strongly in favor of arrangements that would give the retailer a larger cash discount. Everyone would benefit by this. It would practically put business on a cash basis, because, if the discount were 10 per cent., the retailer would make strenuous efforts to save it.

J. Walton Peart, of St. Mary's, also spoke briefly, expressing his willingness to do all he could to aid the new association.

W. I. Waggs, of Providence Bay, said he just had to come in when he heard of the convention, and that he would take back his money's worth.

The principle of a larger cash discount was also taken up by C. W. Conn, of Tillsonburg, who said he had paid his rent, light and heat bills out of his savings on cash discounts.

C. F. Moorhouse, of Toronto, said he had been a member of the one time hardwaremen's association and, although it did not meet with the success he had hoped for, he was sure the new one would.

Mr. Humphries proposed the health of Col. MacLean, which was well responded to, after which the meeting broke up with "Auld Lang Syne," sung with all grouped in a circle of fraternity and kinship.

CONVENTION DRIFTWOOD.

The Kemp Manufacturing Co. issued a neatly printed invitation to the delegates to visit their works and see a practical demonstration of the manufacture of their new Diamond ware.

Organizer Hodson was too full for utterance at the convention and banquet. During his travels he contracted a severe cold which threatened to develop into pneumonia. As he had not fully recovered he was content to be more of a listener than a speaker at the convention. But he had done his work beforehand—and done it well.

"Hold the fort, for I am coming." wrote C. Hartleib, of Zurich. The fort was held against all assaults, but Mr. Hartleib did not arrive to reinforce the garrison. He'll be along next time though.

Mr. French, of Clysdale & French, Caledonia, was delayed in arriving on Wednesday owing to the bad wreck on the Wabash railroad near Buffalo.

John Coffey, of Barrie, made an excellent watch-dog. The way he dismissed the travelers who sought admittance was great.

C. E. Noble—"All right! Go on, Worshipful Master."

W. M. Pringle, of Whitby, was unable to attend the convention as he was short handed.

Mr. Davey, of Ingram & Davey, St. Thomas, had recently undergone a serious operation and it was therefore impossible for that firm to be represented.

J. H. Crow, of Welland, wrote that he would be unable to attend as Welland is having a big boom at present and he is very busy.

J. G. Kingsborough, of Little Current, sent down his membership fee, but regretted that his business would not permit his attending the convention.

Sickness prevented W. R. Hobbs, Tillsonburg, from attending the convention.

G. A. Binns, Newmarket, wrote that as his clerk was leaving him on Monday he would be too short handed to leave his business and get to the convention.

H. M. Mowat, Trenton, sent his well-wishes and regrets at being unable to be on hand.

W. Slater, of the F. Hamilton Co., Hamilton, was expected to deliver an address on the window as an advertising medium, but he was unable to get away from his business.

The automobile ride had to be cancelled on account of the damage by fire to the Canada Cycle & Motor Co's big electric tally ho. Afterwards the Gurney Foundry Co. endeavored to arrange the trip for the delegates, but there were not enough cars available to accommodate the delegates, and the trip had to be called off.

F. J. Taylor, of the Western Foundry Co., Wingham, wrote stating that the association was a "long-felt want" and trusting that one of the first acts of the association would be to control and regulate, if possible, the retail prices of stoves and thus avoid a great deal of the cutting of prices which has existed in the past.

J. Walton Peart, of St. Mary's, was one of the young delegates in attendance, but he impressed his personality strongly upon the convention. His report on constitution and by-laws was a model for brevity and completeness. Before the association is many years old Mr. Peart will be swinging the gavel from the president's chair.

To W. G. Scott, of Mt. Forest, the convention owes much. He always chose the right time to speak, and every word told. On the floor of the convention or in committee, Mr. Scott is a power.

President Humphries fully deserved the honors bestowed upon him of re-election to the presidency and as fraternal delegate to the next convention of the National Retail Hardware Association of the United States, which is to be held in Boston next Winter. Firm and fair in his decisions and prompt and businesslike in his actions, Mr. Humphries has proven his ability to fill to advantage the important position he now holds.

EXTRACTS FROM LETTERS.

Purvis Bros., Sudbury: "It has suggested itself to me that the association might be divided into different sections, these different sections to send representatives to a general association meeting in Toronto or some other central place."

Robt. Lillie, Sturgeon Falls: "I think a separate association, where we conduct our own business, would be by far the better way."

C. Richardson & Son, Harrow: "We are heartily in favor of the association and will do all we can to help it along."

James D. Smith, Baysville: "I am entirely in sympathy with the formation of a retail hardware and stove dealers' association, and certainly wish the convention every success."

L. Wale, Stevensville: "I am sorry it will be impossible for me to be present at your first convention, but will say I will agree to any rules and regulations that are made at the convention and will come to the second convention."

A. Ballantyne, Brantford: "I believe in organization and I have no doubt that, if we get the right men as officers, this association will soon have every hardwareman in it."

C. C. Ballantine, president Canadian Manufacturers' Association: "I hope that this first annual convention and banquet of the Retail Hardware and Stove Dealers of Ontario will be most successful, and that there will be many more take place in the future."

Wm. Vallance, of Wood, Vallance & Co., Hamilton: "I trust that the effort to form a retail hardware association will prove successful. Much can be accomplished by organization which cannot be done by individual effort."

Organizer Hodson Whipping the Members into Line.

F. A. Ricard, Verner: "I hope that the convention will be a success, and wish everyone a jolly good time at the King Edward."

Jas S. Lockie, Newton: "I am in perfect accord with the idea of an association,, such as is proposed, being formed, and wish it every success."

Chas C. Lee, Goderich: "Although I cannot be with you in person, I will be in mind."

W. B. Jackson, St. Thomas: "My best wishes are for the success of the association, and that all in the business may be benefitted."

James R. Moore, Richards' Landing: "The convention is a move in the right direction, and I hope a lot of good will result."

W. H. Jones, Ingersoll: "I hope the convention will have a good and profitable time and that their deliberations may result in great good to the Retail Hardware and Stove Dealers' Association."

S. B. McClung: "I wish the retail hardware and stove dealers every success, and hope they will form a strong association such as is needed in Ontario."

F. C. Lariviere, Montreal: "I sincerely regret that my occupations at this present time do not permit me to be amongst my friends of Ontario."

G. H. Clark, Niagara Falls, who expected to attend, wrote: "I believe in organization. I am at present president of the Retail Merchants' Association in this city, but it has not proved very satisfactory in our line and I believe in a separate association, as I think we can work amongst ourselves to better advantage. I might say that all the hardware merchants here have joined the association and paid their fee."

M. Best, of the Best Stove Co., Peterborough, wrote: "I enclose herewith circular just received from the Retail Merchants' Association. I have been a member of this association for some time, but have been unable to see where they have done anything for the hardware merchants outside of some general legislation, and I think it would be more to the interest of the trade if they maintain a separate organization. I am, therefore, filling in the enclosed proxy, but changing the reading."

HAS THE ASSESSMENT ACT BENEFITTED RETAILERS?

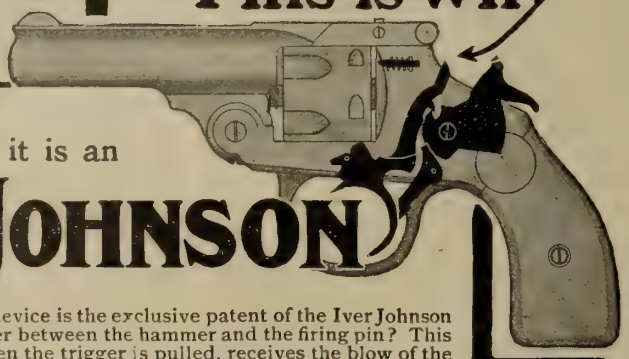
T. N. Dunn, hardware merchant, Ingersoll, who was unable to attend the convention, has forwarded the following letter for publication :

"I notice one of the chief reasons advocated by Mr. Trowern why the Retail Hardware and Stove Dealers' Association should be affiliated with the Retail Merchants' Association is the 'excellent amendment' to the Assessment Act, which has benefitted every hardware dealer more than almost any other line of trade.

"This 'excellent amendment' has just come within $50 of doubling my assessment. I do not feel that it has benefitted me very much although I am a member of the Retail Merchants' Association. I regret very much that I will not be able to attend the convention."

VALUABLE FRIENDSHIP.

Seek the friendship of your local newspaperman. He can help you and you can help him.



You hear little bits of news about people being sick, or intending to get married, or take a trip. The newspaperman wants news.

When you are sending items run in one about yourself, an addition to your store, a change amongst the clerks—anything that will bring you and your store before the public.

The newspaperman will insert them as news, and you will benefit from the publicity.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

A NEW PENINSULAR RANGE.

Clare Bros. & Co., Limited, of Preston, Ont., have added to their Peninsular line a new type of range which is said to be constructed on original lines, and which is made in two styles known as the Ideal Peninsular and the Peerless Peninsular. The ranges are built in two sizes with 18 and 20-inch ovens and can be supplied with either four or six-hole tops with 8-inch or 9-inch covers. They are fitted with heavy covers and centres, large pouch feed, sectional fire back, cemented oven top, nickelled oven rack and duplex grates which can be removed almost instantly without disturbing the linings or waterfront in any way. The provision for removing the grate bars is simplicity itself and must be seen to be appreciated.

New Peninsular Range.

The striking feature of the stove and the one which gives it a specialty in stove construction is the drop oven door which when open completes a shelf flush with the oven bottom upon which the contents of the oven may be drawn out for inspection. This method of construction, which has long been popular on steel ranges, is just as effective a selling feature in these cast iron ranges. The door is balanced with a spring which is attached in such a way that it is kept from contact with the fire.

This range is made with and without a hearth plate. The one without the hearth plate is shown herewith and is known as the Ideal Peninsular, and should be popular with those who have only a limited amount of room in their kitchens. The one with the hearth plate is known as the Peerless Peninsular and was illustrated in our issue of March 24, 1906.

The brilliancy of the nickelling used on these ranges gives them an exceptionally pleasing appearance and the makers consider that with the added attraction of the drop oven door this line is the most desirable they have ever offered.

Do you keep a want list? Have you a record of the goods asked for by different customers, but which at the time you were unable to supply? By all means have a representative stock. Watch the wholesalers' ads. and don't be afraid to write for information.

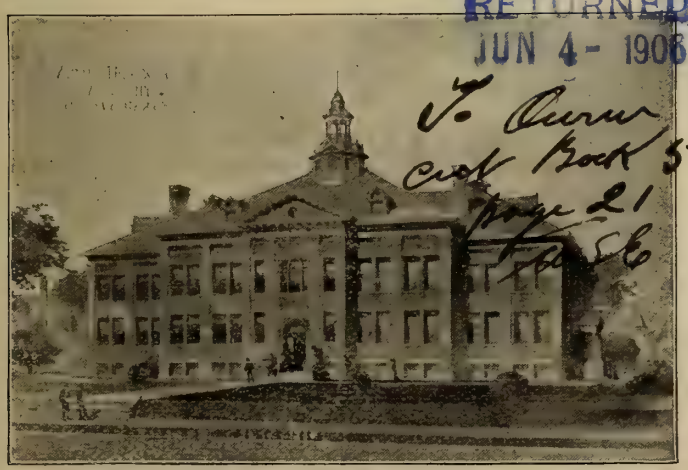
The Walker Sales System

Last February a dealer in a small town who did not expect a range sale for months, sold with the assistance of the Walker Sales System seven Pilot Ranges in eleven days, and a good trade has continued ever since. Others have done better—many have done equally as well.

Our sales department furnished the ammunition, namely, The Walker Sales System, and our manufacturing department furnished the goods:



The Walker Pilot Steel Range

Everybody is satisfied, the customer is pleased with the range, the dealer is satisfied with the profit and speaks highly of our Sales System, and we have been pleased with the orders sent us.

There is an opening in every locality for an aggressive range campaign. We furnish the larger part of the work; your portion takes but little of your time. Let us explain further.

The Walker Steel Range Company, Limited, Grimsby, Ont.

The KELSEY MECHANICAL SYSTEM OF WARMING AND VENTILATING

HIGH SCHOOL BUILDING, MANLIUS, N.Y.

20 CLASS ROOMS AND THE HALLS PROPERLY AND ECONOMICALLY WARMED AND VENTILATED.

MANLIUS, N.Y., April 16th, 1906.

To Whom it May Concern:

The Kelsey (Mechanical) Heating and Ventilating System has been operating in our new High School Building during the past winter. IT IS MORE THAN SATISFACTORY IN EVERY RESPECT. Five Generators, with the aid of the Fans, heat the twenty rooms and the halls.

With the outside temperature below zero and a strong north-west wind, the whole building can easily be warmed to the proper temperature and at the same time secure the required State standard of ventilation in all class rooms and study halls. The rooms are supplied with outside air at all times, when the building is occupied.

With the aid of fans we are able to raise the temperature in a cold room from one to three degrees per minute, WHILE FORCING THE HEAT DIRECTLY AGAINST THE WIND.

In the heat chamber over the Generators is the water tank, holding about five barrels, which serves to moisten the air before it enters the ducts leading to the school rooms.

The Generators are installed in a very satisfactory manner, easy to care for, AND HAVE CAUSED NO TROUBLE WHATEVER FROM ESCAPING GAS

The large heating surfaces of the "Kelsey's" produce a wonderful amount of heated air very quickly.

THIS WINTER WE HAVE CONSUMED FROM 65 TO 70 TONS OF COAL.

In my experience of fourteen years as principal, I have looked much into the heating and ventilating of school buildings, but I HAVE YET TO SEE A SYSTEM SO SATISFACTORY IN ALL RESPECTS AS THE "KELSEY."

I recommend the system.

Very truly,

(Signed) A. S. KNAPP, Principal.

The Kelsey System furnishes large volumes of fresh, pure, properly warmed air, rather than a small quantity of dry, hot, super-heated air, or the re-warming of the same air over and over.

The Kelsey Mechanical System is most positive and reliable as to both warming and ventilating, and with the least possible fuel consumption.

We purpose paying special attention to the proposition of the Healthful, Efficient and Economical Warming and Ventilating of Schools, Hospitals, Churches and other Public Buildings, and will be pleased to submit plans and estimates promptly on request.

HOLIDAY NEXT WEEK.

Advertisers are requested to send in copy for changes of advertisement for insertion in next week's issue a day earlier than usual. This will facilitate matters considerably and allow the publishers to get out the issue without unnecessary delay.

WHAT ABOUT A COMMISSION?

Stalking business organizations is now the favorite political sport on this continent. The political press agent's name for it is "Fighting the trusts." But a trust is anything from Standard Oil to tne Hucksters' Protective Association. A lot of the talk about trade combination and organization is buncome, saturated in ignorance.

The underlying principle of all business is buying and selling at a profit. Buying and selling at a loss is contrary to that principle, and an injury to trade. Sovereign control of an article of commerce carrying with it power of taxation in proportion to the demand for the article is monopoly, is contrary to that principle, and quite, if not more, injurious to trade than selling at a loss.

The trust hunters have not learned to distinguish between organization to prevent selling at a loss and organization to create monopoly. With them all organization save and except that to promote political corruption and graft, is conspiracy. They rush in where angels might wisely hesitate.

The cure must be knowledge of trade conditions applied with honest, common sense. That does not appear to come within the powers of the legally trained judiciary. The rights of trade in relation to the railways required treatment other than could be provided by a court of law, and the railway commission resulted. A trade commission is now needed to deal intelligently with these questions of organization.

QUEBEC WANTS MORE MONEY.

Hon. Lomer Gouin, the Premier of the Province of Quebec, is doing his best to secure an increased subsidy from the Federal Government. In fact he was a prime mover in the concerted action of the various premiers who met at Quebec and agreed together that each needed and were entitled to more money from the Dominion House. However, Sir Wilfrid and his ministers seem to have shown a tendency to evade the question at issue. With his usually strong determination Mr. Gouin took another step and used his influence with the Montreal Board of Trade to get that body to appeal to the Government. They passed a resolution in support of the provincial demands for more money.

Now, whether the action of the Montreal Board of Trade was right or not, it is a fact that whoever gets Government money and no matter how it is spent the money comes out of the people. It seems contrary to economic wisdom that there should be any principle adopted of robbing Peter to pay Paul. The history of the Provincial Government life, in the Quebec case especially, shows many an instance of riotous living. Money had to be raised on two or three occasions, and it was raised sometimes by exorbitant interest-bearing loans which tended to shatter the credit of the province and other times by round-about taxation and it has always resulted in a spendthrift policy. While Quebec is in crying need of money for a better school system, better railways, better public buildings, etc., what will be the result of a Federal subsidy increase? The probabilities are that there is a gap for the money to fill. Then, too, it is a well known human instinct to take an active interest in what one pays for and raises money by effort to obtain. Montreal City Council is at present in the midst of a quarrel owing to the announcement by the chairman of the finance committee that there are funds in abundance to keep the city roads and all its interests in good shape if the patronage system was abolished in the doings of the civic government.

A SPLENDID CONVENTION.

One of the reasons assigned for the failure of the hardware section of the Retail Merchants' Association is that they neglected the opportunities for getting their members together from time to time.

It may be possible for an association whose members have never seen each other to exist, but it cannot be expected to arouse the enthusiasm which a single convention such as that of the present week achieved. Members who came down without any faith in the merits of the association now contend that they will never miss another convention. Still others who frankly confessed that their idea was simply to make an experiment, finally shared the enthusiasm of all and were among the most active in discussing resolutions and grievances.

Members who did not attend the convention may not appreciate to the full the benefits which were derived by the fifty odd who did. But it is certain that many who came down with the idea that the man in the next town was a price-cutter and a pirate, changed their views. On meeting the man in question they learned that he had the same ideals, the same trials and difficulties as they, and they can now respect him, as he can respect them.

Not only have jealousies between dealers in neighboring towns been patched up, but there are even instances of reconciliation of dealers from the same town, who will in future understand each other better, much to their own profit.

One member from a town of about 1,000 inhabitants remarked at the Tuesday evening banquet that he had that afternoon thoroughly enjoyed a long conversation with the son of a competing dealer. But in their own town they have not conversed for many a long day. They will both benefit by this intercourse.

In listening to addresses by experienced business men on subjects of vital interest to the trade, no dealer could help benefitting materially. In the open discussion of such subjects as insurance, the proper storing and display of goods, the collection of small accounts, methods of selling such articles as stoves, and many other kindred ones, the greatest interest was aroused. The result will be an enthusiasm which cannot fail to impress clerks and customers.

But possibly the greatest benefit derived from such a gathering is the intangible one which comes from a break in the monotony of business routine, to mingle and rub shoulders with other men. This is the kind of thing that widens the sympathies and begets inspiration. We do not hesitate to say that every member of the association who attended the convention is a better man, and, above all, a better hardware-man, than he was before.

THE BILL TO AID CO-OPERATION.

Mr. Monk has introduced into the House of Commons a bill to facilitate co-operative banking and trading in Canada. Co-operation in production, marketing and the purchase of breeding stock, machinery and fertilizers, aided and in many cases made possible by co-operative banks, has effected the redemption of the agricultural industry in Europe. In England, where agricultural co-operation is just beginning, co-operative stores in towns and cities have aggregated an enormous trade and have very seriously affected the individual retail interests.

Three conditions here render unlikely any serious attempt at co-operative stores as they have them in England, the comparative thinness of population, the more prosperous condition and higher standard of living of the Canadian working classes, and the department stores.

Agricultural interests might, however, be greatly benefitted by the extension of the co-operative system in the production and marketing of commodities. Anything that benefits agriculture benefits trade. If, however, any retailer thinks the movement a menace to his interests, his business is to send a post card to his representative in the Commons and ask him to oppose the bill.

MERCHANT AS PUBLICIST.

New York telephone users are saving $1,525,000 annually because the Merchants' Association took up the question of rates and after a thorough investigation made an agreement with the company to reduce rates. That was only one of a hundred things the Merchants' Association of New York did last year.

Every business man in Canada should know about that association and its work. The year book just published, an artistic brochure of forty pages, and the membership list, elegant in every typographical detail, is a revelation of what can be attempted and done in regard to matters of public policy by organized business effort. The subjects dealt with last year are too numerous to mention here in detail, but here is the classification of the year book: Public utilities, franchises, domestic commerce, foreign and colonial relations, water supply and insurance, municipal finance, business law, taxation, judicial administration, city transportation, streets and pavements, over-charges by hack drivers, and various subjects.

The association arranged with the railways for special rates to New York for out-of-town merchants during the two buying seasons and 7,000 merchants took advantage of them, including many who had not been accustomed to make purchases in that market.

The association had on January 1 a membership of 1,059, an increase of 330 during the year. The expenses for the year totalled $53,890. They employ a staff of experts. They have a secretary, business manager, editor and statistician and legal counsel. The association work is carried on largely by special committees appointed for the purpose.

Of course such an organization requires a New York to back it; but the work it does for New York, the business men of every town in Canada might be doing locally through the boards of trade.

BANKS AND BUSINESS VENTURES.

Banking methods, like everything else in this progressive age, are undergoing a process of evolution. It is not so very long ago that bankers felt it infra dig to depart from certain clearly defined customs. Like the doctors, they must not advertise for business, while to canvas for customers was almost a sin. These days are departing.

In the United States many of the banks are adopting aggressive and progressive methods of advertising and some of the best advertising that is being done is by the banks. In Canada the spirit of evolution is also abroad. Some of the banks are advertising, and advertising in a way that shocks the decorum of the old-timers. Not only are they advertising, but many of them have inaugurated systematic methods of door-to-door canvas in residential parts of cities for depositors.

It is possibly almost unnecessary to say that this progressive spirit is born of competition. New banks are coming into existence almost every month and in order to get business these are naturally driven to employ more progressive methods than their older confreres.

The business men of the country naturally gain by this more modern condition of affairs. It will not be so difficult for them to get accommodation and they will not have to pay as high a price for that accommodation as is now too frequently the case. The banks get their money from depositors at less than half what they, in many instances, charge their customers for accommodation.

Just as agriculture is the backbone of industrial life in Canada, so the banks are the backbone of trade and commerce. There is in our mind at the moment a certain small town in Canada whose manufacturing industries are the envy of many larger towns. This enviable position is directly traceable to the encouragement which manufacturers who located in that town received from a particular bank whose headquarters were stationed there. There is in fact scarcely an industry there which does not owe its success to the assistance it received from that particular bank. The bank was not careless. It thoroughly investigated the affairs of every client and if his business promised well and the management was honest, enterprising and competent, they lent liberal assistance.

With the development of the modern tendency now in evidence on the part of the banks of this country the experience of this particular town will become more general. There is every reason why this should be so, for like a business man with good prospects, the outlook for the industrial development of this country is most auspicious.

THE GOLDEN RULE.

It's a poor rule that doesn't work as well in business as in other walks of life, and the Golden Rule is not a poor one. But it is undoubtedly forgotten by many a man who has gained a little authority and who enjoys lording it over those who do business with him.

Few men are more frequently the victims of this kind of thing than commercial travelers. No one who has not been on the road can realize the extent to which the traveling salesman is compelled to take insults from the different buyers and proprietors he visits. It is a most difficult thing for him to even secure an audience with the great man, who often deliberately neglects him long enough to make him lose a whole day by missing a train. How would the buyer or merchant enjoy being treated in this manner? Would he like to "kow tow" to every customer who buys goods from him, in the way he expects a traveler to do obeisance to him? Is not the Golden Rule of some value in business life? Even considering the question from the basest standpoint, the merchant should remember that a traveler has many opportunities to benefit him in one way or another.

In pleasing contrast with this all too common thing is the treatment accorded commercial men in one of Canada's finest stores, located in Montreal. Just at the entrance to the office is a sign which reads:

"Travelers are welcome at any time during business hours. Mr. L—— is generally in his office from 9 to 11 a.m. and from 2 to 6 p.m. Foreign travelers will please telephone and make appointment before coming."

There is something for every merchant to learn in that notice. Perhaps this unfailing courtesy serves to explain much of the success attained by the firm mentioned.

MARKET FOR CANADA IN MANCHURIA.

The industrial exhibition being held at Mukden, the capital of Manchuria, is another mark showing the commercial awakening of the Far East. Mukden has a population of about 250,000 and is 120 miles inland from its port, Newchwang.

Although Canada has no exhibit at Mukden some information regarding the trade and commerce of Manchuria may not be uninteresting.

The amount of commerce of Newchwang during the year 1905 was fifty-three million dollars. Of this amount some forty-four millions represented foreign commerce, the balance representing the business carried on between the different points in the Chinese empire, or what might be termed home trade.

The foreign imports of Newchwang amounted to over twenty-two million dollars, and of this amount half was captured by the United States, which means that the United States has shared in the commercial activity of Manchuria as much as all other nations combined who have traded there. The greater portion of these figures represented cotton sheeting, drills, jeans and similar productions from American textile mills, but the amount of wheat flour sent in by the Americans was also of considerable volume. After flour came kerosene oil to the value of $326,875, followed by cigarettes, $313,882, and lumber, $191,889.

These importations may be considered relatively small as compared with the imports of other countries, but it must be remembered that in one year they were increased by twenty per cent., and from this fact can be gathered some idea of the volume of trade that will be done in a few years with Manchuria, which has a population of twenty-two millions.

In connection with the increase of cotton goods importations from the United States it is noteworthy that they were double in 1905 what they were in 1903, while the other imports mentioned — flour, kerosene oil and cigarettes, also showed a remarkable increase in that time.

Now that the war is over and a settled condition prevails in that province, there is certain to be a trade developed there, part of which should be shared by Canada, and in view of the work the Dominion commercial agents have done in other parts of the world—some less important as regards population—Canada with her manufactures and her wheat should not be dilatory in placing a commercial agent at Newchwang, or in other ways seeking to build up this trade.

CANADIAN HARDWARE STORES

No. 2.

The accompanying cut shows the interior of G. A. Binns' hardware store at Newmarket, Ont. The walls and ceiling of this store, which is 25 x 130 feet, are finished with sheet metal, and the stock, as can be seen, is conveniently arranged.

Entering the store, the silverware show case is first met with, and further down upon the same counter is their display of harvest mitts. Other show cases occupy prominent positions farther back on the counter. On the same side is shown the general wall shelving cased in with glass doors where, at a glance, one can see a splendid assortment of tools and shelf goods. The width of the store allows the placing of a row of stoves and ranges down the centre, which can be seen from both sides—a good arrangement. Tables on the right contain a large range of graniteware and other kitchen utensils which can be all taken in at a glance. A feed trough can also be seen close to one of the tables, which shows that no detail of their hardware stock is overlooked. On the right wall shelves are the paints, the appearance of which indicates the large range carried.

In 1892 Mr. Binns entered the stove and tinware business of the late P. S. Wright, and after two years acquired the ownership himself. Ultimately he moved across the street to his present store and added hardware, plumbing and furnaces to his stock. As will be seen from the cut he has now a model store—well arranged and well stocked—the result of continued and well directed effort to keep to the fore in his chosen business. The illustration does not do justice to the depth of the store nor does it show a large stove show room, 25 x 30 feet in size, at the rear of the store.

A good, strong man will make his own opportunity.

CANADIAN HARDWARE STORES, No. 2.—G. A. Binns, Newmarket, Ont.

PRACTICAL PHILOSOPHY.

When the outlook is not good, try the uplook.

Have the courage to appear poor, and you disarm poverty of its sharpest sting.

If a man expects and believes great things of himself, it makes no odds where you put him.

The man who has lived longest is not the man who has counted most years, but he who has enjoyed life most.

If a man were to place himself in an attitude to bear manfully the greatest evil that could be inflicted on him, he would suddenly find that there was no evil to bear.

HARDWARE TRADE GOSSIP

Ontario.

S. Mellon, Hamilton, was in Toronto during the week.

Wm. Head, plumber, of Calgary, spent a few days in Toronto.

Smith Bros. & Co., plumbers, of London, Ont., have dissolved partnership.

J. C. King, of the Warden King Co., Montreal, was in Toronto during the week.

J. B. Hawkins, hardware merchant, of Goderich, Ont., has sold his business to E. P. Paulin.

J. E. Farrell, plumber, of North Bay, called on Hardware and Metal, Toronto, during the week.

F. R. Litster, of Green & Litster, plumbers and heaters, Winnipeg, was in Toronto for a day or two.

J. D. Higginbottom, plumber, of Fort William, has taken into partnership H. R. Sime and D. F. Anderson, both experienced plumbers.

E. C. Boeckh, president and general manager of United Factories, has gone on an extended tour to England and continent for his health. Mrs. Boeckh accompanies him.

The new radiator building being erected by the Taylor-Forbes Co., Guelph, will be three storeys high and 200 by 80 feet. The radiator plant for which this building will be constructed will be the largest plant of its kind under one roof in Canada.

Sympathy generally will be felt for O. B. Henry, of Drayton, Ont., on account of the death of his wife a few days ago. Mr. Henry was for many years proprietor of the hardware business now run by McLaughlin, Sturtridge & Co., of Drayton.

The City of Toronto won the suit brought against them by James Sherlock, plumber, for $390 on plumbing contract at Exhibition buildings. Sherlock claimed to have been delayed by other contractors, and that materials he had to use went up in the meantime.

One of the losers by the fire which destroyed the Western Hardware Co's store at Regina a few days ago, was J. Walton Peart, of the St. Mary's Hardware Co., St. Mary's. Mr. Peart's brother is also heavily interested and one of the most active men in the company.

J. C. Nicholson, manager in Ontario for the Canadian Rubber Co., of Montreal, has been in Montreal for some days on special business at the head office of the company. Mr. Nicholson has been connected with the Canadian Rubber Co. for over twelve years, and at present has jurisdiction over the selling interests of the company from Kingston to Fort William.

F. A. Paulin, late Chicago manager for the India Rubber Co., of New Brunswick, N.J., is now in charge of the tire department of the Canadian Rubber Co. of Montreal. Mr. Paulin is a Canadian by birth, having spent his early years in the carriage trade in Ontario. He has had extended experience during the past twelve years throughout the larger cities of the United States.

Quebec.

The Standard Paint Co., of Montreal, have been incorporated with a capital stock of $150,000.

Archie Macfarlane, Montreal, the well-known manufacturers' agent, is off to Europe for a trip.

C. C. Brown, of Danville, was in Montreal this week seeing his son who is laid up at the General Hospital.

Fred Wilson, of Williams & Wilson, Montreal, sailed on the Virginian of the Allan line on a six weeks' trip to the Old Country.

Among the out-of-town hardwaremen to visit Montreal this week were J. A. Paquin, of St. Eustache, and Theo. Gervais, of St. Johns.

Calling on the Montreal trade this week were Charles Milot, of St. Monique; C. E. Keeler, Iroquois, Ont., and John Dittrick, Perth, Ont.

H. H. Replogle, recently with the Diamond Rubber Co., Akron, Ohio., is now manager of the belting department of the Canadian Rubber Co. Montreal.

George R. Nimmo, of the traveling staff of the Canada Paint Co., visited Montreal this week, having returned from a successful trip through the west.

Freres Beauvais, hardware merchants, Montreal, have dissolved partnership, and the business will be continued by Alcede E. Beauvais and J. P. B. Beauvais.

The Canada Paint Co., have been compelled, owing to increase in trade in the west, to increase the capacity of their Winnipeg factory. The engineers are working on new plans for the addition.

Charles Dietrich, of Galt, regaled his experiences in San Francisco to many interested Montrealers this week and following the old rule that it is an ill wind, etc., he has received a fine lot of good advertising for his firm.

Thos. Pink, head of the large lumber supply manufacturers of Pembroke, was welcomed in the Montreal trade this week. Mr. Pink's trade is constantly widening and he is classed among the most enterprising business men of the country.

The handsome executive offices of the Canadian Rubber Co. of Montreal, corner Papineau avenue and Notre Dame street, are being considerably added to, and when completed will be, perhaps, the handsomest suite of business offices in Montreal.

P. R. Cumming of Renfrew, was in Montreal during the week. The popularity of the products of the P. R. Cumming Co., of Renfrew, is steadily growing in the trade. They have been conducting a campaign of advertising which is a credit to the firm.

H. McCulloch, of Galt, was at the Windsor Hotel during the week. Ross & Greig, two well-known Montrealers, have opened neat premises on St. James street as agents for Goldie & McCulloch, of Galt, and also representing several other good manufacturers.

Western Canada.

J. Gilhuly, of Arden, Man., was in Winnipeg this week on business.

Reports from Caron, Sask., state that a hardware store is needed there.

C. W. Sheppard, tinsmith, Fernie, B.C., has been succeeded in business by A. Hamilton.

Arcola, Man., hardware dealers have announced their agreement to close at 7.30 each evening.

J. Skelding, hardware merchant, of Neepawa, Man., was in Winnipeg this week visiting the wholesale houses.

The Nelson Iron Works Foundry, conducted by A. J. Honeyman, will be operated in future by E. A. Isaacs.

The Forbes Hardware Co., of Vancouver, have been succeeded in business by the Forbes & Van Horne Co., Limited.

Merrick, Anderson & Co., wholesale hardware merchants, Winnipeg, have been incorporated as a joint stock company.

E. A. McBain, manager of the Manitoba Hardware & Lumber Co., of Reston, Man., was in Winnipeg last week on business.

Chas. S. Archibald, of the Nicholson File Co., Port Hope, Ont., was in Winnipeg last week on his return east from a trip to the Pacific coast.

The Western Hardware Co., of Regina, suffered heavy loss by fire last Sunday morning, the big store being completely destroyed. The company will rebuild at once.

From Victoria the death of Wm. Munsie is announced. He was connected with many British Columbia industries and was the founder of the Albion Iron Works there.

Spencer Withrow, who for some time has been in the hardware department of Merrick, Anderson & Co., Winnipeg, left last week for Fernie, B.C., where he has secured a position with the C.P.R.

C. D. Waldon, sales manager of the Pease-Waldon Co., returned to Winnipeg on Monday from an extended trip in the west to Regina, Lethbridge, Calgary, Red Deer, Edmonton and other western towns.

R. J. Younge, sales manager of the Canadian Rubber Company, Montreal, is at present on an extended tour in Western Canada in the interests of this company. Mr. Younge has visited all sales branches and agencies in the west, and is also calling on the trade in all sections west of Winnipeg. He will return to Montreal about the beginning of June.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 78)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Antimony—Another advance of ½c.
Tin—Still advancing. Up to 52c.
Pig Lead—Advance to $4.45.
Paris Green—New prices issued tentatively.
Metals—All very firm radiating from tin advance.
Turpentine—Drop of 2c.
Linseed Oil—Drop of 2c.

TORONTO.

Solder—Quotations have gone up again to 30 and 26c.
Ingot Tin—Now selling at 50c.
Antimony—1c. increase. Now 27½c.
Tin Plate—An advance of 25c. has been made.
Galvanized Sheets—All gauges of "Gordon Crown" brand have been advanced 25c.
Old Material—Tea and heavy lead have advanced 25c. per 100 pounds.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 18, 1906.

Rush marks all branches of the trade. Unprecedented and marvellous are words used to describe the business and tired clerks are engaged on overtime to fill the Spring orders now in full swing. These orders from retailers all over the district are many of them repeats, so that the stocks have been disposed of readily.

Builders' supplies are being delivered freely and the demand is heavy for cement and kindred lines. Activity in construction is decidedly strong, in fact, it was stated this week that in Montreal alone there has never been seen such an aggregate of new buildings going on at one time.

AXES—A good trade is being done at steady prices. We still quote: $7.60 to $9.50 per doz.; double bitt axes $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—Our prices are: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—Conditions are unchanged and we are still quoting $4.25 for Cold Blast.

RIVETS AND BURRS—These goods are being shipped heavily by the jobbers here. Our prices are: Best iron, rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets, with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—The latest reports state that the hay crop will be light. Still hay wire is selling freely. It is expected that a large business will be transacted. We still quote: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash; f.o.b., Montreal.

MACHINE SCREWS—The turn over is said to be very good and discounts remain as follows: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—There is nothing new to remark in this branch of the trade. Quotations are unchanged, discounts being given as follows: ⅜ and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 and 5 per cent.

HORSE NAILS—Business is normal and discounts unchanged. We still quote: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—Our price remains: $2.15 per keg f.o.b. Montreal.

CUT NAILS—Wholesale houses are experiencing the regular demand for these goods. The price given is $2.20 per keg f.o.b. Montreal.

HORSESHOES—Sales are large and prices quoted are as follows: P.B. new pattern, base price, $3.50 per 100 lbs.; M. R. M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—Naturally, this is the season for all kinds of games. All accessories to sport of all descriptions are selling freely and likely will continue to do so for some time. Ammunition and guns are considered in this season also, and there are numerous inquiries with a steadily increasing demand all over.

BUILDING PAPER—These lines are selling rapidly and much activity is in evidence inasmuch as elsewhere is quoted a reference to the astounding life of the building trade generally.

CEMENT AND FIRE BRICK—The call for cement and firebrick is remarkable, to say the least, and orders are coming in from various parts for prompt shipment. Our quotations are as follows: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. "Lafarge" (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21; American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—We give the following prices: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—Repeat orders are coming in from all parts of the country and shipments are being made very freely. We give the following prices: American Twin, 2 qt. $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—This is another line in which repeat orders are being received. The price remains: $1.45 per hundred square feet.

BINDER TWINE—No change in conditions is reported.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, May 18, 1906.

There are no price changes to record this week. Business is easing off a little among the jobbers, but small sorting orders in Spring lines are beginning to come in which would indicate that through the country the stocks of these goods are beginning to move.

Sporting goods have been a leader during the past couple of weeks. Fishing tackle has been exceptionally good. Some ammunition has been sold, but it is early yet for much to be done in this line.

Builders' supplies are keeping up well, many merchants having light stocks on account of the open Winter.

AXES AND HANDLES—The usual amount of trade is being done.

CUTLERY AND SILVERWARE—These lines are selling well for Fall delivery, and considerable business has been done for June.

SPORTING GOODS—The cold snap has given a little setback to sporting goods, but small orders continue to come steadily.

WASHING MACHINES—Trade is fairly active at present.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; ¾ inch, $3.95; 7-16 inch, $3.80; ½ inch, $3.65; 9-16 inch, $3.55; ⅜ inch, $3.45; ¼ inch, $3.35.

EXTENSION AND STEP LADDERS —Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

POULTRY NETTING—This line continues to sell well all over the province.

GALVANIZED WIRE — We quote: $2.17½ f.o.b. Cleveland.

BARB WIRE — Prices remain the same. We quote: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE — (Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS——No further change in prices has been made in nails. We quote: $2.05.

CUT NAILS—The usual trade continues to be done.

HORSENAILS—The usual trade continues to be carried on. No price changes.

HORSE SHOES—Trade shows up well in horse shoes. Our quotations are as follows: P. B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

SADDLERY—Trade is reported to be active in all lines.

RIVETS AND BURS—The usual amount of business continues.

SCREWS—All lines are selling well at present. No price changes.

BOLTS AND NUTS—Prices remain firm on all lines, with a steady trade.

CORDAGE—We quote as follows: On binder twine, 500 feet, 10c. lb.; 550 feet, 11c. lb.; 600 feet, 12c. lb.; 650 feet, 13¼c. lb. Golden Crown, 500 feet, 9¾c. lb. On Gold Medal Brand (imported), 600 feet, 12¼c.; 650 feet, 13¼c. Discount for car lots: Manila, 15c.; British manila, 11½c.; sisal, 10½c.; double lathyarn, 10½c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16½ to 17c.; cotton waste, colored, 6¾c.; white, 9c.

CEMENT—Cement continues to be called for in large quantities. We are quoting as follows: For carload orders, f.o.b., Toronto, Canadian Portland, $2. For smaller orders ex warehouse, Canadian Portland, $2.15 upwards.

FIRE BRICK—There are no changes to record. English and Scotch firebrick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27½c. to 35c.

HIDES AND WOOL — The market situation is practically unchanged. Calf skins are most in evidence. Tallow is 1-4c. and wool 1c. higher.

Hides, inspected, steers, No. 1		0 11

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 18, 1906.

It is a case of no stop to the advance of tin and antimony. They dominate the trade and radiating from them is the natural firming up of many other lines. The much ridiculed cry of 50 cent tin is here in earnest, in fact, to-day we quote 52 1-2c. The probabilities are that it will be higher even, so that the optimists had better take heed.

Small stocks of antimony are held firmly and the price has again risen. We quote 27 1-2c. and the tendency is still towards further advance.

Face to face with the strength of tin is the possibility of advance in zinc and tinned iron, also galvanized sheets.

Pig lead has jumped up and is now selling freely at $4.35 to $4.45, and copper has risen half a cent.

The trade is anxiously watching for the advance of tin plates, so it will be wise for all buyers to be on the alert for such a move.

In fact, the general outlook in the metal market is strong of tone with a tendency to advance all around. No declines may be expected at all.

CANADA PLATES—Our prices remain as follows: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75; galvanized, 52's, $4.10; 60's, $4.35.

COPPER—Sales are very satisfactory and price is holding its own, while some dealers are expecting an early advance. For the present we quote: Ingot copper, 21c. to 21 1-2c. Sheet copper, base sizes, 25c.

INGOT TIN—Another advance, as noted in the foregoing. Current prices are 52c. and 52 1-2c.

PIG LEAD—A stir has taken place and a slight advance accompanied it. We quote: $4.35 to $4.45 per hundred pounds.

PIG IRON—Prices remain as follows:

"Dom.," No. 1 $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered Montreal
" No. 2	19.00	" "
" No. 3	18.50	" "
" No. 4	18 00	" "
Londonderry	20.50	" "
Carron No. 1	22.00	" "
" (special)	21.00	" "
Summerlee No. 1	22.00	" "
" No. 3 (soft)	20.75	" "
Clarence No. 1	18.50	" "
" No. 2	17.65	" "

BOILER TUBES—We quote: British and American tubes, 1½ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15¾c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our prices are: Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.

MERCHANT STEEL—We quote as follows: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.17½ and upwards; square harrow teeth, $2.27½. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING — Our prices remain: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—There are large inquiries in the hands of the local merchants and prospects are that the season's business will be large. Our prices are as follows: Queen's Head, 28 gauge, $4.35; 26 gauge, $4.10; 22 to 24 gauge, $3.85; 16 to 20 gauge, $3.60; Apollo, 28 gauge, $4.20; 26 gauge, $3.95; 22 and 24 gauge, $3.70; 16 to 20 gauge, $3.65; 22 to 24 gauge, $3.70; 16 to 20 gauge, $3.45; Comet, 28 gauge, $4.15 to $4.45; 26 gauge, $3.90; 22 and 24 gauge, $3.60; 16 to 20 gauge, $3.45; Bell brand, 28 gauge, $4.30 to $4.35; Fleur-de-Lis, 28 gauge, $4.20; 26 gauge, $3.95; 22 and 24 gauge, $3.70; 16 to 20 gauge, $3.65; 22 to 24 gauge, $3.70; 16 to 20 gauge, $3.45; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; in less than case lots, 25c. extra.

BLACK SHEETS—We give following quotations: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

ANTIMONY—One or two of the local firms have small quantities of antimony in stock on which they are quoting the remarkable price of 27 to 27 1-2c. per lb.

TIN PLATES—As a result of the continued advances of ingot tin it is thought that present prices on plates cannot long be maintained. There must be an early advance, but prices now current are: Cokes, base size I C 14x20, $4; charcoal, base size I C 14x20, $4.25.

TERNE PLATES — Prices remain steady and it is expected that a move upward will result when tin plates have advanced. We are now quoting $6.85.

INGOT ZINC—The market continues somewhat firmer in tone, with the price steady at 6¾c. to 7c.

SHEET ZINC—An advance has been declared on the local market and we are now quoting $7.75 in casks, $8 in less than casks.

SHEET LEAD—We quote as follows: 2½ lbs., 5½c. by the roll; 3 lbs. and heavier, 5¼c. by the roll; small quantities 25c. per hundred lbs. extra.

BAR IRON—We are still quoting: $2.05 f.o.b. Montreal.

OLD MATERIAL—The demand keeps up and a good trade is reported. Local dealers are quoting higher prices on these goods. Our quotations are as follows: Copper wire, 15½c.; light copper, 14½c.; heavy red brass, 13½c.; yellow brass, 10½c.; light brass, 7½c.; lead, 3¼c.; zinc, 4c.; machinery cast

scrap, $13.50 ; wrought scrap, $12 ; stove plate scrap, $11 ; mixed rags, $1 to $1.20 per 100 lbs. ; old rubbers, 7¼c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, May 19, 1906.

Tin has shown more of a fluctuating character this week than last, when the tendency was continually upward. But the price generally shows nothing of a decline and fifty cents is now asked by some dealers. There is the same scarcity that has been felt all along. There is no lessening of the output of tin, but its use has been steadily on the increase.

English tin plate has also been advanced 25 cents on the 100 pounds by some, and Gordon Crown galvanized sheets have been advanced 25 cents on all gauges. Manufacturers who re-dip made-up ware also feel that an advance will have to be made in these goods, and perhaps on other lines affected by the rise in ingot tin.

Lead is stronger and active. This week a further advance of 10 cents per 100 pounds has been made on English lead.

Antimony is still on the upward movement and quoted at 27½ cents. The fact that Cookson's antimony, which governs prices, has been largely contracted for by the Russian Government is largely responsible for this.

With the exception of lead, old metals remain the same. Both tea and heavy lead have advanced 25 cents on the hundred pounds.

PIG IRON—The market shows considerable strength this week with a slight advance on Middleboro. Other lines same as previous quotations. We quote: Radnor at furnace, $30 ; Hamilton and Midland, at furnaces, No. 1 $21, No. 2 $20.50 ; Londonderry, f.o.b. Toronto, No. 1 $22, No. 2 $21.50 ; Middleboro, $21.50.

BAR IRON—There are no changes in prices, but the market is very firm at $2.15 base, f.o.b., Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Fifty cents is now asked, and although the market has been irregular for a few days, the tendency is still upward.

TIN PLATES—The expected advance on tin plate has been made. An increase of 25 cents over last week now obtains. We are quoting : Cokes, base size, 14x20 $4 ; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS—An advance of 25 cents has been made on Gordon Crown sheets. Other brands remain the same. We quote, 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. Buying is fairly active and quotations 23c. to 24c. per pound.

BOILER PLATES AND TUBES — The demand is steady and we continue to quote : Plates, per 100 lbs., $2.35 ; heads, per 100 lbs., $2.60 ; tank plates, 3-16 inch, $2.45 ; tubes, per 100 feet, 1½ inch, $8.50 ; 2, $8.70 ; 2½, $10.50 ; 3, $12 ; 3½, $15.80 ; 4, $20. Terms, 2 per cent. off.

LEAD—English pig is strong and shows an advance of 10 cents. Canadian lead remains the same in price. We quote : Canadian pig lead at $4.40 and English pig at $4.75 per 100 lbs., with bar lead at $5 per 100 lbs.

ZINC SPELTER—Prices are firm and business good. We quote : 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

COPPER—The market continues firm and unchanged. We still quote : Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

ANTIMONY—The tendency is still upward, and another cent advance has been made. We now quote 27½c. per pound.

OLD MATERIAL—All metals are active with prices generally the same. 25c. advance is quoted on lead. Dealers' buying prices are as follows : Heavy copper and wire, 15½c. per lb. ; light copper, 13¾c. per lb. ; heavy red brass, 13¾c. to 14¼c. per lb. ; heavy yellow brass, 11c. per lb. ; light brass, 8½c. per lb. ; tea lead $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs. ; scrap zinc, 4¼ to 4½c. per lb. ; iron, No. 1 wrought, $11 ; No. 2 wrought, $3 to $5 ; machinery cast scrap, $13.50 to $14 ; stove plate, $10 ; malleable and steel, $5 ; old rubbers, 7c. to 7¼c. per lb. ; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Quotations remain the same as follows :

Anthracite in cars at bridges, egg, stove and nut, $5.50 ; grate, $5.25 ; pea, $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines : Lump, $1.50 ; 3-4 inch, $1.40 ; run of mine, $1.30 ; nut, $1.25 ; N. P. and S., $1 ; slack, 75c. ; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges : 1¼ inch, $2.60 ; ¾ inch, $2.50 ; mine run, $2.40 ; slack, $2.25.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, May 16, 19 6.

PIG IRON—Cleveland warrants are quoted at 50s. 10½d. and Glasgow standard warrants at 50s. 8d., making prices as compared with last week 10d. higher for Cleveland warrants and 8d. higher for standard warrants.

TIN—Spot tin opened steady at £212, futures at £205, and after sales of 240 tons of spot and 500 tons of futures, closed weak at £207 10s. for spot, £200 for futures, making price compared with last week £10 5s. higher on spot, and £11 7s. 5d. on futures.

COPPER—Spot copper opened easy at £86 15s, futures £86 2s. 6d., and after sales of 150 tons of spot and 650 tons of futures, closed easy at £86 5s. for spot, and £85 12s. 6d. for futures, making price as compared with last week £2 10s. lower on spot and £2 15s. lower on futures.

LEAD—The market closed at £17 7s 6d. making price as compared with last week 17s. 6d. higher.

SPELTER—The market closed at £27 2s. 6d., making price as compared with last week 15s. higher.

U.S. IRON AND STEEL MARKETS.

From the Iron Age, May 17, 1906.

The most striking news of the week is that coming from Chicago relating to steel rails for 1907. It is stated that the total new tonnage for 1907 thus far booked foots up to 562,000 tons. It is estimated that the Illinois Steel Company will have to carry over from this year to next about 80,000 tons.

A very fair amount of business was also placed with the rail mills for delivery during the current year. This includes 15,000 tons additional for the Chesapeake & Ohio, 6,200 tons for a Louisiana road, 6,000 tons for the Oneida Railroad and 5,000 tons for the Nickel Plate.

A widespread struggle, which may have its serious influence upon the consumption of pig iron, is that between the founders and molders in Chicago, Milwaukee, St. Paul, Cleveland, Buffalo, Scranton and Boston. There may be further additions to this somewhat formidable list. Pittsburg may be involved, demands having been made.

There has been some fair buying of foundry iron at lake points, in New England and in the Philadelphia and New York districts. But in the Central West what little business has come up has been taken away from southern furnaces, who have for some time been apparently indifferent to sales. The leading interests have maintained their agreement to hold for the basis of $14 at Birmingham for No. 2.

The market for steel making irons is practically swept clean up to the middle of the year, with an unsatisfied demand. In the east some sales of round lots of basic have been effected and there are some good inquiries in the market. These include one lot of 10,000 tons and another of 10,000 to 15,000 tons.

There is comparatively little new work coming up in the heavier lines, like structural material and plates. The dissatisfaction of certain important groups of consumers of bars continues and may lead to some concerted action on the part of the mills.

There is a heavy run of new business in the merchant pipe trade and the sheet mills are firmer, the demand being very heavy. The enormous advance in pig tin, now selling close to 50 cents a pound, is a serious calamity to the tin plate industry, since it must cause an advance in prices and may restrict consumption.

The producers of cast iron pipe are under an enormous unparalleled pressure from buyers of small lots for prompt delivery.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, May 17, 1906.

The record price set by tin during the past week is expected to have an early effect upon the tin plate market. Three advances in the price of tin plate during the last eight months have been occasioned by advances in steel. The present inability of mills to provide an adequate supply of sheet and tin bars, coupled with the advance in tin which amounts to 35 cents per box of tin plate, seemingly justifies higher prices for the latter product. Sheets are also in such brisk demand that an advance is being considered and already independent mills are obtaining premiums for early deliveries. In this line the San Francisco demand is heavy and municipal improvements at Philadelphia and Brooklyn will call for some 40,000 tons.

Rail sales continue at an enormous rate. It is estimated that 1,000,000 tons of steel rails for 1907 delivery are under negotiation and that fully half that tonnage has already been placed.

Labor difficulties, especially in the foundries, are having an important effect on the iron market at present and especially in the Chicago district weakness has developed, Southern irons sagging from 25 to 50 cents per ton. Basic iron is in good demand and Bessemer iron is extremely scarce especially in the Pittsburg district where a large consumer was unable to secure a lot of 20,000 tons for June and July delivery.

The ten days' delay in ore shipments, occasioned by the longshoremen's strike, is not expected to have any material effect on the total shipments of the season. Already the crowded harbors along the lower lakes are being well cleared and in the probable absence of further troubles with labor on the lakes shipments will proceed at an enormous rate. The amount of ore on dock May 1, 1906, was 1,791,090 tons, the smallest tonnage on dock May 1 since 1900. The total amount of ore moved over Lake Erie docks from furnaces in the full year ending May 1, 1906, was 28,984,358 tons against 20,057,070 tons for the preceding year.

British Columbia Trade News

Vancouver, B.C., May 11, 1906.

The lumber manufacturers continue to print revised price lists, the last being issued May 3rd. There has been some alteration or increase in list prices nearly every month this year, and from all indications, the inclination of the millmen is to tilt the limit a bit further yet. The unprecedented demand for lumber in the Canadian Northwest, the scarcity and high price of logs, which have continued to go up instead of fall in the market, and the big California demand as a result of the San Francisco disaster have all been factors in causing the market to increase. The possibility of competition from Washington mills in the Northwest is very much less this year, as lumber demand is just as keen in the U.S. markets as it is in Canada.

Logs are now quoted from $8 to $12 per thousand, which is a higher price, even, than prevailed in the early part of the season. Usually the price of logs goes down as the season advances, because the fine weather permits of camps being operated to the full extent. This year no considerations seem to have any bearing on price.

* * *

The British steamer Chiswick is loading lumber at B.C. ports this week for the United Kingdom. She completed taking one and a half million feet at Hastings mill, Vancouver, and is now at Chemainus, Vancouver Island, where she will take on another one and a half million feet. This three million cargo is one of the largest lumber cargoes ever taken from B.C. ports.

British ship Beacon Rock, with cargo of hardware, glass and cast iron pipe from Liverpool for B.C. ports is discharging at Vancouver this week. Through damage received in a storm in the South Atlantic, the Beacon Rock had to put into Port Stanley, Falkland Islands, for repairs. It took over ten months to complete the voyage, the vessel having sailed from Liverpool in June of last year. The metals included in the ship's cargo, especially bar iron and steel, etc., are worth a good deal more money to-day than when the shipments were made.

* * *

Shipments of tinplate and cannery supplies for up-coast canneries are very active at present, every vessel in the coastwise service taking out full cargoes each trip. The Venture this week took over 400 tons of freight from Victoria and Vancouver, included in which was 100 tons of tinplate for Skeena river and Rivers Inlet.

* * *

Boundary mines and smelters handled 430,000 tons of ore for the first four months of the year. The Granby smelter, B.C. smelter, and Dominion Copper Co.'s smelter, the three plants which reduce ores of the Boundary mines, have been working almost to full capacity all year. In coast mining, prospects are very good. The opening of the Portland canal mining district last year is to be followed by vigorous development this season. In Skeena river district, northern B.C., the Telkwa Valley is covered by mining locations, and one or two heavily capitalized syndicates are preparing to spend large sums of money to prove the extent of their holdings, which are in low-grade copper ore of promising character. One of these companies, the Telkwa Mining, Milling & Development Co., is prepared to build an 80 mile line of railway, if necessary, to bring its ores to the coast.

The Similkameen district is to have its two lines of railway, the C.P.R. Nicola branch, and the Great Northern's V. V. & E. extension from Midway, both completed and in operation this season. At present the greatest attention is being paid to the opening of farming lands by the building of this road, but the biggest development is bound to be in the placing of several valuable mining properties, notably the Nickel Plate, at Hedley, on the list of shipping mines.

* * *

While railway construction has not yet reached this province in the same way that it has begun on the prairie portions and east to the Great Lakes, the fact that both the G.T.P. and the Canadian Northern are rushing work on construction in that part of the Dominion is having a marked effect on business. The demand for lumber for railway construction on the prairies has already been noted, and in this alone the province is benefiting. The indications that construction will not begin in this province this season on the G.T.P. have not deterred activity in movement to those portions of the province which railway construction will develop. The prospecting of B.C.'s undeveloped resources has never before been undertaken on the scale of this season's plans. When railway building begins the advance here will quite equal the wonderful progress being made in the new provinces of the Canadian Northwest.

* * *

The return of Mr. J. Buntzen, managing director of the B.C. Electric Railway Co., from England, where he has spent the Winter, is marked by many announcements of electric development and extension. The B.C. Electric Railway Co. owns and operates all the electric railways in the coast cities and also owns the Vancouver Power Co., a subsidiary concern operating a water power plant for the generation of electric energy. The announcements made include extensions in the city of Vancouver as well as in North Vancouver, where the company has lines now under construction. The most interesting announcements have to do with development of rural electric lines, mainly in the lower Fraser Valley. Here it is the intention to extend a line on the south side of the Fraser river from New Westminster to the Gulf of Georgia, crossing the rural district of Delta and reaching the town of Ladner. A ferry service is to be placed across the Fraser river connecting Ladner with Steveston on the north side of the river, which point is already reached from Vancouver by the B.C. Electric Railway Co.'s Lulu Island line. This will make a complete circuit, as the first urban line, that from Vancouver to New Westminster has been operated for years. Another line is to be run from New Westminster to Port Moody, the old terminus of the C.P.R. at the head of Burrard Inlet. The statement has also been made that the C.P.R. will arrange with the B.C. Electric Railway to operate the New Westminster branch now run by steam from Coquitlam Junction to the Royal City, and that the projected Port Moody line will be finally extended into Vancouver.

On the south side of the Fraser river the C.P.R. now owns a charter for an electric line to Chilliwack, some seventy miles up the river, while the Great Northern has also a charter in the same locality on which the V.V. & E. Railway is said to be intending immediate construction. The fact that the B.C. Electric Railway has already under lease the Lulu Island line of the C.P.R. is given as base from which the statement is made that the C.P.R.'s Chilliwack electric line is to be constructed and operated by the former company.

The Stave Lake Power Co., now controlled by Hill interests, is being developed this Spring, and it is said the Hill connections in the lower mainland are to be operated by electric power generated at Stave Lake.

Hardware and Metal Conditions in Manitoba.

MarAet quotations corrected by telegraph up to 12 a.m. Friday, May 18, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

Prices are steady this week, there being no quotable changes of any importance. Solder is very firm at the recent advance owing to the high price and scarcity of tin. If these conditions continue, higher prices for tinware are predicted.

SCREEN WIRE CLOTH — Quoted at $1.55 per 100 square feet.

LANTERNS—The lantern market is still uncertain, but as sales at this season are not large, the trade are showing little interest. Quotations are as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE—Prices are steady. We quote: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS—Revised list and discounts are now as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅜ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ¼, $7.20; ⅝, $4.60; ½, $4.30; ¾, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS—Discountts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS — The discounts from list prices are 45 and 5 p.c.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—The list on "Irwin" auger bits is now the same as on common bits. Discount on "Irwin" is 47½ per cent., and on the common bits 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES — The price is now 1¾c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 p.c.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—As noted last week, the price has been advanced $3 per dozen. We quote: Royal Canadian, $33; R.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—As noted last week, the price has been advanced to 25c. per lb., and this quotation is firmly maintained owing to the high price of tin. Block tin is quoted at 45c. per lb.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Price has been reduced ½c. per lb. Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC. — We quote as follows: Cartridges, Dominion R.F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33½; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.00; chilled, $7.50; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—We quote: Bar iron (basis), $2.70; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—The price is steady at the recent advance to $5.00 per cwt. for small lots, with a reduction of 25c. per cwt. on ton quantities.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are steady. We quote: Silver Star, per gal., 21½c.; Sunlight, 22½c.; Eocene, 24½c.; Pennoline, 25½c.; Crystal Spray, 24½c.; Silver Light, 22½c.; Gasoline, 70-72 (engine), 25½c.; in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE —Linseed oil is steady since the recent reduction. We quote: White lead, pure, $6.75; bladder putty, in bbls., 2 1-2c.; in kegs, 2 3-4c.; turpentine, pure, in barrels, $1.07; less than barrel lots, $1.12; linsed oil, raw, 64c.; boiled, 67c.

C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75;91 to 95,

New Brunswick Trade News

Halifax, N.S., May 15.

The hardware trade is very quiet at present, the Spring rush being pretty well over, and orders are now coming in very slowly. Collections continue good. Prices are firm in all lines. The sales of tin plate, barbed and plain wire and sheathing have been very heavy this season. Glass is now in good demand and is expected to continue, as building operations promise to be brisk. Jobbers decline to quote prices on glass, owing, they say, to the unsettled condition of the market. Zinc is quoted at 7 3-4c. for casks, and 8 1-4c. for smaller lots. Tin plates IX charcoal are $5.00 to $5.25; I.C. charcoal, $4.25 to $4.50; I.C. coke, $3.85 to $4.00. Ingot tin is very firm at 44c.,a nd bar iron is worth $2.25 for medium quanitites. Black sheet iron is selling at $2.40 for 24 guage. Nails are the same, $2.25 for wire and $2.40 for cut, base. The price of galvanized iron ranges from $4.00 to $4.25. Pig lead is $5.50; sheet lead, $5.75, in rolls, and $6.25 in smaller quantities. Cement is $2.15; turpentine, $1.10; raw oil, 60c., and boiled 63c., in barrel lots. C ordage and white cord are very steady.

PRESTON, ONTARIO

EFFECTIVE ADVERTISING

A department devoted to the improvement of Retail Advertising. The editor of this department will be pleased to answer questions on advertising and review any advertisements submitted to him.

HINTS.

In your newspaper ads., circulars, etc., give lawn goods great prominence.

If your stock is going slow try some of the "schemes" to be found on this page. They have all been worked successfully by many dealers. Also try specialty advertising after the style shown on this page.

In general ads. don't forget to bring to the fore smallwares, even though there may be no particular demand for them. But with seasonable goods you should strike while the iron is hot. Quick turnover is ideal retailing. And that can only be secured by aid of the press and the various trade-tempters proven to be workable and not expensive.

TRADE-TEMPTERS.

Here's the way a Texas hardwareman announced his clearance sale: "Free balloon ascension! Boys! Girls! You'll have to hurry. On the opening day, and on each Saturday of our sale, at 12.15 p.m., we will send up a number of balloons from the street in front of our store. To each balloon will be attached a tag calling for some article of value out of our store. The person returning the tag gets the article free."

* * *

The following suggestions have been tried by a Canadian dealer and found to be successful:

"An hour's sale! Tag several articles in the store after the following style: 'The price of this lamp is now ninety-five cents. Next Saturday from 10 to 11 o'clock we will sell it for sixty-five cents.'"

"These china dishes are now selling for fifteen cents each. On Saturday at 10 o'clock the price will be only nine cents. No more than six to a customer."

"Fill a window with certain articles and have a sign reading: 'You certainly get your money's worth when you get one of these articles for thirty cents. We're selling them just now for twenty cents.'"

* * *

Here is how an Ohio man does it: "Girls, just look this kitchen shower over and see if you would not like one. It will be free to the bride, so get busy. Twelve useful articles for the asking. Boys, why don't you get busy also? Just think what you get thrown in with the license—enough cooking utensils to go housekeeping free! Just let us know who the girl is and we will send the articles to her. Remember, they don't cost you one cent."

D. A. Singleton, who runs a big store in Lufkin, Texas, inaugurated a new scheme in special sales—he had a "pay-day" sale, running one week each month, following pay day. He advertised the sales by means of large circulars.

* * *

A Wisconsin merchant took a number of low flat baskets and filled them with durable heavy goods, such as egg beaters, iron spoons, etc., and set them in conspicuous places on the floor with cards worded "Don't fall over these." "They are as cheap as dirt under your feet—at five cents." "Never before have we offered such low prices. Look down on these and buy." "You can't stumble on such like bargains every day."

Why You Should Buy Your Wares From Me

You haven't ordered your Lawn Mower yet, irrespective of the fact that the "good" ones are going. I want your

LAWN MOWER

order, and here are my arguments:

"I carry guaranteed machines.

"The prices are extra low because I bought to advantage.

"My machines are made with interchangeable parts; thus are easily repaired."

Call or 'phone ——

EXETER.

HARDWARE ADVERTISING.

There are a great many hardware dealers who do not use advertising space, and interviewing these I have found them to be divided into two classes. One class does not believe it pays to advertise their line. They seem to think people know everything they carry and when needing anything in their line will come to their store for it.

It is true a majority of the people know that stoves, stove pipe, door hinges, nails, etc., can be found in a hardware store. But the progressive store of to-day carries numerous articles which a great many people do not know where to find.

Prior to commencing work in the advertising field, I was employed in a retail grocery, clothing and dry goods store and was often requested by lady customers to direct them to some store where they could purchase such articles as agate, iron and tinware, tack pullers and hammers, shelf brackets, tacks, zincs, etc. The greater part of such requests were from women, who, evidently, had never been obliged to investigate such matters, hence their ignorance in this respect.

The dealer who advertises continually, changing his copy often and telling of the seasonable goods he has in stock, and occasionally mentioning the little articles, such as brackets, tack pullers, etc., will bring these and other people to his store and will carry the trade of the town.

The other class are the dealers who believe that advertising pays when it is properly done, but do not know how to go about it.

The ad. of a few inches space that does pay is the one that specializes on one or two articles. Such ads. tell the most superior, useful, needful and desirable qualities of the article in question. These ads. convince the people that they need the article described, the result is, they visit the store that advertises the goods and sales begin.

Your customers prove live advertisements and you need not run same copy more than twice, but change and tell them of something else you have that they need and will want. There is not an article in any store that could not be advertised this way, and it is the only way to do when but a few inches space is used.

Here is the whole thing in a few words. Use space sufficient to allow a good description of each article, write this description in a live and convincing manner. Change copy often, give true value and you will receive good results from your advertising.—E. S. M.

SITUATION WANTED

THOROUGHLY energetic and experienced hardware clerk and office man, reliable, trustworthy. Competent as branch superintendent, or any position of trust. Ockenden, 122 McGill St., Toronto. (23)

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Moffat's Stoves.

The Moffat Stove Company, Weston, Ont., offer $1,000 for a Canada Steel Range that will not operate successfully in the open air with six lengths of stove pipe. Their circulars tell all about it and will be sent upon application.

Martin-Senour Paints.

The Martin-Senour Co., 142-144 Inspector street, Montreal, are keeping right up-to-date with their usual range of paints, stains and all kinds of home beautifiers, and look for another big year. Their illustrated catalogue fully describes their several brands, and at this time of the year will be acceptable to all hardwaremen. Sent on request.

Key Catalogue.

A special key catalogue has been got out by John Millen & Sons, of Montreal and Toronto, which shows a wonderful array of keys. Their catalogue of bicycles, tires, tools and sporting goods is equally interesting, and will be sent to dealers asking for it.

Blue Flame Stoves.

The standard wickless blue flame oil and gasoline stoves manufactured by the Thos. Davidson Mfg. Co., of Montreal and Winnipeg, are meeting with well merited success and are the subject of many inquiries. All information about them will be readily given by the manufacturers.

Atkins' Saws.

The Universal Time Book and Hand Saw Booklet fully illustrate the saws made by E. C. Atkins & Co., of Indianapolis, Ind. These saws have made a good reputation for themselves in Canada, and those dealers who are without a catalogue should drop a line for one.

Hanson Refrigerators.

J. H. Hanson, of 422-424 St. Paul street, Montreal, are making a nice line of refrigerators in ash and oak, lined with galvanized iron and vitrified enamel. These goods will soon be wanted now, and the manufacturers will be glad to send descriptive catalogues.

Galt Metal Shingles.

A card from dealers will bring the Galt Art Metal Company's catalogue, which contains a complete range of steel shingles, ceiling and wall plate in the newest designs. A lot of these goods will be used this year, and this catalogue has some very helpful suggestions to aid in choosing a design.

good roofing

"Eastlake" Metallic Shingles will surely interest your neighbor who has just had the wood shingles on his roof ripped off by lightning.

No wise man will ever want to use wood shingles again when the lightning, fire, rust and storm resisting qualities of "Eastlake" Metallic Shingles are once made evident to him.

All around you new buildings are going up and old ones being repaired. Why let other dealers supply the shingles, etc., when the trade, at a good profit, is yours if you will go after it and show people who have given the matter little thought, the advantages of "Metallic" building materials over wood?

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto and Winnipeg

We also manufacture:
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Metallic" Siding (Stone, Brick, etc.)
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing.
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description. 401

Garden Tools.

The Canadian Shovel and Tool Co., of Hamilton, are having a large trade in their garden tools, post-hole diggers, spades, etc., and illustrate very fully in their catalogue their different manufactures. These are seasonable goods, and a copy of this catalogue can be had by dropping a line.

Table Cutlery.

An illustrated catalogue of table cutlery, silverware, etc., showing the different lines manufactured by the Ontario Silver Co., of Niagara Falls, will be sent to dealers making a request for it. These are always seasonable articles, and this catalogue will be of interest to all hardwaremen.

Sporting Goods.

The Fancy Goods Company of Canada, 156 Front street west, Toronto, have got out a new catalogue of Victor sporting goods which contains a complete line of balls, bats, fencing goods, etc. The season for these goods is about open, and this catalogue, which will be sent upon request, shows some good things.

Builders' Hardware.

A catalogue and price list of builders' hardware from William Newman & Sons, Hospital street, Birmingham, has reached Hardware and Metal. Their particular lines are springs, hinges, fanlight openers and similar lines pertaining to doors and windows.

Cobalt Maps.

The Canadian Fairbanks Company, Montreal, have gotten out a map of Cobalt District showing the general lay-out of the district, including townships, waterways, railways, etc. The map is clear and distinct, and accompanying it are cuts of mining machinery and supplies. Those desiring a copy may have one on application.

Our Letter Box.

Straw Board Tubes.

The Brantford Roofing Company ask: "Can you give us the address of a firm in Toronto who manufacture "straw board tubes" with a spun top and bottom, it serves as a bottom and top, 3 in. diameter x 2 in. high, then, 3 in. x 4 in., 3 in. x 5 in., 3 in. x 8 in., 3 in. x 10 in. These are made of the commonest "straw board paper."

Note.—The Dominion Paper Box Company, King street west, Toronto, manufacture this class of goods.—Editor.

* * *

Roofing Manufacturers.

J. H. Worsell, Goderich, writes: As I desire to get samples and prices of ready roofing, I would be pleased if you would send me the names of firms who handle the different makes of roofing in Canada.

Note.—The Paterson Roofing Company, Toronto; Lockerby & McComb, Montreal, and the Brantford Roofing Company, Brantford, can supply the goods required.—Editor.

THE IMPENDING EXHAUSTION OF THE WORLD'S IRON SUPPLY.

Several months ago the chief of the Swedish geological survey, in pursuance of a resolution adopted by the Swedish parliament, prepared a report showing the extent of the known deposits of iron in the world, and the rate at which such deposits are being consumed. While there has been some dissension as to the exactness of certain details contained in the report, it may be accepted as a substantially accurate investigation of a subject of vital importance to the world. Most disquieting in this report is the conclusion that we are likely to run short of iron within a single century if the present consumption is maintained.

According to the Scientific American the world has only 10,000,000,000 tons of iron ore available. Of these Germany has twice as many tons as the United States. Russia and France each have 400,000,000 tons more than this country. Our annual consumption of iron is placed at 35,000,000 tons, which is more than a third of the world's total consumption.

The efficient consul-general of the United States at Paris, Mr. F. Mason, has analyzed with considerable astuteness the problems involved in this threatened industrial catastrophe. From an elaborate report of his we abstract the following facts:

It is well known that the high-class ores of the lake district in America will, at the present rate of consumption, be exhausted within less than fifty years. Inasmuch, therefore, as the United States possess but about one-ninth of the world's ore deposit and yet consumes more than one-third of the total annual output from all countries, the conclusion is direct and unavoidable that the future economic policy of American iron masters should be to secure by all practical means, the largest possible ore supply from the mines of other countries. How can this be most economically and effectively accomplished?

The problem is largely one of transportation, in which the item of marine freight rates plays a dominant part. An economic long-distance ocean rate for heavy, low-class merchandise, involves necessarily two conditions, viz., vessels specially adapted to the trade, and return freights that will bear an equal or higher charge for transportation. The ship that brings ore from Spain, Sweden and other European countries to the United States, must have each trip an eastward-bound cargo that will be more than ballast and yield a regular and definite profit. There is but one material which will meet the requirements of the case, and that is coal.

It is in respect of quantity and quality of coal supply that the advantage of North America over European countries is decisive and overwhelming. Whatever may be the facts concerning ores, the known coal measures of the United States render their fuel supply secure, abundant, and of excellent quality for centuries to come. There are hundreds of thousands of acres of gas and coking coals of high quality in the Appalachian region—to say nothing of other fields—which have as yet been hardly scratched by the pick and drill of the miner. New coal deposits of greater or less extent and value are being discovered from year to year. With what is now known the present enormous annual output of 280,000,000 tons of bituminous coal can be maintained for hundreds of years without exhausting the available supply. In Europe, on the contrary, the years of adequate coal provision are definitely numbered. In England experts estimate the duration of the workable coal measures to be from sixty to one hundred years. Germany has a somewhat longer lease of industrial life dependent on coal supply, but already the subject is so acute that a heavy contract for the delivery of German coal to France, for iron and steel works, is understood to have been cancelled recently at heavy loss to the sellers, because, it is definitely understood, the imperial government objected to the depletion of the national coal supply for the benefit of neighboring countries. France has native coal for a generation or more, but the mines are deepening, the cost of production is gradually increasing, and economists are looking with growing apprehension to the future. Twenty-five or at most thirty years hence, the question of an adequate fuel supply will be a serious problem for France.

In 1903 France consumed 42,694,100 tons of coal, of which 34,217,661 tons were the product of French mines, while the remaining 8,476,439 tons were imported. Cardiff and Belgium coals are delivered at Havre at prices varying, in ordinary seasons, from $4.63 to $5.21 per ton. This is the competition which American coal would have to meet, since from that port of debarkation, common to all imported coals, the costs of duty and freightage to the interior would be the same.

The railway freight rate on coal from Havre to Paris is 70 francs per carload of 10 tons, or $1.35 per ton for a haul of 143 miles. The rate by the River Seine, which is open to navigation practically the entire year, is from $1.05 to $1.10 per ton. Add to this the import duty of 26 cents and it will be seen that the Belgian and Welsh coals can be landed in ordinary times at the docks outside the walls of Paris for about $6.36 to $6.50 per ton. The wholesale price charged by importers to local dealers for bituminous coal is at present slightly more than $10 per ton. Is there not in the margin of $3.50 and $3.64 between these figures an opportunity for American coal, provided the whole transaction, including mining, railway and ocean transportation, and transhipment at seaports, is so organized and managed as to develop a large trade and reduce expenses per ton to a minimum? In other words, can American bituminous coals of the grades adapted to gas manufacture, domestic use, and general industrial purposes, be delivered in large quantities at Havre for a cost not exceeding $5 per ton.

It remains to consider the correlation between these conditions and the future ore supply of the United States and certain European countries, as described in the first section of the present report. Coal imported into France pays a duty of 26 cents per metric ton. In respect to duty, freight up the Seine to Paris, and other charges American coal would be on the same basis as Belgian and British coals, which come into France principally by that route.

The demand for foreign coal will increase with the gradual exhaustion of the French mines, and the consumption will be augmented in proportion to whatever reduction can in future be made in the present high cost of fuel. There are millions of tons of good coking and gas coals in the Allegheny and Cumberland districts of the United States which can be produced with profit at the mouth of the mine for an average price of $1 to $1.25 per ton. When the railroads now projected or under construction are finished and in operation it should be possible to carry such coals to tide water for a freight rate not much, if anything, in excess of $1 per ton.

When in 1902 the project of exporting American coal to Europe was actively discussed, it was the consensus of expert opinion that the successful development of such a trade would require the construction of a special class of vessels which would do for the ocean-going coal traffic what they had done for the ore and coal trade of the Great Lakes, namely, steel barges of 10,000 tons burden, stanchly built, with quarters for a crew of ten to fifteen men, and engine power sufficient for a speed of 8 or 10 knots per hour, which would give steerageway sufficient for safe handling in all weathers. Given a fleet of vessels, with loading docks for coal along the Chesapeake Bay or Atlantic coast, and a reliable return freight, and the problem of a large and expanding coal export to Europe, which depends primarily on an ocean freight rate not exceeding $1.25 to $1.50 per ton, would be practically solved.

As return freights, the potash minerals of Germany have been suggested, but they are limited in quantity and restricted by various conditions, so that there remains but one available resource, and that is iron ores of Spain, Finland, and the Scandinavian Peninsula, three countries which, together, now mine about 14,000,000 tons per annum, but which, for want of cheap and abundant fuel, smelt not more than one-third or one-fourth of that amount. The time will doubtless come when most, if not all, European countries will prohibit the export of native coal, except to their own colonies. The imported fuel supplies of France, Italy, Spain and Scandinavia will then have to come mainly from beyond the Atlantic.

PAINT, OIL AND BRUSH TRADES

THE NAVAL STORES WAR IN 1905

The following extracts from an article in the Cotton Trade Journal throw considerable light on the influences operating to enhance the prices of turpentine and rosin in recent years. Buyers and users of these goods will be interested in securing even a partial inside view of this phase of the market conditions in the south. The Cotton Trade Journal says:

With industrial as in national affairs it appears at times great questions can be settled alone by conflict. One side claims rights, another feels it is imposed upon, matters reach disputation and then nothing short of a Macduff lay on suffices the side disposed to aggress. The naval stores trade ended the old season after one of the hardest fought industrial battles of the year in this country for control of selling to consumers. Reference to this contest in a general way is an important feature of the year's review.

It became a question as to who should continue to distribute turpentine and rosins, and this alone was the point to be decided by the struggle when the issue was finally joined. The naval stores war started and closed and is now fast becoming a business incident of history with little to tell what the lasting result is to be further than that it strengthens the position of those then and still in control of distributing.

Spencer P. Shotter heads the S. P. Shotter Company, which has for a number of years controlled the distribution of American naval stores. He works with brain, men and money—not with speech. About the place from which he manages the handling of naval stores prevails an impenetrable, sphinx-like silence, from which no flag floats, no word comes, no advice is given nor counsel sought. Loyalty from those within is not expected; it is absolutely demanded. Organization with military rigidity is the Shotter way, with duty and silence the watchwords for all hands.

An ambitious person commands respect, for when gifted with brain and industry one is censured for failure to exercise both. Mr. Shotter was identified with naval stores at Wilmington, N.C., and went to Savannah when the industry was young, therefore growing up with it from its early stages. He was then as now an exporter, selling turpentine and rosins to consumers in this country and exporting to the consumers of Europe. Reference to his operations is needless further than that he soon developed his business to an extent which enabled him to influence the Savannah market, which is the basis for transactions the world over. When the Savannah market is established all others fall into line with the stuff tendered at the ports changing hands at flat Savannah prices, or on such terms, with this market as the basis, as are agreed upon by the parties. Mr. Shotter soon had such control of the Savannah market by the simple reason of his operating upon a larger scale than all others combined, that he could move it with facility. He moved it with sales. He worked, he hustled over this country and to Europe in person, saw consumers, interested them in his business as customers, consequently got orders for naval stores which enabled him to figure in the market. And here it is proper to add, whatever may be said to the contrary, that the turpentine operator owes much to Spencer P. Shotter for the markets he has opened up and the outlets found by him individually for their products.

Surprise went through the Savannah naval stores market one day when Mr. Shotter proposed to take all the turpentine and rosins received at the closed ports by the factors for that season at Savannah prices the day of receipt. This was a big undertaking. It meant the handling of immense supplies. It also meant Mr. Shotter had built up a large trade, knew his requirements and the demand. He complied with his contract to the letter, took all tenders, and the season passed off smoothly, though with mutterings from factors that the market was being manipulated. The next season the same proposition was made, and again factors agreed to turn over to Mr. Shotter their receipts at the closed ports at flat Savannah prices. At the beginning of the season just closed another proposition came from Mr. Shotter, but he drafted an objectionable contract. It was thought the objections

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 18, 1906.

Two notable drops have taken place in the home market. Free deliveries have occasioned a drop of two cents in linseed oil. Turpentine is also being shipped more freely from the producers in southern points and prices have sagged materially.

In general lines of paints there is a good demand and values are well maintained. The call for liquid paints has been termed phenomenal. The fine weather which has kept up for two or three days has helped to make the demand almost unprecedented. The increase in call for coach and car paints is notable. The demand for varnish has so taxed the manufacturers that one firm manager said the goods were "matured and ripened" before shipment. Putty is quiet. Dry colors are also quiet. Oil stains and dry colors are sharing in the little boom which now exists in the paint trade.

TURPENTINE — The local market shows a very brisk demand, which keeps pace with that for all paint materials. We quote: Single barrels, 95c. per gallon; two barrels or over, 93c. per gallon; for smaller quantities than barrels, 5c. extra per gallon is charged. Standard gallon is 8.40 lbs., f.o.b., point of shipment, net 30 days.

LINSEED OIL—We quote: Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 60c.; 5 to 9 barrels, 57c. to 58c.

GROUND WHITE LEAD — We give prices as follows: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC — We quote as follows: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5½c. to 6½c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD—Prices are firmly held as follows: Genuine red lead in casks, $5.75; in 100-lb. kegs, $6; in less quantities at the rate of $6.75 per 100 lbs.; No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

GUM SHELLAC — We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The market is firm at following prices: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

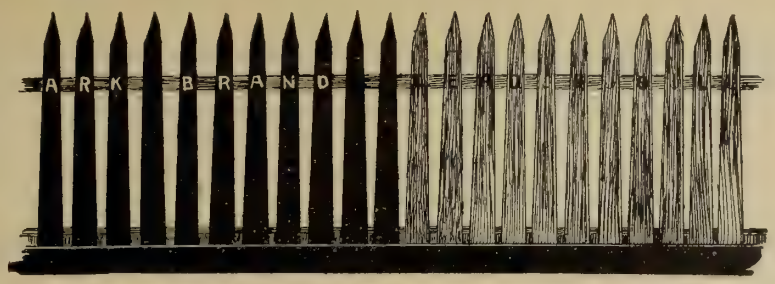
REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—Prices are quoted tentatively and are subject to change. We quote as follows: Barrels, 600 lbs., 19¼c. per lb.; kegs, 250 lbs., 19½c. per lb.; 50-lb. drums, 20c. per lb.; 25-lb. drums, 20½c. per lb.; 1-lb. pkts., 100 lbs. in case, 21c. per lb.; 1-lb. pkts., 50 lbs. in case, 21½c. per lb.; ½-lb. pkts., 100 lbs. in case, 23c. per lb.; 1-lb. tins, 100 lbs. in case, 22c. per lb. Terms 2 per cent. 30 days.

GASOLINE—Price has risen of late, and ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at the advanced price of 24c. in bbls.

WINDOW GLASS — No change has taken place in the market and none is likely until some shipments arrive from the Old Country. We quote: First break, 50 feet, $2.10; second break, $2.20; first break, 100 feet, $4; second break, $4.20; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24; and twelfth do., $28.50.



TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, May 18, 1906.

Turpentine in the south shows an easier market, but not to the extent of any price changes here. Resins have been changed a little, pale resin dropping 25c. and dark resin going up 25c.

Linseed oil keeps steady at the same price as quoted last week and just at present there is no feature that would indicate a change either way.

White lead is still a somewhat scarce

CRUDE PETROLEUM—Prices continue unchanges. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

THE NAVAL STORES WAR IN 1905

(*Continued from page 58.*)

could be settled and an agreement reached, and for this purpose, somehow, a conference was arranged, attended by Spencer P. Shotter on the one hand and a large number of leading factors of Savannah on the other.

As a result of the conditions created at the conference, the nucleus of the Naval Stores Export Co., with a capital of $1,000,000, was formed. The factors said they would combine and control naval stores distributing themselves. That the industry had been dominated long enough was a slogan to which all rallied enthusiastically. The factors, actuated by a desire for protection against what they regarded as undue and overbearing domination, went into the new company, and this soon interested the operators, who also subscribed liberally toward its capltal stock, which was readily taken. Walter F. Coachman was made president by the unanimous insistence of all concerned. He was the man for the place, they said, and the work is understood to have been almost thrust upon him. In anticipating this narrative to state he failed in what he undertook and that the Naval Stores Export Co. later went into liquidation, it is excusable to state that disgust cannot be too severely expressed for those who patted Mr. Coachman on the back into the fight, then when he used his best energies and lost, they deserted and criticised his course.

Mr. Coachman's idea was, briefly stated, to bring producer and consumer into closer relations. He started with the sympathies of the operators with him, therefore it was supposed he would control the output. He put his company straightway into Mr. Shotter's shoes at the closed ports as to both turpentine and rosins, taking these at flat Savannah prices. Mr. Coachman was taking the stuff down at Jacksonville and at all other closed ports, while Mr. Shotter was at his desk in Savannah running that market and fixing the prices for Mr. Coachman to pay. Mr. Shotter ran turpentine away up—so high, in fact, that it looked like the consumers might refuse to pay the price, either using substitutes, curtailing their requirements or doing something else. This might close the outlet and leave Mr. Coachman with a load. He accordingly started spirits to Savannah by trainloads, and when his stuff began to arrive, prices crumbled and an equilibrium was restored. There was a sharp break, during which it was rumored Mr. Coachman made a profitable turn for his company.

The fight went along for some time. Mr. Shotter was urging his men all over the world to work hard and along lines he indicated, acting under instructions from Savannah. The chief was at his desk directing the defence. For it must be understood that Mr. Shotter did not start the fight; he was on the defensive. The object was to put him out of business. No choice for him to take. He confronted either a fight or a retreat, and the latter is unknown to Spencer P. Shotter. For the part he took he could not be blamed and the operator cannot be incensed against him, for he could do nothing else than he did —fight.

Mr. Coachman soon began to get overstocked with rosins at fancy prices, and as his load grew the markets were closed to him in all conceivable ways. The other side centred their fire on that load of rosins—800,000 barrels, more or less. So keen did the competition become that following a Coachman agent another stepped in behind, "we undersell that man 10 cents a barrel, no odds what his price. This is a standing proposition from us. Whatever his price, do nothing

until you see us." The load at Jacksonville kept growing. Mr. Coachman, of course, kept borrowing. The banks at Jacksonville, some at Chicago, New York and abroad, had rosins hypothecated to them for loans. Then the proper means were devised to let the banks know that a terrific slump was imminent in rosins at Savannah. The market started down gradually, and as it did the banks called for more margins.

It's all over when the other man's weapon is the deadly margin call. Nothing has caused more financial wrecks, and once a business gets into that fix the time to capitulate is nearby. Senator Talliaferro, of Florida, first came to Savannah, supposedly to break the news, and was soon followed by Mr. Coachman, who after the conference is said to have emerged from Shotter's office with "his hat under his arm." Mr. Shotter made no boasts, gave out no interviews, but even made concessions to Mr. Coachman in the matter of maintaining prices. At one time Mr. Coachman, though playing the other man's game, had the whole exporting element uneasy, and they did not regret the termination of the contest.

The trade adjusted itself to the new order of things by the end of the season, with every prospect that the competition which existed may soon be forgotten. Neither home nor foreign marketing of these products has been seriously interfered with, and it appears that the operator, after all, has some things to regret as a result of it and others to appreciate.

OAK-CABINET

Given away FREE of charge with an order for six half-dozen Poc et Knives as illustrated above.

May be had through all leading wholesale hardware firms.

Roof Paints Mean Business

Have you a good line of Barn Paints?
Let us show you

Ramsay's Outside Paints

They sell at $1.00 a gallon, and that leaves you a handsame profit.

See our show card with our favorite Red No. 108—the correct thing for barns, roofs, bridges; also our Rubber Roofing Black.

See the price—see the profit.

Easy to sell—no unnecessary talk.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The Barber Asphalt Co. will establish a permanent works in Vancouver.

The output of copper ore from the Boundary Mines, B.C., has reached 430,243 tons this year.

The British Columbia Electric Railway Co. will extend their lighting system from Steveston to Ladnor.

A. McKay, of Seattle, is at the head of a company, who, it is reported, will build a glass manufacturing plant at New Westminster.

The Brantford Screw Works have secured a site in that city upon which they will build a new plant, provided a railway switch is put in.

The Rapid Tool Co., of Peterborough, which has been recently incorporated, expect to be in running shape by July 1st. They have made an agreement with the inventor of the Caldwell lightning auger bit to manufacture this bit in Canada, and will turn out 1,000 of them per day.

The new rubber cement factory of The Canadian Rubber Company, of Montreal, is now in full operation, and exclusive contracts for the supply of rubber cement have now been concluded with some of the principal footwear manufacturers of the Dominion. This industry promises to be a very important one, and the plant of The Canadian Rubber Company is equipped with all the latest appliances for the production of high grade cement.

It is pleasing to note the success of the council of the Board of Trade, of Montreal, in their efforts to increase the membership of the board. At the beginning of 1906 an alarming state of affairs was revealed when it was made known that the membership of the board had been declining almost steadily since 1887. A statement issued by the secretary on February 13 showed that the membership, which in 1887 was 1,362, had fallen to 976. It at once became apparent that something must be done to check this downward movement. The council took measures not only to stop the falling off, but also to increase the membership.

The success with which their efforts have met is illustrated by the fact that no less than one hundred and ten new members have been enrolled since the present council assumed office in February last. This makes the total membership nearly eleven hundred, which must be encouraging, not only to the council itself, but also to the members as a whole. It is the intention of the board to bring the membership up to the two thousand mark, and if the present good work is continued, which is to be hoped, their efforts will be crowned with success.

Companies Incorporated.

The powers of the Dominion Pressed Steel Co. have been extended to manufacture and deal in all articles capable of being made from pressed steel, and to manufacture and deal in wooden handles, bales, etc.

Findlay Bros. Co. have been incorporated under Ontario charter with a share capital of $200,000 for the purpose of manufacturing stoves, furnaces, ranges, etc. The provisional directors are: David Findlay, Wm. Findlay, and John Kirkpatrick, with head office at Carleton Place.

The Newbigging Cabinet Co. has been incorporated under Ontario charter with a share capital of $40,000 for the purpose of manufacturing house and store fittings in wood and metal. The provisional directors are: R. P. Newbigging, John Butterfield, and James Dickson, with head office at Hamilton.

The National Brass Manufacturing Co. has been incorporated under Ontario charter with a share capital of $100,000 for the purpose of manufacturing and dealing in brass and other metal goods. The provisional directors are: C. D. Fergusson, Joseph Grey, and E. J. Saunders, with head office at Toronto.

Jenkins Bros. have been incorporated under Dominion charter with a capital stock of $200,000 for the purpose of manufacturing and dealing in valves, lubricators, injectors, etc. The provisional directors are: A. B. Jenkins, F. T. Swain, E. Brady, H. D. Gordon, and W. R. Stewart, with chief place of business at Montreal.

The Automobile Company of Hamilton has been incorporated under Ontario charter with a share capital of $40,000 for the purpose of manufacturing and dealing in motor vehicles and supplies. The provisional directors are: W. R. Moore, H. H. Hodgson, W. M. Clendenning, S. D. Biggar, and John Jackson, with head office at Hamilton.

The Canada Iron and Foundry Co. has been incorporated under Dominion charter with a capital stock of $2,000,000 for the purpose of carrying on a general foundry and iron works. The provisional directors are: E. M. McDougall, T. J. Drummond, T. Brosseau, G. E. Drummond, F. G. O'Grady, R. J. Mercur, and J. A. Kilpatrick, with head office at Montreal.

The Montreal Reduction and Smelting Co. of Canada has been incorporated under Dominion charter with a capital stock of $2,000,000 for the purpose of carrying on a mining and smelting business. The provisional directors are: J.

B. E. Leonard, B. Burland, L. J. Cartier, A. Robert, A. Tremblay, P. Theriault, J. E. Theriault, O. Lemire, P. Tetrault, O. Theriault, J. M. Mitchell, J. H. Brown, O. Frechette, and E. L. Patenaude, with chief place of business at Montreal.

BUILDING NOTES.

Carlyle, Sask., will build a hospital.

Winnipeg will build a $10,000 fire hall in ward seven.

Oak River, Man., will build a school to cost $10,000.

Vancouver will build a new market to cost about $60,000.

W. F. Lee will build an apartment house in Winnipeg.

A new hotel called the Wascana will be erected at Regina.

Tenders will be asked shortly for new armories in Hamilton.

St. Ann's Congregation, Toronto, will erect a $35,000 church.

The Benwell Hotel, Brantford, will be enlarged and improved.

A large addition will be made to the Queen's Hotel, Montreal.

A $35,000 addition will be built to the Waldorf Hotel, Hamilton.

A new R.C. school will be erected at Edmonton to cost $45,000.

A. R. Garland, of St. Thomas, will build a store 32 x 100 feet.

Tenders will be called shortly for a new opera house for Berlin.

The Western Hardware Co. will erect a new warehouse in Regina.

Brantford has issued permits to the amount of $100,765 this year.

The Victor Beaudry Estate, Montreal, will erect a $30,000 building.

The Hotel Delmonico, Vancouver, will be enlarged at a cost of $40,000.

Fort William has issued building permits representing $90,000 this year.

The Berlin Interior Hardwood Co. are building a large addition to their plant.

The Vancouver Warehouses will erect a $70,000 bonded warehouse in that city.

The Dominion Express Co. will build an office and warehouse at Peterborough.

The City and District Bank will erect a building in Montreal to cost $30,000.

M. W. Stevens, St. Catharines, will put another story on the St. Catharines Hotel.

A building will be erected for the News-Advertiser, Vancouver, to cost $35,000.

W. J. Mackay, of Midale, Man., is erecting a warehouse for furniture and hardware.

The Dominion Automobile Co. will build a garage and sales building in Winnipeg.

The Toilet Supply Co., of Montreal, will erect a four story office building to cost $40,000.

The Northwest Commercial Travelers' Association will call for tenders for a building in Winnipeg.

The Mount McKay brick and tile works of Fort William have been purchased by Geo. Alsip, a Winnipeg contractor.

THE SELF-MADE MAN.

Charles M. Schwab, the millionaire steel magnate and self-made man, takes no stock in the assertion of Professor Buttler, who claims that the day of the self-made man is over. Said Mr. Schwab in an interview in the Inter-Ocean, on a recent visit to Chicago: "That statement is foolish. I don't want to get into controversy with the professor, but I am confident that the chances for ambitious young men to make themselves successful were never better than today. You hear talk about the corporations throwing limitations about the individual efforts of young men. The fact is that corporations are reaching out for bright youths and paying well for their services when they find them. I am a friend of colleges, but I see a point on which they cannot lay too much stress. They should teach their students that they are no better socially than the young men who are winning their way in the workshops. The college diploma ought not give any man a superior place in society over the man who has been learning by practice while others are learning through theories."

We have a letter in our possession from a gentleman who has in his employ about 6,000 men. He reiterates the opinion expressed by Mr. Schwab, that there never was a time when worthy young men were so greatly needed as at the present time, or who were more certain of advancement at high salaries. We remember him as a young man receiving ten dollars a week and without any pull but his own strenuous endeavors, his salary is now five figures a year. He says: "For instance, I have a superintendent to whom we are paying $2,500 a year and a bonus that will bring his salary up to $2,750 or $2,800, who started with me Jan. 1, 1901, at $50 a month. Another, who is doing equally as well, who started in 1902, at $60 per month. These had the right stuff in them. I could cite numerous instances. The company, while doing this, expect to get value received in the way of good service, loyalty, etc., but do not ask anything that is dishonorable."

THE FIT OF A GUN.

A rough-and-ready way of ascertaining if a gun is likely to suit is to stand in front of a looking-glass and pitch it up to the shoulder, just as one would in the field. If the glass reflects nothing but the end of the two barrels the gun is not lar wrong; if some portion of the top rib is reflected, the muzzle of the gun in evidently pointing underneath the object aimed at, while the converse would be the case if some of the under portion of the barrels was visible. The cast off of a gun, by the way, it may not be generally known, can be seen by turning the gun upside down and looking along an imaginary straight line leading from the muzzle end of the barrels along the under rib and through the centre of the heel of the butt—the deviation from the straight line will indicate the amount of the cast off.

SNAP SHOTS.

PLUMBING AND STEAMFITTING

PLUMBING AND SANITATION

A paper by MR. J. W. HUGHES, Montreal, read before the Sketch Club of the Quebec Association of Architects.

Forty odd years' daily experience in the theory and practice of modern plumbing—I use the word in the broad sense of its meaning as generally understood by the public (covering the allied trades of heating, roofing, etc.)—and a consequent intimate contact and association with the architect, his client, and the general public warrant me in making the statement that there is nothing that so quickly makes and assures the architect's reputation as good plumbing—and nothing so rapidly, surely and often unjustly, mars his reputation as faults in connection with this important and complicated branch of the building trade. Let the foundations be laid never so well—the facade be architecturally correct, the interior plan be faultless, decorations unique and artistic—all is quickly forgotten, should drains choke, roof or water pipes leak or the heating apparatus fail in giving the desired temperature. The proprietor forgets the mason, carpenter, artist, plumber and only remembers his architect, when such troubles arise. True the plumber comes in for a certain amount of the blame, and hard talk—but as a rule, he has at least a certain amount of justification, and a ready excuse is afforded him when he can say "I followed out your architect's plans and specifications," and if he has done so, does not his responsibility outside of the workmanship end there? At least I know that in many cases he thinks it does. And be the plumber ever so much in fault the proprietor still blames the architect for his want of knowledge in employing an unskillful or characterless man. Such being the case, the question arises how you are to minimize the risks you run in such matters, for the best of pipes will leak, drains will choke, fixtures overflow, and through no fault of either plan or practice.

Intricate Plumbing Apparatus.

Consider, for a moment, what the plumbing apparatus in a modern dwelling is. In even a small and unpretentious house, it is a most complicated and intricate collection of material that have to be assembled in a skillful manner and according to highly scientific principles, if the desired results are to be attained, and, once completed, it receives little or no thought or care on the part of the owner or user; such as a similarly complicated and expensive apparatus would receive daily if it formed part of the plant of a manufacturing concern. No one even thinks of seeing that moveable parts, from time to time, are oiled; that lost motion is taken up; that nothing is done with, or to it, except what is legitimate, and according to the intention and purpose for which it was designed, and constructed. It is only when something goes wrong that, in the vast majority of cases, the plumbing apparatus receives a thought; and then it is looked upon as an outrage and robbery that something has to be done and money spent. Great pressures are constantly at work day and night, year in, and year out, trying with varying force to tear it apart; expansion and contraction from varying temperatures is always at work to break it; in our climate the cold never fails to get in deadly work, when the slightest opportunity is afforded it; added to all this, is a carelessness on the part of the users that you would scarcely credit. Is it any wonder that troubles are frequent? The wonder is rather that there is so little to complain of.

Evolution in Materials.

There is a further complicating factor in the difficult problem we are considering and that is the constant change that is going on. During my time, men, methods, and materials have changed completely, and more than once. In the early days of the trade in this city, all soil, waste, and water pipes, were of lead; sewers were constructed of brick or wood; there were only "the pan closet," and "the hopper" and "trough"; sinks were of stone, wood or lead lined, "sewer gas" was unknown; back venting and soil pipe ventilating were unknown quantities. The discovery of the germ theory of disease, and the necessity of guarding our dwellings against the entrance of the disease-producing little microbes, completely revolutionized the old fashioned plumbing methods. To-day iron has almost entirely replaced lead, as a material for soil and waste pipes; the modern porcelain closet has replaced the sinks and baths of our fathers; and brass and copper, as well as iron, have largely taken the place of lead for water pipes. And the end is not yet, for they are hard at work, experimenting with a view to the introduction of glass, as a material for the conveyance of the water and sewage of our dwellings, and when success is attained, as I have no doubt it will be, we will have an ideal material for the purpose—and present indications are that it will be "made in Germany."

My intention in the foregoing remarks was to fully impress you, if possible, with the importance of the subject we are considering, and to bring as forcibly as possible to your understanding the difficult and complicated problem offered for solution. Did I go no further you might consider the time so far devoted to the subject as wasted; but there is no intention of wasting your valuable time, and it will be my endeavor to now present for your consideration something practical and useful for at least a partial cure for some of the ills we mutually suffer—as in this matter the architect and plumber are as completely joined as were the celebrated "Siamese twins," and any attempt at severance of the connection would in all probability be attended with serious if not fatal results to one or both.

Good Sanitation Necessary.

The first factor to be considered in the solution of the problem, from your point of view, is the plan. At the risk of being considered presumptuous, permit me to say a few words, from a practical man's point of view, of this important part of the subject. First, you must attend to the sanitary features of the case; plan for health. You are building dwellings, homes, for rich and poor; places of life, light and enjoyment. The first, the greatest requirement of a dwelling is that it be healthy; honestly built, on healthy site, amidst healthy surroundings. You cannot control all the conditions; the site is not yours in the choosing; the surroundings are beyond your power; but your knowledge and skill must be such, as to attain the best possible results from the conditions you have to deal with. If the site is damp, or boggy, or subject to occasional flood, you must plan for not only sub-soil but also surface drainage. Water in itself is one of God's good elements; it is only when it is "matter out of place" that it becomes a menace to life and health. No one dreams of considering the water of the river, lake or ocean, a danger to those residing in its vicinity; we naturally go to the water in the heated Summer term, for health; but the undrained swamp, the stagnant pool, the damp cellar and moulded walls, are dangerous to a degree; and no one can have them as neighbors or harbor them in the dwelling without sooner or later paying the penalty imposed by nature for a violation of its laws.

The Sewage Problem.

The removal of sub-soil water presents many difficulties; but in our city there should be no trouble, provided you establish the principle of never erecting your buildings at such a level as to be below the sewers made and provided by the city for sewerage and drainage purposes. Such a remark may seem

unnecessary and uncalled for, but I know that it is done every day. I could name a number of buildings that are periodically flooded because the cellars are either below or too near the level of the city sewers. There must always be a margin of safety. The crown of the street sewer, with an allowance for proper fall, should be your starting point. I know the owner will fight and argue against steps, to business blocks, and insist on a cellar of given depth; but let me assure you that, when the water rises in the cellars and so renders them useless, or goods are damaged, he forgets all your arguments against going deep in the ground, and the fact that he insisted upon having things as they are is no longer in his mind but he does not forget to talk of the foolishness of the man who built him a useless basement, and the stupidity or worse of the plumber who carried out the plan. Of course, artificial means of drainage may be employed in certain cases; and, where large plants are installed in charge of skilled men, such means may safely be adopted; but outside of this, for the ordinary shop or dwelling, there is only one safe plan, and that is to so construct your building that the natural drainage will always be available.

Building on Swampy Ground.

In planning for the erection of buildings on low and swampy sites, provide for a system of sub-soil drains so laid that they may easily and safely discharge the sub-soil water into the existing sewers, taking care that they be properly trapped at their junction with the main sewer, and further taking care that during the dry seasons these traps are supplied with water enough to keep them safely sealed against the entrance of air from the sewers. This is best done by connecting the waste from some convenient fixture, so that water will always be supplied to the trap. A wash basin or sink, to be used for clean water only, is the best, as the use of a W. C. or kitchen sink will likely result in the choking of the trap and consequent filling of the sub-soil drains with grease or sewage, or a special pipe can be run, from which water is allowed to drip. Cellular gutter land tiles are very good for sub-soil drains, provided they are not laid in running sand. If, unfortunately, your building rests on such poor material, I know of no form of open drains that will not fill up. In such case the sinking of a pit, with an outlet at the proper height, with the usual precautions against its filling with sand, is perhaps the best method of procedure; but great care must be taken to prevent the sand running into the drains, if you wish the building to stand erect. I know of one large building in this city the front of which nearly came down, owing to the fact that a leaky pipe, near the foundation, washed the sand away into an open drain in the vicinity.

The Drain Pipes.

The sewers, or those pipes that are to carry off the liquid wastes of the building, as distinguished from the drains, which are for the conveyance of sub-soil, or surface water, must be of extra heavy cast iron pipe inside the building, as called for by the civic by-law, and should, when at all possible, be so arranged as to be at all times above the floors; or, failing this, at every change of direction fit a cleaning eye that will permit of the insertion of a cleaning rod, from point to point and out into the main sewer. I know of no better material for outside drains than properly laid tile pipes, and no worse material for the inside pipes, especially if they have to be laid under ground, as to make them tight they must be thoroughly cemented at the joints. This makes them into a long and continuous length of very brittle material, sure to be broken by the slightest subsidence of the ground or building, and even by the use of the building. The handling of heavy goods in a warehouse, or even certain legitimate acts in a dwelling, are enough to cause sufficient jar to break these pipes.

Flushing the Pipes.

Avoid too large pipes, try to plan your sewers so that the amount of water flowing through them will scour or flush them. Remember that the largest flush pipe from an ordinary closet is only 4 in.; and that, as a rule, does not deliver the water in a solid stream, but it is usually broken up by the fan or spreader in the closet basin. A pail of water, rapidly emptied into a W. C., is generally the maximum amount of water discharged into house fixtures at once. Of course when roof water is discharged into the sewers through the house pipes a large flush will be the rseult at times, when heavy rainfalls occur; but it is very seldom that the ordinary roof of a dwelling will flood a 4 in. pipe, even if running full at the inlet. The friction and resistance as it travels through the pipe, reduces it in volume. Many architects plan to increase the size of the pipes according to the number of the fixtures to be discharged into them. While this plan has some merit, be careful not to carry it too far. Remember that if there were a dozen closets on one pipe, and the greatest care was taken to have them all discharge at the same moment, that it would be impossible to so arrange them in ordinary practice, that the discharge from all of them would reach the main soil pipe or drain at the same moment; and that the water reaching the main stack first, can never be overtaken by that which follows it. My experience is that more trouble has occurred by the filling up of drains and sewers that were too large to be properly scoured, than by the blocking of small drains that are fully flushed. The same remarks apply to the waste pipes. It is quite common to find 2 in. pipes called for from wash basins, and baths, whereas the average bath and basin plug will not allow sufficient water to pass to fully flush a 1 1-2 in. pipe.

Carry your pipes direct as possible. This can generally be done with very few bends and offsets, if provision is made at the proper time in the stone, brick and woodwork: but when bends have to be provided, at every flat, on account of the variation of thickness of walls, or because beams have been put in the way, or the roof outlet is at an inconvenient point, you have a needless complication making for trouble. While nothing is planned for the reception and passage of pipes, the positions of the fixtures are indicated; but the work of other trades may render it an exceedingly difficult matter for the plumber to get his pipes to the positions without doing a lot of damage that could be easily avoided were provisions made at the proper time. Show on your plans, embody in your specifications, the necessary instructions to carpenter and mason. The pipes, large and small, are as necessary a part of the modern building as the doors and windows—then why not provide for them.

Plan to have the fixtures where the sunlight will get to them. Remember light is the great life-giving agent, and that all plumbing fixtures are of necessity more or less foul. Let the light shine on them; the sunlight, if you want them to be clean and kept clean. Treat the plumbing as an important part of the building; don't treat it as something to be put in any dark hole or corner, where you can put nothing else. Have a dark parlor if you please; it is most used at night when artificial light will dispel the gloom and make it nice and inviting; but have the bathrooms light; the sinks, basins and tubs near the windows.

If you wish to avoid trouble, concentrate the work—try to place the fixtures so that an accidental overflow or burst will not damage the hall or parlor ceiling. The less the pipes are scattered about the less will be the first cost, and certainly there will be the least amount of trouble in the future care and maintenance of them. Where it is necessary to have fixtures in different parts of the building, plan to have them as nearly as possible one over the other; it may in some cases mar the artistic effects, but it won't damage the ceilings and walls so much, in case of the inevitable flood.

Exposed Pipes Preferable.

Have every part of the plumbing fixtures easily accessible. When possible, run pipes in back passages and through pantries and such rooms and leave them exposed. Where they must be concealed, have this done by some means that will allow the pipes to be quickly exposed. Hooks and buttons are best: screws are a nuisance, their taking out is sure to cause damage to decorations and paintings. Never put pipes behind fixed columns, or plaster them in, as the day will surely come when they will require some attention; then trouble begins, and reputations are wrecked with the ceilings and walls.

Select simple fixtures. A closet with a complicated system of valves, levers, syphons and overflows, may work perfectly when new, but it is sure sooner or later to get out of order. A single seat is better than one with a cover, which is a survival of the old style boxed in W. C. The cover is a complica-

tion that serves no useful purpose. A W. C. is a W. C. and if there is anything in it that requires to be covered, there is something wrong. Have it so arranged that it is impossible to cover up any filth or foul matter. Basins with the plain old-fashioned plug, are the best. Those with a complicated system of recesses, stand pipes, and valves, are to be avoided; they get out of order, and when in order the parts are not accessible, and so get foul and malodorous. The same remarks apply to baths and sinks.

There is nothing to equal the S or half S, or P trap. The traps of a complicated form, such as are in common use, have not a proper scour, and are never clean. The merit claimed for them is that they are non-syphonable, which is open to question. If they are so, it is because they obstruct the rapid flow of water. Syphonage can best be prevented by a proper system of back venting; and even this can be carried to an excess, and often is. I have in mind a house where all the traps are back vented with long lines of pipes, of the sizes of the traps, but with unavoidable twists and turns, that render them inoperative, and their fitting was simply a waste of money. Venting traps in a basement, with long lines of pipes carried up in walls through the house to the roof, is not good plumbing—although at first thought it may seem so. This is where that uncommon commodity, common sense, comes in. The risk of danger from a syphoned trap is far less than the risk incurred by the getting out of order of long lines of concealed pipes. Fortunately, the average water cock is seldom perfectly tight; they all drip a little and this drip is enough to reseal in a few minutes a trap deprived of its seal by syphonage. Do not for moment suppose I am advocating the running of any risk of danger from emptied traps; what I desire to impress upon you, is that there is a risk of overdoing the trap venting part of a plant, as well as of incurring needless cost. "Simplicity thou art a jewel" would be a good motto for the architect and plumber to have constantly in mind, when planning.

(To be continued.)

PLUMBERS' PASTE.

The paste ordinarily made and used by plumbers consists of flour, over which boiling water is poured until it begins to thicken, after which the paste is cooked until it is very stiff, says the Plumbers' Trade Journal. There are a number of pastes made especially for plumbers' use, the formulae for which are held by the parties making them. These pastes do the work required of them much better than the paste made by the plumber himself. To do the work well the paste must have the quality of hardness when heated, without flaking off the work, and at the same time wash off easily after the work is completed. Home-made paste may be preserved by adding a few drops of oil of cloves.

PLUMBING MARKETS

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, May 18, 1906.

With the increase of tin, which has now reached 50 cents, solder has also gone up again. Half-and-half is now quoted at 30 cents and wiping at 26 cents.

Iron pipe holds the same, although some talk of an increase has been heard. It is hardly possible that this will occur, however, rumors of cutting being heard from various sources.

There is no cessation to the amount of business being done throughout the country. On every hand trade conditions are good. Toronto trade is picking up and with the increased building operations this year there must be a marked increase in plumbing before long.

LEAD PIPE—Conditions remain the same as to price, with the usual good business. We quote: Lead pipe, 8c., discount 20 per cent.

SOIL PIPE AND FITTINGS—Prices remain the same. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—There is no change in iron pipe, although there have been rumors that it would go up, and also of some cutting being done. We quote: Black, 1 in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS—The usual demand is not at all lessened. Prices continue same as previous quotations. We quote as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable? unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

GALVANIZED IRON RANGE BOILERS—Business remains about the same. There are no price changes. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14.00; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—A steady business continues to be done. No price changes. We quote: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.

SOLDER—Another jump has been made in solder this week. We quote: Bar solder, half-and-half, guaranteed, 30 cents; wiping, 26 cents.

ENAMELWARE—All lines remain the same as regards price, but the demand still keeps the manufacturer on the go. We quote: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal May 18, 1906.

Activity in building circles always evidences a corresponding liveliness in plumbing supplies. It is a long time since such business has been noticed in all lines. Orders are numerous all over. The supply houses have a continuous demand and many houses are taxed heavily to fill orders. Iron pipe is firmer and an advance is still in the future. Solder is away up.

RANGE BOILERS—Market conditions are unchanged. We quote: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—There has been no feature in these goods, which continue to sell well. We still give the following discount: 20 per cent. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—We are still quoting discounts on all sizes of nipples up to 6-inch 67½ to 70 per cent.

IRON PIPE—An advance in price seems to be approaching. Conditions are rapidly firming. We still quote: Standard pipe in lots of 100 feet, regular lengths, ¼ inch, $5.50; ⅜ inch, $5.50; ½ inch, $8.50; ¾ inch, $11.50; 1 inch, $16.50; 1¼ inches, $22.50; 1½ inches, $27; 2 inches, $36.50; discounts on black pipe, ¼ inch, 62 per cent.; ⅜ inch, 62 per cent.; ½ inch, 71½ per cent.; ¾ inch and upwards, 73½ per cent. Discounts on galvanized pipe: ¼ inch, 47 per cent.; ⅜ inch, 47 per cent.; ½ inch, 61½ per cent.; ¾ inch and upwards, 63½ per cent. Extra heavy pipe of 100 feet lots are quoted as follows: ½ inch, $12; ¾ inch, $15; 1 inch, $22; 1¼ inches, $30; 1½ inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—Goods in this line are moving freely. Prices are steady, quotations being still given as

follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—Another advance has taken place and this of course is due to the almost electrifying condition of tin. We now quote: Bar solder, half-and-half, guaranteed, 27c. to 27½c.; No. 2 wiping solder, 21½c.

ENAMELWARE—Orders are large. We still quote: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.15, special $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2½ inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

CALGARY HEATING CONTRACT.

Patterson & Pfeiffel, of Calgary, will instal a Pease-Waldon heating and ventilating system this Summer in the splendid new twelve room stone building which is now in course of erection in the south ward. The system is arranged as to heat the building with direct steam and ventilate it either by the gravity plan or by the fan system.

METHODS OF HOUSE WARMING.

By Charles H. Graves

In seeking a solution of this problem many expedients have been resorted to, and many methods have been tried. A careful consideration of this question will show that steam or hot water are the essential agencies of a perfect heating apparatus for either public or private buildings.

The average person, although quite familiar with all the accessories necessary for the home, office or factory, has but a vague idea of the possibilities of steam and hot water for heating purposes. Many people believe that steam is practical only for factories or for such buildings as have steam for power purposes.

The improvements made during the last few years in steam and hot water appliances have not only made it possible for every home to be healthfully and comfortably heated, but the economy shown by their use over any other system has proved that money invested in a good heating apparatus will bring greater returns than any other part of the building investment.

A good steam or hot water heating apparatus will last as long at the ordinary building and the repairs are practically nothing. Unlike the hot air furnace, which is like a fever, producing alternate spells of extreme heat and excessive cold and sending forth ashes and soot like a domestic volcano, it is easily operated and gives a steady uniform temperature throughout all the rooms of a house and affording a balmy Summer atmosphere in the coldest Winter weather.

Just which is most desirable of these two sanitary ways of keeping warm is a question. It is, moreover, a matter of choice that can best be answered by the individual tastes of him who seeks the benign influences of either and the conditions governing the building to be heated.

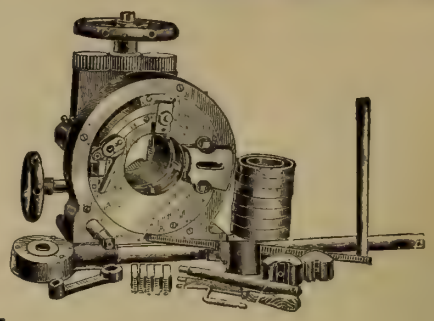
Steam heat is better adapted for schools, hospitals, churches, factories, office buildings and large flat buildings, because it circulates rapidly and can be readily controlled. The radiators heat very quickly and as quickly cool when turned off.

In factories, office buildings or any building where power is used, the exhaust steam from engines and pumps should always be utilized for heating and, to obtain the highest degree of economy, a good vacuum system installed, as it is now generally conceded that the highest results in efficiency, economy and hygiene are to be obtained by the use of steam at or below atmospheric pressure.

The lower the temperature at which a heating plant is run the more healthful the atmosphere. Heat given off at a high temperature, such as a stove or furnace, not only gives a dry and burned air but also destroys the life or vitality.

The hot water system is better adapted for residences, because it heats at a low temperature, which insures the most healthful results and requires less attention, is easily operated by a child and is readily adjusted to suit all changes of weather. The steam or hot water systems may be used in old buildings or farm houses as readily as in new buildings. It is not necessary to move walls, break plaster or discommode the family in any way. The system can be adapted to the building for which it is made. If waterworks system is not available for filling, a barrel placed in the attic or a small force pump from the cistern will supply the water. When once filled very little water is required because the same water is continuously used, the only loss being from evaporation.

There is no class of men whose services are of greater value to the public than the heating engineer or steamfitter, provided, of course, that they are thoroughly competent and trustworthy. Upon the character of their work depends the health and comfort of thousands, and for this reason it is imperative that they should be masters of their business and perfectly familiar with all its details. They should be expert judges of materials and know how to employ them to the best advantage and they should possess such executive ability as will enable them to properly direct and control their workmen.



NOTES.

The Montreal Light, Heat and Power Co. have secured another water power at Cedar Rapids, near Montreal, and will have 5,000 horse power from it in the city by Nov. 1.

"SELLING OUT AT COST."

The difference between trade conditions here and in Yukon Territory may be imagined from the notices appearing in a recent issue of a Dawson City newspaper. It seems that a number of merchants are leaving that city for Fairbanks, a new gold town on the American side of the boundary. One hardware merchant advertises that he is "selling out at cost," and quotes several items to prove his assertion, including nails at $8 PER KEG!

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

GLAUBER BRASS MFG. CO.
CLEVELAND, OHIO

Hustle half as hard and profit twice as much selling this Boiler—

It takes far less effort on the dealer's part to sell the Oxford Hot Water Boiler. That is because the Oxford merit-points are so plain to see, the Oxford reputation so big and wide, the Oxford selling help so liberal and potent, that the Boiler is as good as sold when the customer gets his first look at it. That's why half the effort will make more actual sales with

The Oxford System of Hot Water Heating

Then the dealer's profit is earned easier by the Oxford Boiler,—it is far easier to instal, simply because only this Boiler comes to the dealer put together so far that there's only ONE connection left for him to make,—half-an-hour's work, instead of the half a day other boilers require. And that's only the beginning of the profit-merit of the Oxford—will you ask us to tell you the whole of it?

MUELLER
WATER TAPPING MACHINES

No. 2 "Mueller Original" Machine

The cost of service tapping in a term of years should not be measured altogether by the purchase price of the machine, but largely, and with some machines most, by what you pay in operating expenses.

The few working parts of Mueller Water Tapping Machines have such long bearings that wear is not appreciable while their strength in design and quality of material makes them nearly unbreakable. They do a maximum amount of work with a minimum of labor and make tapping cost low in the long run.

C-001

Mueller Water Tapping Machines are made in three different patterns for different classes of work. The machine illustrated is the No. 2 "Mueller Original" pattern, and makes taps up to 2 inch and inserts corporation cocks up to 1 inch.

Each machine bears the Mueller trade mark and is **UNCONDITIONALLY GUARANTEED.**

Ventilation is Important

as a feature of modern buildings.

There are many buildings and residences, whose occupants are afflicted with drowsiness and headaches, because the ventilation is imperfect, or has been altogether neglected.

THE AEOLIAN VENTILATOR

is unexcelled as a means of producing pure air in large buildings, closet rooms, vaults of churches, schools, factories, stables, etc.

As will be seen from the accompanying illustration, **The Aeolian Ventilator** is very ornamental in appearance, while also possessing exceptional lasting qualities.

We like to talk about the "Aeolian" Will you write us for particulars?

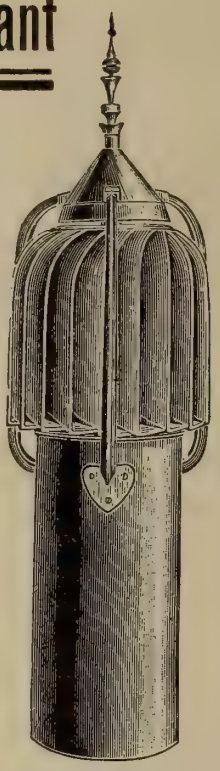
Read this testimonial:

OSHAWA, June 4th, 1903

Messrs. THE J. W. HARRIS CO., LIMITED, Montreal.

Dear Sirs,—Replying to your favor of May 30th, would say that the "ZEPHYR" Ventilator is giving good satisfaction.

Yours respectfully,
J. E. HAWKINS.



The Price is Inconsiderable in Comparison with the Results

Mannfactured by

UNLOADER

No. 1031—For Double Steel Track
No. 1032—For Wood Track

Because your grandfather made money out of some of the goods you're carrying, it's not saying that you can—that was fifty years ago.

To make money these days, you've got to get ahead of the other fellow some way. The best way is to get a good selling line that he doesn't handle, but don't take too long to think it over, or you may be the one to be left behind.

Myers Haying Tools

is as good a line as you could choose.

If you send us an order now, you can supply most of the farmers near your town before your competitor wakes up.

We are sole agents for this district. If you send your order direct, they will only refer you to us, so you might as well send it here in the first place and save time.

We stock the full line, including Unloaders, Forks, Hay Fork Pulleys, Steel Track, Rafter Brackets, Floor Hooks, Hanging Hooks for Steel and Wood Track, Slings, Sling Pulleys, all kinds of Hay Fork Rope, etc.

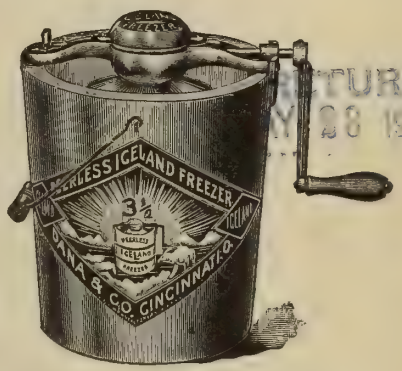
ICE CREAM FREEZERS



RETURNED
MAY 28 1906

"Frezo" Freezers
Sizes 1, 2, 3, 4, 6 Quarts

Ice Chipper

Fly Wheels for 16 and 20 Quarts

"Peerless Iceland" Freezers
Sizes 2, 3, 4, 6, 8, 10, 12, 16, 20 Quarts

Makes ice cream in four minutes. Full size tubs and cans. Tubs are made of the best quality of lumber and cans of the strongest and best coated tinplate. Dasher is of an improved type, double scrapers fastened in the same manner as in Peerless Iceland. Gear frame heavy and strong. Turned by gears fastened on can top. The best constructed freezer of this type.

Has the fewest parts and only one motion—all that is necessary for the freezing of smooth, delicious cream in three minutes. The can revolves around stationary dasher. The quick freezing is accounted for by the peculiar construction of the dasher and the way it handles the cream set in motion by revolving can.

AMERICAN TWIN FREEZER

Freezes two flavors of ice cream, or an ice or sherbet and ice cream, at one and the same time, in one freezer.

Something Entirely New—Never Done Before.

A freezer to make two flavors at one time has been long wanted. In families some prefer one flavor, others another; some prefer ice cream; others a water or ice sherbet, so some had to be dissatisfied no matter what was made in the old time freezer.

RETURNED
MAY

"Twin Freezer" Size 2, 3, 4, 6 Quarts

In the American Twin Freezer the can is divided in two parts by a vertical partition. The dasher carries two sets of scrapers, one set fitting in one side of can and the other set in opposite side. The can cannot be turned as in old style freezers, because of the partition. It is, therefore, swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **pails are of cedar** (the best wood known to resist water) **with electric welded wire hoops,** which are guaranteed not to break or fall off; cans are of heavy tin plate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak; the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

THE HOBBS HARDWARE CO., LIMITED

LONDON and TORONTO

Did you make money out of the sporting goods trade last year?

Once more we return to the subject of your sporting and fall goods trade.

A year ago we asked you the question appearing at the top of this page. We suggested that if you had not made money you should try trading with us. For one reason or another a great many merchants must have taken our advice for our trade in sporting goods enjoyed a large increase.

RETURNED
JUN 4 - 1906

Our new sporting goods catalogue for **1906-7** is just out. It is larger than last year; completer lines and new goods the cause.

It covers the sporting goods ground. It shows guns from the boy's 16-gauge sparrow shooter to the $200 **Parker** gun for the expert trap shooter. Rifles, revolvers and ammunition are listed as completely as the guns. Full lines of **fishing tackle,** snowshoes, skates, animal traps and other accessories are also shown.

To help in the selection of a good line of **horse blankets** and cattle chains a few pages are added covering those items. Have you placed your fall order for these goods yet? Won't you get our prices first?

We are so proud of Harrison Bros. and Howson's **English silver plated** table ware which we have sold in Canada for 25 years, that we have devoted some space to it in the new catalogue. You should buy this line. The quality is better and the price lower than American goods.

Is it not better to trade where you get the variety?

Use the coupon in asking for a catalogue.

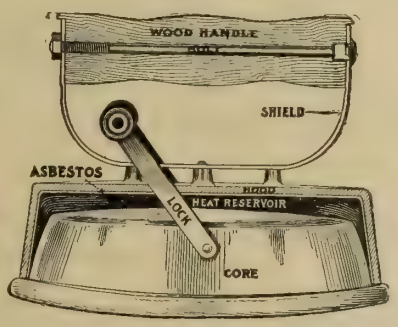
CO-OPERATION

ASBESTOS SAD IRONS

AN IRON FOR EVERY PURPOSE



The Goods

For fifteen years The Dover Manufacturing Co. has devoted its **entire efforts** to producing a **perfect** sad iron.

The result is the **Asbestos Sad Iron** as it is now constructed. Examine the **Sectional View** shown herewith, and you will see a feature which no other sad iron possesses—an **asbestos-lined hood or cover.**

This hood does two things: (a) It retains the heat in the iron; (b) it renders absolute coolness and comfort in the handle.

While the heat-retaining qualities of Asbestos Sad Irons are always appreciated, **the cold handle feature** is a specially strong selling point in the hot days of summer.

If you, Mr. Hardware Dealer, desire to handle goods that will **please your customers**—be sure to stock Asbestos Sad Irons. Do it **now,** when you can make the "cold handle feature" a special argument.

Ask for our Descriptive Booklet.

The Policy

The Dover Manufacturing Co. believes in co-operation. We co-operate with the trade in every way possible.

Following are the three chief articles of our creed—

First—**We believe in co-operating with the trade by furnishing goods which will satisfy the final consumer—and thereby gratify the dealer.**

Second—**We believe in co-operating with the trade by liberal advertising.** Note the fact that we are using larger space to advertise Asbestos Sad Irons in magazines which women read than has ever been used in exploiting a household utensil.

Third—**We believe in co-operating with the trade by establishing and maintaining minimum retail prices.** The Dover Manufacturing Co. cannot afford to have Asbestos Sad Irons in the hands of price cutters We therefore refuse to sell dangerous trade. We cut off the supply of dealers who will not adhere to our policy.

ASK YOUR JOBBER FOR PRICES. **THE DOVER MFG. CO.** CANAL DOVER, OHIO.

CO-OPERATION expresses the true economic relation which should exist between the Manufacturer and the distributer of his goods.

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

Why You Should Sell THE IDEAL FENCE.

You want to handle a fence that will appeal at sight to your customers, and that will satisfy them after they have bought it. You'd like to have a fence to sell of which you could say to a man, and say truthfully, that it does the fencing job for good and all. There is absolutely nothing that looks better, is better, that will give better satisfaction and that will sell better than this Ideal Woven Wire Fence. You can see from the illustration how it is made; crimped, locked, spaced and stayed. Then just remember, and this is all-important, that these wires are all big, heavy, strong wires, all No. 9 hard steel. And they are heavily galvanized so there's no chance for rust to get a hold. One fence sold always sells more. It's easy to get going. Very little talk required to convince a man who has fence to build. Seeing is enough. And then remember that while you're satisfying your farmer friends and doubling up your fence business, there's enough in it for you to make it an object. We see to it that dealers have margin enough to make them want to push it. If you want to handle that kind of a fence just drop us a card about dealer's prices.

THE PROGRESS OF THE GREAT WEST

IMMIGRATION AND ITS EFFECT ON CANADIAN TRADE

An examination and analysis of the official immigration returns convinces the inquirer, as nothing else can convince him, of the immense proportions of the world-wide movement of population towards western Canada and the great advances that have been made in the last ten years. It is even more convincing than to see with one's own eyes the flow of incoming population from the east through Winnipeg and from the south through Moose Jaw, for the new arrivals are soon lost to sight in the insatiable western prairies which seem to be able to absorb and support all the people who come to them in a hundred years. The newcomers are soon lost to sight and they seldom come back.

A writer in the Montreal Herald has caught the spirit of the spectacle and he gives it picturesque expression in the following:

"What strikes one as the most notable, and in many ways the most satisfactory, point about this huge immigration business is that all those thousands of people who now almost daily pass through on the way to the West seem never to be heard of again. Where they go, what they do, how they live, what becomes of them in any one way or another, we never have to ask. They go, the West swallows them, they do not come back asking help. What could be more satisfactory?"

It is just because these incoming thousands are so quickly lost to view that a study of the actual immigration returns is more convincing even than the sight of the incoming home-seekers. Reports have recently been issued by the Dominion Government giving the immigration returns up to June 30th, 1905, the close of the last fiscal year. The summary showing in comparative tables the steady increase in immigration during the last ten years is particularly interesting and instructive.

Analysis of Immigration Figures.

	Great Britain and Ireland.	Europe and Iceland.	United States.	Total.
1895-6	12,384	4,451		16,835
1896-7	11,383	7,921	2,412	21,716
1897-8	11,173	11,608	9,119	31,900
1898-9	10,660	21,938	11,945	44,543
1899-0	5,141	10,211	8,543	23,895
1900-1	11,810	19,352	17,987	49,149
1901-2	17,259	23,732	26,388	67,379
1902-3	41,792	37,099	49,473	128,364
1903-4	50,374	34,785	45,171	130,330
1904-5	65,359	37,255	43,652	146,266
	247,335	208,352	212,590	668,277

The following statement gives the increase or decrease for the immigration of the fiscal year for the principal countries from which settlement originates.

Country.	1903-4	1904-5	Inc.	Dec.
English and Welsh	36,694	49,617	12,923	
Scotch	10,552	11,744	1,102	
Irish	3,128	3,998	870	
Total British	50,374	65,359	14,985	
United States	45,229	43,652		1,577
Total Anglo-Saxon	95,603	109,011	14,985	1,577
Continental—				
Hebrew	3,727	7,715	3,988	
Galician	7,729	6,926		803
German	2,966	2,704		262
Italian	4,445	3,473		972
Russian	1,955	1,916		39
Swedish	2,151	1,847		304
Finns	845	1,323	478	
Hungarian	1,091	981		110
Austrian	516	837	321	
Belgian	856	796		62
Bukowinian	1,578	1,123		405
French	1,534	1,743	209	
Japanese		354	354	
Polish	669	745	76	
Danish	417	461	44	
Norwegian	1,239	1,397	158	
Syrians	369	630	261	
Other continental immigrants bring the total up to	34,728	37,255	2,527	1,577
Total immigration	130,331	146,266	15,935	

These figures are impressive as showing the rapid growth of the world-wide movement Canadawards, and they account for the marvelous development of the Canadian West in recent years; for it must be remembered that, almost without exception, these incoming settlers find their way to the new country west of the Great Lakes. Every able-bodied man who is not afraid of work is pretty sure to succeed and is given a hearty welcome, because it is recognized that it is immigration that "makes the great Northwest." The following doggerel verse sung to the tune of "Mr. Dooley" expresses the prevailing sentiment on the subject:

" 'Tis immigration, 'tis immigration,
America and England send their best.
'Tis immigration, 'tis immigration,
It's immigration makes the great Northwest."

But while the incoming thousands are, as was said above, lost in the great Northwest in one sense, in another and more important respect they are not lost. The result of their coming is seen in the development of the country, in the increased production of wheat and in the rapid and substantial building up of the western towns that supply the increasing population with goods. Can-

adian business men have not been slow to appreciate the lesson of the immigration returns and the trend of population westward. They have devoted increasing attention to the Western Canada market, have established their branch houses in Winnipeg and have reaped the reward of doubled and trebled sales.

The Lesson.

But the immigration figures have a particular meaning for British and American manufacturers if they will but stop to consider. In the last fiscal year two-thirds of the Canadian immigrants were from Great Britain and the United States, the majority of these hailing from the motherland. These people come to Canada with well settled tastes and preferences for the particular brands and classes of goods to which they have been accustomed in their own countries all their lives. Naturally they are most apt to continue to buy these lines of goods if they can get them in Canadian stores, but if they are not able to buy these particular brands when they ask for them the probabilities are that their consumption will be permanently diverted to the lines which they find in their nearest stores. The British and American manufacturers have their opportunity to hold these customers who are leaving their own countries, and through them to extend their trade in Canada in many lines that are not now sold here. Are they alive to their opportunity? If they do not hold these customers when they come to Canada they will be lost in the course of a year or two. The Canadian West affords a constituency already favorable to British and American manufactures, because the people have long been accustomed to using the very lines of goods which it is proposed should be offered them. To sell in the Canadian market is therefore not the same formidable undertaking for a British or American manufacturer as it would be to introduce his goods in a country where they are not already known. Yet, strange to say, many of these manufacturers are devoting their attention to countries where the English language is not spoken and where their goods have to be introduced, to the almost absolute neglect of the promising Canadian market where their goods are already favorably known among a considerable portion of the population. Surely it would be the part of wisdom to follow the line of the least resistance.

Increased Purchasing Power.

Moreover, it should not be forgotten that the purchasing power of these new settlers is, after the lapse of one or two years, very much greater than it ever was, or ever could be, in the countries from which they came. The immigrant, if he is wise, takes up land which he can secure free in some parts of the west from the Government by the performance of household duties or which he can buy from a land company. In the latter case it is a very ordinary thing for the new settler to pay for his land with his new crop. If one crop is not sufficient, the second will pay the balance and leave a surplus. Under these conditions the immigrant is almost immediately in independent financial circumstances and his purchasing power is many times what it was before he left his own country to come to the "Last West." He is therefore a much more valuable customer in Canada than he was in his own country.

The Way to this Market.

How can this market be reached? In one way only, and that is through representation in Canada assisted by judicious and persistent use of printers' ink. It is impossible to handle the trade unless the manufacturer has representation on the spot. There are many reputable manufacturers' agents selling either to the wholesale trade exclusively or to the retail trade, and at any of the offices of Hardware and Metal information will be given gladly as to the standing of these agents.

Carry Stock in Winnipeg.

If possible a stock should be carried in Canada, and if it is the western field to which attention is to be devoted that stock should be carried in Winnipeg. The Eastern Canada firms doing the largest business in Western Canada are those carrying a stock in Winnipeg.

Traveler's Story.

In this connection an actual occurrence told the writer by a commercial traveler is very much to the point. The traveler represented an Eastern Canada hardware firm and he had just completed his first trip through the western provinces. He had met with fair success, but he was very anxious to have a stock in Winnipeg from which to fill his orders.

In a prosperous little town in Saskatchewan he called on a hardware dealer and introduced himself. The dealer knew of the firm from their advertisements in the trade paper, and was willing to give a trial order. The traveler went over his list from his catalogue and he noticed that as he read over the items the merchant was busy writing on a pad of paper. Thinking that the merchant was making a copy of his order the traveler explained to him that he was making a copy in triplicate and that one of the copies would be left at the store.

"Oh, that's all right," was the reply. "Go on with your list."

When the list was completed the merchant remarked:

"I haven't given you a very large order, have I?"

"No, nothing to write home about," was the reply.

"Well, here is a larger order of goods that I must have at once and that I shall send to —— —— & Co., of Winnipeg. Your goods can't be here for three weeks or a month and I need these articles at once. This may help teach your firm to carry a stock in the west."

While the traveler had been calling out his list he had reminded his customer of goods wanted immediately, and he sold more for a rival Winnipeg firm than he sold for his own house.

A man's fortunes are the fruit of his character.

To understand everything is to forgive everything.

A handful of good life is worth a bushel of learning.

The ornament of a house is the friends that frequent it.

Finish every day and be done with it. You have done what you could; some blunders and absurdities crept in; forget them as soon as you can. To-morrow is a new day; you shall begin it well and serenely and with too high a spirit to be encumbered with your old nonsense.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

540. Turpentine.—A correspondent in Russia has asked to be furnished with names of likely firms in Canada to undertake the erection of factories on special lines invented by himself for the manufacture of turpentine.

544. Boiler composition tablets, seed, cylinder and engine oils.—An East Coast firm manufacturing boiler composition tablets, also seed, cylinder and engine oils, desire correspondence with a view to appoint a sole agent for their goods in Canada.

545. Turpentine, paints, varnishes, oils, etc.—An East Coast manufacturer of pure spirits of turpentine, paints, varnishes, cylinder, engine and seed oils, desires to get in touch with Canadian houses requiring same.

546. Cylinder, seed and engine oils.—An East Coast firm is desirous of getting in touch with Canadian houses importing cylinder, seed and engine oils.

548. Silicate cotton, asphaltic roofing felt and stoniflex.—A British firm manufacturing silicate cotton (slag wool) for insulation cold storage and fire-proofing; "Red Hand" asphaltic roofing felt and stoniflex, a felt requiring no annual tarring, are desirous of increasing their Canadian business and invite correspondence.

549. Enamels, oils, paints, turpentine, etc.—An East Coast firm manufacturing all kinds of enamels, sanitary distempers, linseed oils, paints, putty, turpentine and varnishes, invite correspondence with Canadian houses with a view to appointing a sole agent for Canada.

553. Oils, turpentine, tar, resin, etc.—A large East Coast firm of oil refiners and distillers, manufacturing all kinds of cylinder, engine and seed oils, turpentine, tar, and resin, invite correspondence and would appoint reliable firm as sole agent.

554. Portland cement. — An East Coast firm are desirous of placing their special British Portland cement on the Canadian market, and invite correspondence.

559. Anti-fouling compositions for coating ships' bottoms, etc.—A British firm manufacturing anti-fouling compositions for coating ships' bottoms, corrosive compositions for ships' holds, emigrants' fittings, invite correspondence and would appoint reliable agent at Montreal, Quebec, and Halifax, N.S.

580. Steel billets.—A British ironworks company desire to get in direct communication with exporters from Canada of steel billets for rolling down purposes. Large demand for these goods.

590. Vegetable turpentine.—A large East Coast firm of oil and paint manufacturers invite correspondence and negotiations for their pure vegetable turpentine equalling the quality of A1 American at a much less price.

591. Varnishes, etc.—An East Coast firm of paint manufacturers desire to introduce their varnishes, varnish paints, oil and dry colors, lubricating oils and greases, linseed oils and compositions for ships' bottoms, and invite correspondence with those interested.

592. Red oxide.—An East Coast manufacturing firm desire to introduce red oxide on the Canadian market and invite correspondence with firms interested. Prices and quotations will be freely given.

TRADE IN GREAT BRITAIN.

Special Correspondence from HARDWARE AND METAL'S representative at London, England.

Month after month British trade, in the matter of imports as well as exports, continues to progress. The hardware and allied industries are no exceptions. Of course, some branches of these trades are not enjoying the general prosperity, but still, taking all into consideration, everything is satisfactory. During April, exports of manufactured iron and steel revealed a steady increase, making a total increase for the past four months of the current year of £2,571,127. Exports of machinery likewise were on a larger scale, to the extent of some £441,000 for the same four months. Space forbids that further details be given to those other hardware trades which have shown continued progress, but, to harp on Mr. Chamberlain's favorite theme, because all is well is no reason why it should not be made better. If British merchants have succeeded in augmenting their exports to a certain degree, foreign competitors, it must be mentioned, have done likewise. Published statistics showing the relative progress of exports of manufactures from the United Kingdom, Germany, and the United States to the neutral countries of China, Argentine and South America, bring to light the unpleasant truth that Germany and the United States are both securing a relatively stronger grip on these markets. This is particularly the case in various lines of hardware and machinery.

Commercial Agents Needed.

The reason is not far to seek. England wants a Minister of Commerce and a thoroughly organized staff of consuls and commercial agents to help manufacturers exploit these fields. There is every reason to believe that before very long these requirements will be filled. Meanwhile the existing consuls are showing greater activity than ever before. From various quarters of the European continent advices are to hand pointing out openings for goods of British manufacture. In some cases Canadians should be able to obtain a footing. Agricultural machinery, boots, shoes and cutlery, of the best class, it is stated, are required in Rome. Saddlery also is required there, but the dearness of leather here in England is making it difficult for the British shippers to meet the Italians' idea of price. The opening of a railway from Haifa to Damascus, so our consul there states, affords many openings for British goods. Oil engines, hardware, irrigation, and agricultural machinery are particularly in request. Applications to supply the railroad with materials must be sent to the offices of the Hedjaz Railroad at Constantinople. The Foreign Office states that there is a big opening for hardware in Turkey. Iron bedsteads, stoves and cutlery are wanted in Adrianople. Razors are wanted, the German article which now holds the market not being found satisfactory. The Austrian consul at Bourgas reports that scythes and sickles are badly wanted and that agents for the sale of these goods are singularly lacking. In Durazzo and Trebizond there is also a market for scythes of a cheap price.

The above reference to the cost of leather recalls the fact that the Walsall saddlery industry is one of those which are not enjoying as much prosperity as they might wish. Things are in a very depressed condition, so much so that the crisis is probably worse than it has been for very many years. One large firm has had to call a meeting of creditors.

Tin Plate Mills Inactive.

The tin plate mills of Wales are also experiencing a quiet time and it is not long since some dozen of the mills in the Swansea Valley were reported idle. Many others are at present carrying on business from day to day. This curtailment of production, however, is enabling manufacturers of tinware to establish themselves on a sounder basis, and to clear out old stock. Some buyers, taking alarm at the reduced output, are placing orders to cover future requirements.

The cement industry is experiencing a reaction which is about as welcome as it was unexpected. Since the San Francisco earthquake, cement makers in Essex have been flooded with orders for immediate delivery to California for the rebuilding of the stricken city. This, following upon an active demand from the Midlands, has made the cement industry very busy. Truly, one man's misfortune is another man's gain. To the student of economics it is more than this. It is a little practical lesson on the fallacy of the "self-contained" theory.

With the exception of turpentine, the whole group of markets connected with the oil and paint trade is feeling the pleasant influence of Spring.

Labor Disturbances.

That energetic body, the Amalgamated Society of Engineers, has recently made public its 55th annual report. It makes very pleasant reading. The mining, metal, and particularly the shipbuilding industries have prospered; indeed, as far as the last is concerned, the chief yards have work on hand for several weeks, and the demand for marine engines is good. During April 18 vessels of 31,657 tons were launched from Clyde shipbuilding yards. This brings the total for the year up to 160,190 tons and constitutes a record never previously surpassed. But there is a cloud on the horizon. The men in the Clyde yards are threatening to strike unless employers agree to pay them their wages weekly instead of fortnightly. They allow until May 19 for a satisfactory answer to their demands. Masters are firm.

It does seem as though the Eastern Hemisphere is receiving an unusually lengthy visit from the strike fiend, and the injury to business must be enormous. Perhaps the realization of this fact has had something to do with the determination of the executive of the English National Association of Master Plumbers to convert the association into "The Institute of Plumbers (Incorporated)" with the object of "controlling all matters affecting the general status and efficiency of the craft of plumbing." It will be a species of tribunal for settling the disputes of members, and will busy itself with the professional education of plumbers. Meanwhile, the members of a similar association, the Federated Ironmongers' Association, are grieving on account of their inability (sic) to raise £100 to meet expenses which may be incurred in their proposed application for a charter of incorporation. Perhaps a sympathetic brother of the Canadian hardware trade can spare $500 to help them out of their difficulty.

Steamship Service to Hull.

To pass from a small subject to a great—another bond is to bind Canada closer to the mother country. Messrs. Cairns, Noble & Co., of Newcastle-on-Tyne, the Thompson Line, of Dundee, and W. Brown, Atkinson & Co., of Hull, intend to inaugurate a new steamship service between Hull and the Dominion. Although two years ago a similar scheme collapsed owing to insufficient support, it is felt, with reason, that circumstances have now changed to such a degree as to justify a second effort. Hull, of course, is a great centre for Canadian fruit and dairy produce, whilst Yorkshire shippers will likely avail themselves of the new shipping facilities. Certainly, there is a most flattering competition amongst British ports in their efforts to attract Canadian trade. The authorities of Swansea, in view of their exports of coal to the Dominion, are the latest to talk about direct steamship lines.

Reference to matters of transport recalls the fact that Senator Domville is making himself and his proposition conspicuous in the financial world over here just now. He is seeking to secure pecuniary support for the proposed construction of the Canadian Central Electrical Railway between Montreal and Toronto. The results of his efforts have not yet been made public.

Two Important Gatherings.

The Canadian Society of London has secured considerable welcome publicity through the fact that, at a recent dinner, patronized by several distinguished personages, Lord Elgin, Secretary of State for the Colonies, announced for the first time that the much talked of colonial conference will meet here in London in the middle of April next. It is a compliment to Canada that he should have selected that occasion for a statement of such universal interest and importance.

Yet another representative gathering, which will interest Canadians, is the sixth congress of the Chambers of Commerce of the Empire, which will assemble in London on July 10, 11, 12 and 13 next. Lord Elgin will be honorary president, and many topics of real importance to the welfare and consolidation of the British Empire will be dealt with. Such questions as the granting of cheaper postage on British newspapers, uniform parcels post charges in all parts of the Empire, universal penny postage, the appointment of commercial agents throughout the colonies, the unification of the bankruptcy laws of Canada, the embargo on Canadian cattle entering British ports, and other subjects of pressing importance will be carefully debated. Of course, by way of relaxation, there will be a series of entertainments.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.

Executive—Alberta, A. E. Clements, Olds; C. F. Comer, Calgary; A. R. Auger, Okotoks.

Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer. Winnipeg.

Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.

Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man.; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; sec etary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg. Man.
Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association.

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.

Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.
Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

A Western Grievance Remedied.

The attention of Secretary McRobie has been directed recently to a cause of friction between the hardware merchants in Winnipeg and those in the country towns. Winnipeg dealers, owing to their closeness to the jobbing houses, do not attempt to carry stocks of heavy goods such as nails and wire. When they make a good sale of either they have the goods shipped direct from the wholesale house with which they deal. Their profit is made on goods which they have never handled, and their money is not tied up in nails or wire at any time. Consequently they can afford to sell at lower prices than the country hardware dealer, who has to carry a large stock of nails and wire. Moreover, owing to local conditions which it is unnecessary to explain in this connection, the Winnipeg dealers can not get any more profit on their sales in the city of nails and wire than they are getting at the present time.

Now, it occasionally happens that the city and country dealers come into competition on nails and wire. The farmer comes to the city to order his nails and wire and is quoted by the city hardware dealer the same price that obtains in the city. When the farmer adds his freight he finds that he is getting his goods cheaper than he can buy in his own town. The dealer in the country town cannot sell at the Winnipeg retail price plus freight, for the reasons explained, and make any profit on the sale.

This condition of affairs is unfair to the country dealers, who are members of the association, and the secretary has laid the matter before the Winnipeg dealers in a circular letter in which he asks them, before making country sales, to consult him as to the ruling prices in the towns in question.

Travelers to Help.

In the report of the Ontario convention in last week's Hardware and Metal the membership of the mutual insurance committee was given as including the name of C. F. Moorhouse, Toronto. This should have been John J. Coffey, Barrie, the membership of the committee now comprising Messrs. J. J. Coffey, Barrie; John Caslor, Toronto; J. W. Peart, St. Mary's; D. Brocklebank, Arthur, and J. S. Hall, Toronto. The insurance problem affects retailers in outside places even more than in Toronto, and the committee should have a good report to make at the September convention.

In the list of members enrolled as reported last week the names of Thomas B. McDonald, Kingsville, and S. M. Burt, Toronto, were omitted. The membership now stands at 121. Organizer Hodson has had to take a week's rest, so there are no additions to report. Next week, however, should see additional enrollments, as dealers in all parts of Ontario should send in their applications for membership after reading the full report in last week's paper.

J. W. Peacock, Toronto,

Elected Auditor of the Ontario Retail Hardware and Stove Dealers' Association, at the convention last week.

Should Remit Fees.

About eighty of the members enrolled in the association have only paid the provisional membership fee of $2 per year, while the other forty who were present at the convention on the second day have paid up the full $3 fee decided upon as the permanent fee. All members who have not paid the permanent fee will aid the secretary and treasurer materially by forwarding the extra dollar at once. The reasons for the advance were fully discussed at the convention and reported last week. If the association is to be worth anything at all it will be worth $3, and the time spent in circularizing the members for the additional dollar can be better spent on more important matters.

Several travelers have offered to do what they can to increase the membership and blank application forms will be supplied to any traveler who is willing to assist in organizing the trade. This is an excellent opportunity for the travelers to help the retail trade and they will undoubtedly prove equal to the emergency just as the traveling salesmen in Western Canada and the States have helped to boost the associations in these sections.

Getting Down to Work.

The new executive officers are already at work, one member having brought certain matters before the secretary, who has commenced to send out a weekly letter to the various members of the executive committee.

The various matters discussed by the recent convention and referred to the executive for action will be taken up, acted upon, and it is probable that the executive will be called together about the middle of June. As one member writes: "I believe an early meeting of the executive advisable as we must keep the fire red hot even at the expense of some inconvenience to ourselves."

A member of the Mutual Insurance Committee also writes, asking that any member who has the names of any mutual insurance societies or can give any hints or information to the committee to forward the same to the secretary of the association.

One of the Auditors.

The portrait of J. W. Peacock, Toronto, one of the auditors of the association, is given this week. Mr. Peacock is a young man of ability, who for the past six years has been in business for himself at 1026 Queen street west, Toronto, purchasing the hardware business formerly carried on by Thomas Bond. Mr. Peacock learned the trade as a clerk in the employ of Fletcher & Sheppard, Dundas street, Toronto. As a family man, Mr. Peacock has already won distinction, he having been presented with triplets by his wife a year or so ago. With this experience he should be well qualified to keep a proper count on the association's finances.

The Convention Report.

The large amount of space devoted to the convention report last week has been favorably commented upon as, while the convention was composed only of Ontario hardwaremen, the organization of the trade in Ontario is an inspiration to the retail dealers in the Maritime Provinces, Quebec and British Columbia to swing into line with associations of their own.

Writing regarding the report, John J. Coffey, Barrie, said: "It certainly reviews, in one's mind, being at the convention, which was an education to me. I have not been very long in the hardware line and was surprised to find that there was no trade association ere this."

Ontario in Front Rank.

The following letter from the former president of the South Dakota Retail Hardware and Stove Dealers' Association is interesting in showing that Ontario can now take its place in the front rank of the provinces and states in which organizations of retail hardwaremen have been formed. Mr. Joy writes :

"Even before any active steps were taken towards forming an association of the retail hardware and stove dealers of Ontario, I had felt some interest in such a movement, and often wondered whether or not the dealers in this province were immune from the evils that have played havoc with this branch of trade in other provinces and states. But after having had the privilege of listening to the deliberations of those who met at the initial meeting held in the Rossin House on Good Friday, and again at the big convention last Tuesday afternoon, I have not only concluded that the trade in this province has all of the ills of their brethren in other places, but that they are at last fully aroused to the true condition of affairs, and are seized of the fact that it is up to them to administer the remedy, if any is applied.

"The dealers who attended the meeting in the 15th and 16th insts. need no encouragement, but I thought perhaps a word from one on the outside might have some influence with dealers who were not present.

"I was present at the formation of the Minnesota association, and assisted in the organization of the North Dakota association, and I want to say that it is not necessary for Ontario to take a back seat to any of them when it comes to organization of hardware associations.

"I was particularly struck with the wisdom displayed by the executive officers in preparing the preliminaries, so that much valuable time was saved and the business went forward, along the lines mapped out, with the swing of an old association, that must have inspired any doubtful ones with confidence.

"In fact, faith and confidence was not only written upon the countenances of the members, but the debates and discussions were carried on in a tone impressing me with the idea that "these fellows mean business."

"I am not a prophet—it does not require any prophetic insight to predict with assurance that already success is perched upon the banners of the Ontario Retail Hardware and Stove Dealers' Association and that the leaven of Good Friday's meeting is spreading and soon will 'leaven the whole lump.'

"The offer of a page in Hardware and Metal to be devoted to matter and discussions pertaining to the association, should materially assist in the work; and I shall be glad to note rapid acquisitions to the membership. Let each dealer take hold with the executive and the trade paper, and 'push,' and above all things be 'loyal' and emancipation, correction of evils and beneficial results are bound to follow.

"Respectfully,

"H. N. JOY."

Toronto, May 22, 1906.

Price Agreements Unlawful.

At the recent convention Secretary Trowern, of the Retail Merchants' Association, in his address, emphasized the point that all price agreements were illegal unless arranged upon the contract plan by his association. It has always been felt that manufacturers had a perfect right to arrange a minimum retail price and contract with customers that none of their goods would be sold at less than the figure decided upon. Now, however, even this plan has been declared to be a conspiracy, according to the ruling of Judge Clute as reported below.

No law has yet been discovered which aims to force retailers to sell wire nails at $2.10 base if it costs $2.15 to lay them down at the store, and so far as can be seen there is nothing to prevent the merchants handling one line of goods in the same town coming together and agreeing not to cut prices on any line or all lines of goods handled by them. Before entering into any price agreements covering the trade throughout the province, the best of legal advice would require to be taken, but locally, dealers appear to be perfectly within their rights in agreeing not to cut each others throats.

PRICE CONTRACTS ILLEGAL

Price agreements are a violation of the criminal law of Canada. That is the import of a judgment handed out by Mr. Justice Clute at Toronto last week in the case of Wampole & Co., manufacturing druggists, and the F. E. Karn Co., a retail drug firm of Toronto.

The Karn Co. conduct what is termed a "cut rate" drug store. Wampole & Co. claimed damages for breach of agreement to sell their proprietary medicines at a list price, and for an injunction to restrain the Karn Co. from further selling at reduced rates. The case was tried without a jury.

The Agreement.

In the course of the examination of Wampole & Co.'s manager, Judge Clute said :

"Apparently this agreement is the result, as you say at the top of it, of an agreement between the joint committees of the Wholesale Druggists' Association and the drug section of the Retail Merchants' Association ?"

"Yes," replied the witness.

"And you entered into it by an agreement with the committee of the retail merchants who waited upon you ?"

"Just so," assented the witness.

The Judge's Conclusions.

In his judgment Mr. Justice Clute, after reviewing the evidence, continues :

"Competition, therefore, in these articles is not only affected but entirely destroyed. The agreement exists not simply between the parties to this action, but affects the entire trade in the article. No one can buy an article for resale, whether wholesale or retail, unless he enters into one or the other of these agreements, as the case may be.

Agreements General.

"This agreement is used not simply in relation to these commodities between the plaintiffs and their various customers, but is the form adopted by the committees representing a large part of the wholesale and retail trade of Canada. It means that nearly every commodity in common use is to be subject to a hard and fixed contract which fixes the manufacturer's price, the wholesale price, and the retail price below which none can sell, and no one can purchase who is not a member of the association and agrees to sign the contract in question. It means that competition is not only unduly prevented or lessened in the purchase, barter and sale of this article, but is absolutely destroyed. In the present case the evidence also showed, I think, that the price was unreasonably enhanced by reason of this agreement.

What Statute was for.

"I think the statute was intended to provide against agreements similar to the one in question. The history of the law shows that it was passed at a time when the law relating to the protection of native industries was being introduced. As an objection to the protective tariff it was argued that combinations might be formed which would destroy competition and so enhance the price. That while on the one hand foreign goods were excluded, the introduction of which might moderate the price of the article in question, upon the other hand trade combinations might be formed which would destroy competition and greatly raise the price of the commodity to the consumers.

Absolutely Control Prices.

"To meet that objection the law against restraint of trade was passed. It was intended to prevent the very thing that was aimed at in the present contract, and it is difficult to conceive of a scheme more effective to destroy competition and to enhance prices than the contract sued on. It is the form adopted by the association of retail

merchants in Canada and by the association of wholesale merchants in Canada. It thus includes to the extent of the membership of these various associations a very large part of the trade in Canada. The result is that, to the extent that these associations are able to reach persons engaged in the manufacture and trade, they will be able absolutely to control the prices of the various commodities and articles of trade; not only to limit but to destroy competition, and, in effect, to declare that no one will be permitted to deal in their commodity who will not first of all bind himself to sell the same only at a fixed price.

An Unlawful Conspiracy.

"I find," concludes the judgment, "as a fact from the evidence that the agreements in question and each of them were procured by an unlawful conspiracy between the plaintiffs, defendants and other manufacturing chemists and the association of wholesale and retail druggists, and that the conspiracy was entered into for the purpose of unduly preventing or lessening competition in the purchase, barter and sale of the articles in question, being articles of trade and commerce, and for the purpose of unreasonably enhancing the prices of said commodities, and are contrary to the provisions of the criminal code and are null and void."

A leading Toronto wholesale druggist stated in an interview that five leading wholesale drug firms and several smaller ones were using the price contract, and that it was not confined to the drug trade, but was a standard agreement in use throughout the wholesale trade. The wholesale druggists, he held, were not in favor of the plan because it enabled retailers to push their own preparations at lower prices. The druggists' section of the Retail Merchants' Association are said by the defendent, Mr. Karn, to be responsible for the adoption of the agreement. A prominent member of the Toronto branch, speaking of the judgment, said :

"We had looked upon the contract as so invulnerable that we never dreamed we were outside the law. The Elliman Company sent that contract from England, where it has been sustained in a number of cases, and also in America, about thirty or forty altogether. Justice Kekewich held it legal in the case of Elliman v. Carrington. It has been held there is a perfect right to make an agreement about a proprietary medicine. In Philadelphia it was held that the contract was legal, but that it had been procured in a case there in an illegal way. We had no understanding with Wampole and the retail merchants did not contribute a dollar to Wampole's expenses, but I said to-day that as we are brought into it might we not be at liberty to put up part of the expenses of an appeal."

NEW MACHINERY INSTALLED.

The Capewell Horse Nail Company, of Toronto, have just installed a new boiler and engine, made by the John Inglis Company, owing to the old power plant being unable to run the many additions to the machinery necessitated by the great increase in business. This company have doubled their capacity since starting operations last July.

PROGRESSIVE RETAILING

NUTMEG NATIONAL BANK.

How many men have started in business on "hot air," kiting checks to even pay their first month's rent, and some of these very men have been successful and have made independent fortunes? Then, again, how many have failed to make good? Of the average American business men, seven out of one hundred only are successful, the other ninety-three go to the wall.

But who ever heard of a national bank being started on "hot air?" But one was started in a prosperous town in Connecticut, and is now one of the most successful in the Nutmeg State. The head of the bank was a "hustler," who formerly had been cashier of another bank in the same place, but who, on account of some disagreement with the directors, had resigned his position. He knew every business man and farmer of means in the neighborhood, and he was known by them in turn to be a very shrewd and trustworthy man.

After resigning the original cashiership, he resolved to start the new bank under a national charter, with himself, of course, as cashier, and the way he started it was unique and amusing. When he approached a person for a subscription to the stock of the new bank, and the person was invariably one whose credit was A1, he first said, "Now, my dear boy. I do not want a single dollar in cash from you; all I want is your note at three, six and nine months," and these he would get discounted at a Boston bank, which had agreed to act as the Boston correspondent of his bank.

With the proceeds of these notes, the new bank would at once take out circulation, and when the notes became due the bank would take them up and the makers would renew them as long as they pleased at the new bank. The scheme worked to a charm, and that cashier had no trouble in negotiating the notes of the subscribers to the bank stock and with the proceeds at once purchased Government bonds and took out national bank note circulation, so that when the notes for the bank stock fell due he had the cash on hand to pay them off and to renew them for the makers at the newly started bank.

Each subscriber to the bank stock, too, finding the project likely to be a success, began to take a personal interest and pride in the institution, and not only deposited his own surplus funds in it, but induced neighbors and acquaintances to do likewise.

Within two years the bank began to pay dividends and to-day there is no more flourishing institution of its kind in Connecticut. That bank was virtually started on "paper and hot air."

LIVE AND LET LIVE.

It is not always good policy to pay too much attention to your competitor, but it is always wise to pay strict attention to your own business. You cannot give your business too much of your personal attention, unless you have clerks who are better posted, more agreeable, and better salesmen than you.

Looking Ahead.

Every merchant should build for tomorrow and the day after rather than for to-day alone.

Satisfy your trade. There is nothing like it, and when you have accomplished it you will have made strides toward success.

Give your customers what they ask for if you have it; if not, tender something else, but not invariably with the assurance that "it is just as good." Better yet, if the demand is not immediate and urgent, and a few days later will do just as well, promise to send for the goods or article wanted. And then send for it post haste

Cutting Dangerous.

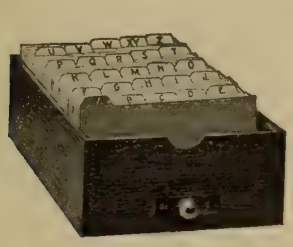
When you have built up a trade on this basis you will be less liable to lose it to a newcomer, and losing a trade that you have worked and slaved for is exasperating and discouraging. It is your trade and you should be able to hold it. Do not cut your own throat in trying to meet competition if the competitor is selling goods at a loss. The only gainer in this kind of a fight is the third party, the general public, that is, for the time being, but in the end the competitors will sacrifice themselves on the altar of competition for the benefit of a newcomer who will grab the trade after the receiver has disposed of the warring merchants and their stocks.

The homely old saw, "Live and let live," older than the hills, is yet worthy, now and then, of consideration. Think it over when you have about decided that it is time to rip things "wide open."

Boomerangs are nasty things. "Push trade," said the prophet, but, he added, "do not push it at the expense of your pocketbook, your bank account or your family."

TRIP-L BODY SALES.

The Francis-Frost Co. have met with great success with their new paint known as Trip-L-Body. In the early part of the year they contracted for what they thought would be enough material to manufacture the season's supply, but already sales have been made that will use up all their stock, and more material has been ordered.

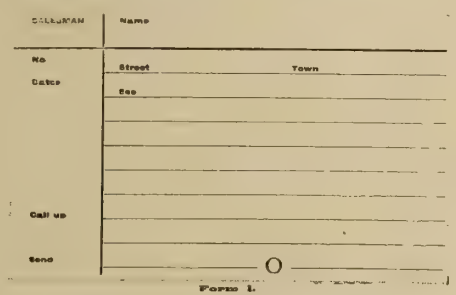


CARD INDEX FOR FOLLOW-UP SYSTEM

By W. H. Stevens.

Unless you catch the apples as they fall it is useless to shake the tree. Just so, unless you are prepared to follow up each enquiry received, you may as well not advertise. If but a few inquiries are being received, one may manage to follow them by recording in a book, or by keeping all the letters, reports, etc., together, and apart from other letters, until the matter is settled. But with constant inquiries, the task of following these by such cumbersome methods is so great, that only very important matters are likely to receive proper attention and that only with a large amount of work, while a large portion of advertising results is wasted.

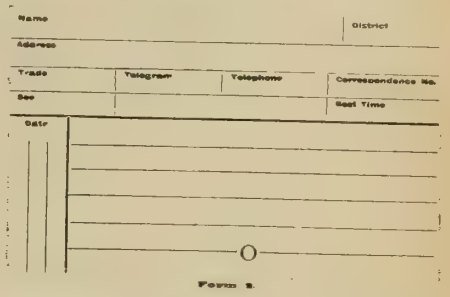
With the card system any requirement may be met, large or small, simple or complex. The following suggestion from systems actually in use, both in its entirety and in its various parts, may be of service, but of course must be suited to conditions wherever adopted.



An inquiry is received. A card or slip about 5 in. x 3 in. (larger if necessary) see form 1, is made out by clerk, (in duplicate if desired) containing name, address, correspondence number, and any particulars desired, also a note of the inquiry and reply. This is filed in a diary tray, vertically, wherein are cards called guides, having projections for months on one color, and for the days of the month, 1-31, on another. If your reply or quotation is dated say the 20th, place the card behind the guide card for the 23rd or 24th, or as far ahead as you wish to allow for an answer. When that day comes, if an order or reply has not been received meanwhile, write again and note on the card, putting it forward in the tray. If you have a traveler to assist you by calling, a duplicate of this report is handed him with instructions to call. He reports his call on a similar slip, a pad of which he carries in a small leather cover, while he retains a carbon duplicate for his further use. All these slips should be clipped together, and moved forward as the matter is followed, until a definite result is obtained.

Cabinet for Index.

It is often desirable to have at the same time an alphabetical index of these inquiries. In this case two methods are used; one, a duplicate or report slip is made out with carbon and filed alphabetically; but while this gives the result with no extra writing, a large number of slips accumulate, making quick reference difficult and taking extra space; the other way is to make out a card (see form 2) showing any particulars desired (i.e., credit, payments, statistics, customers' requirements, etc.) and a note of the inquiry and your reply. When another report or letter is received, this is entered on this card. By using both sides of this card, from 10 to 30 or more brief reports may be entered on one card, and thus the whole record may be quickly referred to by a principal.



All letters written or received which require entering on this alphabetical list, are stamped "Report" by the one who opens or writes the letters, and the correspondence clerk (or other clerk to whom the work is assigned) makes out a report. This is entered on the customers' alphabetical list and then placed in the diary tray. If the vertical numeric filing system with separate copies is used, the correspondence number is put on the slip and then on the alphabetical card when first made out, and is then convenient for reference from these lists without looking in the cor-

respondence index. Since by this arrangement the letters are filed away at once, they are always ready for immediate reference by anyone requiring them, and not side tracked or kept out by manager or other official, causing great inconvenience to anyone wanting such letters.

The traveler may, with advantage oftentimes, have a diary tray and a list of customers also, and form 2 may serve for both—the traveler himself entering reports of his calls on his customers' card and of letters which the clerk reports to him, following these up by means of the diary. When not in use they are filed by district, so at any moment he may have together all the cards in one town.

When it is necessary the alphabetical customers' list may be classified automatically in a variety of ways, i.e., in different colors for different classes of trade, or if such classifications are more than four or five a small tab on the card in different positions shows this classification more easily. A tab card is sometimes used to distinguish between prospective and actual customers, the tab being cut off when an order from the prospective customer is received, or the prospective and actual customer may be in two separate lists. Again, by use of cards with 12 or 15 tabs on each, each tab may indicate a different product. If a circular relating to one of these products has been sent out the tab representing that product may be marked, and when the order is received, the tab would be cut off, showing at a

glance what circulars had been sent and what products supplied to each customer.

SHEFFIELD'S MASTER CUTLER.

Sydney Jessop Robinson, master cutler, of Hallamshire, managing director of William Jessop & Sons, Sheffield, was a visitor in Toronto this week on a business trip, in connection with American and Canadian agencies for his firm. Part of his trip was on behalf of the Cutlers Company, the history of which he personally presented to President Roosevelt at the White House, as well as a copy to the Congressional Library, and one to the library at Ottawa. The Cutlers Company is a unique organization, three hundred years old, somewhat similar to the City of London Guild, this being the first time the history of the organization has been written up, Mr. Robinson being the 282nd master cutler. Mr. Robinson reports excellent business in this country and prospects more promising than ever.

A TRAVELER'S "KICK."

There have been many complaints recently about the lack of accommodation in districts lately won over to local option. Some liquor licenses have recently been issued in the back townships, and in a house licensed May 1 in Coe Hill, the guests, it is said, had to sleep four or six in a room and before retiring diversion was provided by a free fight in which half a dozen drunks participated. There was no extra charge.

STORE PAPERS.

The Walter Hardware Co., of South Milwaukee, Wis., issue Hardware Store News monthly. The first number of this paper doubled the company's January business, and the second number greatly increased the business of a month conceded to be the dullest in the hardware trade—February.

W. W. Mann & Co., Stittsville, Ont., issue The Home Economist, "published now and then in the interests of better business and closer acquaintance. Subscription price your attention. Payable by reading fifteen minutes."

Send a couple of stamps to these concerns and get copies of their paper. Then see what you can do for your own store.

IDEAS FOR THE INDUSTRIOUS

EARNING, SAVING AND SPENDING MONEY.

According to the proverb, "an empty bag cannot stand upright"; neither can a man who is in debt. A man in debt cannot be relied upon to tell the truth; hence it is said that lying rides on debt's back. The man who owes money generally has to make excuses for not paying it when due, and in many cases has to lie about it. The first step in debt is like the first step in falsehood—almost involving the necessity of proceeding in the same course, debt following debt, as lie follows lie. Many a man can date the beginning of the failure of his life from the day he first borrowed money, and realizes when too late the force of the proverb, "who goes a-borrowing goes a-sorrowing."

The Best Test of Character.

The way a man uses money—makes it, saves it and spends it—is perhaps one of the best tests of character. Money should by no means be regarded as the chief end of life; neither should it be held in contempt, as it represents to a large extent the means of physical and mental comfort. Some of the finest qualities of human nature are intimately related to the right use of money—generosity, honesty, justice and self-sacrifice.

An Inferior Class.

The class of men who live from hand to mouth will always be an inferior class. They necessarily remain impotent and helpless, hanging on to the skirts of society—the sport of time and seasons. Having no respect for themselves, they fail in securing the respect of others. In commercial crises they invariably go to the wall.

The Law of Nature.

The world has always been divided into two classes—those who have saved and those who have spent—the thrifty and the extravagant. The building of all houses, the mills, the bridges, the railroads, the ships, and the accomplishment of all the other great works which have done so much for man's advancement and happiness have been done by the savers; and those who have wasted their money have always been their slaves. It is the law of nature that this should be so.

Loose Cash Thrown Away.

Lord Bacon's maxim, that when it was necessary to economize it was better to look after the petty saving than to descend to petty gettings, is a good one to follow. The loose cash that many persons throw away uselessly would often form the basis of fortune and independence. These wastes are their own worst enemies, and are generally found in the ranks of those who are constantly railing at the injustice of the world.

Keep Accounts.

John Locke, the great English philosopher, strongly advises this course: "Nothing," said he, "is likelier to keep a man within compass than having constantly before his eyes the state of his affairs, in a regular course of account." The great Duke of Wellington kept an accurate detailed account of all the moneys received and expended by him. "I make a point," said he, "of paying my own bills, and I advise everyone to do the same; formerly, I used to trust a confidential servant to pay them, but I was cured of that folly by receiving one morning, to my great surprise, duns of a year or two's standing. The fellow had speculated with my money and left my bills unpaid." Talking of debt, his remark was: "It makes a slave of a man. I have often known what it was to be in want of money, but I never got into debt."

Washington was as particular as Wellington in matters of business detail, and it is a remarkable fact that he did not disdain to scrutinize the smallest outgoing of his household—determined as he was to live honestly within his means, even when holding the high office of president of the United States.

Riches no Proof of Worth.

Worldly success, measured by the accumulation of money, is no doubt a dazzling thing, and all men are naturally more or less the admirers of worldly success, but though men of sharp, dexterous, and unscrupulous habits, ever on the watch to push opportunities, may get on in the world, yet it is quite possible that they do not possess the slightest elevation of character, nor a particle of real goodness. Riches are no proof of moral worth, says Francis Collins, and their glitter often serves only to draw attention to the worthlessness of their possessor, as the light of the glow worm reveals the grub.

Men of Sterling Worth.

The power of money is, on the whole, overestimated. The greatest things which have been done for the world have not been accomplished by rich men, but by men generally of small means. Christianity was propagated over half the world by men of the poorest class. And the greatest thinkers, discoverers, inventors, artists, and authors have been men of moderate wealth, many of them little raised above the conditions of manual labor in point of worldly circumstances. The making of a fortune enables some people to "enter society," as it is called, but to be esteemed here they must possess qualities of mind, manners, or heart, else they are merely rich people, nothing more. There are men in society now as rich as Croesus who have no consideration shown them, and elicit no respect. Why? They are but money bags; their only power is their money. The men of mark in society—the guides and rulers of opinion—the really successful and useful men—are not necessarily rich men, but men of sterling character, of disciplined experience, and of moral excellence. The poor man in the joy of a cultivated nature, of opportunities used and not abused, of a life spent to the best of his means and ability, can look down without the slightest feeling of envy upon the person of mere worldly success—the mere man of money.

—

WHEN TO RAISE SALARIES.

Asked recently the question, "How often and at what time of the year do you give your employes a raise in wages?" the head of one of the largest and best known publishing companies in the world made this reply: "We raise our employes on the civil service basis. We have over one thousand two hundred employes in our Chicago offices alone. If we attempted to raise them at a certain time and on a certain basis, there would be endless confusion. Besides, I believe in compensating an employe according to what he is worth. We train them for a certain duty. After they have become competent to discharge it we pay them accordingly. This makes a man self-reliant, for if he is interested in his work he will fight for higher wages. He will work harder and better."

When They are Worth it They get it.

Another extensive employer of labor in the west gave this answer to the same question: "We pay salaries on the 'selling basis.' We raise them likewise. We know that our different departments will stand a certain percentage in salaries—varying from 3 to 5 per cent. The employe who can produce the biggest sales gets the best salary that that department can afford to pay for salesmen. We have no particular time for raising employes' wages—just when we ascertain that they are worth it they get it. Pay your help a living, fair wage and raise them just as soon as they deserve it; then you will get good work out of them."

Show Appreciation by Raising Salary.

Here is another reply: "We have a fixed time for raising salaries — at Christmas. We pay our help good salaries and just as soon as they become fitted to discharge the duties without having someone around all the time instructing them, we raise—and raise to the limit, too. You must show your appreciation of the employe's efforts by paying him. He will do your work then."

STOVES AND TINWARE

MAIL ORDER COMPETITION IN STOVES

An American exchange tells of an interesting experience of a dealer in a town in the Western States, who describes his experience as follows :

"A year or two ago the people of this section concluded that they could save considerable money by buying their ranges of Sears, Roebuck & Co. They frankly told us so, and although we bravely fought the good fight by talking quality, finish, etc., it was seed sown on stony ground. It did not take root. One party after another listened to our little 'spiel' and at once went to the post office or bank, and remitted the cash for a stove or range. One man actually borrowed our S., R. & Co. catalogue to order from, as he had none.

"Next we tried another tack. We ordered the cheapest thing we could get, but alas, the good people were positive that even a price of $26 on a large range was too much, for the catalogue said that we made at least $20 to $30 on every range sold. And then the catalogue house range was the finest thing ever put out by any factory, because the catalogue said so.

"Finally, getting tired of seeing the business in ranges going entirely to the catalogue house, we sat down to think, and after awhile we awoke to the fact that although the catalogue said this and that and the other thing, and while the picture in the catalogue was beautiful to behold, and the description was grand beyond conception, yet there was one thing which we actually did not know. The catalogue says etc., but

What are the Facts?

"What are they really selling at a price of less than $30 ? And we decided to find out. So we remitted the cash for 9-18 Acme Triumph range, but have not time to tell what happened then ; that's another story which may possibly be told some other time. Suffice it to say, that from November until February following we were kept busy returning our check and re-ordering the range. At last, in February, we received the coveted article. We expected at least a range which would be somewhat better than others at the same price, but in this we were disappointed.

"Now, before reading further, take your catalogue and read the description on page 15 and then compare these fancies with the facts as we give them from experience. Shipping weight is quoted at 520 lbs. We took the crating from the range and found it to weigh 90 lbs. Weighing the range itself we found it to weigh the tremendous weight of 335 lbs. net. Adding the 90 lbs. of lumber, we had 425 lbs., finding that S., R. & Co. had made a mistake of some 95 lbs. For those people who imagine the shipping weight to be the weight of range complete the mistake would amount to only 185 lbs. Further examination revealed the following little points of interest : The range is exactly like cut in outline. The blue steel used in closet and body is about the same gauge as common stove pipe iron, or thinner, and of poor quality. The reservoir casing is all sheet steel only, lined with asbestos about 1-32 of an inch thick. A large part of it was already loose, as it appears to have been put on with flour paste. The back flue between oven and reservoir seems to be about 32 gauge, as it rattles like roofing tin when tapped. The edges of oven are rough, looking as if a ten-year-old boy finished them.

Rags of Asbestos Paper.

"Rags of asbestos paper were sticking out everywhere between seams. Back of oven had a piece of iron riveted on which looked as if it has been thrown there and got stuck by accident. Oven bottom, sides and top sound hollow as a drum, and tremble at the tap of one finger. Turning the grate with 'wood side' up, the iron is found to be less than ⅛ of an inch thick. The fireback looks heavy, but removing same it was found to be hollowed out on back side and only about ½ of an inch thick. The ash pan is made without wire around top edge, and is at least two gauges lighter than thin stove pipe. The oven rack is stamped out of thin piece of sheet steel and scarcely bears up its own weight.

"The covers, or lids, are extra large, being 9 7-16 inches in diameter. Yet they weigh only 3 lbs. 9 ozs. Weigh any lid from one of your stock on hand and note the difference. The two beautiful screw drafts to front draft door are simply hung on two pegs, with a piece of wire twisted around the end to keep them from falling out. The nickel is pitted and rough and closely resembles polished iron, showing the scratches from grinding all over. We have never seen poorer nickel. After sizing up this marvelous article thoroughly, we concluded that the extreme actual value or cost was about $20 in all. At least eight or ten dollars must have been saved in finishing expenses. But about the results. We put the range on the floor, next we put another range of a similar price beside it. Then we advertised the S., R. & Co. range, offering to furnish it at cost price, blacken it free of charge, furnish some bread pans, and extra joint of pipe with damper for nothing, but we have not sold it yet, although we have had it a year now.

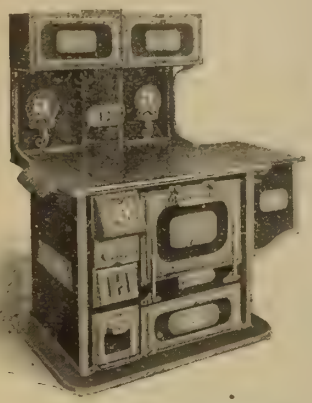
To Work the Cure.

"The best way to work the cure is as follows: Show your customers the measure of lids and weigh them. Do the same with the other range. Show up the difference. Show him both ash pans. Let him 'wiggle' the closet a little. It will surprise him. Take out reservoir—show asbestos paper lining. Tap the sides and notice customer's face meanwhile. It's worth looking at just then. Explain the 'durability' of the tin reservoir. Ask him if he thinks back flue will stand the direct heat for more than two or three years. He won't. Tap the oven with fingers. Hear it rattle, especially if oven rack lays on bottom. Let him feel the thickness of bottom grate. Take out the fireback, showing thickness. Take off a piece of nickel and let him examine it. Show front screw drafts. Finally let him lift up the back end of range and ask him if he is convinced that range weighs what you say it does. Show all these things on your own range, and find out what actual comparison is worth. Have your own range blacked and polished to the limit. Don't do a thing to the S., R. & Co. range. Show it just as it comes,' that's only fair. If you follow these directions we promise that you can't sell it for $25. The freight cost us about $3.30, making net cost about $32.

"As proof of our claims we wish to tell the following : A lady told us that they were going to order a range. When we told her that we could sell her a better range for less money than if she sent for it, she said we could not do it. We offered to pay her $10 cash if we could not convince her in five minutes. In less time than that she owned up that we were right. She is not going to order.

"A man who seemed interested was 'shown' the range and finally admitted that he had just ordered a similar one. When he had seen it all, he at once asked for writing materials and wrote a "red hot" letter demanding that the order be stopped and his money returned. He waited for a month for an answer, and was then informed that his 'letter came too late,' as the range had been shipped.

"Another man who wanted to order one was sent to us by a friend. We did not know his intentions. We offered him the range for $25, provided he would give us ten minutes' time to show it to him. Inside of one minute he declined—disgusted.



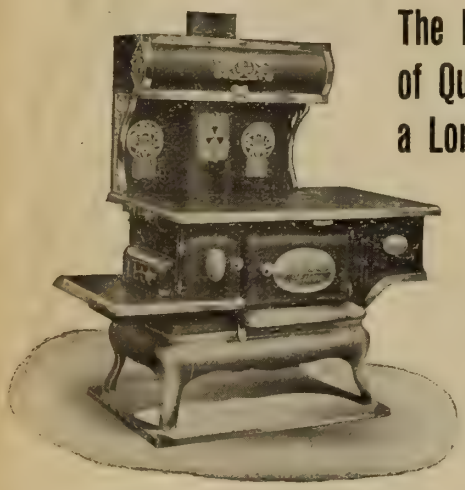
"We call the range our $32 ad. We never lose a sale any more, if we can get at the people before they have ordered. Catalogue house range competition don't amount to shucks now, as there is none. You will never regret it if you order a sample, as it pays for itself in a short time. Arguments don't work, talk won't either; its actual comparison, for seeing is believing."

The great point which the stove dealer should firmly impress upon the people in his town is that he can give them service and satisfaction which they can never get from a concern a thousand or two thousand or even fifty miles away. In case of trouble with chimney or failure to understand the management of the stove it should be the cheerful duty of the stove dealer to explain the cause of the trouble, to remove it and to familiarize his customer with the proper management of the stove. This the catalogue house or stove peddler is too far away to do, and by making this clear to the buyer and demonstrating the cheap quality of the catalogue house stoves the stove dealer should be able to drive the mail order fellows out of his field.

"Combination Declared Legal"

The combination of **Steel Plate** and **Malleable Iron** makes the very best **cooking range** in the world; so declared by many thousand of users, who alone are competent to pass judgment.

Why not commence to build a Range Reputation on this combination? We offer you the only opportunity you've ever had to do it. We protect you in territory, price, and give you the best sales-help possible.



None too early to get ready for fall range sales. Write us for descriptive matter, prices, etc.

Joy Mfg. Co.

32 Humberside Ave. ...Toronto

The Right Kind of Quality Goes a Long Way

You dealers have had enough experience to know that. So have we.

If a range has real merits the fame of these merits will sooner or later reach the people, and then it is just a matter of maintaining the standard.

THE EMPIRE QUEEN RANGE

has always represented the right kind of quality, and we are prepared to state "There'll be no change."

Confidence in our range makes us strong in our statements.

But we will prove what we say—to ***your*** satisfaction.

"Empire Queen" Booklet Makes Good Reading.

THE CANADA STOVE AND FURNITURE CO., 126 West Craig St., Montreal, Que., Agents for the Province of Quebec.

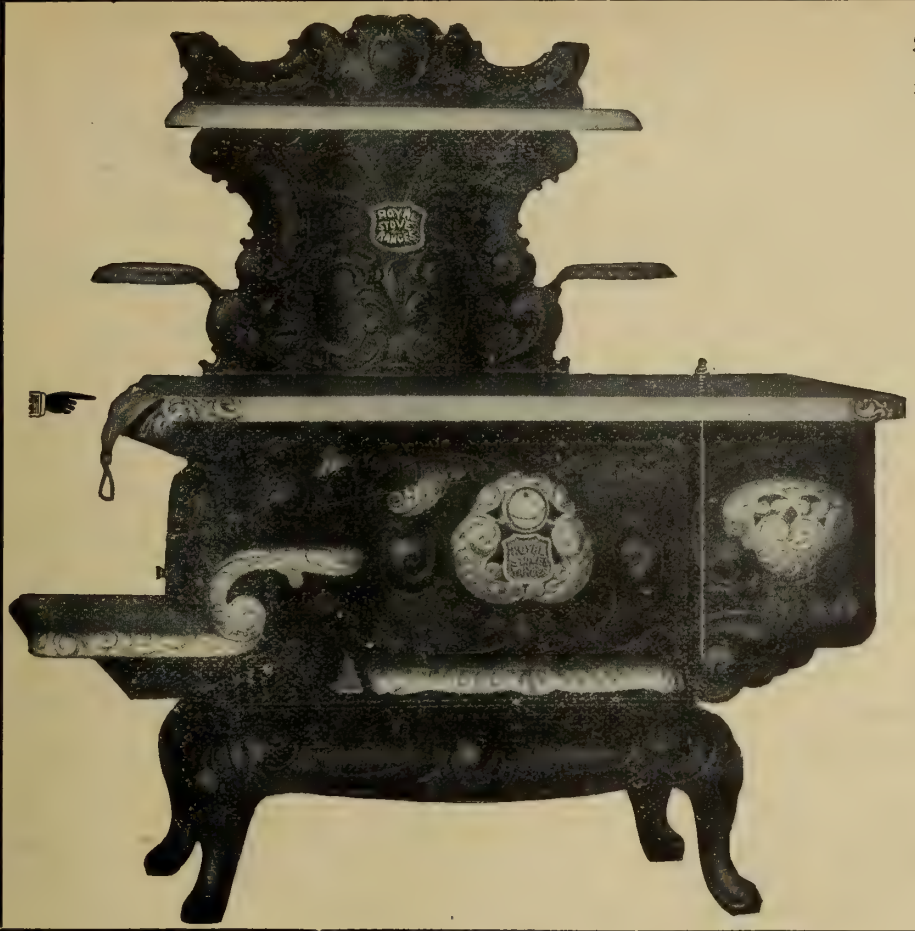
The Range That Sells Ranges—

With an Imperial Oxford Range on your floor, and the Imperial Oxford selling-help working for you on your own trade and the people who ought to be your trade, you'll find that any range you handle will sell better, simply because the Imperial Oxford is so visibly a **QUALITY** range that your store will get a quality reputation beyond any rival's reach.

For the best range we know how to build, and a better range than ever was built before, is this year's

Imperial Oxford Range

It doesn't stop at handsome appearance,—it is made not merely to sell, but to satisfy in the everyday test of the kitchen. Its diffusive oven flue, its extra big oven, its draw-out oven rack, its patent grate, its perfectly designed fire-box,—all these practical points make it an easy range to sell, and to sell for better profit than twice the selling of cheaper ranges would earn you. Why not find out now what there is in all this Imperial Oxford talk—for you?



WE also manufacture Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges and Complete Hotel Kitchen Outfits, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

NO CHANGE IN CRIMINAL CODE.

Reliable information from Ottawa this week is to the effect that Hon. Mr. Fitzpatrick, Minister of Justice, has definitely decided to make no change in the Criminal Code at this session of Parliament, and the business interests of the country will continue to be harassed by the muddy reading of the existing law which says that the price of no article shall be "unduly" enhanced.

"There is no lawyer in Canada who can answer your question," said a well-informed man on Wednesday when Hardware and Metal asked if, in the light of Judge Clute's latest decision, there was any law to prevent the competing merchants in one line of business in any locality coming together in order to stop price cutting and arrange prices upon a profit-making basis.

Judge Clute's ruling practically means that all price agreements are illegal. A manufacturing drug concern entered into a contract to sell certain goods to jobbers to be sold at a stated price, the jobber in turn agreeing with the retailer that the goods were not to be sold under a minimum figure agreed upon. The judge says the retailer has the right to break this agreement as it is illegal. The case will be appealed, and along with the "tack combine," Grocers' Guild, and plumbers' supply cases, will likely hang fire in the courts for some months, the trade of the country being unsettled in the meantime, while the lawyers reap a fat harvest owing to the doubt as to the real meaning of section 520 of the Criminal Code.

The Dominion Government is understood to hold strongly to the view that any sort of trade organization or agreement is legal so long as prices are not enhanced. This being so, there should be no reason why they should postpone action until another year, leaving the law in its present indefinite state to the injury of all branches of trade. The law, and particularly the Criminal Code, should be made so plain that he who runs may read.

But if the Government has decided to leave the matter in abeyance the business men and manufacturers must put up with the consequences. In the meantime it can be taken for granted that, acting locally, retailers can agree to stop price cutting providing the articles covered in the agreement are not raised in price to figures disproportionate to other lines carried in stock. There are many matters which can be dealt with by trade associations without touching upon the regulation of prices, and this matter can well be left, therefore, with the local dealers in each town.

G. T. PACIFIC PROSPECTS.

When in Winnipeg recently, F. W. Morse, vice-president and general manager of the Grand Trunk Pacific Railway made a statement concerning the early construction of the railway which will be hailed with delight throughout the west. Every added facility for handling the wheat crop in a hurry each Fall is of almost inestimable value to the farmers and business men of the west, and there is therefore general satisfaction with the authoritative announcement of Mr. Morse which was as follows:

"The contractors have the work well covered for the Grand Trunk Pacific, and we expect to, as formerly stated, be a factor in handling the wheat crop of 1907 from this country to our Lake Superior port, Fort William, unless there should be delay in the construction of the Government end of the line from here to Lake Superior Junction."

The hope is general throughout the west that Mr. Morse's expectations may not prove to be too sanguine.

RETURNED DRAFTS.

There are times when the retailer does not seem to realize his relation with the wholesaler in the matter of accepting or returning drafts, and refuses to accept a draft on account of some trivial or imaginary reason. Perhaps, if the retailer could really see the amount of work entailed, and the unnecessary expense the non-acceptance of a draft puts the jobber or wholesaler to, he would be more considerate in the matter.

Complaints come to the notice of this paper from time to time, where drafts are returned with no other explanation than "goods not yet checked over," or "drawee out of town," and in some cases simply the word "refused" is written across the back of the draft without even an explanation. Surely it is not the fault of the jobber that the goods are not checked over. To the house making the draft these returns mean the loss of 25 cents collection, the making of new entries and the reversal of every entry put upon the books in connection with the transaction. And then there is the interest due the bank on account of "drafts returned," which is a direct pecuniary loss to the house.

Sometimes an irate letter follows closely on the heels of a returned draft, claiming a shortage or an overcharge of some small amount, in some cases almost charging the house with an attempt to defraud. If the writer would be less hasty in these refusals, and, if he has a grievance, send in a letter explaining the same, there is no jobbing house of any standing whatever that would not be glad to rectify the matter. But to ignore or refuse to accept a draft, unless for some good and sufficient reason, is an act of business discourtesy and a source of inconvenience and expense to the maker of the draft.

Sometimes a draft is returned on account of a small overcharge, the retailer thinking he will commit himself by signing; but he can have little confidence in the house if he feels that by acceptance he is signing away his chance of being credited with the amount, as it would indeed be a short-sighted firm that would take such an advantage. No doubt those who return drafts freely do so without the knowledge that it causes so much trouble, but it does cause needless trouble and work.

W. Patterson, who has for some time been employed on the office staff of B. & S. H. Thompson & Co., Montreal, has returned to Scotland.

CIVICS AND BUSINESS.

Nova Scotia business men and the New Brunswickers, too, are progressive. They have the board of trade idea and apply it in a way Ontario merchants haven't thought of yet. They make a business of civics down by the sea and thereby make civics serve business. They don't let municipal affairs go to seed for lack of a little attention. And they don't ask to be the whole thing either.

Halifax has in operation an admirable plan for co-operative effort by the municipal council and the board of trade. It is a joint committee of the board of trade and city council. But let the chairman of the board, A. M. Bell, tell the story. In his address at the first quarterly meeting of the board he said:

"During the quarter there have been ten meetings of the board of trade council, besides seven meetings of committees and on these occasions the members of the council and of these committees have tried to do things.

"Decidedly the most important committee with which the board of trade is associated is what is known as the Commercial Committee, which is composed of members of the city council and members of the board of trade in equal numbers. The existence of such a committee ensures that harmony and co-operation between these two bodies, which is so much to be desired, and provides, whenever necessary, a representative committee to deal with matters of great importance to the welfare of the city. It is through the work of this committee, of which his worship, the mayor, is chairman, that much of the work of railroad extension has been accomplished.

"Among the many matters which are pressing for solution and which are engaging the attention of the council, is the endeavor to make Halifax a manufacturing and distributing centre. In connection with this, the commercial committee has recommended to the city council that a bill be submitted to the legislature by which new industries which may be started in the city shall be free from taxation for a term of years. I am pleased to be able to report that this has passed the city council and is now in the hands of a committee that is at work on the details of the bill, and it may reasonably be expected that during the present session of the house such a law will be put on the statute books as will lead to the greater development of manufacturing and distributing industries in our city.

"An effort of a different character, but with the same end in view, is that of an experimental business trip by the manufacturers and those engaged in the wholesale trade of the city to some of the towns on the Halifax and Southwestern Railway. A committee has made arrangements with the management of the road for a special train, and as soon as the weather is more favorable it is expected that a three days' trip will be taken as far as Liverpool and Caledonia, calling at Lunenburg, Mahone and Chester, during which an opportunity will be given to discuss with the merchants of these places, problems of mutual interest to those interested in the business of the several points and Halifax.

"Your council is looking with renewed hope to the time in the near future when Halifax will reap the benefit of its splendid position as the finest gateway of Canada on her eastern seaboard. It must be apparent to every observer that the increased size, the greater speed and the immense cost of modern steamers is causing the owners of these splendid vessels to look for ports at which they can at all times lie afloat, and load and discharge without regard to tides, and which they can approach at all times at the highest speed with the least danger. It is the aim of your council to bring the advantages of Halifax to the attention of the great railroad, the steamship corporations, and they now have under consideration a plan which they hope will be of great benefit to the port.."

The commercial committee and the experimental trip are very suggestive departures. The business trip was over a new extension of the Canadian Northern's Nova Scotia system and might be only locally applicable. The commercial committee could be copied with very valuable results in every place where there is a council and a board of trade.

Consider the situation in Toronto, for example, where business men carefully avoid municipal politics. The board of trade's influence in the conduct of civic business is a cipher and wasteful, antiquated methods are in vogue; questions and undertakings of paramount commercial importance drag on from year to year without settlement or progress. Not an alderman and, probably, not a member of the board of trade can tell the financial position of the city. The government of a municipality ought to be simply business. A commercial committee, such as Halifax has, could remove many obstacles to progress not only of Toronto, but of most municipalities in the Dominion.

DISPLAY YOUR STOCK.

Merchants cannot give too much attention to the display of their goods in stock. Many lines of stock may be old and hard to sell, but by judicious display and by keeping them dusted and fresh looking, a storekeeper will reap his reward in better sales. The goods which occupy a place in the window today should not be left there for weeks, or, as is sometimes the case in country stores, for months, but should be moved into the store and placed in a prominent position on the counter or elsewhere, where they cannot escape the notice of customers. The same applies to the goods in the back of the store. Bring them up to the front for a change. Move your stock about as much as possible.

This does not mean, of course, to unload all your shelves and disturb your entire stock, but that portion of it which might be called the transient stock will be benefited by frequent moving and good display, as will such lines as are mentioned above—old or slow sellers. Mark the goods in plain figures, place them before the public eye, and have your salesmen speak for them whenever possible. All this means work, necessarily, but to get along successfully nowadays, to beat the other fellow, you have to take off your coat and put on your thinking cap and buckle down to work hard and unceasingly.

DIRECT RESULTS.

An exchange recently gave notice that in case a stolen carriage whip was not returned to a certain place before the next issue, it would publish the name of the party who took it. The place designated was the back yard of a certain block. The next morning after the first notice came out—the night being very dark—seventeen whips were picked up in said backyard. Yet there are people who do not believe in advertising.

HARDWARE. TRADE GOSSIP

Ontario.

Jas. L. Kelman, hardware dealer of Midland, has assigned to H. J. Craig.

W. Conrad, of Conrad Bros., Waterloo, was in Toronto on Tuesday last.

J. Cole, of Cole & McMurray, Niagara Falls, Ont., was in Toronto during the week.

Tisdale & Cameron have purchased the hardware business of J. L. Kelman, Midland.

Sherman Everett has purchased the hardware business of Brown & Graves, Thamesville.

A. A. McMichael, Toronto, has returned from a fortnight's sojourn at Atlantic City.

The Plumbers' Brass Company, Toronto, have moved into their new premises at 757 Queen street west.

J. Macdonald, of Florence, Ont., was a caller at the Toronto office of Hardware and Metal this week.

Alex. Saunders, bathroom woodwork manufacturer, of Goderich, called on Toronto jobbers during the week.

T. Healy, of Rice Lewis & Son, Toronto, is on the road taking the place of W. J. Seed, who is unwell at present.

N. L. Stewart, for the past sixteen years in responsible positions in stove foundries in Missouri and Texas, is the new manager of the Guelph Stove Company.

Wm. T. Dunbar, hardware merchant of Kars, Ont., has moved into his new store, which presents an up-to-date appearance.

The Canadian Oil Company, Toronto, have established head offices in the Stair building, corner of Bay and Adelaide streets. The business offices on Strachan avenue will also be continued.

Geo. Richardson, hardware merchant, of Guelph, has had new floors and new silent salesmen put in his store. A storage shed has also been built in the rear, and a new delivery wagon purchased.

Adam A. Stewart, manager of the Stewart Manufacturing Company, Woodstock, Ont., makers of stoves, ranges, etc., has resigned owing to ill health, and will be succeeded by Charles E. Stewart.

James Wilson, of the John Ritchie Plumbing Company, Toronto, who has been seriously ill for about six months owing to the strain of the recent plumbers' trials, is now considered out of danger and is recovering steadily.

Bert and Ira Gerry, two Brussels young men, have opened out a hardware store in Fort William. Both men are well acquainted with the hardware business, their father having been a hardware merchant for 45 years in Brussels.

The Canada Plate and Window Glass Company are making extensive improvements to their premises on Richmond street east, Toronto. They have secured a 120-foot frontage, and are making a three-story addition, 90 feet deep. A fine plate glass front will be installed and several artistic mantel showrooms will be erected, two of which are already finished.

Quebec.

Joseph Warren, of Murray Bay, visited Montreal during the week.

Barlow & Budd, plumbers, of Montreal, have dissolved partnership.

Paquin & Bonneville, plumbers, of Cote des Neiges, have dissolved partnership.

Hiram Pitt, hardware merchant, of Cornwall, was in Montreal on business Tuesday of this week.

Aime Lemieux, general merchant, of Henriville, was in Montreal buying hardware a few days ago.

Mr. Haskill, of the Haskill Lumber Co., Fasette, Que., spent part of this week in Montreal on a purchasing trip.

W. S. Fisher, of Emerson & Fisher, St. John, N.B., was a welcome visitor among the Montreal hardware trade a few days ago.

J. A. Baxter, who has successfully represented L. N. Beard for some months past, left on Wednesday for an extended visit to Europe.

W. Fawcett, of W. Fawcett & Co., general merchants, Moose Creek, Ont., was a visitor at some of the wholesale houses of Montreal this week.

Mr. McKenzie, of the McKenzie Trading Co., Shawbridge East, visited Montreal this week, leaving orders with some of the wholesale houses there.

M. Gregory, 13 St. John street, Montreal, has been appointed sole representative of the Vulcan Smoke Consumer & Fuel Economizer Company.

Mr. Moulden, formerly manager of the Montreal branch of the Taylor-Forbes Company, and now of their Guelph office, visited the former city this week.

The painters and stencillers employed in the shops of the Canada Car Company went on strike last week, hoping thus to increase their pay. The strikers do not belong to any organization.

G. E. Stanley Smith, director of Bickford, Smith & Co., manufacturers of fuses, etc., Tuckingwill, Cornwall, England, was in Montreal last week, and will take a business trip through to the coast.

Mrs. Elizabeth Soden Drummond died at her residence in Montreal last Thursday night. She was the mother of George E. and Thomas J. Drummond, both of whom have been most prominently identified with the development of Canada's iron and steel industries.

The Sherwin-Williams Company have in course of construction a new factory on Atwater avenue, near St. Patrick street, Montreal. It will be 100 feet by 70 feet and two storeys high, of brick mill construction throughout. The contractors are D. G. Loomis & Son and the estimated cost $20,000.

P. D. Dods & Company, paint manufacturers, Montreal, are moving their office and warerooms to their new premises at 162-164 McGill street, formerly occupied by L. H. Packard & Co. Hardware and Metal was in error some weeks ago in stating that this building would be occupied by George Phillips & Co., cutlery manufacturers. The latter firm are now settled in the new Packard Building on St. Antoine street.

The special jury in the case of Dame Damase Hebert against the Carter White Lead Co. for $14,000 for the death of her husband by white lead poisoning, brought in a verdict last Saturday night granting her $2,500 and $2,500 for her three children, making in all a total of $5,000 damages. The defendent company was held responsible to the greater extent for Hebert's death, though the deceased was considered to have contributed to it by his imprudence.

Messrs. John Round & Son, silversmiths, Montreal, report very satisfactory returns and that their business is rapidly extending. This is no doubt on account of the ever increasing demand throughout Canada for high-grade English goods, such as is manufactured by this well-known firm, and the fact that they carry a very large reserve stock, from which immediate delivery can be made is a still greater inducement to the retailer who is often called upon for some article he happens to be out of.

The Canadian Rubber Co., of Montreal, have now placed on the market their new "Keystone" side wire tire. This tire has many unique features not to be found in any other make, and the Canadian Rubber Co. have exclusive control of the patent rights for manufacture and sale throughout the Dominion of Canada. Already a large amount of business has been booked, and the carriage and hack trade are displaying great interest in the new tire, which is adjudged by experts to be superior to anything yet put on the market.

Western Canada.

The Red Store, Moose Jaw, will add hardware to their stock.

W. A. Rolston, of Roblin, Man., was in Winnipeg last week on business.

S. L. Bedson, hardware dealer of Elphinstone, Man., has sold out to L. G. P. Lauder.

The Medicine Hat Plumbing and Heating Co., of Medicine Hat, Alta., have sold out to W. B. Marshall Co.

The molders and iron workers in the Northern Iron Works, Vulcan Iron Works and Manitoba Iron Works are on strike.

The Northern Iron Works have purchased a valuable property in Elmwood, where a large foundry will be erected shortly.

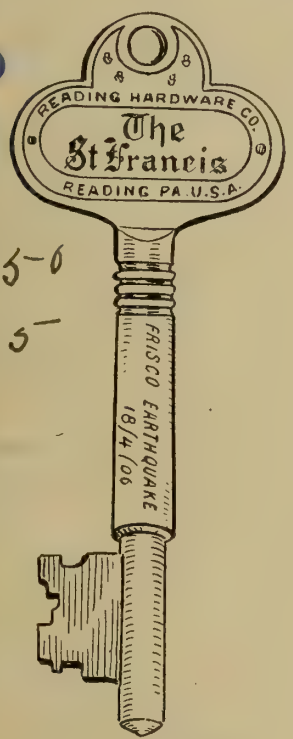
J. E. McRobie, secretary of the Retail Hardware Association, was in Dauphin and Yorkton last week on association business.

A. J. Falconer, of Deloraine, president of the Western Retail Hardware Association, was in Winnipeg last week. He was accompanied by C. Clearihue.

H. S. Price, of Boissevain, Man., was in Winnipeg last week on business and was seen by a Hardware and Metal re-

presentative in the offices of the Retail Hardware Association.

George Ashdown, a prominent hardware merchant of Morden, was last week elected by acclamation as representative for Morden in the Manitoba Legislature. Geo. Ashdown is a Conservative, while his brother, James H. Ashdown, the wholesale hardware man, is prominently identified with the Liberals.



A. M. St. Arnaud, of Montreal, who was in Winnipeg recently calling on the jobbing trade, appointed J. J. McGuire as his agent in the west. In addition to the lines handled by Mr. St. Arnaud, Mr. McGuire is western selling agent for the Cumming Manufacturing Company, Renfrew, Ont., and for the National Manufacturing Company, of Worcester, U.S.A. He has offices in the Ashdown block.

Maritime Provinces.

E. J. Cragg, of Cragg Bros. & Co., Halifax, has sailed for England and the continent to visit cutlery and hardware centres.

H. N. Brown, formerly connected with the Dominion Iron & Steel Co., as foreman in their Sydney, C.B., works, has taken up his residence in Montreal.

RETURNED
MAY 28 1906

A San Francisco Relic.

HE SAVED THE KEY.

A unique souvenir of the San Francisco earthquake is being proudly exhibited by "Charley" Deitrich, who has made hosts of friends in the trade as traveling representative of Shurly & Dietrich, Galt, manufacturers of Maple Leaf Saws.

It consists of the key to his room in the St. Francis Hotel, San Francisco, where he stopped on the night of the terrible earthquake there. Mr. Dietrich has had the key engraved, and he carries it on his key ring, to show his friends one of the few articles which came whole out of the catastrophe. We present on this page a cut of the key, but readers should ask Mr. Dietrich to show them the real thing.

PRESENTATION TO McMILLAN BROTHERS.

On Saturday last presentations were made to McMillan brothers, who have severed their connections respectively with Lewis Bros. and Rice Lewis & Son, to take over the hardware business of George B. Morris, of Guelph, Ont. John R. McMillan was given by his fellow travelers of Lewis Bros. a black leather club bag which was presented on behalf of the Toronto branch salesmen by R. Tait, at the York street warerooms. On the same day the employes of Rice Lewis & Son gathered to say farewell to the other brother, James W., and presented him with a sterling silver tea set. The presentation was made by A. E. Gilverson, secretary of the company. A number of the friends of J. W. also gathered at the Lambton Golf and Country Club on Saturday night, where he was the guest at a dinner given in his honor. The McMillan brothers are both hardwaremen of large experience, and are highly esteemed in both business and social circles. They carry the well-wishes of their many friends in their new venture as retail hardwaremen at Guelph.

CHANGE IN MANAGEMENT.

T. B. Lee, who has been general manager of Rice Lewis & Son, Toronto, left this week on a trip to Great Britain and the continent. A change in the management of the firm has taken place, T. B. Lee retiring and the general managership being taken over by A. Burdette Lee, president of the company. There is no truth in the statement made in the daily press that Mr. Lee proposes to make his home permanently in England.

Our Letter Box.

Metal Polish Makers.

James & Reid, Perth, ask: "Please let us know the address of the makers of York metal polish." The Anglo-Canadian Supply Company, 26 Adelaide street west, Toronto, are the manufacturers.—Editor.

* * *

Who Makes Soil Pipe?

A. C. Waltz & Co., plumbers and steamfitters, Port Arthur, ask for the names of manufacturers of soil pipe in Canada. The Toronto Foundry Company and the Toronto Hardware Company, Toronto, have been making this line for years, but the Forwell Foundry Company, Berlin, are now working up an excellent trade for the product of their new foundry.—Editor.

THE KIND HE LIKED BEST.

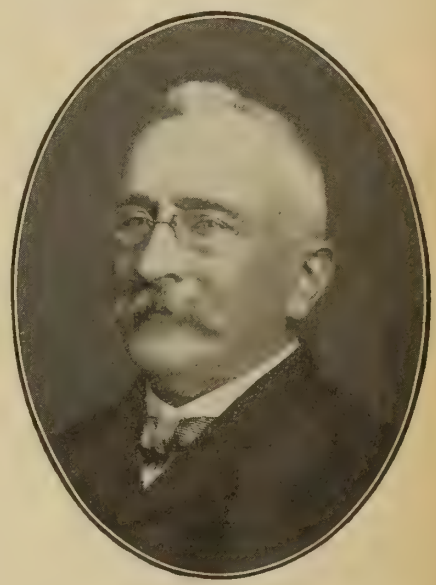
A deaf old gentleman was asked to a dinner party, and a lady present was urged to help him along in the conversation. It proved even more difficult than was expected. As the fruit was passed around she asked him:

"Do you like bananas?"

"What?"

"Do you like bananas?"

"No," said he, shaking his head; "I never wear them. The old-fashioned night shirt is good enough for me."



SUCCESSFUL JOBBERS AND SALESMEN.

No. 25.

Few men have such a long record of salesmanship as has John P. Conklin, who for over twenty-five years has represented the firm of Sanderson Pearcy & Co. on the road. Mr. Conklin became interested in the paint and varnish business as a boy in 1866, when he started working for the Forest City Varnish Co., of Cleveland, O., with which firm he remained some years, thoroughly acquainting himself with all the different phases of the manufacture and sale of paints and associated lines before engaging with his present employers a quarter of a century ago.

When the firm of Sanderson Pearcy & Co. was formed into a joint stock company, he was admitted as a shareholder, so that he now possesses an interest in the business he has been instrumental in building up.

Mr. Conklin has been eminently successful on the road, attributing his success to the fact that he never misrepresents his goods, and has always retained the confidence of his customers by keeping his word.

John P. Conklin,
Representing Sanderson Pearcy & Co., Toronto, in Northern Ontario.

TORONTO BOLT WORKS BURNED.

The Toronto Bolt & Forging Co. had their works at Swansea, near Toronto, destroyed by fire on Tuesday last. The loss was in the neighborhood of $100,000, covered by insurance. They will rebuild immediately.

THE SECRET OF ADVERTISING.

If you want to know the secret
Of the way to advertise,
You've got to use some common sense—
Be up-to-date and wise.

It isn't merely filling space,
It isn't all display,
It's telling folks about the goods
In a bright and catchy way.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 74.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Galvanized Iron—Advances declared.
Canada Plates—Full polished, firmer.
Ingot Tin—Price now 48 to 48¼c.
Turpentine—Decline of 2c.
Machinery Cast Scrap—Declined to $13.
Solder—Prices have declined slightly.

TORONTO.

Turpentine—Down 2c.
Paris Green—Quoted nominally at from 19 to 22c. in pound packages.
Churns—New list of advanced prices is in effect.
Ingot Tin—The market has weakened, but is again strengthening, and we still quote 50c.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 25, 1906.

Practically no alterations have been made in the prices of general hardware lines during the week. The market is very steady and the few fluctuations in metals have not appreciably affected the situation of hardware.

Although this is the time of year when a slight falling off in business is looked for, after the rush of early Spring deliveries, the big jobbing houses here report that there has been no let-up in the volume of orders.

Sporting goods are gaining strength every day. Guns and ammunition are moving particularly well, while the demand for fishing tackle and outdoor sports equipment is increasing.

A large business is still being done in freezers. Heavy shipments of these goods have been made right from the commencement of the season. Repeat orders for other Spring goods are coming in very regularly and the season's aggregate will be large.

Owing to the fact that in many parts of Quebec the farmers are only now in the midst of seeding, the provincial business of most of the houses is somewhat quiet.

AXES—No features in the trade, which continues steady. We quote: $7.60 to $9.50 per doz.; double bitt axes $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—Our prices remain as follows: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—Business is fair and prices remain stationary at $4.25 for cold blast.

RIVETS AND BURRS—The market in this and other staple lines is very steady. Our prices are as follows: Best iron, rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets, with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—Shipments are quite numerous and fairly heavy. We quote: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash; f.o.b., Montreal.

MACHINE SCREWS—Business keeps very brisk at unchanged prices. We give discounts as follows; Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—This line, as always, is commanding a good share of attention. We are quoting discounts as follows: ⅜ and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 and 5 per cent.

HORSE NAILS—The jobbers are shipping freely, and mills are full of orders. We quote: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—There is naturally a good demand for wire nails, owing to the great amount of building now under way. We quote: $2.15 per keg f.o.b. Montreal.

CUT NAILS—Trade is about as usual. We are quoting $2.20 per keg f.o.b. Montreal.

HORSESHOES—The mills are continuing a big output, which is being taken up well by the trade. Our prices are: P. B. new pattern, base price, $3.50 per 100 lbs.; M. R. M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—Inquiries and orders are becoming more numerous every day. A particularly good demand is being experienced for guns and ammunitoin.

BUILDING PAPER—Trade is still somewhat quiet, though it is increasing right along.

CEMENT AND FIREBRICK—Turnover is large and local merchants are shipping largely. We give prices as follows: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. "Lafarge" (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21; American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—Business is good. We quote prices: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—These goods are still selling remarkably well. Repeat orders are constantly in evidence. We quote: American Twin, 2 qt. $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—Large quantities of wire cloth are still being sold. We still quote $1.45 per hundred square feet.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, May 25, 1906.

Farm and garden tools and accessories are the feature of the present trade. Poultry netting is particularly active, and lawn mowers, garden hose, reels, sprinklers, etc., with similar lines are giving an impetus to business again after the rush times of the general Spring opening up. Woven wire in rolls, and screen doors are going out in large quantities, some big orders being shipped to northern Ontario.

In the more distant points in the province ice cream freezers find a steady market, but in the districts adjacent to large cities this trade is not so great as in former years, as ice cream is distributed there from city makers.

The burning of the Toronto Bolt and Forging Works may cause a shortage in bolts, washers, nuts and other lines made by them, as some big contracts were in their hands. Already some of those who had contracts with this firm are negotiating with American manfacturers with a view to placing orders.

An advance has been made in the list price of churns, which makes quotations as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $12; No. 5, $16. The discounts remain the same.

AXES AND HANDLES—Trade conditions normal, with no price changes.

CUTLERY AND SILVERWARE—A steady business continues to be done.

SPORTING GOODS—Baseball and lacrosse goods and fishing tackle continue in good demand, and gums, ammunition, etc., are selling well.

WASHING MACHINES—Trade is fairly active at present.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; ¾ inch, $3.95;

7-16 inch, $3.80; ½ inch, $3.65; 9-16 inch, $3.55; ⅝ inch, $3.45; ¾ inch, $3.35.

EXTENSION AND STEP LADDERS—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

POULTRY NETTING — This line is particularly active now.

GALVANIZED WIRE — We quote: $2.17½ f.o.b. Cleveland.

BARB WIRE — Prices remain the same. We quote: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE — (Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—Wire nails are holding at the same price, with the usual large sales of this time of year. We quote: $2.05.

CUT NAILS—The ordinary quantity of cut nails is being sold.

HORSENAILS—The usual trade continues to be carried on. No price changes.

HORSE SHOES—Trade shows up well in horse shoes. Our quotations are as follows: P. B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

SADDLERY—Trade is reported to be active in all lines.

RIVETS AND BURRS—Business is good in these lines with prices the same.

SCREWS—All lines are selling well at present. No price changes.

BOLTS AND NUTS — The destruction by fire of the Toronto Bolt and Forging Works may cause some change in bolts, nuts, washers, etc., as this firm were large producers and had some big contracts on hand.

CORDAGE—We quote as follows: On binder twine, 500 feet, 10c. lb.; 550 feet, 11c. lb.; 600 feet, 12c. lb.; 650 feet, 13½c. lb. Golden Crown, 500 feet, 9¾c. lb. On Gold Medal Brand (imported), 600 feet, 12½c.; 650 feet, 13½c. Discount for car lots: Manila, 15c.; British manila, 11½c.; sisal, 10½c.; double lathyarn, 10½c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16½ to 17c.; cotton waste, colored, 6¾c.; white, 9c.

CEMENT—There is no lessening in the quantity of cement being asked for. All that is being made finds a ready market. We quote: For carload orders, f.o.b., Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Porland, $2.05 upwards.

FIRE BRICK—There are no changes to record. English and Scotch fire-brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27½c. to 35c.

HIDES AND WOOL — The market situation is practically unchanged. Calf skins are most in evidence. Tallow is 1-4c. and wool 1c. higher.

HIDES AND WOOL—The market is steady with little change in the situation. Prices are unchanged from last week.

Hides, inspected, steers, No. 1		0 11
" " " No. 2		0 10
" " cows, No. 1		0 10½

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 25, 1906.

Many interesting features have developed on the metal market here during the week just passed, and fluctuations have been more numerous and varied than for a long time.

To begin with, tin early in the week took a sensational drop of nearly ten cents per pound. It soon recovered, however, and began to firm up again. At time of writing, the metal dealers are quoting from 48c. to 48 1-2c., and many expect that higher prices will be reached again. At any rate, the London market shows higher prices to-day for both spot and future tin.

Pig lead went in just the opposite direction, making a noticeable jump at the beginning of the week. A slight reaction, however, set in, and prices went down to their former figures. But lead is much stronger than last week, and there is a confident expectation that prices will go up.

In pig iron an advance has been declared on Summerlee No. 3. Indeed, it is very difficult to obtain any old country pig, except the higher classes of Scotch iron. It is even stated that no deliveries of No. 3 will be available until next August. Prices all around are very steady, and bookings are good.

Both ingot and sheet zinc have advanced in foreign markets, though not sufficiently to affect stock prices here. Jobbers' prices are a little firmer, but the trade will still be able to secure deliveries at last week's prices.

In sheet metals, galvanized iron has finally been advanced by the wholesale houses. Frequent advances have been made by importing firms, but so long as local stocks remained good, no move was made to follow suit. It is now seen, however, that they will soon have to replenish their stocks, hence the change in price. Tin plates are the subject of active inquiry just now, as it is generally felt that current prices cannot much longer be maintained.

COPPER—The market shows greater strength this week, though prices are unaltered. We quote: Ingot copper, 21c. to 21 1-2c. Sheet copper, base sizes, 25c.

INGOT TIN—After a sharp decline, strength is again shown, and price is now quoted at 48c. to 48 1-2c.

PIG LEAD—This metal scored a jump early in the week, but a slight falling off occurred, leaving the price as before. It is very firm at these figures, however, and they will probably be advanced very shortly. Our price is $4.35 to $4.45 per hundred pounds.

PIG IRON—Deliveries of the softer grades are very difficult to obtain. We give prices:

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	21 00	"	"
Clarence No. 1	18.00	"	"
" No. 3	17.65	"	"

BOILER TUBES—Conditions of trade are unchanged. We quote prices: British and American tubes, 1½ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15¾c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our prices are: Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.

MERCHANT STEEL — Prices are generally firm. We quote prices as follows: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.17½ and upwards; square harrow teeth, $2.27½. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING — Our prices remain: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—As has been predicted for some time, the Montreal jobbers have been compelled to advance prices, as their stocks have become low and they are now replenishing at higher figures. We now quote: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28

gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—Our prices remain as follows: 28 gauge, $2.40; 26 gauge, $2.35 ; 22-24 gauge, $2.30 ; 19-20 gauge, $2.30 ; 8-10 gauge, $2.45.

CANADA PLATES — Quotations are very steady, and we quote: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

ANTIMONY—Prices are unchanged, and dealers still have no difficulty in getting from 27 to 27 1-2c. per pound.

TIN PLATES—The large buying of the past week or so shows the prevalent feeling that there will soon be a jump in price. For the present we quote: Cokes, base size I C 14x20, $4 ; charcoal, base size I C 14x20, $4.25.

TERNE PLATES—No advance has yet taken place, as the market depends largely on that of tin plates. We still quote $6.85.

INGOT ZINC — Importers are now paying higher prices, but local markets have not yet been affected. Our prices remain 6 3-4c. to 7c.

SHEET ZINC — This line is also stronger, although prices locally remain the same. We quote: $7.75 in casks; $8 in less than casks.

SHEET LEAD—As pig lead is advancing, prices are firmer. We quote: 2½ lbs., 5½c. by the roll ; 3 lbs. and heavier, 5¼c. by the roll ; small quantities 25c. per hundred lbs. extra.

BAR IRON—We are still quoting : $2.05 f.o.b. Montreal.

OLD MATERIAL—All metals remain unchanged in price, though the tendency of zinc is slightly weaker. Machinery cast scrap is also weaker, as the demand has fallen off. Wrought iron remains the same, the mills setting the price. Rubber is a little uncertain. It is perhaps a little weaker, but dealers here are still looking for prices to go higher a few weeks later, when the Spring collections have been worked off. We quote: Copper wire, 15 1-2c.; light copper, 14 1-2c.; heavy red brass, 13 1-2c.; yellow brass, 10½c. ; light brass, 7½c. ; lead, 3¼c. ; zinc, 4c. ; machinery cast scrap, $13.00; wrought scrap, $12.00; stove plate scrap, $11 ; mixed rags, $1 to $1.20 per 100 lbs. ; old rubbers, 7¼c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, May 25, 1906.

Ingot tin continues to be the feature of the metal market, the past week seeing a sharp decline and a steady reaction which may carry the metal even higher than the former record figures. As far as can be learned the drop of £12 in one day a week ago was due altogether to speculation rather than to any news of increased production or decreased consumption. The London market is improving again, but there is very little real news obtainable, and the trade have to draw their own deductions. A change in sentiment in futures is noticeable, the recovery in price of which was £4 per ton on a business of 920 tons on Tuesday. The market generally, however, has a much better tone, and with a revival of interest on the part of consumers, conditions would soon be normal again. Stocks are light in Toronto and demand not very keen. Solder is, however, selling in large quantities owing to its comparitive cheapness in comparison to pig tin and lead.

Tinned sheets are selling at higher prices in outside markets. Lead and spelter are more active with a brisk business doing in copper.

PIG IRON—A firmer market is reported with the following prices: Radnor at furnace, $30 ; Hamilton and Midland, at furnaces, No. 1 $21, No. 2 $20.50 ; Londonderry, f.o.b. Toronto, No. 1 $22, No. 2 $21.50 ; Middleboro, $21.50.

BAR IRON—There are no changes in prices, but the market is very firm at $2.15 base, f.o.b., Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Fifty cents is asked by dealers with changed prices each day.

TIN PLATES—There has been some heavy buying of plates in the expectation of higher prices. We are quoting: Cokes, base size, 14 x 20, $4; charcoal, base size, 14 x 20, $4.50.

GALVANIZED SHEETS—Trade continues fair and we quote: 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. Buying is fairly active and quotations 23c. to 24c. per pound.

BOILER PLATES AND TUBES — The demand is steady and we continue to quote : Plates, per 100 lbs., $2.35 ; heads, per 100 lbs., $2.60 ; tank plates, 3-16 inch, $2.45 ; tubes, per 100 feet, 1½ inch, $8.50 ; 2, $8.70 ; 2½, $10.50 ; 3, $12 ; 3½, $15.80 ; 4, $20. Terms, 2 per cent. off.

LEAD—The market is very active, but prices continue as before. We quote : Canadian pig lead at $4.40 and English pig at $4.75 per 100 lbs., with bar lead at $5 per 100 lbs.

ZINC SPELTER—Prices are firm and trade lively. We quote: 7 1-4c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

COPPER — Business is brisk with prices unchanged. We quote: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

OLD MATERIAL—All metals are active with prices the same. Dealers' buying prices are as follows : Heavy copper and wire, 15½c. per lb. ; light copper, 13¾c. per lb. ; heavy red brass, 13¾c. to 14¼c. per lb. ; heavy yellow brass, 11c. per lb. ; light brass, 8½c. per lb. ; tea lead $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs. ; scrap zinc, 4¼ to 4½c. per lb. ; iron, No. 1 wrought, $11 ; No. 2 wrought, $3 to $5 ; machinery cast scrap, $13.50 to $14 ; stove plate, $10 ; malleable and steel, $5 ; old rubbers, 7c. to 7¼c. per lb. ; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Quotations remain as follows: Anthracite in cars at bridges, egg, stove and nut, $5.50 ; grate, $5.25 ; pea, $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines : Lump, $1.50 ; 3-4 inch, $1.40 ; run of mine, $1.30 ; nut, $1.25 ; N. P. and S., $1 ; slack, 75c. ; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges : 1¼ inch, $2.60 ; ¾ inch, $2.50 ; mine run, $2.40 ; slack, $2.25.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, May 23, 19 6

PIG IRON—Cleveland warrants are quoted at 50s. 10 1-2d. and Glasgow standard warrants at 50s. 7d., making prices as compared with last week unchanged for Cleveland warrants and lower for standard warrants.

TIN—Spot tin opened strong at £187 10s., futures at £186, and after sales of 170 tons of spot and 650 tons of futures closed strong at £188 10s. for spot and £187 for futures, making price as compared with last week £19 lower on spot, and £13 lower on futures.

COPPER—Spot copper opened firm at £85 10s., futures £85, and after sales of 50 tons of spot and 400 tons of futures, closed easy at £85 5s. for spot and £84 15s. for futures, making price as compared with last week £1 lower on spot and 17s. 6d lower on futures.

LEAD—The market closed at £16 15s. making price as compared with last week 12s. 6d lower.

SPELTER—The market closed at £27 2s. 6d, making price as compared with last week unchanged.

U. S. IRON AND STEEL MARKETS.

From the Iron Age, May 24, 1906.

The large rail contracts recently reported for delivery in 1907 contrast with conditions in other finished lines, where buyers as a rule show no eagerness. It is estimated that 900,000 tons of rails have now been definitely closed for next year and that nearly 300,000 tons in addition will be carried over from this year. The forwardness of the railroads is calculated to help counteract the hesitation shown by many consumers. In some quarters sales organizations, long used to order books written up months ahead of rollings, are not entirely complacent under present conditions.

The foundry pig iron market is easy under continued inaction. The machinery founders and molders in the various centres involved in strikes are evidently settled down to a test of endurance. Some scattering buying in the east and New England shows that on close competition 25 cents a ton has come off recent prices. In the Central Western Valleys, No. 2 foundry has touched $16, and on malleable business, in which some little inquiry appears, $15.80 has been done. A contract indicating how closely steel making irons are being swept up has been made by a small Shenango Valley furnace about to start, after long idleness. A Pittsburgh steel company has taken the entire output for the second half. Virginia basic is finding its way into western steel foundry districts at slight concessions. An Ohio pipe

foundry is about to close for 12,000 tons of southern iron and eastern pipe foundries are feeling the market.

The billet market is working into a freer condition, more steel being available. In sheet bars the situation is more troublesome and sheet mills are falling behind on their deliveries.

Important contracts for structural steel for New York work are practically closed, 28,000 tons for the Hudson Co's tunnel terminal and 12,000 tons for the City Contracting Co's Cortlandt street building. The open hearth building of the Gary, Ind., plant of the Steel Corporation has been placed and takes 15,000 tons. At Milwaukee a 2,800-ton contract is announced.

Attention is still converging on the bar situation. Large contracts are pending; the question is one of terms. In bar iron conditions are less satisfactory.

An advance from $3.60 to $3.75 per base box in the price of tin plate has come, tardily following the excitement in pig tin. But tin plate manufacturers are largely sold up for the year.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, May 24, 1906.

The world's production of pig iron for 1905 was 53,700,000 tons. The output has doubled in the past fifteen years, the production for 1890 being 26,980,810 tons. Russia has made the best showing, having more than tripled its output in that period. The United States and Germany have run quite evenly, the United States increasing its production in the 15 years by 149.8 per cent. and Germany by 147.0 per cent. In 1890 these two countries made 51.1 per cent. of the world's pig iron; of the total increase in 15 years they furnished 74.9 per cent., so that in 1905 they made 63.0 per cent. of the world's total. To put it in round figures, in 1890 the United States and Germany made one-half of the world's pig iron. While the world's production doubled in 15 years, their own production increased one and a half times, and in 1905 they made five-eighths of the world's total The increase in pig iron production in the past 15 years is not likely to be duplicated indefinitely. Even the statistical record would not bear out any prediction based on this period, for the reason that trade has moved in 20-year cycles, and these 15 years have reaped most of the fruit of the whole cycle. Still, there is absolutely no reason to predict any halt or retrograde movement.

The pig iron market has manifested little change during the past week. Largely through labor troubles foundry iron prices have weakened though the usual run of small orders continues. Both basic and Bessemer iron, however, are in brisk demand and prices are firm. Some large tonnages are pending in the latter, the supply of which is admittedly limited.

The scarcity of sheet bars is unrelieved and sheets are eagerly sought with mills constantly becoming further behind in deliveries. The leading producer of tin plate has advanced prices 15 cents per base box, to $3.75 Pittsburgh. This move was forced by the higher price of tin.

While rail sales of the week have been small, the tonnage already booked for 1907 delivery is enormous. It is estimated that already more than 1,000,000 tons have been contracted for, of which the Illinois Steel Co. has booked 550,000 tons, the Colorado Fuel & Iron Co. 200,000 tons, the Tennessee Coal, Iron & Railroad Co. 150,000, while heavy bookings have been made by the Carnegie Steel Co., the Lackawana Steel Co., and the Cambria Steel Co.

Nova Scotia Trade News.

Halifax, N.S., May 22.

Trade has brightened some since last report. There is a good demand for builders' materials from many sections. Building is not very brisk in Sydney this season, and in consequence business from that section is a little slack. Prices are firm throughout the list. The new lists on bolts and nuts show no change in discounts. Prices on enamelware have been reduced about ten per cent., but they are expected to advance again. Ingot tin is very active. According to recent advices from London, the price has been advanced eleven dollars per ton. Prices here have been increased 4 cents a pound. It is now quoted at 46 cents, and will probably go even higher. Tin plates are now advancing. They are quoted here at $3.85 to $4. A reduction has been made in tarred and dry sheathing, it being now quoted at 45 and 35 cents respectively. Builders' materials show a slight advance, and also cement. Oils and turpentine remain about the same. An early advance is looked for in the price of gasoline. There has been quite a heavy sale for garden tools, made so by the encouragement given in the public schools to the pupils to take up gardening at their homes.

* * *

The city council has just awarded to the Warren Bitulithic Company, of Toronto, a contract for paving several streets in this city. The rate must not exceed $2.69 per square yard, on specifications to be drawn by the city engineer. Some portions of the concrete base will be four inches, and others six, being over newly fitted trenches or soft or spongy spots. The area to be paved covers 26,000 square yards, and the contract will probably amount to about $80,000. The city will retain $4,000 from the amount of the contract for ten years, as a guarantee that the work will be satisfactory. There was keen competition for the contract between the Barber Company and the successful tenderers.

* * *

The Micmac Gold Mining Company is rapidly developing the Micmac gold mine in Leinsigate district, Lunenburg County, and is now marketing its securities upon the New York curb of the Mining Exchange. The Micmac gold mine is a combination of properties which three experts have announced as inexhaustible. The capitalization of the company is $1,500,000, divided into 300,000 shares on which it is expected before the last of the year to pay a substantial dividend. It is stated that there is now over $3,000,000 worth of ore in sight and opened on two or three sides. The last 21,000 tons of ore yielded $216,000. When the new equipment is installed over 20,000 tons of ore will be mined per annum.

New Brunswick Trade News

St. John, N.B., May 21, 1906.

Though nothing out of the ordinary has occurred in local hardware circles of late, the uneventfulness has not betokened a stagnation by any means. Trade conditions have been quiet, but they have been satisfactory in the main. The business done has been at least up to the average of Spring trade and in some cases it has been considerably better. Moreover, the outlook for Summer business is such as to cause the dealer to regard it with a feeling of satisfaction. To date the sale of Summer hardware stock has been fairly good and there are signs that the adjective "fair" will not be applicable much longer. The sale of such goods as hammocks, ice cream freezers, lawn mowers, refrigerators, and supplies for out-door sports, is already quite brisk, and is daily becoming brisker.

* * *

The prices prevailing continue to be markedly firm. In some cases the advances that have almost come to be looked for now have taken place and the indications seem to be that reductions will not come at all generally for some time yet. Collections of late have been good and all in all conditions in the local hardware world are, as said above, such as to be viewed with a large degree of satisfaction.

* * *

Tin prices continue to excite some particular comment and even a little wonder. Apparently, however, the ruling figures are not going to be replaced by others lower at any time in the near future. Ingot tin, as all readers of Hardware and Metal are well aware, is still quoted at a record making figure, and all compositions into which tin enters are bringing high prices. Tin plates, for instance, are firm with every prospect of further advances before long. It may be noted that the high price of tin is affecting the price of the metal used in the linotype machine and in the stereotyping operations of the newspaper. The price asked for these metals, a newspaper manager told your correspondent a day or so ago, is very much greater than was asked a few years back and even considerably more than was asked but a few months since, comparatively speaking.

* * *

C. D. Dunfield, a general dealer of Baie Verte, is seeking to compromise with his creditors at 50 cents on the dollar. He has been in business for about three years.

* * *

William Fisher has taken over the blacksmith and carriage repair business formerly carried on here by G. F. Hawkhurst.

* * *

J. J. Bull, J. S. Sutton, W. H. Wilson, R. G. Ferguson, and others are seeking incorporation as the Maritime Cooperage Co. The capital of the proposed company is to be $5,000.

Hardware and Metal Conditions in Manitoba.

Market quotations corrected by telegraph up to 12 a.m. Friday, May 25, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

Business continues very active. Among the retail trade there is sharp competition in wire, but jobbing prices are maintained pretty steadily.

SCREEN WIRE CLOTH — Quoted at $1.55 per 100 square feet.

LANTERNS—The lantern market is still uncertain, but as sales at this season are not large, the trade are showing little interest. Quotations are as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE—There is sharp competition among the retail trade for business in wire, and in some districts it is being handled at cost or less. Jobbing prices are being maintained pretty steadily. Our quotations are as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS—Revised list and discounts are now as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅜ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ½, $4.10; ¼, $7.20; ⅝, $4.60; ½, $4.30; ¾, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS — The discounts from list prices are 45 and 5 p.c.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—The list on "Irwin" auger bits is now the same as on common bits. Discount on "Irwin" is 47½ per cent., and on the common bits 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES — The price is now 1¾c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 p.c.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—As noted last week, the price has been advanced to 25c. per lb., and this quotation is firmly maintained owing to the high price of tin. Block tin is quoted at 45c. per lb.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Price has been reduced ½c. per lb. Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC. — We quote as follows: Cartridges, Dominion R.F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33⅓; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.00; chilled, $7.50; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—We quote: Bar iron (basis), $2.70; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—The price is steady at the recent advance to $5.00 per cwt. for small lots, with a reduction of 25c. per cwt. on ton quantities.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ⅛ inch, $2.45; ¼, $2.85; ⅜, $3.15; ½, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10½ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are steady. We quote: Silver Star, per gal., 21½c.; Sunlight, 22½c.; Eocene, 24½c.; Pennoline, 25½c.; Crystal Spray, 24½c.; Silver Light, 22½c.; Gasoline, 70-72 (engine), 25½c.; in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE Quotations are: While lead, pure, $6.75;

bladder putty, in bbls., 2½c.; in kegs, 3¾c.; turpentine, pure, in barrels, $1.07; less than barrel lots, $1.12; linseed oil, raw, 64c.; boiled, 67c.

WINDOW GLASS — We quote : 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40. 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00; 26 to 40, $4.52; 41 to 50, $4.75; 51 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95,

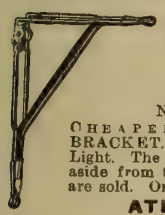
WINNIPEG CORDAGE AGENCY.

Tees & Persse, Winnipeg, have arranged to act as agents of the Consumers' Cordage Company, with mills at Montreal and Halifax. The Consumers' Cordage Company manufacture a most complete line, and with the expansion of the Canadian west this arrangement cannot fail to benefit both manufacturers and the western trade.

British Columbia Trade News

Vancouver, B.C., May 17, 1906.

From the Pacific Coast, where a great deal of international coastwise traffic exists, there goes to Washington a petition which, if acted upon, will have a serious effect on trade from B.C. ports. The petition is sent from the Seattle Chamber of Commerce, appealing to the representatives from Washington State in Congress to urge the ahoption of the second proposed amendment to the Ship Subsidy Bill



RANCH FENCING

We are putting on the market a Woven Wire Fence in 40 rod rolls. This is a special ranch fence and a winner—it competes with barb wire, weight of roll considered.

METAL SHINGLES ARE SURE SELLERS
Wood is too friendly with fire to be on the roofs of houses. Consequently
METAL SHINGLES
are in great demand. Besides resisting fire, they are rain-proof, snow-proof, lightning-proof.
A man in your town, say, is building a house. What is to hinder you getting after a Metal Shingle order? Give the owner the insurance argument, the "fifty-years-wear" argument. If he says to see the contractor, give that gentleman the "future" argument—**That if he recommends wood shingles and trouble arises (as it is sure to) he will reduce his chances for getting contracts**

PRESTON, ONTARIO

now before the U. S. Congress. The amendment provides that the subvention shall not apply to American vessels plying between B.C. and U.S. Pacific Coast points. The object of the amendment is to prevent the giving of a premium to American vessels going to Canadian ports to load lumber to be sold in competition with lumber manufactured in the State of Washington, or other coast states. As American vessels are frequently chartered for the adoption of the second proposed amendment would practically debar these by taking away the benefits of the special subsidy.

* * *

While James J. Hill, of the Great Northern Railway, is making a semi-royal progress through Canada West, beginning at Winnipeg, of which city he is a pioneer of pioneers, his lieutenant on the coast, Mr. John Hendry, is making statements respecting the company's plans for B.C. fully as interesting as the larger plans announced in Winnipeg by Mr. Hill. The latter have to do with the construction of a line of railway through Western Canada, while the plans for B.C., as stated by Mr. Hendry. have to do with this province, and really with but the coast section, of that portion lying immediately to the east of the coast section. From the interior, or Boundary district, in which the Hill railway branches have been working for three years, the V.V. & E. line, owned by the Great Northern also, is being pushed rapidly westward, and is, in fact, nearly completed into the rich Similkameen district, the last great valley in Southern B.C. to await railway transportation. To make the line complete and really a benefit to the district and the province, a direct line to the coast must be constructed. This has long be planned, but now Mr. Hendry comes out with the definite statement that grading begins within a month on the coast section. This will comprise the mileage up the Fraser Valley from New Westminster to Hope, and across the Hope Mountains, to connect on the other side of that range with the extension being driven through from the Boundary. All the surveys on the west side of the Hope Mountains have been virtually completed, is Mr. Hendry's statement, and grading is to go ahead at once. The rails are to be here by September, coming by sea from Sydney, C.B.

* * *

A car service bureau, comprising lines operating in B.C., has been formed, to prevent abuse of ordinary car service rules on the part of shippers. The usual demurrage rules and other regulations formerly broken with little or no penalty are to be strictly enforced. Mr. E. J. Travers, formerly a railway man of Winnipeg, has been appointed agent, and the companies included in the arrangement are the C.P.R., Great Northern, E. & N. Ry., V.,W. & Y., and V.V. & E. Railways.

* * *

The Minnesota Hemp Co. has sent a number of packages of hemp seed to the secretary of the New Westminster Board of Trade, to be distributed among farmers who will undertake to raise the hemp. Each package is sufficient to seed half an acre of land, and they are to be distributed by the reeves of various municipalities in the Fraser Valley, and to the best crop grown the Hemp Co. will give a prize. The product is to be shipped back to Minnesota to be tested, and on the result will depend the decision of the company to locate here and put up a factory for manufacture from the raw product.

* * *

Thirty miles of the eighty-mile railway to be built from Dawson to the Stewart River are to be completed this Summer, says J. H. McKenzie, a leading mining operator of the Yukon. The money is being furnished by an English syndicate, and there have been thirteen hundred tons of rails ordered, together with half a million feet of lumber. This material will be shipped north in six weeks' time.

* * *

The effort of the Yukon Government, and several leading mine owners of that district, to secure a better supply of water at the season when it is needed for sluicing, has definitely resulted in the engagement of C. M. Hatfield, the California rainmaker. He sailed from this port on Tuesday on the steamer Princess Beatrice, en route for Dawson. His engagement is with the Yukon Government, and is for $10,000, the candition being that he shall secure sufficient rainfall to give plenty of water at the times required. Half the money is subscribed by mine owners and half by the Government. Hatfield asserts that he has made 37 successful tests of his system in Southern California.

* * *

Lumber prices are, perhaps, responsible for part of the interest being manifested all over the country in the making of cement blocks for house construction. Even in British Columbia, where lumber is supposed to be cheaper than elsewhere, but where cement is also fairly cheap, the use of these building blocks is coming into notice. A company has recently been formed, called the Re-inforced Cement Block Co., to make a new style of block, which has not only the cellular form, but has two steel bands holding the two sections together, thus giving strength with the air space sought for dryness. Other forms of cement blocks have been used for some time here. Their use on the western prairies is very extensive, and in the establishment of cement works at one or two points in the Province of Alberta, is seen a possible large increase in the cement block method of construction for prairie buildings.

Manufacturers' Agents selling to the hardware and iron merchants. Correspondence solicited from firms in the hardware, iron and metal trades wishing representation in Winnipeg.

LIQUIDATOR'S SALE OF FOUNDRY BUSINESS

PURSUANT TO THE WINDING-UP Order made in the High Court of Justice, in the matter of The Winding Up Act, being Chapter 129 of the Revised Statutes of Canada and amendments thereto, and in the matter of The OTTAWA FURNACE AND FOUNDRY COMPANY (Limited), dated the 10th day of February, A.D. 1906, and the Order of Reference to the Master at Ottawa, tenders will be received by W. L. Scott, Esquire, Master at Ottawa, up to Twelve o'clock noon on TUESDAY, the 5th day of JUNE, A.D. 1906, for the following property :—

PARCEL 1.—Lots 13 and 14 on the west side of Lyon street, lots 29, 30 and 31 on the south side of Catherine street, lots 13 and 14 on the east side of Bay street, and those parts of lot 15 on the west side of Lyon street, lot 15 on the east side of Bay street, and lots 29, 30 and 31 on the north side of Isabella street lying northerly of the lands of the Canada Atlantic Railway, together with the foundry buildings, plant, machinery, etc., situate thereon, and the tools now on the said premises.

PARCEL 2.—The stock of stoves, boilers and furnaces now on the said premises.

PARCEL 3.—The raw and partially manufactured material now on said premises.

PARCEL 4.—The office furniture now on said premises.

PARCEL 5. — The rolling stock now on said premises.

Inventories of the several parcels may be seen at the office of the Local Master or at the office of the Liquidator.

Tenderers may tender for all or any one or more of the said parcels.

The chattel property included in parcels 2 to 5 is inventoried as follows :—

PARCEL 2	$ 6,776.11
PARCEL 3	10,312.37
PARCEL 4	251.35
PARCEL 5	362.70

Parcel 1 will be sold subject to the taxes, water rates and other rates accrued thereon since the 31st December, 1905.

The purchaser shall have the conveyance prepared at his own expense and tender the same for execution. All expenses of and incidental to the investigation of title, including the abstract thereof, shall be borne by the purchaser. The vendor will be bound to produce only such title deeds as are in his possession.

An accepted cheque for ten per cent. of amount tendered must accompany each tender (which cheque will be returned if tender is not accepted). If tender is accepted the balance of tender price shall be paid within thirty days from the date of acceptance, and upon such payment the purchaser shall be entitled to a conveyance and to be let into possession of the property.

The highest or any tender not necessarily accepted.

In all other respects the terms and conditions of sale shall be the standing conditions of this court.

Further particulars may be had from E. A. Larmonth, Liquidator, Central Chambers, or from Messrs. MacCraken, Henderson & McDougal, Trust Building, Ottawa, solicitors for the liquidator.

W. L. SCOTT, Master at Ottawa.

Dated at Ottawa this 18th day of May, 1906.

successfully used in this city, New Westminster and Victoria for three years. A number of leading officials are to visit Vancouver shortly and see how the appliance works.

* * *

Preparatory to using another source of supply for the city water works, the engineers for Vancouver, Messrs. Hermon & Burwell, are making surveys of Seymour River, a large stream across Burrard Inlet, from which a very large quantity of water can be secured. The intention is to use this for the high level system to be built in the higher portions of the city, south of False Creek. A part of the work goes ahead this year, though it will take two years to complete the system. The cost is estimated at three-quarters of a million dollars, and this sum was voted by the ratepayers at the civic elections last January.

* * *

A plan is being promulgated to establish a wireless telegraphic station here, as well as at other points on the coast. The American Deforest Wireless Telegraph Co. is pressing the matter. A special representative has been in the city, and he states the intention is to establish a line of service from San Francisco to St. Michaels.

* * *

To patronize home industries is the object of a campaign being formulated by the Hundred Thousand Club of Vancouver. Incidentally, the club will look up openings for industries not yet located here, and so from time to time interesting announcements may be expected from them. The possibilities for a tannery, a rope manufactory, and other industries, have already been discussed.

* * *

The Dominion Government is to expend $100,000 in building a dredge to take the place of the old Mud Lark, which has been overhauled for the season's work. The new dredge is to be a dipper pattern, not a suction, as is the King Edward, the big machine built two years ago.

FIRE-PROOF GLASS WINDOWS

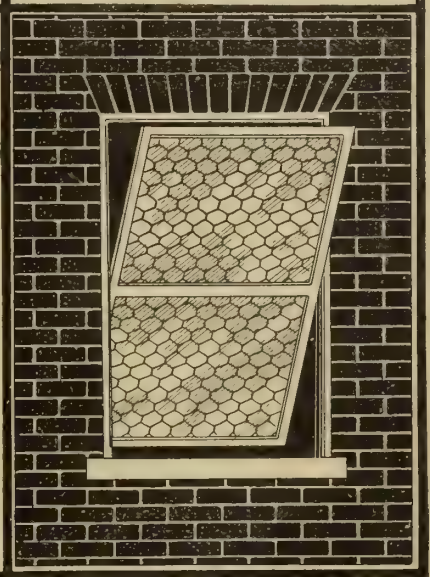
THAT ARE FIRE-PROOF

These windows in a fire-proof building, complete the security, and in any building will thoroughly prevent the spread and advancement of the fiercest flames.

Better than iron shutters (even if they happened to be closed at the needed time); fire-proof glass remains intact, resisting both the intense heat of the fire and the action of water.

Many practical tests have proved it's efficiency.

Used in conjunction with our hollow sheet-metal frames and other fire-proof fittings, it gives the most perfect protection available.



It's adoption lessens insurance rates.

If you want to know more about "fire-proof windows," write us, it's an interesting subject.

Metallic Roofing Co., LIMITED,

TORONTO, Canada.

BABBITT METAL.

Metal Industry corrects an erroneous idea that seems to be prevalent concerning the invention of babbitt metal. Attention is called to the fact that although Isaac Babbitt was the inventor of using soft metals in journal boxes, his patent specifications make no claim on the alloy itself, but simply on the method of holding the soft metal in place.

Isaac Babbitt was born in Taunton, Massachusetts, on July 26, 1779. He learned the trade of goldsmith, and in 1824, in his native town, made the first britannia ware produced in the United States, but this enterprise proved unsuccessful. He then removed to Boston and entered the employ of the South Boston Iron Works, and in 1839, while an employe of this establishment, he produced the invention which has perpetuated his name. For this invention he was given a gold medal from the Massachusetts Charitable Mechanics' Association, and afterwards Congress granted him the sum of $20,000 as a reward. In 1844 the invention was patented in England and in 1847 in Russia. After devoting some time to the production of metals he engaged in the manufacture of soap, so that his name has become almost a household word. He died insane at the McLane Asylum, Somerville, Massachusetts, on May 26, 1862.

The fact that in the patent specification no claim is made for the alloy is sufficient to dispel the ordinary belief in this direction. Britannia metal, pewter, or an alloy of tin, 50 parts; antimony, 5 parts, and copper, 1 part, are recommended. The latter alloy is somewhat softer than that now known as "genuine babbitt," which is commonly composed of tin, 96 parts; antimony, 8 parts, and copper, 4 parts. The original idea in the use of a soft metal was practically the same as it is now—i.e., to make a bearing which would conform to the surface of the axle. It is natural, then, that the alloys used to-day are somewhat harder than the original material employed. It is also natural that the same Isaac Babbitt should have been handed down to posterity as the inventor of the alloy, although, of course, quite erroneously.

KEEP EVERLASTINGLY AT IT.

The constant flow of water
Wears away the hardest stone.
The constant gnaw of Towser
Masticates the toughest bone.
The lover's constant pleadings
Win the erst-reluctant maid;
And the constant advertiser
Is the man who gets the trade.

FAKE ADVERTISING IN GERMANY.

The drastic way in which, under the law against fraudulent advertising, a German concern which makes false or exaggerated statements is handled is shown by a case recently reported from Berlin. The defendant, a merchant of Spandau, advertised that he would clear out his stock of goods at less than half price. A customer who made a purchase complained to the police that the advertisement was a fraud. Thereupon the retailer was prosecuted by the police and was fined $150 and ordered to pay the customer $75 damages. On appeal the fine was reduced to $75 and the damages were remitted on the charge that the customer had not suffered any material loss.

FOUNDRY AND METAL INDUSTRIES

Seven smelters are now in operation in Nelson district, B.C.

The township of Brighton, Ont., will erect three new steel bridges.

The Nova Scotia Steel Co.'s machine shops at Bell Island were destroyed by fire.

John E. Askwith and others have purchased a site for a mica factory in Ottawa.

John Bertram & Sons Company will build another shop at their Dundas works.

The contract has been let for the building of Crowe's Iron Works plant at Guelph.

The city of Brandon asks for tenders for large quantities of iron pipe, hydrants, etc.

The production of all kinds of steel ingots in Canada during 1905 amounted to $403,449.

The Western Iron Works, Winnipeg, will go into the manufacture of ornamental iron work.

A discovery of an 85-foot vein of copper is reported on the Judge-Jumble mine in Cobalt district.

The Amherst Foundry Co. have commenced the work of building an addition to their molding shop. The extension will be forty by sixty feet.

The steamer Bergenus is at the Dominion Iron & Steel Co's piers, Sydney, unloading the first iron ore cargo of the season from Wabana, Newfoundland.

The American Locomotive & Machine Works will expend $1,000,000 in extending their works at Longue Pointe. The principal enlargements will be the steel bridge and the locomotive departments.

There is a probability of blast furnaces being established on the Ashbridge's Marsh land in Toronto shortly. The assessment commissioner is negotiating with the interested parties, and prospects are bright for an agreement being reached.

The Transcontinental Railway Commission are inviting tenders for 65,000 gross tons of eighty-pound steel rails (open hearth or Bessemer) and the necessary fastenings, and 1,545,000 railway ties. Tenders will be received up to noon of June 7.

W. F. Jennison, who represents foreign capital, is now engaged in superintending pumping operations at the George's River, C.B., copper mine. As soon as the weather conditions become settled, operations toward the development of the areas at Coxheath will also be commenced.

The steamer Unity, from New York, is at Louisburg, C.B., landing a cargo of steel rails for the Dominion Coal Co. The cargo consists of 9,092 rails, over 1,000,000 pounds. The rails were shipped by the United States Steel Product & Export Co., of New York.

McDonald Bros., of Truro, have been awarded the contract for the erection of the following buildings for the Stanfield's Limited, of Truro. The main building will be 158 feet long by 111 feet wide, three storeys high; power house, 62 feet by 30, one storey; boiler house, 79 x 49, two storeys; annex to spinning mills, 85 x 87, two storeys; pump house, water tanks, etc., for fire purposes, all to be built of brick. It will take over one million bricks, 2,000 barrels of cement, and 112 tons of castings to complete the contract.

Give Your Trade the *Best* Shingle Insurance

Shingled effects are popular now-a-days in the building of modern homes. But without the proper finishing, artistic and pleasing treatments cannot be secured. The *right* finish *must* be used—a finish that both beautifies and protects.

SHERWIN-WILLIAMS
PRESERVATIVE SHINGLE STAINS

insure long life to shingles—protect and beautify the wood. Twenty-three delightful shades are offered for color combinations—the browns and greens are particularly good—and the most pleasing results may be obtained. They are made with Creosote, the best wood preservative known.

S-W. Shingle Stains offer a splendid line of finishes, too, for barns, outbuildings, fences, and any place where soft tones are desired at a moderate cost.

With this line of artistic stains you can give the best shingle insurance to your trade and the most satisfactory results. Write today for further information and make the present painting and building season of profit to you.

THE TIN PLATE PROPOSITION.

Extensive advertisements and write-ups are appearing in the daily press booming the Canada Tin Plate & Sheet Steel Company, of Morrisburg. The advertisements are very misleading, for as far as the buildings are concerned, they are in practically the same condition as they were last Fall. A little work has been done in the way of putting on paper roofing, hanging of doors, painting iron siding, etc., but no machinery has been put in, nor has any arrived at Morrisburg so far as can be learned.

The power plant being put in by the municipality is being pushed along vigorously, and should no unforeseen delay come up, it might be completed this Fall.

J. F. Howard has commenced making stoves in the Miller foundry, and is turning out nice castings. He has installed a 15 horse-power motor, electric power being furnished him by the municipality for $7.50 per horse-power from the town's lighting plant. This industry appears to be a good one with good chances of success.

The property of the tin plate company is assessed to J. Wesley Allison, while the land on which the buildings are in process of construction was deeded to the Canada Tin Plate Company some time ago by Mr. Allison. The land and buildings are only assessed for $51,000.

STOVE WORKS FOR MORRISBURG.

The Peterborough Heater and Radiator Co., which was recently incorporated, with a view to manufacturing in that city, from present circumstances may locate at Morrisburg, Ont., which place has voted a by-law granting them certain concessions. It was the original purpose to use a building in Morrisburg until the question of a site in Peterborough was settled, but it now seems that the smaller place will keep the industry.

PAINT, OIL AND BRUSH TRADES

THE LIFE OF PAINT.

As is well known, the ultimate life or durability of a paint film depends to a great extent on its capacity to retain unimpaired a certain degree of elasticity or flexibility, says the Oil and Colorman's Journal, in order that it may accommodate itself to atmospheric changes and to expansion and contraction of the surface on which it is employed. Under the ordinary conditions of applying paints the paint film during and after drying gradually becomes less and less elastic, and more and more brittle, with the result that the strain to which it is subjected causes it to crack. Moisture then enters, and the primary elements of destruction and corrosion come into play. In order to counteract this tendency towards elasticity some authorities recommend the introduction into the paint vehicle of some body which will mitigate to a certain extent the hardening action. Thus, a proportion of non-drying oil, such as cotton-oil, tallow, or rape oil, or of linseed oil soap, is sometimes recommended to be incorporated in the formula. It is exceedingly doubtful whether this is sound in practice, for the reason that a film containing a fluid which remains fluid after the drying oil has become set, is exceedingly likely to develop fissures and cracks through inherent weakness in the film itself. Attention is directed to the point in the present instance, because the matter has recently engaged the attention of some very large users of paint for engineering work, and the question appears to offer a fruitful field for experiment and investigation.

responsible for paint peeling and general bad after effects so often seen. The way the paint is applied and the time allowed between coats has as much to do with the subsequent appearance of paint as anything else. In building a house the painter is the last man on the job, and by the time he is called in so many delays have been caused by lack of men and material that the architect and the builder are impatient and want the thing hurried through. On interior finishes he is called upon to fill the wood, and without giving it a chance to really dry, he must apply the varnish, two or three coats in daily succession. The rubbing is hurried on just as soon as the varnish ceases to be tacky. The result is that in a short time the gloss is all gone and nothing remains but a heavy body of varnish too dull for a polished finish and too cloudy for a wax finish. With varnish there should be ten days allowed between coats, otherwise the result will be disappointing. The same applies to a lesser extent in paints. They, too, should be allowed several days between coats; and in the application of the paint uniform spreading is of more importance than a heavy coat.

Every painter has his own way of mixing, each one thinking the best results can be obtained by his particular method, or his use of certain ingredients. White lead is still conceded, however, to be the best basic material in composition of paint, although a certain percentage of zinc has a beneficial effect. If this exceeds 15 per cent. it is said by observant painters to have a tendency to make the paint peel and crack in a very few years. The claim put forward for a small percentage of zinc is that it keeps the lead from oxydizing, and this theory seems to be borne out by chemists.

Sometimes paint will not stand well if applied to lumber fresh from the mill. On freshly planed lumber there is a smooth hardened surface caused by the planer rollers, which would better be allowed to pass off before being painted, as the pores then become open and the surface loosened so that it will absorb the priming coat. Many of these points are minor in themselves, yet their combination would make a formidable array of injurious elements.

TO PAINT GALVANIZED IRON.

Very few paints seem to adhere to galvanized iron, but flake off in a short time. A prominent chemist has said that red lead gives the best satisfaction of any paint as a first coat for this class of work. It has also been found that a wax solution added to the unmixed red lead paint prevents scaling and cracking, as it tends to prevent cracking resulting from contraction and expansion of the metal. The formula for the wax solution is: Melt a cup of beeswax and when it reaches a thin fluid, pour it into a gallon of raw linseed oil heated to 200 degrees F. For use, add one quart of the solution to every 100 pounds of mixed red lead paints. When uncertain as to the durability of paints a good plan is to have a number of test sheets painted with the different kinds and so placed that they will get the full heat of the sun's rays during the hot days of Summer. It has been found in these tests that the paint with the wax introduced stands the best.

TILBURY OIL WELLS.

An oil flow of 100 barrels per day is reported to have been struck at Tilbury, Ont. This is the fourth good flow that has been struck in this district.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 25, 1906.

Although such lines as dry white lead, red lead, orange mineral and gum shellac have gone higher in Old Country markets, no difference has yet been made here, either in jobbing prices of these goods, or in the furnished products.

A decline of 2c. in the price of turpentine is the only change in the price lists. Other lines remain steady.

TURPENTINE—With freer deliveries, the price has again declined, and we now quote: Single barrels, 93c. per gallon; two barrels or over, 91c. per gallon; for smaller quantities than barrels, 5c. extra per gallon is charged. Standard gallon is 8.40 lbs., f.o.b., point of shipment, net 30 days.

LINSEED OIL—We quote: Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 60c.; 5 to 9 barrels, 57c. to 58c.

GROUND WHITE LEAD — We give prices as follows: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC — We quote as follows: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD—Prices are firmly held as follows: Genuine red lead in casks, $5.75; in 100-lb. kegs, $6; in less quantities at the rate of $6.75 per 100 lbs.; No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

GUM SHELLAC — We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The Old Country market continues to advance, but we still quote as follows: Firsts in cases, 8 1-2c; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—Prices are quoted tentatively and are subject to change. We quote as follows: Barrels, 600 lbs., 19¼c. per lb.; kegs, 250 lbs., 19½c. per lb.; 50-lb. drums, 20c. per lb.; 25-lb. drums, 20½c. per lb.; 1-lb. pkts., 100 lbs. in case, 21c. per lb.; 1-lb. pkts., 50 lbs. in case, 21½c. per lb.; ½-lb. pkts., 100 lbs. in case, 23c. per lb.; 1-lb. tins, 100 lbs. in case, 22c. per lb. Terms 2 per cent. 30 days.

GASOLINE—Price has risen of late, and ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at the advanced price of 24c. in bbls.

WINDOW GLASS—Deliveries are now being made satisfactorily, and jobbers report an exceptional demand. Prices are steady as follows: We quote: First break, 50 feet, $2.10; second break, $2.20; first break, 100 feet, $4; second break, $4.20; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24; and twelfth do., $28.50.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, May 25, 1906.

In dry colors and ready-mixed paints this has been the banner week since Spring opened up. The sale of these lines is yearly increasing, each succeeding season being a record one with manufacturers. The prices in all regular lines not affected by speculative conditions remain the same.

This week turpentine is again weaker, the Florida crop showing up better than was anticipated, and in a week or so, when the new crop reaches Toronto, there may be still easier prices.

Linseed oil is weaker, but Canadian stocks are light with a good demand, so that it is a conjecture whether or not price conditions will change. Flax seeding has been lighter this year than last in the Northwestern States, and this with the steady demand may have the effect of steadying the market.

White lead is still in good demand, and the high prices are compelling the use of substitutes more and more. Some manufacturers have become independent of white lead situations altogether, and claim to have the equal of it in other basic materials.

Paris green is still high but is quoted nominally at from 19 to 22 cents for

EXTRACTS FROM———————

"The Triumphant History of ARK BRAND PAINT"

"Pressed" praise is valueless. "Merit" praise is valuable. But there's mighty little of the latter going around. Here are extracts from two letters recently sent us by persons we had never seen nor heard of before:

No. 1—"Six years ago I painted three dwellings with 'Ark Brand' Paint; and when I think of the results of that job I am proud of your paint and my work."

No. 2—"The folks here are in love with my new home—say that if it's a sample of what 'Ark Brand' will do, that's certainly the paint to get."

After you have sold "other" paints a while you may get "tripped up" on quantity or quality or get surprises in price matters.

Not so with "Ark Brand" Paint. The **quality** is a foundation stone that never moves. The **quantity basis** is a tower of truth held together by honesty. The prices are the "light of fairness," guiding you to trade.

CANADA'S BEST—ARK BRAND—FOR YOU.

PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2 to $2.10; bulk, in 800-lb. casks, $1.50; pure, $1.95 to $2; 100-lb. kegs, 25c. extra.

LIQUID PAINTS — Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL—English, in cases, 8½c to 9c. per lb., and 10c. for single tins.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM—Prices continue unchanges. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

WHITE LEAD — Ex Toronto, pure white, $6.30; No. 1, $5.92½c.; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; ½c. per lb. extra will be charged for 12½-lb. packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 560 lbs., $5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50; ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7½c.; No. 1, in casks, 6c.; in 100 lbs., 6½c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12½ lbs., 8½c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1 per 100 lbs.

WHITING—60c. to $1 per 100 lbs. Gilders' whiting, 75c.

PARIS GREEN—Berger's English and Canadian Government standard from 19c. to 22c.

SHELLAC VARNISH — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange) $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 59c.; 5 to 9 barrels, 57c.; boiled, 1 to 4 barrels, 62c.; 5 to 9 barrels, 61c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

PAINT WORKS AT TORONTO.

The Canada Paint Company's Toronto works, while not by any means approaching in size their Montreal plant, are, nevertheless, very extensive and well equipped for the particular work that has been allotted to this branch. The business of the company has practically been divided into two sections in so far as manufacturing is concerned, the montreal factory doing the milling and grinding, while the boiling and melting is given over to the Toronto factory. This latter branch is no small thing in a business that has reached the proportions of the Canada Paint Company, for it includes the making of all the varnishes handled by the firm. For this purpose large boilers, melters and filtering machines are required, in the management of which workmen skilled in the art of varnish making are employed. Outside of this work the Toronto plant is chiefly a distributing warehouse for sorting orders, and the smaller consignments, for which purpose it is admirably fitted up. Its storehouses contain complete lines of the different dry and ready-mixed paints, oils, fillers and surfacers, the more combustible materials, such as turpentine and benzine, being isolated in buildings apart from the factory, and in underground tanks. The goods not made in Toronto are received from Montreal in bulk, and are labelled and assorted for shipment in Toronto for the Western Ontario points. The only thing lacking in the equipment of this branch is a railway siding, but it is expected one will be put in at a not far distant date.

RETURNED MAY 28 1906

Canada Paint Company's Toronto Works.

Wall Paper

THE wall paper situation is very encouraging to merchants at present. So far the sales have been first-class, and there is every prospect of continued movement in the trade. A point which is to be appreciated is the high tone of the wall paper demand

No. 1589, made by Staunto is Limited, a handsome parlor panel decoration that is very simple in application. Some chaste, yet elegant, colors are shown in two-tone velours, flats and silks.

This cannot but cause the wall paper dealer much satisfaction. The reign of cheap goods is always found anything but a profitable proposition. The merchant is not satisfied with the profits he reaps ; the customer cannot be pleased with the inartistic designs necessitated by a low-selling price. For these reasons the increasing demand on the part of the public for high-class wall papers may be considered a good omen for trade. Of course the cheap goods will never be completely cleared off the market, since there are always some who will not pay a higher price than they have been accustomed to give, but they can be provided for easily.

GOOD ASSORTMENT

Wall Papers

for Special Orders

For emergency orders send for samples from STAUNTON'S Quick Service—no delay.

Staunton's papers afford big profits to the dealer who handles them. They are easy sellers.

STAUNTON'S
Limited
Wall Paper Manufacturers
Toronto, Ontario

Study Harmony.

The designs in wall paper for Spring are many and beautiful. The wealth of color which greets one upon entering the wall paper department is bewildering. There has been a very good demand this Spring for foreign goods, but Canadian wall paper still holds first place. Germany supplies foreign manufactured goods largely. England, too, is offering many designs that are meeting with the approval of the Canadian public. Progress is being made by Japanese goods on the Canadian market, and the high-class tone of the offerings from this little island is rapidly being recognized. It is becoming now not only the duty of the dealer to handle the goods, but also to direct the purchasing party, so as to ensure that party's wall paper harmonizing with the house furnishings. This has become almost an absolute necessity nowadays, since it has become so difficult for the housekeeper to select a suitable pattern from the multitude of designs placed on the market by manufacturers.

Art tapestries are still very much in demand for use on walls. More and more attention is being paid to the ceilings, and manufacturers are encouraging the increasing trade in this direction by putting on the market many new and beautiful effects. Light effects on ceilings are becoming very popular among the high-class trade, following the example set by the English trade.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and in dustrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

Little Bros.' sawmill was destroyed at Haileybury, Ont.

Richmond, Que., will spend $25,000 on their waterworks system.

R. McQuarrie will build a lumber and shingle mill at Port Kells, B.C.

The Regina city council will spend $400,000 on street improvements.

The Shipman Electrical Supply Co. has opened showrooms in Winnipeg.

L. Higgins & Co., Moncton, N.B., will build a shoe factory at Yarmouth, N.S.

The farmers near Tenby, Man., are organizing a company to build a flour mill.

Fred Fry has the contract for installing a waterworks system at Indian Head.

James J. Hill has announced that he will build a road from Winnipeg to the coast.

Cassette & Trudel's sawmill at St. Tite, Que., was destroyed by fire. Loss $10,000.

P. Leblanc's carding and planing mills at Napierville, Que., were burned down. Loss, $4,000.

Fowler's Canadian Co. will make extensive addition to their abattoir plant in Toronto.

The Locks Water Power, Peterborough, will be offered for sale by auction on June 13.

H. Bedell has started a factory at Picton, Ont., for the manufacture of cement bricks.

Taylor Bros.' sawmill, and the electric light plant at Haileybury were destroyed by fire.

Archibald & Getchen, of Winnipeg, will erect a flour mill at Kenora for local capitalists.

The Great West Power & Machinery Co. have been organized to build a gas works at Winnipeg.

The Toronto and Hamilton Sewer Pipe Co. will rebuild at Hamilton; their works destroyed by fire.

A canning factory will be erected at Tilbury, Ont. H. E. Edgecombe, of Strathroy, will be manager.

The Vancouver Island Portland Cement Works will increase their plant to produce 300 barrels a day more.

Business men of Nelson, B.C., have formed a 20,000 club and are taking aggressive steps to increase their population.

The work on the extension of the Canadian General Electric Co's works in Peterborough will be commenced at once.

The Canadian Manufacturers' Association are urging Montreal City Council to advertise its manufacturing advantages.

Negotiations are understood to be on foot for the consolidation of the Granby Rubber Co. with the Canadian Rubber Co.

The largest and most powerful dredge in Canada, being made by Polsons, Toronto, will commence work at Toronto this week.

The Bennet Furnishing Co., of London, have temporarily closed down, pending a dissolution of partnership and reorganization.

The Shearer, Brown & Mills Co., of Montreal, have purchased the Dixon timber limit at Buckingham, Que., and will build mills there.

The Crandall Cutlery Co., of Bradford, Pa., ask for a free site and tax exemption in London, Ont. The council has the matter in hand.

Active work has now begun in preparing the site of the new Royal Bank building on St. James street, Montreal. It will be pushed to completion as rapidly as possible.

The Canadian Westinghouse Co. have made a contract to equip the Windsor, Essex & Lake Shore Railway with motors, transformers, etc. The amount is over $100,000.

Wm. Lorimer, of the Lorimer Automatic Telephone System, Chicago, has announced that his company will build a large plant in Peterborough for the manufacture of telephone appliances.

The American Tobacco Co. have completed arrangements for the erection of a large new plant on St. Antoine street, Montreal. It will be built by the Dominion Engineering & Construction Co.

Companies Incorporated.

The Central Foundry has been incorporated under Ontario charter with a share capital of $200,000 for the purpose of carrying on a general foundry business. The provisional directors are H. L. Bowers, H. T. Bush and R. C. Donald, with head office at Toronto.

Toronto & Belleville Rolling Mills have been incorporated under Dominion charter with a capital stock of $599,999, for the purpose of operating mills for the manufacture of iron and steel. The provisional directors are W. D. Morris, Henry Nicholson, G. E. Barber, R. G. Code and E. F. Burritt with head office at Belleville.

The Hadley Cement Co. of Canada, have been incorporated under Dominion charter with a capital stock of $50,000 for the purpose of manufacturing and dealing in leather and rubber cement. The provisional directors are W. O. Hadley, D. J. Herlihy, J. P. Dent, W. J.

George and Thos. Hall, with head office at Cote St. Paul, Que.

The Contractors' Supply Co. have been incorporated under Ontario charter with a share capital of $100,000 for the purpose of manufacturing and dealing in builders' supplies and structural material. The provisional directors are T. W. Self, Frank Saunders, Richard Chalkley, W. Smallwood, J. Crang, F. R. Love and T. E. Cannon, with head office at Toronto.

BUILDING NOTES.

Fort William will have a $25,000 hospital.

Sintaluta, Sask., will build a $11,000 school.

Eganville, Ont., will build a town hall.

E. Hughes will erect a block at Welland, Ont.

Wingham, Ont., calls for tenders for a new schoolhouse.

A thirty-room hotel will be built at Sintaluta, Sask.

Campbellford, Ont., Methodists will erect a new church.

E. H. Smith will build a $4,000 residence in Hamilton.

F. C. Burroughes, Toronto, will build a $35,000 warehouse.

Charles Ogilvy will erect a large store building in Montreal.

Porter & Co., Winnipeg, will erect a six storey warehouse.

D. H. McAndrew, of Renfrew, will build a store building.

Ottawa building permits last week amounted to $55,000.

A new Roman Catholic church will be erected at Lismore, C.B.

John E. Smith, of Brandon, will erect a block to cost $50,000.

J. Jansen will erect a $10,000 business block at Rosthern, Sask.

A branch post office will be built in Montreal to cost $57,000.

Winnipeg has selected a site for a new bridge across the Red River.

St. Catharines building permits so far this year amount to $200,000.

The Western Elevator Co. will build a large elevator at Fort William.

O. H. Bush has taken out a permit for a $7,500 residence at Edmonton.

J. F. Falconer & Son have the contract for a new rink at Halifax.

The Saskatchewan Hotel Co. will erect a $150,000 hotel at Regina, Sask.

G. H. Walton will build an apartment block in Winnipeg to cost $80,000.

W. F. Cockshutt, of Brantford, will erect a store building in that city.

Crawford street Methodists, Toronto, will build a $20,000 Sunday school.

Robert McAlpine, of Glasgow, will build a twelve-storey building at Winnipeg.

Rudolphe Forget will spend $300,000 in buildings on his property at St. Irenee, Que.

The Eastern Townships Bank will erect a ten-storey building in St. John, N.B.

The House of Providence, Toronto, will erect an infants' home to cost $60,000.

FERDINAND DIECKMANN
1180-82-84 HARRISON AVE.
CINCINNATI, O., U.S.A.

Start Right

Now is the time, with stock-taking over, to make your plans for a record-breaking season's trade for 1906.

You can make money selling heating goods, but you must start right—you must have the right agency and you may safely follow the lead of hundreds of the wisest and most successful dealers in the trade in Canada, by basing your season's prospects on the

Pease Economy

line of heating goods.

They will cover the whole range of your needs—save you endless worry and annoyance, build up your heating business on a firm and enduring foundation and, besides, will make substantial profits for you.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Mine Rescue Apparatus.

Wallach Bros., 57 Gracechurch street, London, Eng., are desirous of appointing wholesale agents in Canada for their "Evertrusty" Shamrock oxygen rescue apparatus, which will allow men to enter mines filled with after-damp, noxious fumes and gases in order to effect rescues and repairs.

Portable Forges.

Now that the building season is upon us and construction work is being carried on, the time is opportune to make a few sales of portable forges. A fine line of these convenient machines in all sizes, as well as post drills, etc., are shown in the catalogue of the Canadian Buffalo Forge Co., of Montreal, who offer to mail dealers a copy upon request.

Maple Leaf Twine.

The Brantford Cordage Co. are prepared to send samples and price lists on binder twine to dealers and handlers. This twine needs no recommendation to Canadian farmers, who are thoroughly familiar with the "Maple Leaf Brand."

Naturo Closet.

An illustrated booklet demonstrating fully the advantages of the Naturo closet will be sent to any one not yet familiar with this closet. The Naturo advertising has made a remarkable impression on the public, and it is worth while to know more about it. For information write the Naturo Company, Salem, N.J.

Barnes Tools.

The Barnes three-wheel pipe cutters are still to the fore among plumbers. A full line of plumbers' tools are made by the Barnes Tool Co., New Haven, Conn., and are illustrated and described in a catalogue which they will send dealers upon request.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

Auer Lights.

The Auer Light Company, Montreal, make many claims for their gasoline lamps. It is said that more and cheaper light is given from these lamps than from any other illuminant. A card will secure all information.

Plumbers' Tools.

Threading and cutting machines for hand use are always interesting to plumbers. The Merrill portable machines are well spoken of by users, but if fuller information is desired a card to the Canadian Fairbanks Co., Toronto and Montreal, will secure it.

Pipe Tools.

The Armstrong Mfg. Co., Bridgeport, Conn., call attention in their catalogue of pipe tools to the double taper on all Armstrong dies. Catalogue sent on request.

Range Closets.

The Standard Sanitary Mfg. Company, Pittsburgh, Pa., in an 80-page catalogue show their different lines of range closets, drinking fountains, etc., which will be very helpful to anyone figuring on the plumbing of large or public buildings.

Babbit Metal.

The Jas. Robertson Co., Montreal and Toronto, have a handy little vest pocket note book, full of general information, which incidentally tells about their babbit metals. This is a useful note book, and a request will bring it.

Berry's Varnishes.

Berry Bros., Walkerville, will be glad to tell dealers through their 100-page catalogue the merits of their varnish. Their goods are well known, but a still closer intimacy on the part of dealers would be advantageous, and may be had by getting their book.

Warren's Scales.

The New Warren Scale Company of Montreal, who have been making scales in Canada for over 70 years, are showing some nice lines of platform and counter scales in their illustrated price lists. These are goods which every hardwareman should be familiar with.

Plumbing and Heating Goods.

Catalogues of enamelled baths and other plumbing supplies, as well as of stoves and furnaces, can be had from Orlando Vickery, 178-180 Victoria street, Toronto, on request. Mr. Vickery represents the Amherst Foundry Company and the Guelph Stove Company, in Toronto.

A range well polished and put in the window with the necessary kitchen utensils, giving a price for the whole, is an attraction to those beginning housekeeping.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (a $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

FOR SALE.

HARDWARE, stove and tinware business for sale, including tin shop, tools, patterns, shop fixtures, wagon, ladders, etc.; stock will run about $6,000; situated in good live village, with excellent surrounding farming country; splendid place for two men, hardware man and tinsmith; good reasons for selling. Apply Box 524, HARDWARE AND METAL, Toronto. (21)

QUOTATIONS WANTED

SPINNERS—Quote prices on zinc and copper 1 to 12" spun half balls, in quantities, to Box 53?, HARDWARE AND METAL, Toronto. (21)

PLUMBING AND STEAMFITTING

THE PLUMBING OF A COTTAGE

by J. A. F. Cardiff in the National Builder, Chicago.

ARTICLE VI. (Continued.)

Soil, Waste and Vent Stacks.

Soil stacks are the vertical lines of pipe that receive the discharge from water closets and urinals in addition to any other fixtures.

Waste stacks are the vertical lines of pipe that receive the discharge from any fixtures other than water closets and urinals.

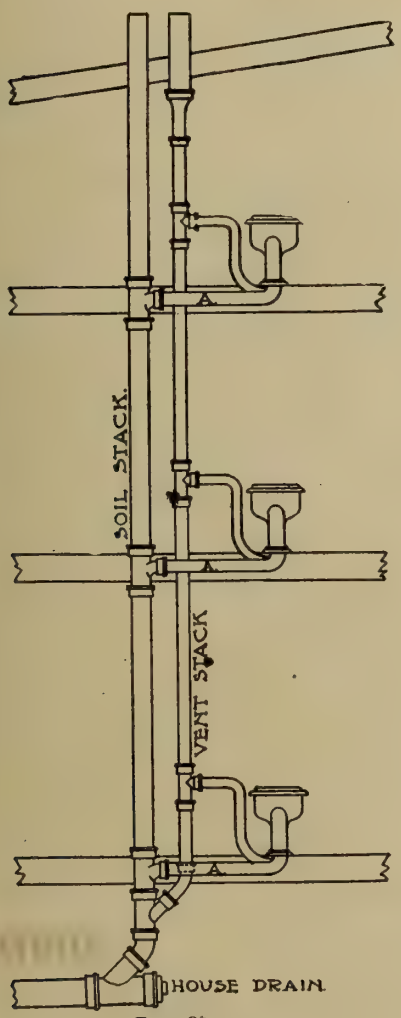

FIG. 33.

A vent stack is a vertical line of pipe, running in conjunction with a soil or waste stack, and the purpose of which is to provide a supply of air to the traps of all fixtures discharging into the soil or waste stacks, so as to protect the water seal of the traps from siphonage and back pressure and to ventilate the system.

The soil stack connects to the house drain at the bottom with a Y fitting, and an eighth or sixteenth bend, and extends to a point about one foot above the roof (Fig. 33).

The soil pipe is the horizontal connection between the water closet or urinal and the soil stack (A, Fig. 33).

Waste stacks are constructed in the same manner as soil stacks, connecting to the house drain at the bottom and

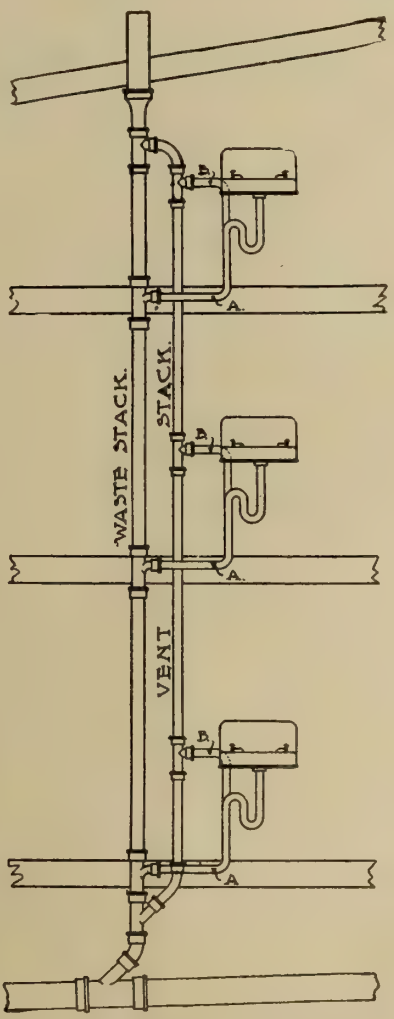

FIG. 34.

extending a foot above the roof (Fig. 34).

The waste pipe is the horizontal connection between the fixture or fixtures and the waste stack (A, Fig. 34).

Vent stacks connect with the soil or waste stacks below the lowest fixture in the manner shown in Fig. 33, so as to prevent the accumulation of rust scales. At the top they either extend above the roof, as shown in Fig. 33, or may be connected to the soil or waste stacks at a point above the highest fixture, as shown in Fig. 34, in which case that part of the soil or waste stack above the connection becomes a vent stack.

The latter method is, of course, less expensive and in no wise objectionable

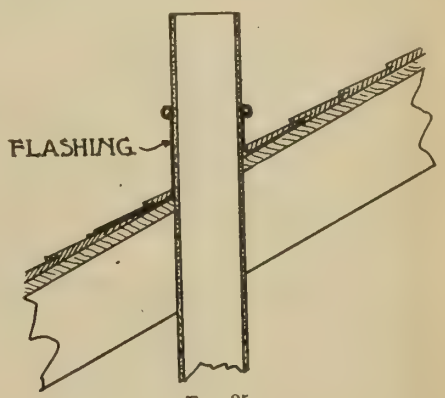

FIG. 35.

for cottage work, but in a building where there are fixtures on six or more floors the vent stack should extend separately above the roof.

The vent pipe is the horizontal connection between the trap of a fixture and the vent stack (B, Fig. 34). It should be set with a decline to the trap so that the water of condensation will drain through the soil or waste pipe.

Soil, waste and vent stacks should be constructed of extra heavy cast iron pipe, or, where a little extra expense is not an important consideration, wrought iron pipe might better be used. Standard cast iron pipe is used to a great extent

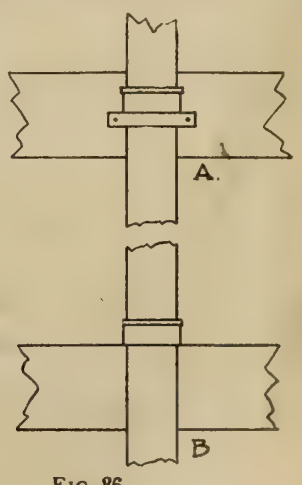

FIG. 36.

but the plumbing regulations of many cities prohibit its use.

Necessary offsets in soil and waste stacks above the highest fixture should be made at an angle of not less than 45 degrees to the horizontal. All offsets in vent stacks should be made at an angle

of not less than 45 degrees to the horizontal.

Soil, waste and vent stacks less than four inches in diameter should be enlarged to four inches at a point not less than one foot below the roof surface, by an increaser such as is shown at (B), Fig. 33, not less than twelve inches long. The increase in the size of the pipe is made in order to reduce to a minimum the possibility of the outlet being choked by frost in Winter.

Where stacks pass through the roof the joint at the intersection of pipe and roof should be made thoroughly watertight by flashing with 16-oz. copper or 6-lb. sheet lead in the manner shown in Fig. 35.

Stacks should be supported at each floor, and where possible between floors with iron straps as at (A), Fig. 36, or by cutting the pipe so that a nub will occur at each floor (B, Fig. 36).

The sizes of pipes and stacks and some examples of their installation will be made the subject of the next article.

PLUMBING AND SANITATION.

A paper by Mr. J. W. Hughes, Montreal, read before the Sketch Club of the Quebec Association of Architects.

(Concluded from last issue.)

Joints of Iron Pipe.

While on the matter of sewers—it may not out of place to say we have not a really first-class joint for iron pipes. The lead joint is not to be depended upon, as, from its nature and the difference in properties between it and the iron, the lead is sure to work loose. The really permanent part of the ordinary caulked joint is the oakum. When proper oakum is used and it is thoroughly caulked, it forms a safe material against any serious leakage of sewer air; the lead holding it in place. It has been my practice for years to put a substantial covering of putty on top of the lead while it is hot, as an additional safeguard. The best joint I know of is made of red lead and oakum. This makes a permanently tight joint, with sufficient elasticity in it to allow for the slight difference in size of ordinary pipes, arising from the various changes of temperature; but it is so filthy to handle that it is unsuitable for general use in house work. Portland cement and oakum also makes an excellent and durable joint. The difficulty with it is the fact that workmen cannot be depended upon, in general practice, to take proper care in mixing the cement; and you have to depend upon the workman, after all is said and done, as you cannot be on hand all the time to watch the various details of a complicated practice.

The introduction of wrought iron pipe, with the ordinary screw joints, has much to recommend it, but there is as yet unsolved the question of durability, although I learn they are trying to pull them out in New York because of corrosion. If the gases and fluids of the sewers attack and destroy a material possessing so great a resistance to such forces as lead and cast iron, it can hardly be expected that so susceptible a material as wrought iron or steel would be permanent. The introducers of this system, evidently appreciating this fact, claim to cover their pipes with some resisting material; but the coating is of necessity so thin as to not be worth the cost of its application. The pipes are thick and no doubt last many years, but there is nothing like cast iron. Speaking of coating pipes, permit me to say that the so-called asphalting should be omitted; in fact, in some towns the plumbing by-laws expressly forbid the use of coated pipe. In Montreal it is so now. The coating at the best is so thin as to be of very little practical use, but it suffices to cover defects. Many a length of pipe has gone into use that, were it not for the coating covering its defects, would never have left the foundry. You cannot see blow holes, cold shuts and similar defects, when covered with a coat of black varnish or tar—politely called asphalt.

Little Danger of Sewer Gas.

Have all pipes that serve as main stacks carried full size through the roof. Omit the intercepting trap; there must be no interception of sewage. Once it leaves the fixture, the quicker it reaches the end of its journey (the main sewer) the better. The basic principle of the water carriage system which we use is the rapid removal of solid and liquid sewage matter from the premises by means of an adequate amount of water, and any checking of this is defeating the very object desired to be obtained. Too much stress has been laid by "faddists" upon the danger of sewer gas getting into the house from the main sewers. Gentlemen, there is no such thing as sewer gas; at least so far the scientific world has not been able to find it. Sewer air there certainly is; that is the ordinary air, loaded with the odors of decaying animal and vegetable matter; but the main sewers are all ventilated into the streets and from our streets we get the air of our houses, we cannot get it anywhere else in the city. Take no chances of the sewer air getting into the house from defects in workmanship or materials of the interior plumbing; but trying to bottle it up, and in so doing obstructing the flow of sewage in the pipes, is not the correct way of doing it.

Pipes for Carrying water.

Water-pipes are, in general practice, made of lead. An excellent material it is for water pipes when it is pure lead, and years ago there was no thought of seeking a better; but of late years so much argentiferous lead (a by product of the silver mines) has been put upon the market that the old "stand by" has lost its character. Pure lead is soft and pliable; the argentiferous lead is hard and brittle and liable to crack and leak. Especially is this the case when it is used for the conveyance or circulation of hot water. Many substitutes have been introduced. Plain iron pipe is apt to rust out in a few years. Galvanized iron has been extensively used of late. Whether the very thin coating of zinc with which it is covered, is an ample protection, time alone will tell, and it is a question whether the inside of the pipe is thoroughly coated. Judging from the experience with galvanized iron range boilers in this city, it is a most unsuitable material that will soon give trouble: and from a sanitary point the contact of water with zinc is very undesirable.

Glass Lined Piping Dangerous.

Glass lined iron pipe has also been introduced in this city, and one would suppose it was an ideal material for the purpose, but I had to remove it from one row of houses, as, for some reason, probably the difference in the expansive qualities of the two materials, the glass after a few years began to break up, and it was no uncommon thing to draw broken glass from the taps. On the removal, and upending of the pipes in question, small particles of glass would come out in quantity. Tin lined iron and lead pipes have also been tried, the difficulty with the tin lined lead pipe being that, in making the joints, the low melting point of the tin caused it to run and make trouble; besides it was expensive. I have here a sample of tin lined iron pipe. It looks all right and combines the durability of the lead with the strength of the iron. At the moment I know nothing against it but it doubtless has its weak points, probably the joint. The difficulty with all combined materials is the unequal expansion and contraction and in some cases galvanic action is set up, that rapidly destroys the material. Taking it all in all, there is nothing better than honest lead pipe for the conveyance of cold water; and copper pipes—iron pipe size, not thin copper pipe, such as I have shown you—for the hot water system. The samples of copper pipe show plainly the effects of both galvanic action and the unequal expansion and contraction between the copper and the solder of which the joints were made. These samples were taken from a house on which no expense was spared in the fitting of the plumbing; and, while the pipes did good service for a long time, in the end damaged ceilings and much worry and expense were caused by their use, and they had to come out.

Ventilation and Heating.

The question of ventilation is too large and important a one for me to take up at this time; but a few words on the heating apparatus will not be out of place. While the modern low pressure steam plant is doubtless the best for some buildings, our Canadian experience so far is that nothing can come up to the modern low pressure hot water apparatus, for ordinary domestic purposes. And here let me say that this form of apparatus had its origin in our city: and in no other city that I am aware of, are the dwellings of the people so generally and comfortably warmed. In fact,

the demands of our people in this respect approach the unreasonable—that 70 degrees should be demanded in sleeping apartments with a 20 below zero temperature outside, is going beyond reason, besides being exceedingly unhealthy. Imagine sleeping in an apartment at 70 degrees, and stepping out in the morning at, say, 25 below zero. The wonder is that our people do not suffer more from throat and lung trouble than they do. Permit me to remark that there never has been a temperature of 30 degrees below zero in Montreal, as far as I have been able to find out. Once, a year or two ago, it went to 26 degrees below. That is, I believe, as cold as any authentic record we have for our city proper. Yet some specifications call for 70 degrees when the thermometer is 30 degrees below.

Heating Depends Upon Building.

I will now tell you the whole secret of having a warm house. There is no other way of getting it in our climate and I want you to keep it constantly in mind. It is to build it warm. No furnace, boiler, stove or other means of supplying artificial heat is sufficient to counteract all the cold of out of doors; and that is what is being attempted when the house is constructed in such a manner as to let in the cold. Honestly built walls of proper thickness, with the joints filled with mortar, not merely jointed outside to look well, are indispensable. Then, no matter how thick these walls are, or how solidly they are built, there must be an air space between them and the inside plaster. This air space must contain confined air, for if the air can circulate behind the plaster, you have a perfect cooling apparatus; in fact, it is on this very principle of moving air that refrigerators are built; but confined air is a good non-conductor and protection against cold. A solid wall that is plastered on the inside, or even lined with porous bricks, will not keep out the cold. It cost me several hundred dollars to find the latter out, but you can have the benefit of my experience for nothing. The walls should be back plastered between the furring, carrying the coating of plaster well up and down between beams, and the furring must be stopped off at the top to prevent the circulation of air. Then door and window frames must be cemented into position tightly with oakum. Stuffing material around them that looks like chopped straw or dried grass, lightly pushed in with a screw driver, as I have seen it done dozens of times, is not caulking in the frames with oakum. The object to be attained is to keep out the cold; and, if you let it in around door and window frames in ever so small quantities it gets behind your inch of plaster, and, instead of having solid walls between your house and the outer cold, you have only the thickness of plaster. If the air behind the plaster can circulate as fast as it becomes heated, it moves off to be replaced by a fresh supply of air from out of doors.

Wastes in Heating.

The door entrances to buildings are another weak spot. In the course of construction the stone and brick beam gets knocked away. The mason has gone, "Mr. Carpenter' lays his floors, sets up his steps, builds the gallery; and there openings are left, invisible but getting in their work of letting in the cold; and the house dwellers wonder why the floors and walls are so cold, and why there are draughts; and "paterfamilias" curses the architect, the furnace man, and coal dealer, because of the size of his coal bill; wonders why "Jones" heats his house with 10 tons of coal, while he, with a smaller house, is never warm and burns 15 tons. The reason is "Jones is heating his house and his neighbor is trying to heat all out of doors—a big contract in our climate. Another weak spot, a very weak spot, of comparatively recent origin, is the ventilated roof. It is right to ventilate the roof, but, when you let the outer air in below the roof, remember, you must keep it from entering the house. A one inch rough board and a thickness of building paper is not proper construction for our Winter, and hundreds of our houses are so constructed. I could give you many instances of this if necessary, I know of two first-class houses where a few bags of sawdust, put on top of the boards in the attic space, made all the difference between a warm and comfortable house and a cold and uncomfortable one, and the unkindness of it was that I had to supply the sawdust and labor because I was so unfortunate as to have fitted a furnace in these houses. Sawdust is not a proper material for the purpose, but you must have something to keep out the cold. Mineral wool is better material.

Percentage of Piping.

Gallery beams projecting through the walls are another source of trouble. The mortar dries around them and the cold pours in just where it will do most harm. Caulk them in tight with oakum if you want the house warm. You will be told they are well bedded. They may be, but timbers when wet with mortar swell, and when dried by heat shrink and the air enters. You must remember that when the air is cold outside and warm in, there is a very considerable difference in pressure, and the cold air is seeking entrance by every crack, cranny and pore. It is possible to blow out a candle through one foot thick of sandstone, and ordinary brick and mortar is much more porous. Keep out the cold by taking the proper common sense precautions at the time the building is being constructed—it cannot effectually be done afterwards—and you will have a warm house, small coal bills, contented clients, possibilities of ventilation, and a good reputation. As to percentages of piping, years ago we never thought of using over 6 per cent. on the ground floor, 5 per cent. on the first floor, 4 per cent. on the third floor, but your modern building is cold with 10 per cent., 8 per cent. and 7 per cent. Why? Simply because the same precautions are not taken for keeping out the cold as were taken in the older buildings.

Blanket Clauses in Specifications.

As a matter of simple justice to your heating contractors, do not put in a blanket clause in your specifications that puts the plumber at the mercy of an unjust and unreasonable client for the balance of his life. Plan your house, specify what you want in the way of heating apparatus, and see you get it; then, instead of running off with a clause that the building is to be heated to a given degree in coldest weather, say: "If the proprietor, after a season's trial, desires additional power or heating surface, the contractor shall be bound to supply the same at contract rates." This is perfectly fair to all but the heating contractor, as he cannot go to a finished apparatus and add to it except at a greater cost than the original work. But he will not object to this I am sure; while the present practice is unfair and unjust to a degree. Imagine my having to put additional radiators, for nothing, in a room that had been occupied for five years as a bedroom and was then converted into a sitting room, and imagine further any architect, calling himself an honest man and a gentleman, backing up such a claim. That it was not necessary was proved by the fact that, when a year after the additional heating was done, the house changed hands, the next tenant had the pipes taken out, because the room was too hot. Of course, there was a cranky woman in the first case.

The Best is the Cheapest.

I must now touch upon a somewhat delicate subject, but it is the most important of all the subjects we have had under consideration. Something has been said about selection of materials and methods to be pursued in their use, but the most important selection you have to make, for your own sake—and the sake of your clients, is the man. The best is none too good. Don't let the continued cry for cheapness influence you. Your reputation you cannot afford to cheapen, and every time you let a contract you put your reputation into the hands of the man you let it to. You cannot watch him all the time, and if he wants watching you have no use for him. None of us can be in two places at the same time, and while you are in your office—or even in your bed—the skin contractor may be wrecking your character. Beware of the man who is always telling you how good a job he is making for you; who is always at the building to point out his good work, and the mistakes the other fellow is making. "Good wine needs no bush." Try to select men who have some character as well as skill and means to put into their work. Beware of the cheap man.

Variation in Tenders.

Tenders will, of course, vary within a reasonable limit, but when some one is away down look carefully into the matter. No one gives a dollar for ninety cents. There is no necessity for so do-

ing, the dollar is always worth a hundred cents. If a man says he is doing it, he is either a knave or a fool, and you cannot for a moment leave your reputation in the hands of such a man. If he is really giving you a dollar for ninety cents he is a fool, and not carrying out legitimate business principles. If he is only pretending to do it, he is a knave, and as honest men you have no use for him. Experience will teach you that as a rule things in this world are worth what they cost. A cheap man or a cheap house, or a cheap architect is cheap because there is something lacking. Of course, the special cases and exceptions come in and in the hurry of tendering, especially under some of the conditions that I am sorry to say exist, it is very easy for a contractor to make a mistake and "leave the roof off" as the saying is. In such a case it is far better to consult over the matter, and allow a man to withdraw. Do not allow him to amend his tender; that would not be just to his competitors, but you can allow him to drop out. Otherwise, when he finds out, as he surely will, that he has made a mistake, the temptation to try and make up his loss will be very great, and we are all human. When you have proved your men, trust them; they will take care of your reputation for you, if they find you are careful of them. It is their interest to do so, and, after all is said and done, self interest is the most powerful factor in all business matters. As a rule men do not become philanthropic until they have made their pile.

Character in the Work.

Another point is that in some, so far as I know, unaccountable way a man's personality and character gets into his work. Take two artists trained in the same school. One takes a canvas, stretches it, applies his color; result, a painting worth fifty thousand dollars. His confrere, using the same materials and having the same training and desire, produces a picture that would be dear at fifty dollars. The training is the same, the materials alike; the difference is in the mental equipment, the personality, the character. If you want Smith's architecture you cannot by any possibility get it from Jones, although Jones may agree to give it to you. It is the same with grosser materials. A friend of mine, whom I congratulated upon having built himself a fine residence, said "Yes, I am satisfied with everything but the woodwork; the carpentering does not come up to my expectations." I replied, "You have good woodwork; your carpenter is a good man and certainly did his best." "Yes," he replied, "that is so, but Johnston's carpenter work was what I was to have had." "But Johnston did not do the work," was my reply. "Oh," he said. "but Johnston's work was to have been the standard." When I told him that only Johnston in the whole world could give him Johnston's work, he paused a moment, then said, "You are right. It never occurred to me before. I engaged the wrong man."

RETAILING LIGHTS TO PUBLIC

By Oscar Herzberg.

Recently the sale of patented articles to the public whereby better lights or better heat may be secured through one's gas or electricity, has become quite a business. The writer having looked into this trade quite extensively for one of his clients, is prepared to make some observations on the attraction and retention of customers therein.

One of the plans which has been adopted has been to put up a light at the buyer's place and keep it there in good shape while the payment is kept up. This payment is called for weekly or monthly, whichever may be convenient, and is a small one, say ten cents a week. Such an arrangement is satisfactory to all concerned, making it easy for the payer, and excellent for the recipient, since the light thus becomes a source of constant income to him. Where he sells the light to the user for a few pennies or even a few dimes, this source of income is entirely obviated.

One of the failures which we still look to the future to eliminate is the poor quality of various lights furnished. That an igniter should crash almost immediately after being put up is a condition that should cease to exist, but it is a frequent one at present, owing to our scant knowledge on this subject. The light companies are frequently cursed for a condition that exists in entire good faith, that is to say, everything that is known is applied, but we have not arrived at the proper applicant. The retailers who apply lights should make this fact clear to their customers. A few years from now and this irritation probably will be entirely removed, or some plan developed whereby the manufacturer of the lights takes the burden upon his shoulders, with more income to him, as in the case of the housekeeper who pays a weekly or a monthly small sum. The ordinary man would more readily pay $5.20 in weekly dimes than $2 in one small sum; the advertiser who has seen this problem in its proper light has secured his reward.

The large manufacturer may advertise his lights through the local newspapers and through the most popular magazines, but these media are not available to the retailer in large cities though the storekeeper in small towns and in villages may use his city dailies. Aside from this the retailer must confine himself to circulars, excellent window display and keep himself constantly in sight by having his various lights showing their merits. If in addition he naturally is a good business man with a good manner, a pleasant easy way of greeting his public, it will aid to a great extent.

What has been very popular in introducing such lights to the people has been the employment of demonstraters to indicate their merits to the public who stand before the store. Appealing as do a great many of such lights to people of refinement who are desirous of learning, this furnishes an easy way of knowing without appearing to desire to learn. When demonstraters are employed by the manufacturer in department stores and other places do so simultaneously, one becomes a rival to the other. Whether the manufacturer's plan of demonstration is more practical than leaving it to the various dealers, is a question we are not prepared to enter; at present the question we are concerned with is influencing the public in their purchase of lights.

One of the best factors in producing trade to the dealers in lights is the enthusiasm of customers. These tell their satisfaction to friends and relatives and gradually but surely the fame of certain lights and heaters spreads.

It always has been the writer's belief that in presenting the merits of the various lights to the public more art should be used—more pictures to indicate what they accomplish most. Being as they are, machines of skill, etc., the ordinary public needs to be informed as to why one light should be rejected for the next. In most cases this is better obtained by a picture than by a description.

In cities, the use of circulars on good paper and of excellent literary calibre in fair envelopes, properly addressed, probably often has brought business to retailers of lights; when in addition there are the proper pictures, the right demonstration, the business vim about the store as needed, as indicated above, and quite a number of new novelties in light and heating always about the establishment, bringing constant trade, the selling of lights to the public probably will be as profitable a trade as any of its competitors.

HOW MIRRORS ARE MADE.

The making of modern mirrors consists first in ridding the glass to be used of all defects and then silvering. If the mirror is to be beveled, additional operations of beveling and preparing the glass precede the silvering. Nowadays silver has, to quite an extent, taken the place of mercury in this industry.

In selecting glass suitable for mirrors, the experienced workman, by placing a piece of black cloth behind the glass, and looking through at an angle, quickly discovers all defects. Even the scratches and stains must be removed in the making of a really good mirror. Scratches are removed by holding the glass upon an upright buffing wheel covered with felt. The stains are removed by a device known as a "blocking machine." Unless it is to be beveled a glass free from stains and scratches is ready for silvering.

For beveled mirrors, plate glass is used. The bevel is obtained by holding the glass against a horizontal roughing wheel, sand and water playing an important part in the operation. The bevel, like the surface, must also be polished. An emery wheel is used to remove the sand and clean the surface. Then after being held against a horizontal grindstone, a polishing wheel with pumice stone is used. To brighten the glass, a buffing wheel rouge upon it is employed.

At least three things are claimed for silver in place of mercury in the making of mirrors. In the first place, that it reflects more light; secondly that mirrors can be turned out in less time, and, in the third place, that the work is made more healthy for the employes. In silvering a modern mirror, after the glass has been freed from defects and

sufficiently polished and washed, a preparation that will hold the silver is poured on. Next the glass is removed to a perfectly smooth table which is heated by steam. As the silver solution is poured upon this table a goodly per cent. of it at once begins to adhere, the remainder later being drained off. Over the back, shellac is then applied to keep out the moisture.

In the earlier days of mirror-making, sheets of tin foil were first placed upon the surface of the glass and pressed closely to it, after which it was covered with quicksilver, the quicksilver at once forming an amalgam with the tin. Various methods are employed in making mirrors where quicksilver is used.—Popular Mechanics.

TORONTO PLUMBERS REORGANIZE.

For some time an effort has been on foot to bring about a reorganization of the master plumbers and steamfitters of Toronto and success has at last crowned the labors of those active in the work. The recent negotiations regarding a wage schedule with the journeymen were the means of bringing together about 60 of the bosses who had joined the Employers' Association, and this number was considerably increased at the last meeting in the Employers' rooms on Victoria street on Monday evening. The new officers are: L. Legrow, president; D. J. Morgan, vice-president; A. G. Ritchie. 64 Adelaide street east, secretary-treasurer, and John F. Knott, sergeant-at-arms. The new organization will meet on the first and third Mondays of each month.

TORONTO'S SEPTIC TANK SYSTEM.

The contractors have been putting in sewage mains under difficulties in the Kew Beach district in Toronto's eastern suburbs. The plans for the drainage of this section embrace all the streets south of Queen, from Woodbine avenue to Hammersmith street. There is to be a main along Queen street and on all streets between the two mentioned, and north of Queen street a main will be run for a distance of two hundred feet.

One of the worst spots so far encountered was at the foot of Kenilworth street. There the ground is very swampy, and a pump had to be used before the fifteen inch mains could be laid. The difficulty was finally overcome, and the trench is now dug the whole length of the street and manholes put in. The trenches are very carefully cribbed, so as to prevent the possibility of a cave-in.

A large septic tank is to be erected on the lake front to receive the sewage of the district, the ground south of Queen street being too low to be drained in any other way.

TO ENFORCE BY-LAWS.

The water commissioners of Peterborough will enforce the by-laws in regard to plumbers taking out permits for water connection, and reporting on the number of taps, etc., they put in.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, May 25, 1906.

All plumbing goods are now moving freely. Everybody wants immediate shipments of goods, and it is hard to get prompt shipments.

Only one price change of importance is to be noted this week, quotations on solder having declined, owing to the drop in ingot tin.

Iron pipe remains stationary, although an advance in price is obviously only a question of time. Conditions are rapidly becoming much firmer.

RANGE BOILERS—Good sales are being made by the local supply houses. We give the following prices: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—Prices and discounts are the same as last week. Pig lead is, however, showing much strength, and any material advance in the primary markets would no doubt be followed by quotations on pipe being amended. We quote: 20 per cent. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—Demand is large, keeping prices steady. We are still quoting: Discounts on all sizes of nipples up to 6-inch, 67 1-2 to 70 per cent.

IRON PIPE—In spite of a confident feeling which has existed for some time, that prices on these goods would have to be advanced, we can only say at present, that the situation shows as much firmness as ever. We quote: Standard pipe in lots of 100 feet, regular lengths, ¼ inch, $5.50; ⅜ inch, $5.50; ½ inch, $8.50; ¾ inch, $11.50; 1 inch, $16.50; 1¼ inches, $22.50; 1½ inches, $27; 2 inches, $36.50; discounts on black pipe, ¼ inch, 62 per cent.; ⅜ inch, 62 per cent.; ½ inch, 71½ per cent.; ¾ inch and upwards, 73½ per cent. Discounts on galvanized pipe: ¼ inch, 47 per cent.; ⅜ inch, 47 per cent.; ½ inch, 61½ per cent.; ¾ inch and upwards, 63½ per cent. Extra heavy pipe of 100 feet lots are quoted as follows: ¼ inch, $12; ⅜ inch, $15; 1 inch, $22; 1¼ inches, $30; 1½ inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—There is an active demand for this class of goods. Quotations are unchanged and are as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent off. Fittings, 60 per cent. off.

SOLDER—Owing to the fact that ingot tin declined sharply during the week, we are now quoting easier conditions in solder. Our revised prices are: Bar solder, half-and-half, guaranteed, 26c. to 26 1-2c.; No. 2, wiping solder, 20 1-2c.

ENAMELWARE—Jobbers are making big sales in all the leading lines. We give prices: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.15, special $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2½ inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, May 25, 1906.

Solder is not so strong this week, and is quoted by some jobbers as low as 22¾c. for wiping and 27¼c. for half-and-half.

Lead pipe continues at the same price, but while the price is firm there is no expectation of any change.

Business is a little easier this week but going along steadily. Throughout the country goodly quantities of corporation brass and engine fittings and supplies are being used.

All other prices except those mentioned remain as before, and with the exception of the commodities affected by tin and lead, there is little likelihood of any other changes for the present.

LEAD PIPE—Prices are firm on lead pipe as pig lead is up, but no change has been made. We quote: Lead pipe, 8c., discount 20 per cent.

SOIL PIPE AND FITTINGS — The usual good business is being done, with prices the same. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—Iron pipe continues to go out in large quantities. There are no price changes so far, although there were rumors of a higher price being asked. Our quotations are as follows: Black, 1 in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS—The usual demand is not at all lessened. Prices continue same as previous quotations. We quote as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleabl? unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-

plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

GALVANIZED IRON RANGE BOILERS—Prices remain the same on all sizes, and trade is becoming more active. We quote as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14.00; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—A steady business continues to be done. No price changes. We quote: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.

SOLDER — The market is a little weaker, and a drop is recorded from our last quotations. We quote: Bar solder, half-and-half, guaranteed, 27¼c.; wiping, 22¾c.

ENAMELWARE—There have been no price changes recently. A large business continues to be done. We quote as follows: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

NEW FORGE SHOP EQUIPMENT.

Numerous large manufacturing establishments are awarding contracts for new forge-shop equipments to be installed during the Summer, and similar equipments for manual-training schools will be placed in many institutions during the vacation season. Recent large orders obtained by the Buffalo Forge Company have come from the Midvale Steel Co., of Pennsylvania, and from the Lynn works of the General Electric Co. Orders are also on file for the Calumet (Mich.) High and Manual-Training School, and the Indiana Reformatory at Jeffersonville.

SYSTEM GONE TO SEED.

"The old man" has just seized the telephone transmitter and called up his manager, this being the final step in a long "thinking spell" about the overloaded system in his business. He has come to the conclusion that he has no further use for a so-called "system" that so envelops employes in red tape that it ties up all energy and initiation and turns men into machines. These are the "sparks from the old man's wire" as caught on the fly and recorded by Frank B. Rae, Jr.:

Hello! That you, Lane? I want you to drop everything, take a good, sharp ax and go over this office cutting out superfluous system right away, now! We're getting all snarled up in a lot of pesky red tape. I want it thrown out.

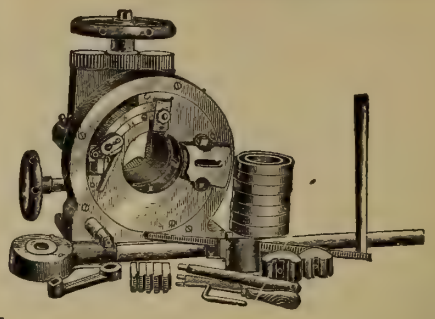
System essential? I know that. I didn't build up this business by guesswork. But we've just got a thin core of real system running through our business—and around that a lot of deadwood has gathered that you think is system. But it isn't. It's red tape—system gone to seed. Fact is, Lane, the business has been growing so rapidly for the past three years that we've sort of lost track of first principles.

Can't handle your people without it? There's just the greatest danger of red tape—it over-regulates employes; too much machinery in the office makes them machines. And—

Men have no initiative? Not after you've got through with them—carding and numbering them like so much merchandise. Take my word for it, Lane, the force here is made up of human beings, not "help." I believe we can trace half our office troubles to the fact that red tape has almost wiped out individuality among the clerks. I don't believe we get the best there is in the boys when they're handled like so many adding machines or billing machines or phonographs

No—no—you're not right there, Lane. We need men in the business. You and I and one or two more can't provide all the brains and ideas and energy—and we won't always be here. The more gray matter that is convoluting for our interests, the bigger those interests will become. We want a system that will make men think—not one that takes all need or desire to think away from them; and—

Exactly. Now change things around so as to infuse a little cayenne and self-confidence into the boys. The automatic, double-checking, self-acting mistake-preventing system may look very sweet and tempting on paper, but if it gets a strangle-hold on personal ambition and kills initiative, it's a mighty expensive economy.



Take the case of Egan. He's a branch manager now, but he'd have been a clerk all his life if the tape hadn't broken down and given him a chance. He marked time for three years, going through routine. Then the chief clerk got sick and Egan had to take his desk. Had a few letters to write and a few orders to give. That touch of responsibility made Egan. In a week he was hustling around on his own hook, helping to run the business—and he's been helping ever since.

Exception? Not a bit of it. Anyway, if it was, I want you to find whether there are any more of those exceptions floating around in this office undiscovered. That's the sort of opportunity we ought to chuck under the nose of every clerk every day. I don't want a system that develops plodders—I want one that develops men.

Sure. You know these things as well as I do. The trouble is, the telegraph poles of routine are passing by you so fast that you can't see the significance of an isolated pole

Will have to revise your system? You bet—revise it so that we get the use of those brains. Loosen up the red tape and give that ambition elbow room. Make your regulations positive instead of negative. For I tell you, Lane, we can make more money by utilizing brains and ambition than we can possibly save by restricting our clerks to an error-proof system. That's the idea. Good-by.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

This Boiler is Half Sold The Minute You Begin to Talk It to a Customer

Ten minutes of your time spent talking the points of The Oxford Hot Water Boiler will acomplish more in real profit-earning than an hour put in trying to sell another make. Why? Simply because the Oxford merits are so plain to see, so easy to prove. They stick out all over the Oxford—the sloping walls that save fuel, the triangular hollow grate bars that make the fire burn a lot of air and so assure **PERFECT** combustion, the absence of rubber joints that leak and the use instead of the Oxford Push-Nipple joint that simply never can leak—and these are only part of the selling points of

The Oxford System of Hot Water Heating

If you'll write and ask questions, we'll show you plain as day that you **NEED** this boiler in your business and need it **NOW.** Why not write and ask to-day?

The washer can't spread or become frayed.

Each bibb bears this Trade DECATUR H◇M ILL. U.S.A. Mark

and is **UNCONDITIONALLY GUARANTEED.**

H. MUELLER MFG. CO.

Decatur, Ill., U.S.A. *New York, N.Y., U.S.A*

Why Not Make a Start Now?

Because you have neglected to order trade-winners like

"BLACK DIAMOND"

TARRED FELT

"JOLIETTE" AND "CYCLONE" BRANDS OF SHEATHING

There is no reason why you should continue to miss the business. And the same can be said of our

READY ROOFING, BUILDING PAPERS, WRAPPING PAPERS

We would like you to write for particulars—not some other day, but to-day.

82 McGILL STREET

ALEX. McARTHUR & CO., Limited, MONTREAL

F. J. C. COX, Winnipeg, Sole Agent for Northwest Provinces.

CURRENT MARKET QUOTATIONS.

May 26, 1906.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Ventilation is Important

as a feature of modern buildings.

There are many buildings and residences, whose occupants are afflicted with drowsiness and headaches, because the ventilation is imperfect, or has been altogether neglected.

THE AEOLIAN VENTILATOR

is unexcelled as a means of producing pure air in large buildings, closet rooms, vaults of churches, schools, factories, stables, etc.

As will be seen from the accompanying illustration, **The Aeolian Ventilator** is very rnamental in appearance, while also possessing exceptional lasting qualities.

We like to talk about the "Aeolian" Will you write us for particulars?

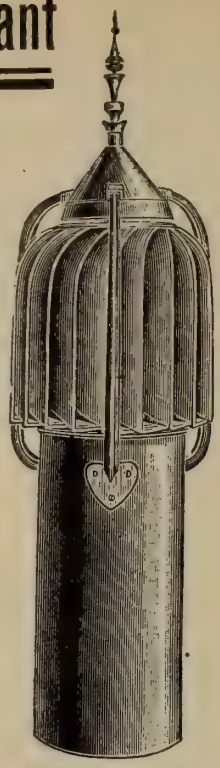
Read this testimonial:

OTTAWA, June 4th, 1903.

Messrs. THE J. W. HARRIS CO., LIMITED, Montreal.

Gentlemen,—In reply to your letter of 1st of June instant, beg to say the "AEOLIAN" Ventilators we got from you have always proved satisfactory to us and we can recommend them where such an article is required.

Yours respectfully,
McKINLEY & NORTHWOOD.



The Price is Inconsiderable in Comparison with the Results

Manufactured by

THE J. W. HARRIS COMPANY, LIMITED

SUCCESSORS TO LESSARD & HARRIS, CONTRACTORS

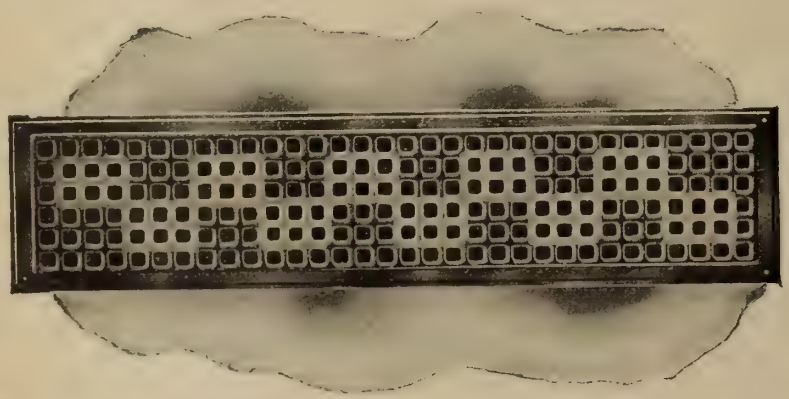
THE AEOLIAN VENTILATOR
(Can be supplied in copper, if so desired)

THE SUN ECLIPSED BY "PUTZ"

Putz! What is Putz?

PUTZ, "Lion" brand, is the most popular and satisfactory metal polish in the world. PUTZ, "Lion" brand is put up in boxes in the form of liquid as well as paste and is known as PUTZPOLISH.



The finest thing for metals is the "Lion" brand. "Lion" brand, PUTZ contains no acid. Its use will not injure metal of any kind. PUTZ gives a lasting polish to all metals. It will neither scratch nor rub off. The "Lion" brand saves hours of work. It acts in minutes as compared with hours by old systems of polish. When applied on the surface of iron, of zinc, of nickel, and metals of all descriptions especially, the Triple Extract Putz Polish for Metals, the "Lion" brand, liquid or paste, gives a brilliant and lasting sheen.

Insist upon getting PUTZ, "Lion" brand.

OTTAWA, ONT.

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS.

THE JAMES SMART MFG. CO.
Brockville, Ont.

May 23, 1906.

Dear Sirs,—What can you furnish me a "Kelsey" furnace for, large enough to heat 10 rooms 12x12 and 9 ft. high? I have made up my mind that I must have a "Kelsey" for my house, although I sell the——— stoves and furnaces. However, let me know at once. Yours truly,

This is not an unusual occurrence. There have been many similar cases where dealers have procured a "Kelsey" for their own home, although selling some of the many other heating devices.

THERE'S ONLY ONE WARM AIR GENERATOR and the agency cannot be given to every dealer. **THE KELSEY SYSTEM** assures the most **Sanitary, Efficient** and **Economical** warming and ventilating.

Experienced and **Competent** "Kelsey Experts" will be pleased to lend assistance in interesting intending purchasers and the closing of contracts.

HAMILTON, ONT. MONTREAL, P.Q.

"Union is Strength."

The two essentials to a first-class fence are first-class wire and first-class methods of manufacture.

In the "Dillon" these two essentials are basic principles.

You and your friends can sit on the top wire of the

Dillon Hinge Stay Field Fence

(same panel) and when the strain is removed the strands and stays spring up as if nothing had happened.

In underwear this ideal "comebackness" is called Elasticity, in wire fencing it is called Flexibility; but in many fences the quality is a **stated** one, **not a proven one.**

And because the **Dillon** is able to stand the **pressure** test, it is also able to meet the **frost** without affecting it. the **heat** without **sagging.**

Persons addressing advertisers will kindly mention having seen their advertisement in Hardware and Metal.

Why You Should Sell
THE IDEAL FENCE.

You want to handle a fence that will appeal at sight to your customers, and that will satisfy them after they have bought it. You'd like to have a fence to sell of which you could say to a man, and say truthfully, that it does the fencing job for good and all. There is absolutely nothing that looks better, is better, that will give better satisfaction and that will sell better than this Ideal Woven Wire Fence. You can see from the illustration how it is made; crimped, locked, spaced and stayed. Then just remember, and this is all-important, that these wires are all big, heavy, strong wires, all No. 9 hard steel. And they are heavily galvanized so there's no chance for rust to get a hold. One fence sold always sells more. It's easy to get going. Very little talk required to convince a man who has fence to build. Seeing is enough. And then remember that while you're satisfying your farmer friends and doubling up your fence business, there's enough in it for you to make it an object. We see to it that dealers have margin enough to make them want to push it. If you want to handle that kind of a fence just drop us a card about dealer's prices.

It don't stay on the Shelf

There's a reason why **The Martin-Senour Paint** doesn't stay on the dealer's shelf and why it keeps him busy passing it over his counter. It's because of its quality. It's the satisfactory kind. It flows well, covers well, looks well and wears well. It pleases the painter who puts it on and the owner of the premises where it is used. No wonder the dealer is pleased too for it means money in his pocket—a pleasant proposition all around for everybody. If you do not yet belong to this pleased company we'd like to talk to you a little about our

100 Per Cent Pure Paint

We believe we can convince you that you can make money handling **The Martin-Senour Paint.** Not simply because of the profit realized on each sale, but because **The Martin-Senour Paint** is a builder of trade; one sale brings another. It's a paint you can recommend to your customers and the next time they visit your store it will be because they want more, not to enter a complaint. We'll be pleased to hear from you—write to-day.

Louden's Steel King Barn Door Hangers

Always give Satisfaction.

They are perfectly "stay-on," hold the door much closer to the track than others, and are better secured to the door, having three bolts well spread apart, instead of two bolts in the same line and close together, which is liable to split the board and loosen the hanger.

In addition to this, the pivot in all Louden Jointed Hangers is set a little ***outside of the centre line,*** which causes the door to hug the side of the barn, prevents it from rattling with the wind, and gives it more play to pass obstructions.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.

Executive—Alberta, A. E. Clements, Olds; C. F. Comer, Calgary; A. R. Auger, Okotoks.

Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer. Winnipeg.

Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.

Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man.; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg. Man.

Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association.

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.

Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.

Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

Organizer Hodson Resigns.

Oscar M. Hodson, who has been acting as organizer for a month or more, has resigned his position in order to become the Toronto representative of H. R. Ives & Co., Montreal. The Ives Company recently disposed of their hardware patterns to the Taylor-Forbes Company, Guelph, but still manufacture iron and brass beds and hot water boilers. In Mr. Hodson they have secured a representative who has won a name for himself as a persistent and hard worker who makes a success of whatever he turns his hand to.

Executive to Meet.

The members of the executive have been considering the various matters referred to it by the recent convention, and in order to put their motions into action an early meeting has been decided upon. The meeting will probably be held in Toronto on June 12, several of the executive having expressed a desire to get to work as soon as possible. A committee will be appointed to confer with representativs of the jobbers regarding various subjects upon which a better understanding is desired, and during June the executive hope to be able to report to the members of the association that something of real value to the trade has been accomplished as a result of their efforts.

The Membership Growing.

New members are being enrolled and from present indications the secretary will be able to report an increase of at least 100 per cent. when the next convention is called to order in September. The majority of the executive seem to favor September 4 (the day after Labor Day) as the most satisfactory date for the convention, and it is probable that date will be selected.

A number of members have forwarded the additional dollar added to the $2 fee by the recent convention, and others who have not yet paid the full fee of $3 should remit the balance to the secretary at once in order that all may be on the same footing in the treasurer's books.

Travelers' Assisting.

Membership blanks are being placed in the hands of a large number of travelers who have expressed their willingness to help in the work of organization, and now that the organizer is out of the field the travelers have an excellent opportunity of proving their friendship to their customers in the retail trade. It is unlikely that any of the manufacturing or jobbing houses will object to the travelers assisting in the work of organization, as any move which tends to do away with price-cutting and put the retail trade upon a sounder financial basis cannot but be helpful to the manufacturers and wholesalers.

Vice-President Scott intends visiting Harriston, Palmerston, Durham and other places in order to extend the membership, and other members of the executive will endeavor to visit or write the dealers in their own districts. Dealers with any initiative in their make-up, however, will not wait to be called upon, but will forward their applications for membership to the secretary or secure a card from one of the travelers. If each dealer does his part by joining the association the executive officers will do theirs by improving trade conditions very materially or let the members know why they do not succeed.

A County Association.

One of the members from Haldimand County has suggested that the dealers in Cayuga, Dunnville and Canfield get together into a county association. This is a practical suggestion and will probably be acted upon at once.

The members in Toronto are also laying plans for an extension of their membership and a general meeting of all the hardware and stove dealers in the city will be arranged at an early date.

Addresses on Express Parcels.

C. E. Noble, Dundalk, makes a practical suggestion when he says that express bills could be improved by putting the shipper's name on the bills. "When I came home from the convention," writes Mr. Noble, "I found three express bills in my office, the charges being 25c., 35c. and 50c. I could not tell who the shippers were and what articles they represented. One parcel, one box, one crate, and so on is how they are known. If we order a certain article to come by express we want to charge up to that article the express. We might have three or four bills come in at the same time all with different charges, but we could not tell which bill belonged to the particular article. I 'phoned to the local express agent; he could not give me the information. Putting the shipping firm's name on the bill should not inconvenience the express company any and it would be very helpful to the receiver of the parcel. The secretary might write the express companies suggesting the improvement.

"Another convenience to country merchants," writes Mr. Noble, "would be for the wholesale houses and manufacturers to put their street addresses and telephone number on their invoice or letterheads. A short time ago I wanted to get a wholesale house to order goods by 'phone but I could not find their number on any invoice or billhead. The central 'phone here could not find it for several hours and that left it too late to order for that day's express. The Bell Telephone Company do not supply us with a directory for Toronto."

Regarding the latter part of Mr. Noble's letter it would seem very short-sighted business procedure upon the part of the telephone company to fail to instruct their country operators to send such calls direct to the long distance office in Toronto, where it would be but a moment's work to procure the desired number.

HOW TO DERIVE BENEFIT FROM ASSOCIATIONS.

In a recent address before the Illinois Retail Hardware and Stove Dealers' Association on the above subject, George A. Cubbage said there was but one way, and that was to join the association, attend all its meetings, gathering in all the information offered, and such as is not voluntarily offered in the regular proceedings by simply calling for it.

"By asking what at first sight might seem a very simple question you would draw out a discussion that would not only benefit you, but as well the entire association. You cannot get the benefit of the association as you should by always remaining quietly in your seat and letting others do all the talking. By so doing you fail to get the enthusiasm you would otherwise receive did you only enter into the discussion. You can derive benefit by being a good listener, too. You must be both. You can derive benefit by telling the convention about your business troubles, and just as well and better, too, can the same results at the proper time be had by giving us the benefit of your splendid success. You may be successful in some departments of the business of the retail hardwareman, and a failure in others. By putting the failures and successes before the convention, you draw out much benefit to yourself as well as to others.

"The object of the association in convention is mutual benefit, which is had by correcting the errors of each other, whatever they be. Unless you have come here to be taught as well as to teach, you will most woefully fail to get the intended benefit. To get benefit from the association, good fellowship must prevail. You will learn in the association that if your competitor is making a success and you are not, it is because your management is at fault, and you will be much benefited by learning how to correct the fault.

WINDOW AND INTERIOR DISPLAYS

A NOVEL WINDOW DISPLAY.

The engraving shown below is a reproduction of an eastern window display prepared by S. S. Wetmore, with A. M. Bell & Co., Halifax, this display having been awarded first honors in the competition for seasonable window displays during April, the month in which Easter came this year. The view is from the side, it having been impossible to secure a good picture from the front. Several attempts were made but each plate showed bad reflections.

Prize Winning Easter Window Display, Dressed by S. S. Wetmore, traveler for A. M. Bell & Co., Halifax, N.S.

The illustration gives but an imperfect view of the most important features of the display, the feed mill, windmill, lake, and rustic bridge, but the minute description accompanying the photo gives a good idea of the amount of work put into the display by Mr. Wetmore.

Every article shown in the window was designed and made by Mr. Wetmore, the total expense for material being less than $1, the buildings being made from scraps of paper and wooden boxes, while the tanks for the lake were tin linings of cutlery boxes. He also did his own plumbing in connecting pipes and soldering brook connections for the running water which was used to drive the wheels of the mill. It came through a three-quarter inch rubber hose (attached to a nozzle used for washing windows) passing up through the floor behind the grove of trees, entering the water sluice and being carried to the wheel in the face of mill. The hose in the sluice is covered by paper, crumpled and painted to represent running water. The grass was made of fine excelsior dyed with Diamond dyes and cut into lengths of ¼ inch, and graded from cold green in the distance to warm color in the foreground. All grass spots were first covered with cotton dyed to correspond with grass, and upholstered with excelsior to give the necessary hills and hollows.

The window being arranged particularly for the Easter holidays, the "chicken" idea was certainly both original and seasonable. In the incubator shown in the window eighty-two chickens were hatched out of a total of one hundred eggs used, the chickens being allowed to have the run of the window during the display.

Mr. Wetmore's description of the display follows :

"In the left lower corner was placed the much weather-worn cattle shed, feed box, milking stools, etc., outside of shed being the feeding rack and drinking trough of hewn log, surrounded with rustic fencing and gate, near which was the rock well and pole with bucket for drawing water suspended over well. Back of the shed was the hay barrack with thatched roof. The upper left hand corner was the entrance for the chicks, a rustic roadway fenced and lined with trees leading down to front of window.

"On the right of the chick entrance, on elevated ground, was a grove of fir trees, from which came the water sluice carrying the water on to the over-shot wheel on the face of the mill, which in

turn revolved the machinery wheels shown in the windows. After the water turned the wheel it dropped behind the rustic bridge and flowed through arch of bridge over a rocky bed and into the small lake, on the shore of which was seen rushes, rocks, moss, etc.

"On the face of mill was 'Cyphers Chick Feed Mill,' and other signs. By the door of the mill was a hand-cart lettered 'Cyphers Co.,' and containing bags of chick feed. A little to the right was a rustic shed with sign-board 'Hotel de Swine,' with fence and feed trough, the fence bearing the sign: 'Paints, Oils, etc., ' at A. M. Bell & Co.'s.'

"Further to the right and back of the stable stood the windmill, revolved by power from the feed mill. Farther to the right was another hay barrack with thatched roof, backed by fir and maple trees, on the fences hanging scythe, snath and rake.

"In front of the windmill was the large stable, the doors of which were open, showing horse and wagons. The roof, tower, etc., were utilized for signs showing the many advantages of the Cyphers incubator and brooder over all others. At left corner of stable was a wagon filled with bags of chick feed to be conveyed by the ferry at lower road. On right of stable was a pile of logs in front of which was a grindstone, sawhorse and saw.

"Just below stable was the wharf on which were bags of feed for loading the old scow attached to the cable crossing the river. A sign on the post beside wharf was painted 'Fares,' there also being small horn attached. On river bank was a small canoe with paddles, cushions, etc. The whole front of the window and road to the brooder was occupied by chicks 10 days old, hatched by the Cyphers incubator.

"All parts of window were connected by rustic roads, interspersed with trees and banks of grass graded in color from cool shades in distance to warm mellow tints in foreground. On the back shore of the lake was a rustic bridge of colored rocks, from which protruded nuggets of gold, with a sign attached to the rail of bridge: 'Mining capitalists are cautioned not to trespass on this property.' The north end and back of window being of mirror plate glass, much larger and prettier effect was given."

A JUNE WEDDING WINDOW.

No more suitable window can be suggested just now than a display of articles suggesting wedding gifts of cutlery or silverware, or a window showing a model kitchen for the use of the young married couples. The dealers who give some thought to an attractive display of this kind, using one window for the cutlery and silverware and the other for a small Summer stove and kitchen utensils, are certain to get results, especially if the display is backed up by effective advertising accompanied by a few reading notices in the local papers. Circular letters to newly married couples are also effective, but the central feature should be a good window display of goods likely to be in demand both "before and after" the wedding ceremony.

AN ARTISTIC ADVERTISER.

In each of the two window dressing competitions conducted by Hardware and Metal in the last few months the Maritime Provinces have been represented in the list of prize winners in the person of S. S. Wetmore, one of the traveling representatives of A. M. Bell & Co., Halifax. Mr. Wetmore has been connected with this house for about thirty years, and now covers Newfoundland for them. He is well known in Halifax as an amateur artist and designer, and his handiwork is in demand in many quarters, largely in the direction of fairs and other functions for the benefit of charity. He also takes an active interest in athletics, and is considered an authority on outdoor sports.

Mr. Wetmore does not hesitate to express his views on advertising and window displays, being strongly in favor of both, providing they are unique and, if possible, one better than the competitors

S. S. Wetmore

Traveler, Halifax, N.S., winner of two prizes in window dressing competitions conducted by this paper.

in the same line. During the past two years he has devoted considerable thought to preparing an occasional window display of an entirely original character. At first little encouragement was given him, but his efforts are now thoroughly appreciated by his house, and other stores are endeavoring to devise similar displays to draw the crowds.

There is a lot of real philosophy in the words of the poet who said

"Luck is only pluck
To try things over and over.
Patience and skill,
Courage and will,
Are the four leaves of luck's clover."

And other clerks and travelers should, like Mr. Wetmore, endeavor to master the obstacles in their path and win the appreciation of their employers. A study of the accompanying likeness of Mr. Wetmore will show that he possesses the four qualities referred to by the poet as well as being of a jovial disposition and one whose friendship would be worth having.

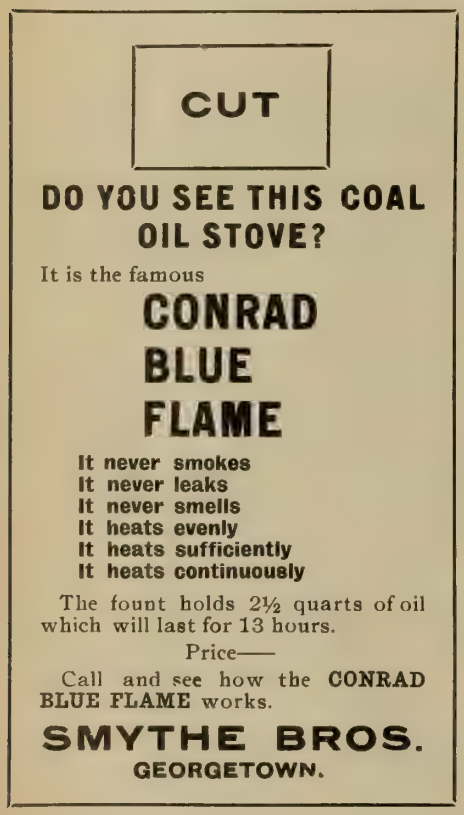
THE LADY DRUMMER.

Down in Indiana there is an enterprising retail hardwareman who figured it out that wholesalers did not put travelers on the road to "drum" up trade until competition became very keen. Consequently the retailer, who had been in the habit of making a buying trip to the city once or twice a year, got into the habit of buying from the traveling salesman. Reasoning along this line the retailer figured that now that the competition is very keen in the retail end of the hardware business, it is up to the retailer to go out after business just as the wholesaler did years ago.

The idea hit him hard and he put it into action. He wanted to reach his country customers, most of whom were farmers' wives, and as he knew a young woman who was cheerful, rather pretty and very much alive, he employed her in his store for a while and then sent her out to bring in business. And she did. Her sales are large and she has a steady job now at a good salary.

Every morning the lady traveler starts out in a buggy with a few good selling novelties. She carries leaders principally—those goods that are marked low and serve as a bait; but she also takes a few staples, as many as the rig can hold. She drives up to a farm house and Mrs. Farmer comes out and sees a new coffee percolator, a bit of tinware for mixing eggs or kneading dough, a mechanical cow milker or a mighty good cream separator. And then the lady drummer shows a few things marked down below catalogue-house prices, demonstrating that local dealers can sell as low as anybody, and perhaps lower.

There is no reason why it should not pay; there are many reasons why it should. The steel range peddler is an absolute stranger in a community. People don't like to trust strangers. He sells his ranges, however. He sells them because he goes directly to the customer. How much more can the local dealer sell his merchandise if he employs the same tactics! He is trusted, perhaps admired, and certainly well known. People will take his word, while they suspect the peddler.



Then, too, the mail order houses manage to get trade in spite of every reason why they should not. They get it by going directly after that trade—by going to the customer. This is what the Indiana man does, and he does it so well that, from a small two-by-four establishment, he now occupies a double store, fifty-five foot front, and uses the second floor for storage purposes—all this in six years.

Canada's production of steel in 1905 was greater than that of 1904 by 171 per cent. The output was 403,499 gross tons.

EFFECTIVE ADVERTISING

A department devoted to the improvement of Retail Advertising. The editor of this department will be pleased to answer questions on advertising and review any advertisements submitted to him.

Coal oil stoves are a line that the country dealer ought to advertise frequently. Besides the great Summer demand, there is an ever-increasing call between seasons for a stove that will warm a sitting room or bedroom with minimum amount of labor and expense. With an eye to filling this latter role, manufacturers have been experimenting for some time, with the result that there are now some excellent specimens of "ornamental" coal oil stoves on the market.

In cities the people have the alternative of using either the gas stove, the coal oil stove, or the wood and coal range, but in the country the choice is limited to the coal oil stove and the regular wood stove. Any advertising by the hardware dealer, therefore, becomes a question, not of the need for a coal oil stove, but the need for the best coal oil stove.

In newspaper announcements the points to lay stress on are instantaneous "working" flame, concentrated heat, freedom from smoke, even distribution, and minimum consumption of oil.

Some coal oil stoves have such features as enameled chimneys, which makes them rust-proof and easy to clean; others have devices for maintaining oil level, thereby prolonging the life of the wick. Certain manufacturers specialize on interchangeability of parts, and so on.

Where a dealer is situated in the precincts of a Summer resort, it would pay him to despatch somebody after business. This trade is now mostly gobbled up by peddlers and agents, but its rightfully your trade.

For appealing to the people in general the weekly newspaper should be tried and also a carefully prepared list of prospective buyers should be circularized.

It is well to be somewhat familiar with the working parts of the stove you sell—this especially for store trade. When a person asks to see one of your stoves working, the facility with which you "light up" and "turn out" has a good deal of influence for or against the sale.

Just about this time it might pay on certain days of the week to have a stove burning right on the counter. Nobody could enter the store without noticing the flame, and naturally curiosity would be aroused. People are often led to buy in this way.

The specimen ad. shown herewith might be used with the necessary changes.

Advertising Expenditures.

A great many merchants ask what percentage of the total net profits should be spent in advertising. There is no positive answer. What applies in one territory is absolutely unreliable in another. A man should spend as large a percentage of his earnings in advertising as will bring a reasonable percentage of interest on the investment. It's worse than folly for a man in a town of 3,000 inhabitants to get the advertising bug in his bonnet so badly that he wants to use every available method within his reach of spending money on what some people call advertising.

It is still more foolish for a man in a town of 25,000 with a good rural community, to neglect newspaper advertising and circularizing. In such a field a man can, with good profit, spend one-quarter of his income—excluding living expenses, of course—in judicious publicity. A hardware merchant who has studied the value of advertising for his particular business once told me that after he had laid aside from his profits enough to pay expenses for the year, he invested one-half of the remainder in advertising and used the other half in improving his store and business. Another man whom I asked, said, "Oh, I sink about $300 a year in advertising," and I have no doubt that he spoke truthfully, for he paid no attention to his advertising from one year to another.

Some small merchants will persist in painting signs on rocks and fences in sequestered spots where the passers-by number about fifteen a week.

It would be interesting to know when will the advertiser who spends about two or three hundred dollars a year in theatre programmes, church papers, etc., learn that it is infinitely better to give one-half of it to charity and buy with the other half one-hundred-fifty dollars' worth of good business getting circulars, or one-hundred-fifty dollars' worth of newspaper space. When one once advertises in a society program he is stuck for all time. A merchant will gain more respect and actual cash by donating ten or twenty dollars to the general fund.

Merchants in small towns usually neglect the kinds of advertising that cost them little or nothing. One of the best methods for the small merchant, also the one most frequently neglected, is the package slip. The composition and printing on about 2,000 package slips would cost about $1.50. Every parcel that leaves the store should contain some good piece of business getting literature. Following is a suggestion for a package slip to be enclosed in all bundles sent out:

* * *

Our satisfaction lies in the satisfaction of our customer. Have your purchases to-day pleased you? Or is there any little thing that is not quite satisfactory? Tell us of the little things that do not please you whether there be flaws in goods or discourtesy on the part of employes. No goods enter our store without rigid inspection. If there are flaws we have failed to find them. We endeavor to see that all purchases will please you unfailingly. If they do, tell your neighbor about them.

We refund money cheerfully on unsatisfactory purchases. Mark well, we say "cheerfully." We do not mean with an air of despondency.

Here is a suggestion for addresses to be pasted on outside of packages:

STOVES AND TINWARE

MALLEABLE RANGES.

In the stove trade of Canada malleable iron ranges are beginning to attract wide attention. The first malleable iron ranges were made some thirty years ago in the United States, and in time became so popular with the trade on account of their many advantages that other makers soon took the line up, until now there are in that country nearly as many malleable iron ranges as there are of grey iron.

In Canada there are now three firms engaged in making these ranges, the newest of which is the Joy Manufacturing Co., of Toronto. That there is a growing demand for this class of range is shown by the number of inquiries made regarding it, and the fact that this year nine carloads have been brought into British Columbia from the United States would indicate that there will be a large volume of business done in these ranges.

One of the advantages of the malleable range is that all risk of breakage is removed. The lids, dampers, door hinges and all smaller parts which are usually easily broken, will stand any amount of strain or pounding when made of malleable iron. But an equally important feature is that not being grey cast iron they can be rivetted together instead of bolted, thus ensuring tighter joints, and no escape of heat.

The Joy Company have given considerable study to the construction of their range, particularly the proportions of the fire-box, and have, they claim, a range that will give the best results with a third less fuel than is ordinarily used. They sell to retailers only, one in each town, giving him a surrounding district sufficiently large to justify him pushing the goods.

SELECTING A RANGE.

The handling of a particular line of stoves or ranges is usually given to one dealer in each town, and frequently there is rivalry on the part of the dealers to get a well known and well advertised line. No doubt it is the best policy for both manufacturer and retailer to follow out this principle, as no two stores having the same stove the evil of price cutting is done away with, or at least lessened, and the article is sold on its merits.

In Canada to-day there are plenty of ranges of reputable and substantial make, the manufacturers of which are prepared to lend every assistance to the retailer in advertising, but in choosing which to represent the actual merits of the range are the points to be considered, even more than if the range is not so well known as other makes.

The choosing of a stove to handle should be governed by the points one would emphasize in selling it, as this is the part that really interests the dealer. With the customer it is not sufficient to generalize, or say it is a fine stove and has had wonderful sales; the points of superiority must be enumerated. The oven, the principal part of the stove, should be opened and displayed to show its arrangement and capacity. The seller should be able to show why it will bake evenly and not burn, how easily the heat can be regulated to suit the necessities of different kinds of cooking. The fire-box should be gone over to show just how the fuel is placed, and how the heat is all used instead of going up the chimney.

The convenient arrangement of shelves and accessories is another point that can be elaborated upon to good purpose; and lastly, the nickel plating and ornamentation, for to have a nice looking stove is the desire of most buyers, as shown by the commendatory exclamations that one hears from neighbors when a new range is shown them.

The manufacturers of stoves have long made it a study to bring about the best results with the least fuel, and each make has some exclusive points that the retailer would do well to become familiar with, for it is upon these things that favorable comparison can be made with stoves not having such good points, and being able to show what no one else can goes a long way in closing the sale.

SUMMER STOVES.

The Gurney Foundry Co., Toronto, are introducing this Spring a new line of gas broilers and toasters, called the Eclipse, the particular feature of which is quick service. The steak is held in a moveable wire rack that is placed in the stove on its edge, between two sets of flames instead of being held over the fire until one side is done, and then turned over. By the new way both sides are cooked at the same time without turning, and the dripping drops down into a pan at the bottom without falling upon the fire. Bread is toasted in the same manner, both sides at once. Another line is called the Oxford gas broiler, it being similar in construction to the Eclipse, but is made smaller and can be placed on top of a range. It is neatly and compactly made and is having good sales. For places where there is no gas, the company push the Sun gasoline and oil stoves. These stoves are wickless and self-generating, ready for business as soon as the tap is turned on, instead of having to be first heated up. The Brooklyn, blue flame, wickless gasoline and oil stove is another make using the self-generating system. The quickness with which these lines can be brought into service will no doubt commend them to the public, as any time saver is as welcome in the kitchen as in the factory.

NOTES ON SOLDERING.

I had not been long out of college when I was first sent out as a road engineer, so it was not to be expected that I would know very much. In those days I even thought that a soldering iron was made of iron, writes a contributor in the Electric Journal.

When I first used a soldering iron on wire joints, I held a dry iron under a joint and waited for the wire to heat enough to melt the solder placed upon it. After floundering around at that awhile and making a bad job of it, I began to remember how I had seen others do it, and then I placed some solder on the iron and held the iron with the molten solder against the joint, which soon began to sizzle, and as it was clean and well fluxed, the solder flowed at once all through and over it.

In college I had taken a course in physics and had heard all about conduction, convection and other things concerning heat, and also knew that copper is a good conductor of heat. But it did not occur to me in the present instance that those principles had anything to do with the work in hand. After I had mastered the job I began to see their connection with it.

A soldering iron, when in use, may be considered a reservoir of heat and the object in view is to get as much of the heat as possible into the wire. When the iron is held against the joint it touches only the high spots and there is a thin film of air between, no matter how smooth the surfaces may be. This air is a very good heat insulator, though when solder is run into this space it unites with both iron and wire and acts as a bridge over which by the principle of conduction heat flows rapidly into the wire from the reservoir.

Clean and hot are the two essentials. One trouble with some novices is that they only half appreciate that statement and seem to have an idea that the solder is the only thing requiring heat, whereas all surfaces to be joined must be brought to the temperature of molten solder before union can take place. This mistaken idea does not lead to much difficulty when the work is confined to joining small wires, for in that case a small quantity of molten solder contains sufficient heat to quickly raise all parts of the joint to the required temperature. But when large wires or any bulky pieces of metal are to be soldered, this idea leads to trouble.

SPARKS.

Heating stoves are finished for a while but you can boom cooks and ranges.

* * *

Oil stoves, gas and gasoline stoves ought to be good sellers now that the warm weather is on.

* * *

The furnace trade, too, should be looking up, with so much building being done.

* * *

Have a camp stove on view, arranged with utensils in camp fashion. Always some one wants these things.

* * *

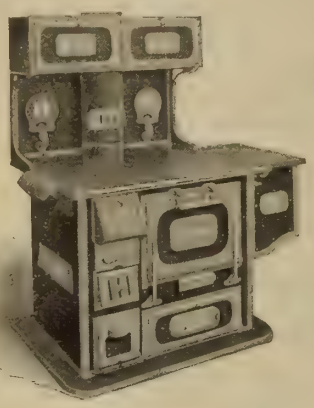
If the stove does not draw, it is likely the fault of the chimney.

* * *

Sometimes the smallest detail in a range attracts a woman's attention and makes a sale. Show off the plate racks, etc.

* * *

Next month is the month of marriages. How about your silverware and cutlery display for that time? There are other things, too, that the young wife needs.



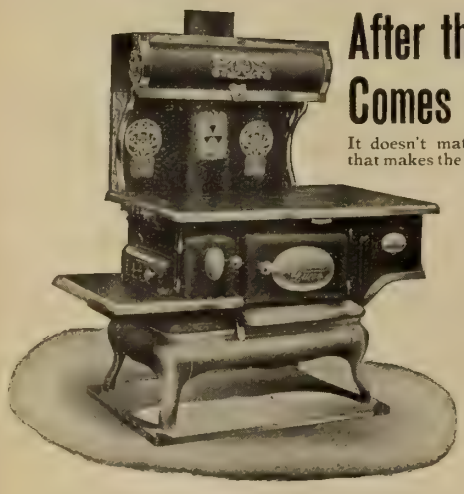
THE JOY

is its name.

It is made of Malleable Iron and Steel.

Its field is all of Canada.

It is sold from manufacturer to consumer through one dealer in a town.



It is not **peddled,** Catalogued or Jobbed.

Its agent is protected and assisted. It wants you. You need it. Better secure it now.

You haven't any idea how quick and sure range-selling can be unless you've got an Oxford Chancellor Steel Plate Range on your store floor right now. Unless it is there, you're missing enough sales to pay a good deal more than your current expenses, simply because you are getting no good from the advertising we're doing for this range and the live dealers who handle it. Does it seem right to you that your competitor should profit by our campaign for the biggest-valued steel range the market knows?—and you not profit? It's surely easy enough to connect with us on the proposition,—all you need do to get right on the range question is to write us a letter and say, "Tell me why I ought to sell

The Range Any Trade Will Buy—and Be Glad It Did Buy."

WE also manufacture Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges and Complete Hotel Kitchen Outfits, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

NEW ADVERTISERS.

Tyree, A., & Co.
Schultz Mfg. Co., Hamilton.

"THE SITUATION IN METALS."

Metal buyers have been constantly on the alert within the past few weeks, but even those who have most closely followed the vagaries of the market, find it difficult to explain this week's happenings.

Of course, tin furnishes the chief excitement. Always subject to the operations of manipulators, it is now, so far as the tyro can perceive, escaping from bullish control. "Fifty-cent tin" is no longer the rule, the price now current being four or five cents under that figure. But even this is thought by some of the best experts to be the work of market bulls who are temporarily depressing quotations.

If so, the explanation of this action is found in the announcement of the periodical Banka sales. As is well known, the Banka mines are controlled by the Dutch Government, who hold these sales at stated intervals. At these times the output for the succeeding period is bought up by operators, and a spice of uncertainty is given to the transaction by constant fear of trouble with the coolies, and other dangers, which limit the product of the mines.

It is possible, and even probable, that the bulls, in their anxiety to control the visible supply, have forced down the price during the Banka sales, and, if this is so, the present low figures will soon be increased. Not a few metal men are expecting to see again the magic "fifty-cent tin."

Antimony and lead are dividing public interest with tin. The former metal, although it is now commanding the record price of thirty cents, still has a great deal of strength, and the feeling is that there are yet higher figures in prospect. Pig lead shows a decided awakening. For the past two or three weeks it has been gaining firmness, and as this tendency continues at the time of going to press, it is safe to say that current quotations are very steady.

If there is one thing more than another, which characterizes the metal markets at present, it is the confident feeling pervading the whole trade, that the exisiting strength in all departments, for some time yet, is to be considered a permanent one. There is certainly no hint of a coming weakness.

SLUMP IN WIRE NAILS.

Wire nails are always an unsatisfactory branch of the hardware business. Both manufacturer and jobber have cause to be dissatisfied with the small profit they make on this line; the retailer, in most cases, uses it only as a bait for his other goods, being content to make actual cost on his sale; and, in the end, even the consumer does not show any gratitude for the reduced price at which he purchases the nails.

If this trade is unsatisfactory under normal conditions, the present situation is particularly so. It seems that an unusually heavy turnover was experienced by the manufacturers last December, when they placed many shipments which are not generally wanted until the Spring.

As a natural result, Spring orders were not up to expectations, and the makers viewed with unnecessary alarm the large number of nail kegs which were piling up in their warehouses. Each one thought his competitors were getting all the business, and some preferred customers were offered a small cut, in strict secrecy. But it leaked out some way or other, and other customers wanted the cut as well.

The inevitable happened. Cut was met by cut, and the market is now practically open. And, of course, now that retailers in some localities are taking advantage of the situation, many jobbers are beginning to think that they are not so anxious to part with the nails, after all.

OUR RECENT COMPETITIONS.

In our Window and Interior Display Department this week we reproduce the Easter window display prepared by S. S. Wetmore, of A. M. Bell & Co., Halifax, which has been awarded the $5 prize offered in the competition which closed on May 1. Several other creditable displays were entered in the competition, those of Messrs. W. J. Illsey, of the J. H. Ashdown Hardware Company, Winnipeg; D. & H. Becker, New Hamburg; G. H. Davison, with G. A. Richardson, Guelph, and H. H. Otton & Son, Barrie, all being worthy of special mention and reproduction in these columns. In making the award to Mr. Wetmore, the originality of the design, the seasonableness of the goods shown and the interesting description accompanying the photograph were all considered and our readers will agree with us in commending the prize-winner for the thorough and enterprising manner with which he entered into the competition.

The ad-writing competition, which also closed on May 1, was not so successful as the contest already referred to and next week it is our intention to criticise the sample advertisements so that the contest will be helpful to the clerks who competed and the dealers who write their own ads. The first prize was awarded to W. J. Illsey, with the Ashdown Company, Winnipeg. Neither the printer nor the ad-writer made the most of the opportunity, but as the number of replies was limited the choice narrowed down to the Winnipeg entry and advertisements of stores in Dundalk, Ontario, and Cranbrook, British Columbia.

It is satisfactory to note that from one end of the Dominion to the other readers are sufficiently interested in these competitions to take part in them and while it is unlikely that any further contests will be announced during the Summer preparations are being made for others in the Fall. In the meantime the editor would be pleased to receive suggestions from clerks, travelers or merchants regarding competitions which would be helpful to the trade. It is proposed, for instance, that a prize be offered for the best short article on "How to Transfer a Business from a Cash to a Credit Basis." Before announcing this competition the editor desires to know how many are willing to send in such articles, and a year's subscription to this paper is offered to the person who suggests any interesting subject for a competition which is considered worthy of adoption, or any suggestion outlining any plan by which the paper can be made more interesting and helpful to its readers.

BUSINESS MEN AND MUNICIPAL POLITICS.

Everywhere in Canada municipal government is increasing in importance, and everywhere, but especially in the large cities, leading business men avoid active participation in the administration of civic affairs. Civics are not politics; straight business all the time, and requiring the very best capacity available. Halifax, as set forth in last week's issue of Hardware and Metal, has adopted a plan for bridging the rift of indifference between the municipal administration and the business community by a commercial committee, half members of the board of trade, half members of the council, with the mayor as chairman.

Mayor Coatsworth, of Toronto, and Peleg Howland, president of the board of trade in the Ontario capital, were asked for expressions of their views on the Halifax plan. Mr. Howland wanted time to consider it. Mayor Coatsworth said:

'I have felt the necessity of consulting prominent and able business men in connection with various city matters and I invariably take an opportunity of doing so whenever I can. During the past week I have consulted two or three prominent business men in relation to important matters affecting the interest of the city. When we come to deal with the question of the radials, my purpose is first to take counsel with several of our leading men, asking their advice as to the best business arrangement to make with the railways, and I will be very much impressed and perhaps entirely guided by their advice, particularly as to the financial side of the question.

"I would not think of entering into important financial matters of city business without first getting the advice of some of our leading financiers. We have a number of splendid and able men in Toronto, and I must say, speaking from my own experience, I have found them ready and willing to enter into a full discussion of city matters at any time and to give me the benefit, for the city, of their long experience and training.

"I found it also of advantage to confer with a committee of working men who have been appointed for that purpose by the Trades and Labor Council. At any moment, if a matter arises affecting the working men, I can immediately reach these gentlemen and secure from them what might be called the very inside information as to the views and wishes of the labor men on the subject.

"I am decidedly in favor of calling in the experts in every line to consult on city matters in their various spheres, and, up to the present time, I am bound to say that these gentlemen have responded in a manner that has made it a pleasure for me to consult them.

"I feel assured that a committee of these gentlemen, wisely chosen, with whom the council could consult, and who would co-operate in city business, would give greater steadiness to important civic affairs and inspire more confidence in the public mind, although we have no reason to complain of the public feeling at present."

OPINIONS WANTED.

The Halifax plan of a commercial committee, half members of the board of trade, half members of the city council, with the mayor as chairman, is an example for the whole of Canada as a means of bringing to bear upon municipal affairs the organized business ability of the community. It is an exceedingly important question, and increasing in importance every year. Something must be done to improve the municipal administration, especially in the larger centres of population. In another column we publish this week a statement by Mayor Coatsworth of Toronto in reply to a request for his opinion regarding the Halifax plan. We will be pleased to receive from any of our readers an expression of opinion regarding the plan or through them the opinions of others competent to speak.

TECHNICAL EDUCATION.

This is an educational age. Trained minds seem to possess the key to success everywhere. Business men are looking for high priced labor more than ever before and high priced workers are scarce. We have this from the Canadian Manufacturers' Association which sent a petition to Sir Wilfrid Laurier asking the Government to appoint a commission on technical education. This petition was framed along the lines of the resolution passed at the last convention of the association.

"That the Dominion Government be requested to appoint a commission to report on the best method for establishing a comprehensive national system of technical education, to provide Canadian industry and commerce with trained assistance from amongst the Canadian people, and thereby aid in developing Canadian industry and do away with the present condition of affairs, which compels employers to go abroad for men to occupy the more responsible and more remunerative positions in Canadian enterprises."

The day after this deputation visited the Premier, the Montreal branch of the association's executive heard a number of complaints from manufacturers to the effect that they were unable to get enough skilled labor, and the question of establishing a labor bureau for skilled mechanics was referred to the head office at Toronto.

Here is a body of prominent manufacturers who have made money for themselves and who confess that they cannot get high grade labor. Certainly technical schools will help to solve the difficulty. In the Province of Quebec especially the Government is losing a grand opportunity to develop latent ability. The French-Canadian is an ideal mechanic in some lines. It is in the blood of the French race to have an instinct for work of an artistic tendency. A Frenchman with an axe and a saw will build a very attractive looking house. He is possessed of great taste in mechanics, and if an institution was established where the worker could be taught how to use correctly his natural talents: how to direct his energies in the proper channels, and above all a fuller appreciation of himself, then a marked development would take place all round.

The technical school is a necessity, and it is past comprehension that such schools have not been in vogue long ago in the big cities. In the Old Country, notably in London, the influence of the German workers has been severely felt. The highly trained young German arrives in London, looks for a position, gets it. To the astonishment of the Britisher he finds that this young Teuton can speak the languages of Europe, he can dictate strong letters on almost any subject all-convincing and profitable. At a bound three or four of the cheaper accountants and correspondence clerks are dismissed and the system and brain of the young technical-schooled German is running the business. This has been proven again and again. In Canada the big offices of the railway companies have expert accountants who draw only $40 a month. Why? Simply because all these men know is to do accounting. The equipoised mind, the alert trained one that knows how to learn what it has not found out, is the force in demand to-day.

May the Government hastily accede to the request for technical schools.

HARDWARE TRADE GOSSIP

Ontario.

Keenleyside & Co., oil merchants, London, suffered loss by fire during the week.

Wm. Knight, hardware merchant, Maple, was a visitor in Toronto this week.

J. Chatfield, plumber, of St. Catharines, was in Toronto on business during the week.

Joseph Moses has sold his hardware business at 516 Dundas street, Toronto, to R. M. Cameron.

The store of F. W. Mahon, hardware merchant, Hintonburg, was damaged by fire a few days ago.

Ben Noble, of Smith Bros. & Co., plumbers and gasfitters, London, was in Toronto on business this week.

The stock of J. W. Knapp, grocer and hardware merchant, Smith's Falls, has been sold for 55c. on the dollar.

James Boxall, of Boxall & Matthie, stove and tinware merchants, Lindsay, was in Toronto for a day or two.

Jonas Hartleib has purchased the hardware stock of E. P. Paulin, Dashwood, who has removed to Goderich.

Alex. A. McLachlan, Magnetawan, Manitoulin Island, has been granted Canadian and American patents on a new horse shoe attachment.

Friends of R. C. Fisher, of Fisher & Sons, Dundas, and for a quarter of a century with Rice Lewis & Son, Toronto, are glad to see him back in the city.

The building being erected for R. J. Cluff & Co. on Lombard street, Toronto, is nearly completed. All the brick work is done and the interior fittings are being installed.

Wm. Reid, of Reid & Wilson, hardware merchants, Seaforth, has been a visitor in Toronto during the past week. Mr. Reid is one of the most jovial hardwaremen in the country and it is always a pleasure to meet him.

R. A. Gray has resigned his position as manager of the Toronto branch of H. R. Ives & Co., Montreal, and Oscar M. Hodson, formerly in the retail hardware business at Bolton, Ont., has been appointed Toronto manager for the company.

R. Fair, hardware merchant, 302 Queen street east, Toronto, intends selling out his business and going into building exclusively. He has already disposed of his store building, but the purchaser is willing to continue the stand of the hardware store.

W. A. C. Hamilton, of the Consumers Cordage Co., Montreal, visited Toronto on Thursday. The Consumers Cordage Co. intend to close their Toronto branch, having appointed the Colonial Cordage Co., of Strachan avenue, Toronto, as their representative in the smaller lines of their manufacturing.

W. R. Stavert, Montreal. Canadian representative of Jenkins Bros., Boston, was a caller at the Toronto office of Hardware and Metal on Wednesday. Mr. Stavert states that a site has been procured for the new Jenkins plant at Montreal, from which valves will be made for export to Great Britain, Australia and other portions of the British Empire.

C. S. Baxter, of Neveux, Clinton & Baxter, Windsor, called on Hardware and Metal on Tuesday. Mr. Baxter is now devoting his attention chiefly to the wall paper business, but states that trade has been exceptionally good in his hardware store. Cutlery is an important branch of this business, sales averaging from $30 to $40 per day in pocket knives alone during the Summer tourist season.

The addition recently made to J. H. Worsell's store at Goderich gives him thirty feet more depth in his front store for the display of his goods, the mechanical department being removed upstairs. Mr. Worsell has been cramped for room in the display of his stock, and this change gives him a front store 65 feet deep and 22 feet in width. It is arranged with windows in the side to allow of an abundance of light, and behind the front store he has an unpacking room 20 feet in depth by 22 feet wide.

Quebec.

J. A. Moquin, general merchant, of Eastman, visited Montreal on business during the week.

Mr. McNeill, of the Laurentides Paper Co., Grand Mere, was among the visitors to Montreal this week.

J. R. Terrill, of Caverhill, Learmont & Co., is carrying his grip and sunny smile in Ottawa, this week.

T. McAvity, of T. McAvity & Sons, St. John, N.B., was in Montreal this week, visiting his friends in the trade.

J. H. Cameron, representing the Winchester Repeating Arms Co., took orders from the Montreal jobbers this week.

Malcolm Cameron, of the Canada Paint Co's montreal staff, has gone to St. Agathe to spend a three weeks' vacation.

James Davidson, president of the Thos. Davidson Manufacturing Co., Montreal, has returned from an enjoyable visit to Europe.

Mr. Bissonette, of Bissonette & Freres, general merchants, of St. Sebastien, was among the buyers to visit Montreal during the week.

Mr. Monty, of Monty Freres, hardware merchants, of Granby, came in to place some orders with Montreal jobbers a few days ago.

Kenneth Carmichael, of the staff of Frothingham & Workman, Montreal, has joined the purchasing department of the Northern Electric Co.

On May 28 there died at Remscheid, Germany, the mother of Messrs. Dorken Bros., the Montreal manufacturers' agents, at the age of 78 years.

C. H. Le Tourneux, one of Montreal's oldest hardwaremen, died in that city on Sunday last. Deceased was head of the firm Le Tourneux Fils & Cie.

L. N. Dupuis, of Huntingdon, was this week a visitor among the wholesale hardware dealers of Montreal, placing orders for blacksmith's supplies.

Mr. St. Arnaud, of St. Arnaud & Duval, general merchants, of Ste. Genevieve de Batiscan, called on some of the hardware jobbers of Montreal recently.

Paul R. Hanson, manager of the Canadian Rubber Co's Montreal branch, is this week out of the city visiting Sherbrooke, Chicoutimi and other points.

The annual convention of the Air Brake Association of America will be held in the Windsor Hotel, Montreal, for five days, beginning Tuesday of next week.

The annual picnic of the staff of A. C. Leslie & Co., Montreal, was held on Thursday of this week, when perfect weather was an important factor in the pleasure of all.

F. A. Coons, of A. Sweet & Co., general merchants, Winchester, Ont., spent Victoria Day in Montreal and took in some of the sights in company with friends in the trade.

J. A. Gordon, of Montreal, who is secretary of the National Plumbers' and Steamfitters' Association, goes to Ottawa this evening, where he will make preliminary arrangements for the annual convention of that body.

Western Canada.

Lewis & Taylor, plumbers, of Winnipeg, have assigned.

Allen Bros., hardware merchants, Lang, Sask., have sold their business to J. H. Small.

W. B. Marshall Co. and Jas. Gray have purchased the Medicine Hat Plumbing & Heating Co.

J. E. McRobie, secretary of the Western Retail Hardware Association, was in Roland, Man., last week on association business. Next week he will leave Winnipeg on an extended trip west over the C.N.R. from Dauphin to Edmonton.

E. G. Prior & Co., of Victoria, B.C., will supply the hardware for the new Empress Hotel. The locks will be a special feature. They are so constructed that if a door is locked on the inside and the key left in, another key supplied to the proprietor called the "grand master" can be inserted and will unlock the door from the outside.

AN OLD COUNTRY VISITOR.

H. Oliver, of the firm Hawksworth, Eyre & Co., silversmiths and electroplate manufacturers, Sheffield, England, is on a tour through the Dominion. F. H. Scott is the Canadian representative of this firm and has just returned from the Old Country, visiting the headquarters of this firm and several others whose Canadian agent he is. The growth of the trade of these fine old English houses in the Dominion has been in a measure due to the energy and ability of Mr. Scott. Renewed interest is now being taken in Old Country silver and electro-plate, owing to the marked attention paid to new styles and especially the unfailing durability of all stock.

A CUTLERY DISPUTE.

Readers of Hardware and Metal will remember that a few months ago objection was taken by cutlery manufacturers in England to certain lines of cutlery manufactured in Canada upon which the word "Sheffield" was stamped. The correspondence was conducted through the Dominion Government, but nothing more was heard of the matter until last week, when Mr. Sydney Jessop Robinson, of Wm. Jessop & Sons, Sheffield, England, visited Toronto. Mr. Robinson is the master cutler of the Cutlers Company for the present year, and it is understood that his visit to Toronto set in motion the legal proceedings which were taken at Niagara Falls this week when a charge was made against the Ontario Silver Co. for unlawfully conspiring to deceive by making cutlery and stamping it with the word "Sheffield" as though it were made in Sheffield, Eng. The law officers visited the premises of the company and seized certain dies, invoices and letters, these being now in the hands of the court, the case having been adjourned for a week.

The Ontario Silver Co. is an old established firm, which has been doing business for about fifteen years, the last five in Niagara Falls. They import their steel from Sheffield, have a large number of Sheffield workmen employed in their factory, evidently considering this sufficient reason to allow them to mark their goods with the word "Sheffield." For some time they have had the matter under consideration, the correspondence seized showing that it was the company's intention to discontinue the use of the "Sheffield" dies as soon as their present stock had been disposed of. They are doing business as usual, notwithstanding a sensational article in one of the Toronto papers, and are continuing to sell their regular lines until a decision is arrived at in the matter.

MONTREAL WAREHOUSE BURNED.

About $10,000 damage was done by a fire that destroyed the warehouse of Wm. McNally & Co., corner of Grey Nun and Wellington streets, Montreal, on the morning of May 24. The building was a two-storey wooden structure, and was filled with contractors' supplies, such as cement, plaster and wheelbarrows.

The damage done by water was even greater than by fire. The big stock of cement and plaster stored in the building was ruined by the water, which the firemen poured into the building.

The loss is covered by insurance in the Royal, Queen's and Mount Royal insurance companies.

AN ELECTRICAL EXHIBIT.

A commendable move is being contemplated by the Electrical Contractors' Association of Montreal. Recognizing how little is known by the public concerning many of the most interesting applications of electricity in this twentieth century, they have decided to hold an "Electrical Trades Exhibition" in the Victoria rink, from Sept. 17 to 22, inclusive. The rink will contain a hundred stalls, in which will be exhibited the best types of underground conduits, street lighting material, dynamos, motors, fire alarm apparatus, telephone supplies, electric fixtures, electric signs, etc.

Diploma awards will be given for the best exhibit, and for the most useful invention, at the exhibition. It is announced that Prof. R. B. Owens, E.E., M.Sc., will be chairman of the judging committee.

"MARRIAGE IS PROMOTION."

George Eliot, the celebrated authoress, in one of her novels, says that "marriage is promotion." Be that as it may, statisticians vow that numerous marriages undoubtedly denote prosperity.

Cupid has evidently been busy with the staff of the Canada Paint Co., and planted his darts with unerring aim, for, last week Frank W. Bell, the company's genial receiving clerk, led a charming and blushing bride to the altar, and was the recipient of a flattering address, together with something more tangible in the shape of a well-filled purse from the staff of the company.

Allan James Munro.

This week, society columns of Montreal papers say that "Mr. and Mrs. Piers Locke announce the engagement of their daughter, Josephine Hume Locke, to Allan James Munro, son of Robert Munro, of Montreal. The wedding will take place June 22, at St. Cuthbert's church, St. Lambert." "May joy attend them" is the earnest wish of their many friends, and Hardware and Metal warmly adds a loud and genuine "AMEN."

OPENING BRANCH AT TORONTO.

The Syracuse Smelting Works, with plants at New York and Montreal, have opened a branch at Toronto under the management of B. Muscat. They will import ingot metal and sell their own manufactured lines of solder, babbitt and type metals.

RUMORED WHOLESALE CHANGES.

A rumor, current in Toronto this week, was to the effect that a leading Toronto wholesale and retail hardware house was to be absorbed by a Montreal jobbing concern, which desires to get into Toronto on a more extensive scale than they are at present. The rumor cannot be verified and it is probable that it is nothing more than street talk, although a man on the inside, on Thursday, said that "if the Montreal people have the price they can have the business."

From various sources statements have been recently made that before another year goes by Toronto will have at least another large jobbing house. An American house is understood to have an eye on this territory and it is well known that one or more of the Montreal wholesalers are only waiting for the occasion to present itself for the opening of branches there.

TWO GOOD WINDOWS.

The F. Hamilton Co., 65 King street, east, Hamilton, who believe in the value of window displays, make it a point to have that part of their advertising seasonable and attractive. Last week the west window of their store was made up of sporting and athletic goods, pyramidal in form with a small automobile on top. The sides of the pyramid were arranged with baseball, cricket, lacrosse and general sporting goods, and in addition to this was an easel with a nice display of jointed fishing rods. A lawn tennis net with racquets hung against it formed a fitting background for the whole, and the effect was good.

The east window was made up similar in construction to the other, but was decorated with paints, enamels, brushes, paper-hangers' supplies, etc. On the top of this pyramid was a miniature frame house painted with Bull Dog paints, which attracted much attention.

The Hamilton Co. show good judgment in their displays, particularly in having the special features of the automobile and house bear a relation to the other things shown. Something scenic or out of the ordinary will always attract attention, but to get the best results the interest of those who look at the window should not be wholly absorbed by these things, but, instead, should be directed by them to the general display.

Morris, Man., will establish an acetylene gas plant.

* * *

The James Smart Manufacturing Company, Brockville, have secured the contracts for the warming and ventilating in the Chalmers Church Sunday school building, Toronto, and the public school building at Teviotdale, Ont.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Solder—Prices have eased off some.
Turpentine—Quotations are declining.
Linseed Oil—Lower prices are the rule.
Wire Nails—An open market exists.
Ingot Tin—A 4 cent drop has been made.
Pig Lead—Prices have advanced.
Galvanized Iron—There has been a readjustment of prices.

TORONTO.

Solder—Quotations are about 2 cents lower.
Turpentine—Down 3 cents, and likely to go lower.
Linseed Oil—A drop of 1 cent has been made.
Crude Petroleum—Prices have advanced 2 to 4 cents.
Ingot Tin—A speculative drop of 5 to 7 cents has been made.
Boiler Plates—Some lines are slightly advanced.
Antimony—Another advance has been recorded.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 1, 1906.

General business, while scarcely so brisk as it was last week, is still healthy and large orders are being filled by all the leading jobbers.

Shelf goods are the strong feature of the week's trade, and most of the wholesale houses report that these are being taken in especially large quantities by city merchants. The local business is experiencing a great boom, as the natural result of the large amount of building which is now being done.

Prices in most lines are stiff, but wire nails are somewhat weak. Manufacturers appear to be losing sight of the fact that larger quantities than usual were moved last December, and they are now fighting hard for orders. The market is practically an open one.

AXES—A normal volume of business is being done. Prices are steady as follows: $7.60 to $9.50 per doz.; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—The trade shows no special feature. We quote prices: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—A fairly brisk turn-over is reported. Our price remains $4.25 for cold blast.

RIVETS AND BURRS—There is lots of business doing at the same prices as have prevailed for some time. We give the following discounts: Best iron, rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets, with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—In spite of pessimistic reports as to crop prospects, sales continue to be good. We quote: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b., Montreal.

MACHINE SCREWS—An active trade is going on. Our discounts remain as follows: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—Being a staple line, these goods are selling fast. Our discounts are as follows: ⅝ and smaller 60 per cent. and 10 per cent.; 7-16 and larger, 55 and 5 per cent.

HORSE NAILS—The volume of business is good. We still quote: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—The situation is unsatisfactory for manufacturers and jobbers, although large quantities are being purchased by retail dealers. The market is practically open, and the price we quote is by no means general. Our price is $2.15 per keg, f.o.b., Montreal.

CUT NAILS—The unsettled condition of the wire nail market is being reflected in this line as well. Our price remains $2.20 per keg., f.o.b., Montreal.

HORSESHOES—Business shows a very satisfactory volume, and prices are firmly maintained. We quote as follows: P.B. new pattern, base price, $3.50 per 100 lbs.; M.R.M. Co.' latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c. per 100 lbs. extra.

SPORTING GOODS—Orders for guns, ammunition, etc., are increasing, and trade will continue to improve in these lines during the balance of the season.

BUILDING PAPER—No noticeable change has taken place in the condition of this market. Altogether the situation is satisfactory but featureless.

CEMENT AND FIREBRICK—The busy season is now at its height. Montreal dealers are enjoying a full share of the boom. We quote prices: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. "Lafarge" (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21; American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—A good turn-over in this line is reported by the local wholesalers. Our quotations are: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—This continues to be one of the best selling lines in the trade. Active inquiries for all grades are being received. Prices remain as follows: American Twin, 2 qt. $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—Our price remains steady at $1.45 per hundred square feet.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 1, 1906.

While there are signs of the slackening usually following the rush of Spring business, trade continues brisk and seasonable lines of all kinds are being shipped as fast as they can be prepared.

Refrigerators, freezers, wire cloth, screen door fixtures, hammocks, lawn goods, bicycles, baseball goods, fishing tackle, and all other seasonable goods are going out to dealers in large quantities every day. In addition to this, there are continual re-orders on the earlier lines, such as wire and nails, fencing, steel goods and similar lines. Builders' hardware is active. The large amount of railroad construction work going on also causes a continual demand for shovels, scrapers and similar goods in very large quantities.

AXES AND HANDLES—Trade conditions normal, with no price changes.

CUTLERY AND SILVERWARE—A steady business continues to be done.

SPORTING GOODS—Baseball and lacrosse goods and fishing tackle continue in good demand, and guns, ammunition, etc., are selling well.

WASHING MACHINES—Trade is fairly active at present.

CHAIN—We quote as follows: 1 inch, $6.60; 5-6 inch, $4.55; ¾ inch, $3.95; 7-16 inch, $3.80; ⅝ inch, $3.65; 9-16 inch, $3.55; ½ inch, $3.45; ⅜ inch, $3.35.

EXTENSION AND STEP LADDERS

—Prices continue as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—A good trade is reported.

GALVANIZED WIRE — We quote: $2.17½ f.o.b. Cleveland.

BARB WIRE — Prices remain the same. We quote: On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE — (Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The same conditions continue with considerable cutting being done and we quote nominally $2.05 base.

CUT NAILS—The average demand exists for cut nails.

HORSENAILS—The usual trade continues with no changes in quotations.

HORSE SHOES — Our quotations continue as follows: P. B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

RIVETS AND BURRS—Business is good in these lines with prices the same.

SCREWS—All lines are selling well at present. No price changes.

BOLTS AND NUTS — With stocks light prices continue firm.

CORDAGE—We quote as follows: On binder twine, 500 feet, 10c. lb.; 550 feet, 11c. lb.; 600 feet, 12c. lb.; 650 feet, 13½c. lb. Golden Crown, 500 feet, 9¾c. lb. On Gold Medal Brand (imported), 600 feet, 12¼c.; 650 feet, 13¼c. Discount for car lots: Manila, 15c.; British manila, 11½c.; sisal, 10½c.; double lathyarn, 10½c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16½ to 17c.; cotton waste, colored, 6¾c.; white, 9c.

CEMENT—There is no lessening in the quantity of cement being asked for. All that is being made finds a ready market. We quote: For carload orders, f.o.b., Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Porland, $2.05 upwards.

FIRE BRICK—There are no changes to record. English and Scotch firebrick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27½c. to 35c.

HIDES—An advance of ¾c. on country hides is the only quotable change in the list this week. The situation is uninteresting, with supplies fairly well meeting the demand.

Hides, inspected, steers, No. 1	....	0 11
" " " No. 2	....	0 10
" " cows, No. 1	....	0 10½
" " " No. 2	....	0 09½

Wool, unwashed fleece	0 17	0

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 1, 1906.

Another decline in tin was the feature of the week's happenings in metal circles here. This market is always a difficult one to understand, as it is subject to the influence of speculators more than any other metal. It is felt locally that the depression of prices now existing in the tin market is almost wholly due to this cause, as the metal is very scarce and sales are active.

Pig lead has advanced, and is very firmly held at the higher price. The situation is particularly strong, and there is an evident state of expectancy in the trade which forecasts a further move upward. This same feeling, by the way, seems to be general, and to extend to all metals.

Antimony took another flight upward during the week. It is impossible to see the end of the present wonderful rise of this metal, even when prices are more than three times their normal figure. Every indication points to a continuance of the advance.

Copper is not exciting a great deal of attention in these days of antimony and tin, but buvers find that prices are very firm, and there is no reason to look for any lower quotations. Indeed, the tendency is decidedly the reverse of this.

Pig iron is causing some concern to dealers owing to the difficulty experienced in securing consignments of the softer grades. It is almost an impossibility to obtain prompt deliveries of No. 3 in any of the better known irons, and there are several cases on record of purchasers buying No. 1 because the softer iron was not available.

Sheet metals are showing activity. In galvanized iron very firm conditions prevail, reports from the Old Country markets showing slight advances there. Among the local dealers there has been a re-adjustment of prices for gauges other than 28.

Unless the declining market in ingot tin keeps up, which is unlikely, the price of tin plates will have to advance. This is momentarily expected by the market experts in this city.

COPPER—Conditions are very steady and this metal is gaining strength constantly. Our prices are: Ingot copper, 21c. to 21½c.; sheet copper, base sizes, 25c.

INGOT TIN—The market is weaker, but this is probably only temporary and due to artificial means. We now quote: 46c. to 46½c.

PIG LEAD—As predicted in our last issue, this metal is stronger this week, and a very noticeable jump has been scored. We now quote: $4.40 to $4.50 per hundred pounds.

PIG IRON—Prices are unchanged, but the scarcity of number 3 grades, mentioned last week, is now being felt even more keenly. We quote:

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	21 00	"	"
Clarence No. 1	18.00	"	"
" No. 3	17.65	"	"

BOILER TUBES—Sales are satisfactory and quotations as follows: British and American tubes, 1½ inch, 8½c.; 2 inch, 8½c.; 2½ inch, 10c.; 3 inch, 12c.; 3½ inch, 15¾c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our quotations: Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7½c.; Conqueror High Speed Steel, 60c.

MERCHANT STEEL — Continued strength is shown, and prices are stiff. We quote: Sleigh shoe, $2.17½; tire, $2.27½; spring, $2.75; toecalk, $2.82½; machinery iron finish, $2.27½; ruled machinery steel, $2.75; mild, $2.17½ and upwards; square harrow teeth, $2.27½. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—We are still quoting: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON — Advances in Old Country markets have stiffened conditions here once more. Our quotations follow: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—This line is very firm and prices have strengthened. We still quote: 28 gauge, $2.40 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

CANADA PLATES—Our quotations are as follows: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

ANTIMONY—The market is still on the jump. Still higher prices are reported, and great firmness is shown even at the new figures. We quote: 29½c. to 30c. per lb.

TIN PLATES—Dealers are confident that an increase in prices will soon be declared, unless the ingot metal continues to decline. We quote as follows: Cokes, base size I C 14x20, $4; charcoal, base size I C 14x20, $4.25.

TERNE PLATES — The market remains steady with prices constant at $6.85.

INGOT ZINC—As a result of higher prices in the Old Country markets, an advance has been declared here. We now quote: 7c. to 7¼c.

SHEET ZINC — Much firmer conditions now prevail. We quote: $7.75 in casks; $8 in less than casks.

SHEET LEAD—The market this week is still stronger, owing to further advances in pig lead. Our quotations: 2½ lbs., 5½c. by the roll; 3 lbs. and heavier, 5¼c. by the roll; small quantities 25c. per hundred lbs. extra.

BAR IRON—The market is steady at $2.05 f.o.b. Montreal.

OLD MATERIAL — The situation in metals is still firm, and there is no immediate prospect of weakening. In scrap rubber prices are holding up very well, considering that the largest collections are coming in at this time. Manufacturers of reclaimed rubber seem to be holding back orders in the hope that the usual fall in price, owing to Spring collections, would take place sooner or later. The demand for all kinds of rags continues good, with the exception of cotton rags for paper stock, of which the supply exceeds the demand. The same may be said of waste paper, as mills are at this time of year using large quantities of ground and other wood pulp. Dealers purchasing prices follow: Copper wire, 15 1-2c.; light copper, 14 1-2c.; heavy red brass, 13 1-2c.; yellow brass, 10½c.; light brass, 7½c.; lead, 3¼c.; zinc, 4c.; machinery cast scrap, $13.00; wrought scrap, $12.00; stove plate scrap, $11; mixed rags, $1 to $1.20 per 100 lbs.: old rubbers, 7¼c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 1, 1906.

Speculation in tin has brought prices down from five to seven cents and the slump has stopped the buying to a considerable extent. Stocks are light locally and available supplies are light. According to an English statement of market conditions there "the speculative character of tin has once more shown itself to its full extent, and with the stocks already at a dangerously low level, and still being encroached upon by the steadily expanding requirements of trade, prices lend themselves easily to manipulation. Although the east has been selling more freely at the high prices established during the week, there are no indications of any change in the actual position of the metal. Consumption remains very good, and supplies are not increasing."

Opinion is very much divided in New York in regard to the probable course of the tin market. The time for the statistical statement is close at hand, and it is held by some that the market may decline again on the statistics. On the other hand, however, London advices and limits show an expectancy of yet further recovery.

Pig lead and copper continue very firm, and antimony has again gotten its wings in motion for another upward flight.

PIG IRON — A firm market is reported with the following prices: Radnor at furnace, $30; Hamilton and Midland, at furnaces, No. 1, $20.50; No. 2, $20; Londonderry, f.o.b. Toronto, No. 1 $21.50, No. 2, $21; Middleboro, $21.50.

BAR IRON—There are no changes in prices, but the market is very firm at $2.15 base, f.o.b., Toronto, with discount of 2 per cent. net cash.

INGOT TIN—From 43c. to 45c. is being asked by dealers with changed prices each day.

TIN PLATES—There has been some heavy buying of plates in the expectation of higher prices. We are quoting: Cokes, base size, 14 x 20, $4; charcoal, base size, 14 x 20, $4.50.

GALVANIZED SHEETS—Trade continues fair and we quote: 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. Buying is fairly active and quotations 23c. to 24c. per pound.

BOILER PLATES AND TUBES — The demand is steady and we continue to quote: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1½ inch, $8.50; 2, $8.80; 2½, $10.75; 3, $12; 3½, $15.80; 4, $20. Terms, 2 per cent. off.

LEAD—The market is very active, but prices continue as before. We quote: Canadian pig lead at $4.40 and English pig at $4.75 per 100 lbs., with bar lead at $5 per 100 lbs.

ZINC SPELTER—Prices are firm and dealers are looking for an early advance. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

COPPER — Business is brisk with prices unchanged. We quote: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

ANTIMONY — Another rise has brought our quotations up to 28½c.

OLD MATERIAL—All metals are active with prices the same. Dealers' buying prices are as follows: Heavy copper and wire, 15½c. per lb.; light copper, 13¾c. per lb.; heavy red brass, 13¾c. to 14¼c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8½c. per lb.; tea lead $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4¼ to 4½c. per lb.; iron, No. 1 wrought, $11; No. 2 wrought, $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel, $5; old rubbers, 7c. to 7¼c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Quotations remain as follows: Anthracite in cars at bridges, egg, stove and nut, $5.50; grate, $5.25; pea, $3.50 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; 3-4 inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.60; ¾ inch, $2.50; mine run, $2.40; slack, $2.25.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, May 29, 1906.

PIG IRON—Cleveland warrants are quoted at 49s. 9d and Glasgow standard warrants at 49s. 6d, making prices as compared with last week 5 1-2d lower for Cleveland warrants and 1s. 1d lower for standard warrants.

TIN—Spot tin opened irregular at £182 10s., futures at £182 10s., and after sales of 320 tons of spot and 650 tons of futures closed strong at £186 for spot, £186 for futures, making price as compared with last week £2 10s. lower on spot, and £1 lower on futures.

COPPER—Spot copper opened firm at £85 10s., futures £84 15s., and after sales of 300 tons of spot and 600 tons of futures, closed firm at £85 15s. for spot, and £85 2s. 6d for futures, making price as compared with last week 10s. higher on spot and 17s. 6d higher on futures.

LEAD—The market closed at £16 15s. making price as compared with last week unchanged.

SPELTER—The market closed at £27 10s., making price as compared with last week 7s. 6d higher.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, May 31, 1906.

The call for sheets coupled with the scarcity of sheet bars will probably result in an advance of from $2 to $4 a ton in the near future. Heavy premiums are now being paid for immediate deliveries. The advance in quotations on tin plate is being maintained.

The gap continues to widen between Bessemer and basic iron on the one hand and foundry on the other. One 10,000 ton lot of Bessemer for third quarter delivery sold during the week at $17.35, and smaller lots went at slightly higher prices. The corporation has taken all the available Bessemer for June and basic sales have been good with the price of $17 well maintained. Foundry grades, however, are selling freely at $16 to $16.25 valley for No. 2, though the tonnage moving is not extremely large. Several producers have withdrawn from the market, finding present prices unattractive, and an Ohio inquiry for 10,000 tons has been withdrawn. A canvass of the southern situation shows stocks in furnace yards very low.

The shipment of ore from Lake Superior ranges is proceeding uninterruptedly, but it is not so large as was hoped. The car shortage on the range railroads and the limited capacity of upper lake docks are being strongly felt.

U. S. IRON AND METAL TRADES.

From the Iron Age, May 31, 1906.

The widespread struggle between the founders and the molders over the open shop issue is to a considerable extent curtailing the melting of iron and has led to some holding up of deliveries. The foundry iron markets are therefore somewhat weaker.

The market for steel making irons is very quiet after last week's purchase in the Pittsburg district of 25,000 tons by one large interest for delivery during the last half, and of 10,000 tons by another large steel company. In the east one structural mill has bought 4,000 tons of basic pig and another has taken on additional tonnage.

The steel rail mills have booked about 20,000 tons more for this year.

The American Bridge Co. has thus far booked this month 60,000 tons of orders, the latest being 28,000 tons for the Hudson Co's tunnel terminal, and 10,000 tons for the New Trinity and North Trinity buildings. The Pennsylvania Steel Co. has secured the contract for a 4,000 ton bridge at Pierre, S.D.

Of interest to the plate trade is the contract for riveted water pipe for Brooklyn, just secured by the East Jersey Pipe Co. This will require 12,000 tons of 5-8 inch plates.

In the sheet trade the steady strengthening of the market is leading to the belief that an advance may be established at no distant date.

The domestic wire trade is rather quiet, as is usual at this time of the year. It is understood, however, that there is a very satisfactory export movement.

British Columbia Trade News

Vancouver, B.C., May 25, 1906.

A Wednesday half-holiday for Vancouver and New Westminster has been concurred in by nearly all the different classes of retail trade, excepting the hardware merchants. The latter have for years been leading in the question of a weekly half-holiday, and have for many seasons closed up on Saturday afternoons. Their reason for refusing to join in the Wednesday half-holiday and sticking to their old date is that on account of the building trades, the machine shops, mills, foundries, and in fact nearly every industry which requires hardware and fittings, it would be impossible to close up Wednesday afternoons without practically compelling a cessation the same afternoon for all the industries mentioned. On the other hand, the building trades nearly all observe Saturday afternoon. So do many machine works, etc., though the saw mills all run right through the week. It is therefore argued, with strong ground, that the Saturday afternoon is the better for the hardware men, and while the rest of the city merchants have practically agreed on Wednesday afternoons for the Summer months, the hardwaremen will not change.

* * *

Prince Rupert, the new northern coast terminal city, which is to spring into existence at the magic touch of G.T.P., is already placed on the map, is indications serve to show. The location so much talked of at last session of the Provincial Legislature, Kaien Island, which the G.T.P. purchased from the Government, is very likely to be the scene of great activities this season. The island, which is very close to the mainland, only a narrow channel separating, is close to Metlakatlah Mission on Tuck's Inlet, and being ten thousand acres in extent, there is quite a field for laying out a city, fully as large as the new terminus is likely to be for some years. The G.T.P. surveyors are already on the ground in force, and making headquarters temporarily at Metlakatlah, for the reason that there are some old buildings there which are being temporarily utilized. The activity is not being confined to surveyors alone. A large saw mill is being erected, and W. D. Hays, brother of the general manager of the G.T.P. Railway Company, is head of the new concern. It was stated some time ago that this mill had been given the contract for a very large quantity of ties and railway timbers, and the announced intention is to get the plant installed and begin work at as early a date as possible. If the surveying of the townsite is proceeded with this Summer, there will be a rush to the place, for an enormous number of inquiries and much prospecting has been done by people from all over Canada anxious to get in on "the ground floor" in the making of the new city.

* * *

While last week J. J. Hill and associates in various parts of the west were making interesting announcements as to their intentions in respect to building a new line in the west, and more especially respecting the finishing up of their V.V. & E. line, coupling up the coast with the interior by direct route, their engineering staff was busy with preliminaries for getting their line to the water-front in Vancouver. It has long been an open secret that the Great Northern had bought considerable valuable property on the harbor front, east of the C.P.R. docks. While it has been officially confirmed that the Vancouver Engineering Works site and wharf have passed into the railway company's hands, the larger portion, the Hasting's mill site, has never yet been admitted to have passed. Other water-front has also, it is understood, been bought up. This week surveying parties are running lines and getting gradients to make a final decision as to the route to the deep-water frontage of the harbor. At present Mr. Hill's road gets in over the V.W. & Y. line from New Westminster, but has no terminus on the harbor front. To connect up this present line, and also to provide for the line to the projected bridge across the second narrows, is the problem this week being solved. Chief Engineer Stewart, of the Great Northern, is here superintending the work. Mr. Hill is expected to arrive shortly, and meantime the final lines will be run, and the plan submitted for his ratification when he reaches here.

* * *

The millmen are this week resting from their labors, insofar as the price list is concerned. While further increases, making a fourth in the year, are occasionally rumored, the present indications are that the season will proceed with no more changes. The mills are now nearly all running night and day, and logs are still hard to get and very high in price. The operators also say that labor for both logging camps and mills is higher priced this year. In the mills, the shortage in the number of Chinese and Japs is being felt by some. But the cannery season approaching has always had its effect in taking off both classes of Orientals, the Chinese being all operatives in the canneries, while the Japs are fishermen. For the short fishing season the returns are often very remunerative, and the Orientals follow the dollar.

WELSH TIN PLATE SITUATION.

David W. Williams and G. W. Prees, U.S. consuls at Cardiff and Swansea, report that practically all the tin mills in Wales will be shut down during the first week in June. Their letters describe the depressed tin-plate trade as follows:

It has been the custom to allow a holiday week in many of the mills some time in the midsummer, but the present depression in the tin-plate trade has caused the masters and men of all the organized mills to hasten the holidays by six to eight weeks. The depression at this time has resulted in closing over 97 of the mills that were running at the beginning of the year, which has already reduced the production by about 25 per cent. Of the other mills, the majority are now running on day to day notices.

The depression is of such a character that it is discussed very generally, and all sorts of views are expressed. Some seem to see in it only the result of overproduction, and the measures now resorted to are based in part on that assumption. It is generally conceded, however, that the increase in the price of materials, and of block tin in particular, the loss of the Russian trade occasioned by the disturbances in the oil fields of that country, and the levying of discriminating tariffs by many foreign countries, are affecting the trade very materially.

The loss of the Russian market has alarmed the trade, for it has revealed what may happen in case other markets may be lost. The possibility that Japan may enter the trade is already exciting some apprehension, and the effort to build up the tin-plate industry in Canada must affect the Welsh trade injuriously. It is felt, also, that the repeal of the American rebate on tin plates would wipe out the entire American trade, which has been gradually disappearing ever since the McKinley tariff was levied. Much of the rebate is now received by a few large corporations, and it is this fact that occasions the belief that the rebate may be abolished. It may be noted also that the high price of block tin is affecting other industries in Britain, especially those interested in art-metal ware into which tin enters.

Hardware and Metal Conditions in Manitoba.

Market quotations corrected by telegraph up to 12 a.m. Friday, June 1, 1906.)
Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

Fluctuations.

Pig Lead—Advanced 25c. per cwt.
Churns—Advance in list.

Business is still very active, the turnover in the wholesale trade being considover in the wholesale trade being considponding month last year. Prices are steady in nearly all staple lines, the only quotable changes being those noted above.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Our quotations are as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE—Retail competition continues very keen. Jobbing prices are as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02· 12. $3.10· 13, $3.20· 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes. No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS—Revised list and discounts are now as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅜ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ½, $4.10; ¼, $7.20; ⅝, $4.60; ½, $4.30; ¾, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—The list on "Irwin" auger bits is now the same as on common bits. Discount on "Irwin" is 47½ per cent., and on the common bits 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES — The price is now 1¾c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 p.c.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—The price of solder is firmly maintained at 25c. per lb. owing to the present scarcity of tin. Block tin is quoted at 45c. per lb.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Price has been reduced ½c. per lb. Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC. — We quote as follows: Cartridges, Dominion R.F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33½; C.F., pistol, 5 p.c.; C.F., military. 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.00; chilled, $7.50; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—We quote: Bar iron (basis), $2.70; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50· tool steel, Black Diamond, 100 lbs., $9.50; Jesson. $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—The price is steady at the recent advance to $5.00 per cwt. for small lots, with a reduction of 25c. per cwt. on ton quantities.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are steady. We quote: Silver

Star, per gal., 21½c.; Sunlight, 22½c.; Eocene, 24½c.; Pennoline, 25½c.; Crystal Spray, 24½c.; Silver Light, 22½c.; Gasoline, 70-72 (engine), 25½c.; in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE Quotations are: While lead, pure, $6.75; bladder putty, in bbls., 2½c.; in kegs, 3¾c.; turpentine, pure, in barrels, $1.07; less than barrel lots, $1.12; linseed oil, raw, 64c.; boiled, 67c.

WINDOW GLASS — We quote: 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40. 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00; 26 to 40, $4.52; 41 to 50, $4.75; 51 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75; 91 to 95, $17.30.

Nova Scotia Trade News.

Halifax, N.S., May 29, 1906.

Ingot tin is soaring and the jobbers do not know when the ever increasing advance is going to stop. It is now quoted here at 50c., and it is expected that it will go still higher. Last Fall the same article was quoted here at 32c. and 33c. One cause of the advance is said to be due to the heavy increase in the price of pig tin. Zinc is quoted at 8c. for casks and 8 1-2c. for less. There is a drop of 5c. on turpentine. It is quoted at $1.00 for casks and $1.05

RANCH FENCING

We are putting on the market a Woven Wire Fence in 40 rod rolls. This is a special ranch fence and a winner—it competes with barb wire, weight of roll considered.

METAL SHINGLES ARE SURE SELLERS

Wood is too friendly with fire to be on the roofs of houses. Consequently

METAL SHINGLES

are in great demand. Besides resisting fire, they are rain-proof, snow-proof, lightning-proof.

A man in your town, say, is building a house What is to hinder you getting after a Metal Shingle order? Give the owner the insurance argument, the "fifty-years wear" argument. If he says to see the contractor, give that gentleman the "future" argument—That if he recommends wood shingles and trouble arises (as it is sure to) he will reduce his chances for getting contracts

ASK US TO SEND YOU PRICES

METAL SHINGLE & SIDING CO., Limited

PRESTON, ONTARIO

for less. Wire nails have also taken a drop, they being quoted at $2.15 f.o.b. Halifax. The object of this cut of the local dealers is to hold the Cape Breton trade. Upper Canadian firms at this season of the year secure very cheap freight rates, and the Halifax jobbers have to make the price very fine to compete with them. It is stated that an effort is now being made to straighten the matter out. Cut nails are selling at $2.40 base. There is a good demand now for haying tools, such as rakes, scythes, schaths, scythestones and grindstones.

The firm of H. H. Fuller & Co. have just received an order from Ireland for poll picks and handles. This is probably the first time that a hardware firm in this province has received an order from that part of the world. A prospector of Schull, Ireland, wants two dozen of the picks, which are of a special make and handled only by this firm. It is thought that the prospector must have at some time visited Halifax to become acquainted with the picks.

Trade on the whole is very good and collections are up to the average.

The mining outlook at Wine Harbor, N.S., is exceedingly bright. The old provincial gold mine has been taken over by new hands and is to be developed under the management of J. Owen Jones, a mining and civil engineer, with several years experience in Australia and other western countries. The possibilities are that the whole of the Wine Harbor district will come under the same management.

William Creelman, of Truro, N.S., who is part owner and manager of the Six Mile Brook Copper Co., is confident of the ultimate success of the mine, and says that some of the assays have been as high as 15 per cent. The company is waiting for the completion of the smelter at Picton to start operations.

The Dominion Iron & Steel Co. are developing a new limestone quarry at George's River. They also intend to operate on a large scale this season, their dolomite areas.

The Robb Engineering Co., of Amherst, are having an extremely busy season. Within two weeks they have sent eight carloads of machinery to Western Canada, three to provincial points, engine and dynamo for the City of Moncton, and a portable saw mill to George's River. They have also received an order for a 125 H.P. Robb-Armstrong Corliss engine from the Logan Tanning Co., of Pictou.

L. F. Le Moine, electrician, of New Glasgow, has just finished installing electric signs for ten of the largest firms in Truro. These signs are constructed as to be valuable for both day and night time, and are very effective.

Percy J. White, the gold prospector, has returned to Guysboro, and it is understood will start work in the vicinity of the Fifteen Mile Stream territory in quest of the precious metal.

A BUSINESS MAN IN POLITICS

The new leader of the Liberal Party in Manitoba.

In the Manitoba Legislature the farmer and the lawyer have been the classes most numerously represented and the classes whose influence has been most felt. Hon. R. P. Roblin, the present Premier, is a farmer; his erstwhile opponent, Hon. Thos. Greenway, for many years Premier of Manitoba, is a farmer; Hon. Hugh John Macdonald, who led the Conservative party from the cold shades of Opposition to the Government benches, defeating the Greenway Government, is a successful lawyer; and Hon. C. J. Mickle, who has led the Manitoba Opposition during the last two sessions, is a member of the legal profession. The business men have scant representation in the Legislature. Hon. J. T. Gordon was minister without portfolio in the Roblin Government for a short time, but he resigned because of the pressure of business. Hon. Robert Rogers might, perhaps, be classed as a business man, but

Edward Brown.
Leader of Liberal Party in Manitoba.

if so, he is the only man of his class in the present cabinet.

Business men, merchants, country storekeepers will be interested in the political career of Edward Brown, no matter what may be their own political opinion; and in Edward Brown they have a representative of their class of whom they have every reason to be proud.

It may be taken as axiomatic in these days when the Canadian West is at last coming into its own in the estimation of the general public, that the West offers exceptional opportunities for advancement, and to the progress of the newer Canada Mr. Brown may rightly ascribe a good part of his striking success in business; but it is not every man who succeeds as Mr. Brown has succeeded, and there are very few men who at 41 have become as wealthy as Mr. Brown and have attained to the highest gift in the bestowal of their provincial party. These results show the character and ability of the man.

Like so many others in Manitoba, Mr. Brown was born in the County of Bruce in Ontario. In truth, the two counties of Bruce and Huron were the first to people Manitoba extensively, and each has given the Manitoba Liberal party a leader. Hon. Thos. Greenway belongs to the County of Huron and Edward Brown to the County of Bruce.

In 1888 Edward Brown, in partnership with his brothers, was managing a general store in Paisley, Ont., but, fortunately for them, the Brown brothers caught the Western fever and moved west, finally locating in Portage la Prairie, where they bought the business of Geo. Craig & Co., the same firm who own a dry goods store in Winnipeg at the present time. The three Brown brothers made a strong business combination, and although unqualified success did not come to them immediately, they were sure to win out eventually. As the years went by each developed his own particular talents. Edward Brown became the financial head of the firm, James Brown devoted particular attention to the management of the retail store, and, as the interests of the firm were varied and by no means confined to the retail store business, Adam Brown took charge of the horse and live stock end of the firm's interests. But, while it was as the financier of the firm that Edward Brown made his mark and achieved his most conspicuous successes, he nevertheless kept in very close touch with the management of the retail business, and he recently assured the writer that he has always been a close reader of at least two of the MacLean trade newspapers—The Canadian Grocer and The Dry Goods Review.

From the first year of his arrival in Portage la Prairie, Edward Brown has been a conspicuous figure in the municipal life of his town, and his townsmen say that to write the municipal history of "Portage" would be to tell the story of Edward Brown's career there. For a number of years he has been mayor by acclamation, and in the municipal field he has gained the political experience which should stand him in good stead in his struggles in the wider provincial arena.

THE MAN BEHIND.

There's the man behind the gun,
And the man behind the loom;
There's the man behind the stove,
And the man behind the boom;
There's the man behind the bank,
And the man behind the till;
There's the man behind the club,
And the man behind the quill;
There's the man behind the horse,
And the man behind the cow;
There's the man behind the hoe,
And the man behind the plow;
There's the man behind the fist,
And the man behind the curse;
There's the man behind the pick,
And the man behind the hearse;
There's the man behind the jokes,
And the man behind the rhymes;
But I'd rather be behind them all,
Than the man behind the times.

—The Hustler.

SPORTING GOODS TRADE.

The sporting goods business has opened up with more than its wonted vigor this Spring, and in those things that the hardwaremen handle in this line there are not a few improvements.

The Marlin people have out a new, small game rifle of the magazine style, capable of holding sixteen 22 calibre bullets. This new model has a slide under where the barrel and stock are joined, that is used in ejecting and reloading, instead of the under lever that has formerly been used in these arms. While the slide is by no means a new thing, but has been used on the Winchester rifles for some time, the idea as adopted by the Marlin company has some new points of merit. The action of the rifle is very quick, and a boy armed with it could work great destruction among a flock of sparrows.

From the demand that baseball goods are having this Spring, it would seem that its popularity is increasing more than ever. There is scarcely anything that can be called new, with the exception perhaps of a body protecter for boys which is sold at a lower price than the usual size. In the equipment of boys' clubs the protecter ought to meet with more than ordinary sales. There is nothing so appeals to a boy as do baseball goods, and a window tastefully dressed with them in the Springtime is a sure trade winner.

It is early yet for football in the cities, but in the country this game is played the year round. The Thomlinson, which has enjoyed such popularity for many years, will still be largely used in 1906. Another ball out this year is called the Zug, and is sold by the Harold A. Wilson Co., Toronto. The Zug is said to be indestructible by reason of the specially manufactured leather from which it is made. Water is claimed to have no effect on it; not even boiling water. The explanation of this is that in the process of manufacturing, the gelatine in the hide becomes oxidized, and therefore makes the leather impervious to water. The McGregor football is still to the fore in popularity. This is the ball which is used in the international games between Scotland and England.

In sweaters and football shirts, the English style is becoming popular in Canada. These are made in two colors, not interwoven, but straight half and half. One sleeve may be white, the other green. The body of the shirt is the same, and even the collar shows a separate color on each side. A new football goal net made by Brodie is out this year, and ought to save a multitude of disputes in scoring.

For the fisherman there are also some nice things this year. The Dowagiac floating minnow is so gotten up that it is guaranteed to deceive even the elect among the finny tribes. These minnows float on the surface of the water, and at the points of the head and the tail are revolving wings of bright metal to attract attention. They are said to be sure decoys.

The Rainbow rod, of American make, handled by the Warren Sporting Goods Company, Toronto, is a new hollow steel rod made for both bass and trout, and will no doubt fill the bill for those who like a steel rod.

Allcock, Laight & Westwood, Toronto, are introducing a new line of bait casting rods in two and three joints, made by themselves in lancewood and greenheart; and in reels are showing the aluminum Ariel, which they claim is the fastest spinning reel made. Take-a-part is the name of another new reel selling well, it being made from German silver. In bait a novelty in the shape of a rubber mouse is particularly attractive to pike, pickerel, longe and bass.

Taken altogether, no season has ever opened up with better prospects in the sporting goods business than has this year. Mercantile houses have their ball and yachting clubs, and the spirit of outdoor sport seems to have taken hold as never before. All the lines mentioned here can be carried by the hardwaremen, and usually return a good profit, besides giving a bright up-to-date appearance to any store.

JEFFERSON'S TEN RULES.

Never put off until to-morrow what you can do to-day.

Never trouble another for what you can do yourself.

Never spend money before you have earned it.

Never buy what you don't want because it is cheap.

Pride costs more than hunger, thirst and cold.

We seldom repent of having eaten too little.

Nothing is troublesome that we do willingly.

How much pain the evils have cost us that have never happened!

Take things always by the smooth handle.

When angry, count ten before you speak; if very angry, count a hundred.

It is reported that Port Burwell is the possible location for the new smelter for the Hamilton Iron & Steel Company.

FOUNDRY AND METAL INDUSTRIES

The Canadian Westinghouse Co. have just completed the largest generator manufactured in Canada. It is for the British Columbia Electric Railway Co. of Vancouver.

E. Cowper Thwaite, of London, Eng., has purchased the Mallery mineral claims on Howe Sound, B.C., for $250,000.

A meeting of the directors of the Dominion Iron and Steel Co. has been called for June 6th, when, it is understood, reorganization plans will be discussed.

The Northern Iron Works, Winnipeg, have purchased 25 acres in the suburbs of that city upon which they will erect a new plant.

The Central Foundry Co. will commence at once to fit up buildings in Port Hope for their new plant. They will install machinery to the cost of $75,000, and employ 25 men the first year.

The Canadian McVicar Engine Co. will establish a plant in Galt to make gas and gasoline engines. A. W. Wright, president of the American Abel Co., is president of this company.

The Canadian Westinghouse Co. have secured a contract to supply the Montreal Street Railway Co. with equipment to cost $130,000. Fifty sets of air brakes are included in the order.

The Ontario Iron and Steel Co. have concluded the purchase of 60 acres of land at Welland for their new plant.

The Chapman Ball-Bearing Co. have purchased land on Sorauren ave., Toronto, for a new plant.

The Minister of the Interior has ordered an investigation of the iron ore resources of Canada.

The Saskatchewan Government will erect a $200,000 steel bridge at Battleford.

IRON IN MUSKOKA.

A valuable iron deposit is said to have been found in Muskoka by J. B. Brown, Crown Lands agent, John Anticknop and Lou Pelletier, who have secured mineral rights to 900 acres, and samples that have been smelted have produced the best of foundry iron. The deposit of ore, which is wholly on the surface and runs down to a depth of about five feet, is found in Oakley township. It is easily obtainable so far as mining is concerned, but at present there are no transportation facilities for getting it out, but if the Bracebridge & Trading Lake Railway goes ahead this difficulty will be overcome. A company will probably be formed to take the matter up.

The Problem of Paint Selling Is No Problem At All—Handling the Best Paint, a Paint That Is Known and Recognized Everywhere as the Highest Standard of Quality, and Pushing It Enthusiastically, is the Easy Solution.

Sherwin-Williams Paint, Prepared, is the best paint the dealer can handle. With his co-operation it easily solves the paint selling problem. Here's a few of the many reasons why:

S. W. P. is the best paint that can be made. The materials used in it are carefully selected and tested; the mills for mixing and grinding it are the most efficient devised; the men employed in its manufacture have spent a lifetime in good paint making.

S. W. P. is known and recognized universally as the standard of paint excellence. It has a record of forty years of honest paint making behind it. Its name stands for the best in paint value.

S. W. P. moves rapidly from the dealer's shelves. The strong advertising and selling helps *The Sherwin-Williams Co.* gives their agents creates a strong demand. The agent has every advantage and is offered every aid to go after the business, get it, and keep it.

S. W. P. spreads farther, wears longer, and looks better than any other paint, and costs no more than good paint should cost. It makes money for both dealer and customer and gives lasting satisfaction.

If you have had trouble with the paint selling problem, we have a good proposition that will solve it for you. Write us today.

THE ANTIQUITY OF IRON.

Nothing is known of the origin of the smelting and forging of iron. The oldest piece of iron known to be in existence was discovered wedged between two stones in the pyramid of Cheops, which was built about 3,000 B.C. A thousand years previous to the construction of this pyramid, an Egyptian king, the oldest monarch known to history, changed the course of the Nile by erecting dams of stone. The erection of these great dams without the use of iron and steel tools, and great numbers of workmen skilled in their use, would have been impossible, so that the working of iron antedates written history many centuries.

The theory that the earliest iron implements were made of metal obtained from meteors, is hardly tenable, as only about 650 meteors have been found on the earth within the knowledge of man. It is supposed that the prehistoric forgemen smelted their iron by melting the ore in a wood or charcoal fire, and then hammering the spongy product obtained into the desired shape.

The first great advance in the manufacture of iron was the employment of an artificial air blast to maintain and regulate the fire. Sculpture on the walls of a tomb erected at Thebes 1,500 B.C., shows that the Egyptians utilized an artificial blast. The picture shows a conical vessel suspended over a fire, which was fanned by a bellows consisting of two leather bags with a clay pipe extending down to the fire for conveying the air. Standing upon the bags, the operator pressed each alternately, closing with his heel, the hole in the top of the bag for admitting the air. When the air was exhausted, the operator removed his foot and opened the air-hole by pulling a string.

PAINT, OIL AND BRUSH TRADES

READY MIXED PAINT BEST.

The conscientious architect owes it to himself no less than to his patrons that he should understand the subject of paint at least superficially, says the National Builder. To go to the bottom of the subject is scarcely possible, since technical experts as yet agree on very few points connected with it. They are practically agreed, however, in condemning precisely the practice still adhered to by the majority of architects. What this practice is every one who is familiar with current specifications understands; two or three coats of lead and oil tinted to the desired color, the actual preparation of the paint being left largely to the discretion of the contracting painter.

The long series of exhaustive experiments conducted by the Pennsylvania Railroad, under the supervision of Dr. Dudley, have proved as conclusively as any fact can be proved, that pure pigments of the basic type do not make satisfactory paint, while Mr. Job, chief chemist of the Reading Railway, has also clearly demonstrated the fact that fine grinding of pigments and intimate incorporation of the various ingredients of a paint determine to a large degree its durability.

These two controlling factors—fine grinding and intimate union—are precisely the two conditions necessarily wanting in a hand-mixed paint. The only form of paint in which they are pre-eminent is a properly made ready-mixed paint.

On the face of the matter no one would deny that this is the only logical form of paint. Given the same formula, there is no intelligent user of paint that would not prefer to leave the entire process of selecting, grinding and mixing of components, done under proper supervision, to a well equipped paint factory than to run the risk of accidental or intentional adulteration and necessarily imperfect combination in the paint shop. It resolves itself, then, into a question of the materials used in either case.

But, it has been pointed out, materials used in ordinary practice for contract work are not by any means the best available. While lead is a very useful ingredient in certain types of paint, it is not the only desirable ingredient. Both technology and paint manufacturing progress have left this antiquated practice far behind, except in architectural specifications.

Few large railway companies, agricultural implement makers or structural steel builders of the present day in any case tolerate a straight mixture of lead and oil in their work. Such specifications, where white or a tint is required, uniformly prescribe the addition of zinc oxide or other white pigment and some inert material to the white base.

The manufacturers of ready-mixed paints have followed far more closely than either the average painter or the average architect the progress of technical development in these lines, and while it is true that by no means all ready-mixed paints reach or are intended to reach the desired standard, yet, as a matter of fact, the average prepared paint put out by a reputable manufacturer, if fairly handled by the painter, will afford more permanent decoration and protection at a lower cost than the routine shop-mixed lead and oil.

NEW METAL POLISH.

"Autopolish" is the name of a new polish which the Francis-Frost Co., Toronto, have lately placed on the market for cleaning and polishing all metals, being especially recommended for brass, copper, aluminum, zinc, tin, polished steel, and steel knives, as it will not scratch the finest surface. The brasswork of railway and steamboat dining cars is said to offer the most critical test for a polish, and Mr. Francis states that in recent demonstrations the merits of "autopolish" have been proven, with the result that the latter is now a fixture with the railway and steamboat companies.

PAINTING AN OLD HOUSE.

In painting an old house much depends on the condition of the old paint on its walls. If pure white lead was used it can be brushed off; but if the old paint still clings here and there in scales it will have to be scraped off or have wire brushes used on it, says the Metal Worker. Then give it a coat of oil, using one gallon of turpentine and a pint of good drier to four gallons of oil. After this any remaining paint may be scraped off. Let the oil dry, then put on two coats of paint in the regular way.

A freshly painted room should not be closed up tight, but opened to the air and light. Paint with driers in it will not dry if corked up tight in a bottle.

"Say! that Elastilite of yours is great varnish, painters in our town will have nothing else."

The above is what a prominent hardware merchant told us in our office last week when placing a rush order for a further supply. If you haven't got the painters' trade in your town, try them on Elastilite. Send us the names of your painters and we will submit through you free samples for test.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 1, 1906.

Turpentine has now commenced to move quite freely, and lower prices are recorded. Stocks now in the hands of local dealers, however, came in for the most part at a higher rate, and holders are reluctant to meet the drop too quickly. Nevertheless, the inevitable must come, and prices will be shaded for delivery about June 10th.

Linseed oil is easier, owing to ample supplies. We are this week quoting prices somewhat lower, for boiled oil.

All lead products and paints in which lead largely predominates are exceedingly firm, and the tendency is to higher prices. General trade continues lively and everything points to a very busy June.

TURPENTINE—Receipts are in larger volume, and prices are consequently somewhat easier this week. Dealers are in no hurry to lower prices unduly owing to good stocks still in hand, which were purchased at higher prices. We are now quoting as follows: Single barrels, 90c. per gal.; 2 barrels or over, 89c. per gallon; for smaller quantities than barrels, 5c. extra per gallon is charged. Standard gallon is 8.40 lbs., f.o.b., point of shipment, net 30 days.

LINSEED OIL—Prices on boiled oil have declined slightly. We give the following prices: Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.

GROUND WHITE LEAD—Stiffer conditions prevail. Prices are steadily held at the following figures: Best brand Government standards, $6 to $6.25; No. 1 $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC—We give prices: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil) — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD—Prices are firmly held as follows: Genuine red lead in casks, $5.75; in 100-lb. kegs, $6; in less quantities at the rate of $6.75 per 100 lbs.; No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

GUM SHELLAC — We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The Old Country market continues to advance, but we still quote as follows: Firsts in cases, 8 1-2c; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—We quote following prices, which are subject to withdrawal or change: Barrels, 600 lbs., 19¼c. per lb.; kegs, 250 lbs., 19½c. per lb.; 50-lb. drums, 20c. per lb.; 25-lb. drums, 20½c. per lb.; 1-lb. pkts., 100 lbs. in case, 21c. per lb.; 1-lb. pkts., 50 lbs. in case, 21½c. per lb.; ½-lb. pkts., 100 lbs. in case, 23c. per lb.; 1-lb. tins, 100 lbs. in case, 22c. per lb. Terms 2 per cent. 30 days.

GASOLINE—Price has risen of late, and ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at the advanced price of 24c. in bbls.

WINDOW GLASS—Forward buying has now practically ceased and it is for the most part merely a question of getting deliveries. This problem is accentuated by the strike of Montreal carters. Prices are somewhat uneasy, and are subject to an early revision. We quote: First break, 50 feet, $2.10; second break, $2.20; first break, 100 feet, $4; second break, $4.20; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24; and twelfth do., $28.50.

The Lake Superior Corporation have orders ahead for steel rails to run them ten months.

EXTRACTS FROM

"The Triumphant History of ARK BRAND PAINT"

"Pressed" praise is valueless. "Merit" praise is valuable. But there's mighty little of the latter going around. Here are extracts from two letters recently sent us by persons we had never seen nor heard of before:

No. 1—"Six years ago I painted three dwellings with 'Ark Brand' Paint; and when I think of the results of that job I am proud of your paint and my work."

No. 2—"The folks here are in love with my new home—say that if it's a sample of what 'Ark Brand' will do, that's certainly the paint to get."

After you have sold "other" paints a while you may get "tripped up" on quantity or quality or get surprises in price matters.

Not so with "Ark Brand" Paint. The **quality** is a foundation stone that never moves. The **quantity basis** is a tower of truth held together by honesty. The prices are the "light of fairness," guiding you to trade.

CANADA'S BEST—ARK BRAND—FOR YOU.

THE FACT OF THE UNIVERSALITY OF THE PRODUCTS OF THE CANADA PAINT COMPANY IS UNQUESTIONED, AND ALL THEIR BRANCHES ARE **BUSILY BUBBLING** WITH **BUOYANT BUSINESS.**

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 1, 1906.

Turpentine is again weaker and has shown a marked lowering in price, as mentioned in our last report. The Florida crop has shown up in better proportions than was expected and it is likely that the market from this on will be a little easier.

Linseed oil is also weaker and we quote a cent lower than our last quotations. The demand keeps steady and although there might still be some fluctuation the indications are that prices will not vary much either way, from present quotations.

Paris green shows no tendency to come down any.

Ready mixed and dry colors are being sold in increasing quantities, some popular lines being sold out of stock.

TURPENTINE—Single barrels, 92c., 2 to four barrels 91c., f.o.b. point of shipment, net 30 days. Less than barrels, $1.00 per gallon.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11½c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11½c; finest American white, 19c. per lb.; No. 1 American white, 15c. per lb.

PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2 to $2.10; bulk, in 800-lb. casks, $1.50; pure, $1.95 to $2; 100-lb. kegs, 25c. extra.

LIQUID PAINTS — Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL—English, in cases, 8½c to 9c. per lb., and 10c. for single tins.

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM—We quote: Canadian, $1.38; Pennsylvania, $1.64; Ohio, 98c.

WHITE LEAD — Ex Toronto, pure white, $6.30; No. 1, $5.92½c.; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; ½c. per lb. extra will be charged for 12½-lb. packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 560 lbs., $5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50; ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7½c.; No. 1, in casks, 6c.; in 100 lbs., 6½c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12½ lbs., 8½c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1 per 100 lbs.

WHITING—60c. to $1 per 100 lbs. Gilders' whiting, 75c.

PARIS GREEN—Canadian Government standard, 600-lb. barrels, 19 1-4c.; 250-lb. barrels, 19 1-2c.; 50-lb. drums, 20c.; 25-lb. drums, 20 1-2c.; 1-lb. packages, 21c.; 1-2 lb. packages, 23c. Berger's English from 1 to 2 cents higher.

SHELLAC VARNISH — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange) $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 58c.; 5 to 9 barrels, 56c.; boiled, 1 to 4 barrels, 61c.; 5 to 9 barrels, 60c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

PAINT BRUSHES.

In selecting a genuine bristle brush, we are told to pull out a few of the centre hairs and hold them in a flame, says the Paint, Oil and Drug Review, and if genuine they will curl and act like burning hair, if otherwise, they will burn into ashes. This will not always work, for the makers of bogus bristles have it down so fine that the false bristles will act in the same manner. Not long ago when a brush was tested in this way, the bristles acted, when a blaze was applied to them, exactly like genuine bristles. The brush was composed largely of bogus material, and was not even represented as a genuine bristle brush. The best way is to drop a few hairs on a hot stove lid and notice the odor. There is nothing similar to the odor of burning hair or bristles. Feathers come the nearest, but there is still quite a difference. It is not bogus bristles that the painter need fear so much as a poor quality of genuine bristles.

Bristles and hair are like all other organic products. There are three natural grades, good, bad and medium. It is evident that the bristles and hair taken from animals which have died of disease are not so good as that cut from the living animal, or taken from the hides of animals which have been killed. Again, the age and condition of the animal from which the hair has been taken will account for the texture of the hair. The season of the year should also make a difference. To say nothing of the few bristles that have lost their elasticity, which may be found in what is called a first-class quality of bristles, and which would take up too much time to pick out one by one, there is no doubt that there is much bad hair mixed in purposely, in order to meet an ever-prevailing demand for cheap brushes, to supply that part of the brush trade outside of the painting business, who demand a genuine bristle brush, but it must be cheap.

The appearance of these brushes sells them. They are finished quite as well as a brush costing double the amount, but when it comes to working with them the difference between one of them and a good bristle brush is soon manifest. The bristles having no elasticity, bunch up, and the whole brush has the appearance, when filled with paint, of being made of so many rat tails. They will spread paint after a fashion, of course, and the people who use them, having never used any others, perhaps, think they are all right, consequently they have a large sale.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

A mica factory will be erected at Hull, Que.

The Dominion Bridge Co. will erect a plant at Winnipeg.

The Canada Furniture Co., Walkerton, will enlarge their premises.

Ottawa will spend $100,000 in extending its waterworks system.

W. H. Gardiner is equipping a sash and door factory at Edmonton.

Elora ratepayers carried a by-law to lend $3,500 to a furniture concern.

The Canada Leather Co., at Verdun, Que., was damaged by fire to the extent of $3,000.

J. P. Hall, of Willow City, N.D., will establish a soap factory at Saskatoon, Sask.

Chatham ratepayers will vote on the loaning of $75,000 to the Keystone Sugar Co.

The Ham & Nott Manufacturing Co., Brantford, will make large extensions to their plant.

The Glengarry Mills Company, of Alexandria, will build an elevator and chopping mill.

A company known as the Jackson Visible Typewriter Co. will establish a plant at Hamilton.

The Fowlers' Canadian Co., Hamilton, will increase their factory premises by a $10,000 addition.

The Quatsino Power & Pulp Co. will erect a $200,000 pulp mill on the north end of Vancouver Island.

The Canada Flax & Fibre Co., of Montreal, will build a flax mill and elevator at Milestone, Sask.

The Canada Carriage Co. will erect a three-storey addition to their works at Brockville, to cost $20,000.

The Town of Fort William asks for tenders for developing Loch Lomond water supply, including dams, reservoir, etc.

The London Cement Brick Machine Manufacturing Co. will build a large brick factory to accommodate their works.

The Bank of Ottawa, Parry Sound, offers for sale 67 square miles of timber limit on the Georgian Bay with a new mill upon it.

The Grand River & Western Power Co., of Brantford, are seeking incorporation with a view to generate power from the Grand River.

The Bachus-Brooks Co., Minneapolis, have purchased the limits of the Keewatin Lumber Co. in Northern Ontario and will erect large mills.

The Imperial Oil Co. will erect a distributing warehouse at Boissevain, Man.

E. C. Perry, of Minneapolis, will establish a biscuit factory at Calgary.

The Ontario Government has accepted J. R. Booth's tender for a pulpwood area near Montreal River. He pays a bonus of $300,000, and 40 cents a cord for spruce cut, and 20 cents a cord for all other woods.

Excavation work has begun on the site for the new Guarantee Company of North America building on St. James street, Montreal. C. E. Deakin is the general contractor, and the fireproofing will be done by the Roebling Construction Co. of Buffalo.

The new steamer Tricolor, which was constructed on the Tyne for the Dominion Iron & Steel Co., has arrived in Sydney harbor and will be used in the Wabana ore trade. The Tricolor enjoys the distinction of being the largest single deck steamer afloat.

Companies Incorporated.

The Ontario Iron & Steel Company has been incorporated under Ontario charter with a share capital of $500,000 for the purpose of manufacturing, smelting and dealing in iron, steel and other metals. The provisional directors are David Muhlfelder, Joseph L. Steefel and W. M. German, with head office at Toronto.

BUILDING NOTES.

Carnduff, Alta., will build a six room school.

The G.T.R. will build a new station at Paris.

The Oddfellows of Ottawa will build a new hall.

Berlin will expend $13,000 on sewer extensions.

Ottawa will have a separate school to cost $60,000.

A flour mill will be erected at Swift Current, Alta.

Cardstone, Alberta, will have a $10,000 court house.

Brampton, Ont., will have a $10,000 Carnegie library.

Glenvilla, Man., Presbyterians will erect a new church.

McDougall & Secord will erect a brick block at Edmonton.

J. F. Scholtz, of Stratford, will erect a brick whip factory.

Wm. Farrell will build an apartment house in Vancouver.

J. I. Case & Co. are erecting a $25,000 warehouse in Calgary.

O. C. Ross, of Minneapolis, will build a theatre in Edmonton.

Richmond, Que., will expend $25,000 on a waterworks plant.

W. O. Benne, of Stratford, will erect a $10,000 office building.

Tenders are asked for a new house of refuge at Cornwall, Ont.

Charles Ogilvy will build a store in Ottawa to cost $40,000.

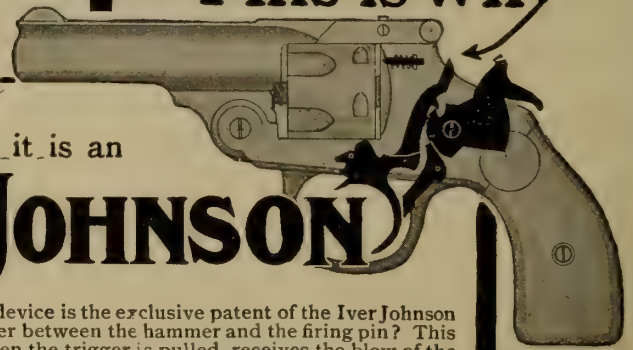
Young Methodist congregation of Winnipeg will build a new church to cost $27,542.

W. H. Rowe, of Pittsburg, Pa., will erect a residence at Cobourg, Ont., to cost $150,000.

Plans have been prepared for the Edmonton legislative buildings. They will cost $400,000.

The Robinson & Greenwood block at Temiskaming, Ont., will have three stores added to it.



The Harris Abattoir Co., of Toronto, are erecting warerooms, refrigerators, etc., in Sydney, C.B.

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

The Canadian White Company, of Montreal, have the contract for Walker's new theatre, Winnipeg.

A RAPID CHURN.

A churn that makes butter in sixty seconds is on exhibit at the Agricultural Hall in London. The machine is so handy that it might be placed on the tea table as an accessory to the cups and teapot, and yet not look out of place. Given the requisite quantity of cream, with a temperature of 60 degrees, butter can be made at any time desired. The new device does not even need a special vessel for holding the cream. The latter is placed in the vessel so that the dasher is in the centre, and about one and a half inches below the surface. The handle is turned slowly for a few seconds, and then at a good speed, and within one minute butter is formed. If fresh cold water be then poured in, and the handle turned slowly two or three times, the butter is ready for washing and making up.

A VALUABLE BOY.

The employer was bending over a table looking at the dictionary. The new office boy slipped up quietly and poked a note into his hand. The surprised employer opened it and read:

"Honored Sir—Yer pants is ripped."

The teacher had been telling the class about the rhinoceros family.

"Now, name some things," said she, "that it is very dangerous to get near to and that have horns."

"Motor cars!" replied little Willie Jones, promptly.

BUSINESS CHANCES

HARDWARE—$5,400; large town. Box 532, HARDWARE AND METAL, Toronto. (21)

HAVE you seen the patent air tight down draft Base Burner Coal and Wood Stove? It makes more heat with less fuel than any other stove, and does not cost any more to buy than direct draft stoves. It sells on sight; secure agency now. W. J. Mundy, Petrolia, Ont. (22)

POSITION WANTED.

AS traveler, by experienced young man, now employed. Active and energetic, with good appearance, to sell hardware and engineers' supplies to mill trade. Good connection. References. Box 529, HARDWARE AND METAL, Toronto. (20)

EXPERIENCED traveler seeks position; highest references. Address Box 531, HARDWARE AND METAL, Toronto. (21)

METAL SHELF BOXES

DO you know that your customers are judging your stock by the general appearance of your store? It is absolutely impossible to keep your goods neatly arranged without using some kind of shelf boxes. Our system enables you to keep all goods of one kind together; you always know when your stock is running low, and you never have to tell a customer you are just out of what they want and then find the next day you had plenty in stock. The Bennett Metal Shelf Box has been on the market for years. Some of the best hardware stores in Canada have thrown away their old wooden boxes and put in our up-to-date metal box. Cameron & Campbell, Toronto.

SITUATIONS VACANT

PARTNER WANTED in established plumbing and tinware business in richest district in Ontario, to look after stock and books; or would sell; stock, about $3,000. Box 536, HARDWARE AND METAL, Toronto. [23]

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (a $1,000) are allowed as one word.

Cash remittances to cover cost **must** accompany all advertisements. **In no case** can this rule be overlooked. Advertisements received without remittance cannot be acknowledged.

Where replies come to our care to be forwarded, five cents must be added to cost to cover postage, etc.

FOR SALE.

HARDWARE, stove and tinware business for sale, including tin shop, tools, patterns, shop fixtures, wagon, ladders, etc.; stock will run about $6,000; situated in good live village, with excellent surrounding farming country; splendid place for two men, hardware man and tinsmith; good reasons for selling. Apply Box 524, HARDWARE AND METAL, Toronto. (21)

THE largest and best paying hardware business in Western Ontario; stock will inventory $25,000; reasons for selling, owners have other interests. Box 522, HARDWARE AND METAL, Toronto. [26]

HARDWARE, stove and tinware business for sale with set of tinsmiths' tools and locksmiths' outfit. Located between Sherbourne and Parliament—a splendid district. Stock runs about $2,500. Owner must devote his attention to other interests. Will sell in whole or in part. An excellent opportunity to pushing man with small capital. Apply R. Fair, 302 Queen street east, Toronto. [23]

QUOTATIONS WANTED

SPINNERS—Quote prices on zinc and copper 1 to 12" spun half balls, in quantities, to Box 530, HARDWARE AND METAL, Toronto. (21)

MECHANICS WANTED.

WANTED — Two tinsmiths at once. Apply, stating experience and wages required, to The George Taylor Hardware Co., New Liskeard, Ont. (21)

SITUATIONS WANTED

BUILDERS' HARDWARE — Married man, now business manager of United States corporation manufacturing locks and builders' hardware, desires to change position for good reason; thoroughly familiar with all details of lock business and systematic office management; record speaks for itself; would accept executive position with manufacturer or large jobber. Address, "Locks," care HARDWARE AND METAL, Toronto. [22]

WANTED—A position as hardware clerk by young man; 4 years' experience; A1 reference. Box 534, HARDWARE AND METAL, Toronto. [24]

ADVERTISER, age 33, requires situation as leading assistant or manager to firm of builders' ironmongers; thorough knowledge builders', plumbers' and electricians' requirements. Twenty years' successful experience with good English firms. Excellent references for character, ability and energy. Box 5, HARDWARE AND METAL, 88 Fleet street, London, England. [22]

WANTED—Position by first-class hardwareman; over 10 years' experience in first-class general and builders' hardware; experienced in plan reading in large American city; best references. Box 535, HARDWARE AND METAL, Toronto.

AS purchasing agent, by experienced young man, age 30, with large manufacturing concern. Active, energetic; now employed. Good office man. References. Box 526, HARDWARE AND METAL, Toronto. (20)

THOROUGHLY energetic and experienced hardware clerk and bookkeeper, reliable, trustworthy. Competent as branch manager, or any position of trust. "Metals," 29½ Ann street, Toronto. (23)

A COMPETENT builders' hardware salesman, open for a position 1st June; twenty years experience in Canada and the United States. Box 533, HARDWARE AND METAL, Toronto. [23]

PLUMBING AND STEAMFITTING

THE CIRCULATION OF HOT WATER.*

The first cause of the circulation of water in a hot-water heating system, by the force of gravity, is that the water becomes dense as it cools off, and it therefore outweighs the warmer and lighter water and pushes it to the top of the apparatus. Hot water will move only when there is a heavier and cooler body of water to displace it and force it upwards by means of its superior weight.

The force which propels the water in the risers and radiators is proportional

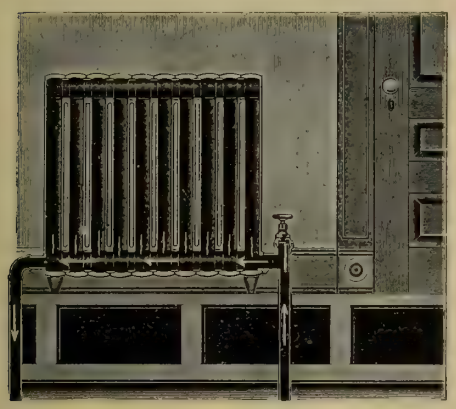

Fig. 1

to the difference in the mean temperature of the ascending and descending parts of the apparatus, and it is also proportional to the vertical height of the circuit. For example—in a circuit or riser 50 feet high the motive force would be twice as large as one only 25 feet high.

The force of the circulation through radiators with a given fall of temperature depends mostly upon the height of the return pipe and is independent of the height of that portion of the riser pipe which is about the radiator. Take, for example, a radiator on the fourth height, as indicated on the accompanying diagram. The circulation through the radiator on the fourth floor will be about three times as great as through the radiator on the first floor, notwithstanding the fact that the supply columns of both radiators are of equal height, because the return, (F), is about three times as high as the return, (E), of the radiator on the first floor. The temperature of the pipes (C) and (D) are nearly the same, consequently the water in (D) simply balances an equal height of pipe (C), and fails to supply any force for circulation. The force for circulation in this circuit therefore depends upon the preponderance of the weight of water in the return pipe, (E), over the weight of that in the pipe (C) below the level of the radiator, (B).

Fig. 1 is a fair illustration of a radiator with the usual style connections. The force of the circulation through the radiator depends upon the height of the return column. The return pipe having a strong pull on the radiator, the most direct for the current, is along the lines indicated by the arrows, and the water up in the radiator has a circulation to it, which depends not on the force of the main current, but on the tendency of the water cooled in the radiator to fall to the bottom and to be replaced by the water flowing upward in the coils nearest the entering feed.

Fig. 2 shows an improved connection to increase and improve the circulation in a hot water heating system, which has been successfully used by the writer

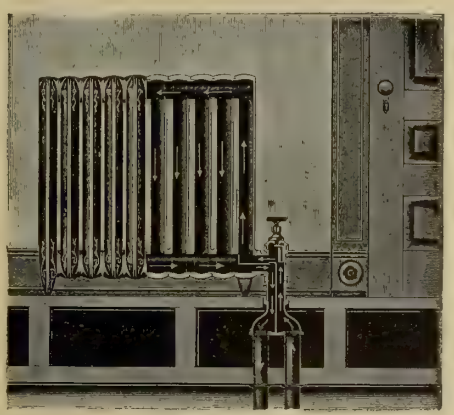

Fig. 2.

on a great many hot water heating systems. The direction in which the arrows point show the actual current within the radiator. The hot water must pass directly to the top, dropping to the bottom, and, as it cools off returning to the return pipe. The circulation is positive and by actual tests the entering water six degrees hotter than by circulation in the old way, and, furthermore, the entire surface of the radiator is heated. I have compiled figures of tests of these two styles of connections for radiators. A thermometer was placed on the feed and return section of each radiator. The connections on the usual style of radiator shown in columns 4 and 5 were 1 1-2 inch inside diameter on the feed, the improved connection shown in columns 2 and 3 were 1 1-2 inch connection with a partition in it with 1 1-2 inch feed and return pipe.

Column 1 is the time in which the test was made. Column 2 is the top return section of the radiator with the improved connection, and column 3 is the thermometer on the feed section of the radiator with the improved connection. Column 4 is the thermometer on the return section of a radiator with the old style connection. Column 5 is the thermometer on the feed section of an old

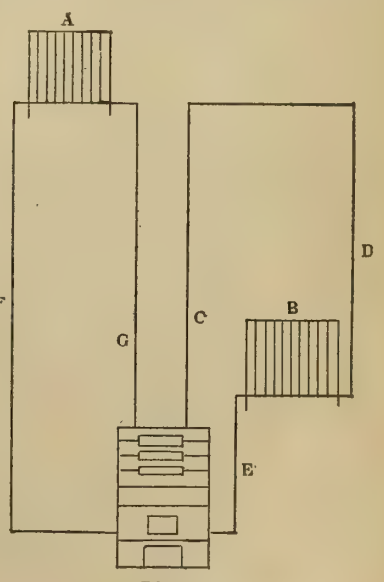

Diagram.

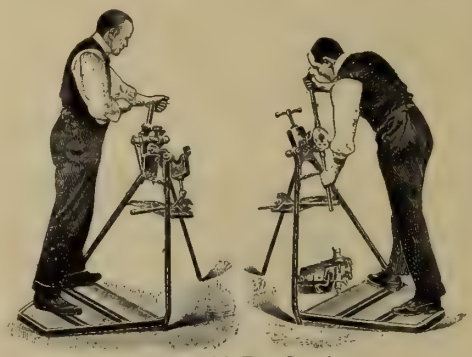
style radiator connection. The radiator connected to columns 4 and 5 old style connection, is a 13 loop 38 inch high Corinth radiator, containing 71 1-2 square feet radiating surface. Radiator columns 2 and 3, or the new style con-

* A paper read by John S. Brennan at the eleventh annual meeting of the American Society of Heating and Ventilation Engineers

nection, is a 24 loop 14 inch Unique radiator containing 96 square feet of radiator surface. It will be noticed that the thermometer on column 3 or feed pipe of improved connection is higher than the one on column 4 or feed pipe old style connection, it being six degrees higher and remaining somewhat higher until the thermometer registers 212 degrees. The principal object to be sought in designing a system of hot water piping is to adjust and equalize the resistance in each circuit and branch so that the hot water will flow with equal readiness to each radiator. This is accomplished by making the diameter of each pipe just sufficient to pass the desired amount of water under the head or drawing force which is available in that particular part of the system.



Heretofore a great many people objected to hot water as a means of heating by reason of the radiators having a connection at each end, and when any cleaning or painting was done behind the radiator it was necessary to drain the water from the radiator and disconnect it from the flow and return pipe. This necessitated shutting down the apparatus until the radiators were connected again.

The trouble and annoyance incident to setting and connecting a radiator with two pipes in or above the floor in the usual way are avoided by this improved connection which requires but a single opening to be cut in the floor and a single coupling to be made above the floor. This improved connection by its peculiar construction allows a radiator to be swung away from the wall without interrupting the circulation of the water. This is very useful when using the apparatus when the building is being erected. The heating apparatus can be installed complete and the radiators swung out, and when the building is completed they can easily be swung back in place again.

VENTILATION IN DWELLINGS.

It is the frequent act of the sage in the heating business to remind his neighbors that ventilation costs money. It does, of course, but it must be had, says the Metal Worker. In residential work we do not wrangle for it, unless we are considering the erection of one of those monumental palaces to stand as evidence of our success in bullion getting. We realize, even if our clients do not, that an air change occurs within the average class of American dwelling that really gives some ventilation. These buildings are sieve-like in their structure, as is borne out by the cases where furnace heating is in vogue. Certainly the hot air admitted into the rooms must displace that already present, and usually the escape has to be effected through unseen and unprovided places. It has always seemed strange that the establishment of a system of heating depending, as does a furnace or an indirect heating job, on a continual supply of warm or hot air should not have comprehended an arrangement of vent passages or exhaust flues for the outflow of the spent air. It is barely possible that early provisions in this line were characterized by exhaust air passages, which through faulty proportions and locations probably allowed air currents to occur in the reverse direction to those intended, with accompanying cold drafts. Certain it is that there are indirect systems of heating in use which know nothing of exhaust flues. This is even true of houses protected with double windows, although structures possessing these additions usually have one or more open fire places.

The point is that the porosity of the walls of the average building to air is greater than generally understood, and this means that in heating work, air as well as the building, its furnishings and its people, has to be warmed. And this, too, whether the heating is direct or indirect, for obviously if the outflow of air is essential to the working of the indirect systems the same holes in the sieve can be found by wind driven atmospheres in the direct systems. In the first case there is a heat loss represented in the air escaping at room temperature; in the second, there is a heat loss represented in the inleakage of air that must be warmed to inside temperature. In leakage of outside air is, of course, also an accompaniment of the indirect heating system. How much heat and

New English Tool Stand.

therefore coal is necessarily burned without benefit in heating is not readily calculable, but the loss is not easily avoidable, so about the only comfort the coal conserver can take is that in heating he gets some ventilation for the cost of his coal anyway. Heating systems should be designed with more care with regard to exposure than is frequently the case.

A PORTABLE WORK BENCH.

The "Pioneer" work bench, made by the Union Standard Machine Company, London, Eng., consists of a pipe-vise and a parallel bench-vise combined, and fitted on a tripod stand, as shown in the accompanying illustrations.

To prevent the vise and stand moving about, a hinged foot-board is attached, upon which the workman stands, thus steadying the appliance by the weight of his body. The foot-board and legs of the stand are made to fold up. By this means the appliance occupies very little room when not required for use, and is also rendered portable, so that a man can carry it to any job which may not be far from the shop.

The work bench is made in two forms. One for threading pipes up to 2 in., and which weighs 50 lbs.; the other bench having a parallel vise with 3 1-2 in. jaws, in addition to the pipe-vise, and weighing 88 lbs.

EVOLUTION OF STEAM WARMING.

By R. T. Crane, in the Valve World.

The first attempt made in warming dwellings by steam was, of course, crude and possessed but little skill or ingenuity in its development, but following it came a very different apparatus, one possessing a large amount of ingenuity, and really a great step in the advance of steam warming, namely, the Gold low pressure direct steam heating apparatus.

This apparatus not only possessed all the necessary devices to make it automatic, but it was the first introduction of a radiator, and the first introduction of single pipe connections to radiators. The boiler was an upright wrought iron shell boiler with a cast iron internal fire box with cones to increase the heating surface, and outlets for the products of combustion in the sides, the product being passed around the outside of the boiler. As far as we have any knowledge, this is the first attempt to make the boiler automatic. Mr. Gold introduced the automatic fire regulator and the water regulator, and as the radiators were made of sheet iron they would stand but little pressure, consequently he had to apply special devices to his boiler to avoid pressure that would be likely to burst his radiators, so he applied a diaphram to operate the safety valve, and also had an open glass pressure gauge connected to the boiler just below the water line, and it would therefore show the pressure of the steam by a water column, and in case everything else failed to keep the pressure down, this acted as an automatic blow-off, so the apparatus was absolutely complete in all its operations and exceedingly simple when we consider what was to be accomplished.

As mentioned above, the radiator was the first attempt in this line of mechanism, and was made of sheet iron with rivets passing through at frequent intervals to strengthen it and a peculiar arrangement of the valve for connecting. This apparatus met with a great deal of favor at the time, having the particular merit of warming the building, because the radiators were in the room that was required to be warmed, and was reasonably economical on account of its being direct heating instead of indirect. But the great difficulty with it was that the radiators were subject to corrosion and leaking, and finally he adopted copper radiators; still the life was not long enough to give satisfaction. The radiators of course stained the walls, as they always do, and as radiators are a decided objection in fine houses, it was not long before it became evident that something different would have to be evolved before entire satisfaction was obtained. Still, to Mr. Gold should be placed the credit of making great advance in the art of steam heating.

The next article on this subject will take up the evolution of indirect steam warming.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 1, 1906.

A lively business is still the rule among the Montreal supply houses. Orders for all kinds of plumbing goods are continually being sent in by travelers, or placed personally by plumbers from the nearby towns, who frequently visit the city at this time of the year.

Firm conditions in the iron pipe market are yet noted, and jobbers state that prices are very likely to go higher, and that, too, before many more weeks have passed. For the present, all sizes are very strongly held at the same prices as have been quoted for some weeks past.

Owing to another decline in tin, solder has eased off a little, and still lower figures are given in our quotations this week.

Lead pipe prices are rather steadier than at last reports, owing to an advance in pig lead. All other lines are firm at prices quoted below.

RANGE BOILERS — Demand continues brisk and following prices are steady: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—Owing to higher prices on pig iron, the pipe situation is stronger. Discount remains as follows: 20 per cent. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—The market continues to show strength. We quote as follows: Discounts on all sizes of nipples up to 6-inch, 67 1-2 to 70 per cent.

IRON PIPE — Conditions are unchanged with a feeling still prevalent that advances in quotations cannot much longer be delayed. We quote: Standard pipe in lots of 100 ft., regular lengths, ¼ inch, $5.50; ⅜ inch, $5.50; ½ inch, $8.50; ¾ inch, $11.50; 1 inch, $16.50; 1¼ inches, $22.50; 1½ inches, $27; 2 inches, $36.50; discounts on black pipe, ¼ inch, 62 per cent.; ⅜ inch, 62 per cent.; ½ inch, 71½ per cent.; ¾ inch and upwards, 73½ per cent. Discounts on galvanized pipe: ¼ inch, 47 per cent.; ⅜ inch, 47 per cent.; ½ inch, 61½ per cent.; ¾ inch and upwards, 63½ per cent. Extra heavy pipe of 100 feet lots are quoted as follows: ½ inch, $12; ¾ inch, $15; 1 inch, $22; 1¼ inches, $30; 1½ inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—Sales are large and many inquiries are coming constantly to hand. We quote following discounts: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent off. Fittings, 60 per cent. off.

SOLDER—As tin has experienced another drop during the week, jobbers have marked down the price of solder for half-and-half. We give the following prices: Bar solder, half-and-half, guaranteed, 25½c. to 26c.; No. 2 wiping solder, 20½c.

ENAMELWARE—A brisk business is being done. Our quotations are as follows: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.15, special $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2½ inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, June 1, 1906.

Solder is down this week again consequent on the weakened tin market, and is now selling by some jobbers as low as 25c. for half-and-half, and 21½c. for wiping, although the ruling prices are two or three cents higher.

From time to time rumors recur regarding an increase in iron pipe, but it is hardly likely that any such condition shall obtain in Toronto, as there is still some cutting done on present prices.

Lead pipe continues to hold firm at the same quotations and discounts, and a great deal is going out.

Corporation goods are selling well in all parts of Ontario, as well as all plumbing lines. Toronto trade is being swung into line now pretty well, a lot of roughing in goods being sold.

Steam heating systems for residences are in good demand all over, and although a little early in the season the prospects look good.

LEAD PIPE — Prices continue firm and business good. Pig lead continues high, but pipe has not yet been affected. We quote: Lead pipe, 8c., discount 20 per cent.

SOIL PIPE AND FITTINGS — A large trade is being done with prices the same. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—The usual large volume of trade continues to be done. Prices remain the same. We quote as follows: Black, 1 in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

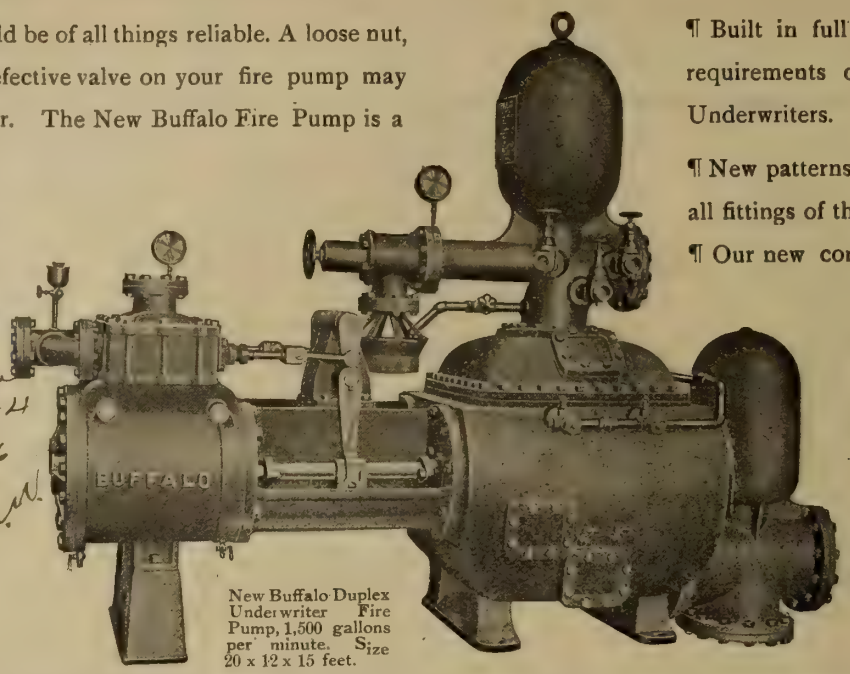
IRON PIPE FITTINGS—The usual demand is not at all lessened. Prices continue same as previous quotations.. We quote as follows: Cast iron elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

GALVANIZED IRON RANGE BOILERS—Although a little quiet, sales are increasing steadily and the prospects look good. Our quotations: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11.00; extra heavy, $14.00; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—The usual business of this season of the year continues. We quote: Hot water, 47½ per cent.; steam, 50 per cent.; wall radiators, 45 per cent.

SOLDER—Is again weaker, and is being sold all the way from 21½c. to 27c. We quote: Bar solder, half-and-half, guaranteed, 25c.; wiping, 21½c.

ENAMELWARE—There have been no price changes recently. A large business continues to be done.We quote as follows: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.



NATIONAL ASSOCIATION CONVENTION.

J. A. Gordon, Montreal, secretary of the National Master Plumbers and Steamfitters' Association, visited Ottawa this week to make preliminary arrangements for the annual convention to be held in that city in August. The disruption of the Ontario Association may lessen the number of delegates in attendance, but should not seriously affect the success of the meeting. Toronto, having reorganized, will undoubtedly send delegates to the convention, which should do much to get the trade again established on a profitable basis in Ontario.

FIRE PROTECTION—BUFFALO UNDERWRITER PUMP

¶ Fire protection should be of all things reliable. A loose nut, sticking piston or a defective valve on your fire pump may some day spell disaster. The New Buffalo Fire Pump is a study in reliability. Its use is a guarantee of effectiveness at any and all times.

RETURNED SEP 6-1906 To Montreal Office Cut Book 54 Page 56 A.A.M.

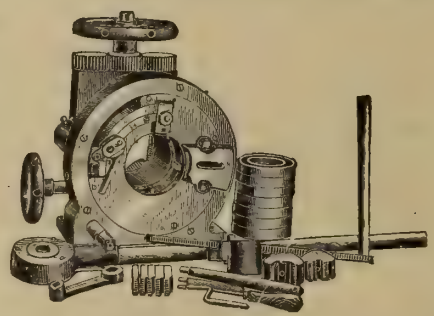
New Buffalo Duplex Underwriter Fire Pump, 1,500 gallons per minute. Size 20 x 12 x 15 feet.

¶ Built in full conformity with the requirements of the Factory Fire Underwriters.

¶ New patterns used throughout and all fittings of the highest class.

¶ Our new complete catalogue will soon be ready for distribution. Let us add your name to the list.

Buffalo pumps, both reciprocating and centrifugal, are built in a complete line of sizes, from boiler feed to waterworks service. They are newly designed and conservatively rated and embody only such features as have been fully approved by years of service.



CANADIAN BUFFALO FORGE CO., Limited, MONTREAL, QUE.

STANDARD SANITARY'S NEW PLANT.

The Standard Sanitary Manufacturing Co., Pittsburg, Pa., manufacturers of "Standard" porcelain enameled baths and sanitary goods, will this year erect a large modern plant for the manufacture of these goods in the east. Land has been acquired at East Camden, N.J., directly across the Delaware River from Philadelphia, and a factory, designed upon the same elaborate scale as the great plants at Alleghany, Pa., New Brighton, Pa., and Louisville, Ky., will be constructed. The new works will be completed this year, and will employ in the various departments about 1,000 hands. The cost of the plant will be approximately $500,000. A full line will be manufactured, including the various types of bath tubs in all sizes, lavatories in the different designs and sizes, sinks and laundry trays, closet bowls and tanks, urinals, drinking fountains, wash sinks and other articles used in plumbing and sanitary installation.

The erection of a factory in the east was found to be an imperative necessity, owing to the enormous trade which had great plants at Allegheny, Pa., New York, Philadelphia, Boston, Baltimore and other centres. The company's export trade also has grown to such huge dimensions that it was found by locating a plant near the seaboard, great savings could be effected in freights as well as raw materials, and deliveries could be made more promptly and satisfactorily.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—The Chasers, Vise and the large range of work covered.

Less Work and More Profit--Selling this Boiler Means That to You

Less work to sell the Oxford Hot Water Boiler because it's advertised for your benefit to the whole of your public,—and because, too, every owner of an Oxford Boiler is a living advertisement for its fuel-saving, never-leaking, trouble-banishing qualities. Less work to instal, because it comes to you so far assembled that one-tenth the labor finishes all you have to do to it to get it in shape to connect up for heating. Do you know about that point? Wish you'd ask us to tell you about it?

More profit selling the Oxford Boiler because it's priced so you can make a living and the price kept strictly up so cut-throat competition can't undersell you, except by deliberate cheating of the buyer. Get right on the boiler question—ask questions in a letter addressed to us.

The Gurney Foundry Co., Limited

We also manufacture Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges and complete Hotel Kitchen Outfits, Steam Boilers, Radiators, Warm Air Furnaces and all kinds of Cooking and Heating Apparatus, Plumbers' Supplies.

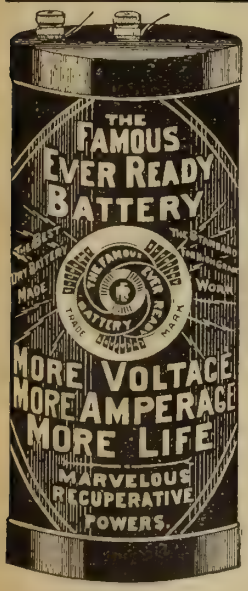
THE ORIGINAL

The Improved Daisy Hot-Water Boiler is the Adam of the industry. The others came in on the eve of the Daisy's success.



Imitations, etc., are never as good as originals, because they represent "follow-the-lead" methods, have no self-reliance.

Other boiler-makers have attempted to get the "Daisy" ECONOMY trait, but so far they haven't been able to get within a mile of it, though they have done lots of trying and shown lots of things—ON PAPER.

Let Dealers be Wise and Order the "Daisy"

CURRENT MARKET QUOTATIONS.

June 2, 1906.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Chances for Business

In these days of prosperity large public buildings are constantly being planned in all parts of the country.

These are your chances for getting business.

Good air is a necessity in all buildings, but more especially in those built for public use.

The best way to get good air is by the use of our

AEOLIAN VENTILATORS

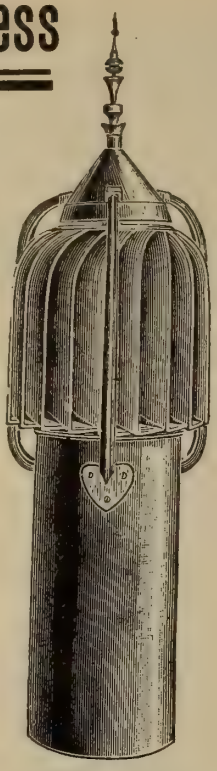
They have been tried all over Canada, and have never failed to give complete satisfaction.

Montreal, June 15th, 1903

Messrs. J. W. Harris Co., Limited, Montreal.

Dear Sirs,

In answer to your request, we take very much pleasure in saying that we have your system of ventilation installed in our Chuch for several years and it has given us entire satisfaction.



Fre. Marie Raymond, O. F. M.

Write us for terms.

THE J. W. HARRIS COMPANY, LIMITED

THE AEOLIAN VENTILATOR

(Can be supplied in copper, if so desired)

THE SUN ECLIPSED BY "PUTZ"

Putz ! What is Putz?

PUTZ, "Lion" Brand, is the most popular and satisfactory metal polish in the world. PUTZ, "LION" brand, is put up in boxes in the form of liquid as well as paste and is known as PUTZPOLISH.

The finest thing for metals is the "Lion" brand. "Lion" brand PUTZ contains no acid. Its use will not injure metal of any kind. PUTZ gives a lasting polish to all metals. It will neither scratch nor rub off. The "Lion" brand saves hours of work. It acts in minutes as compared with hours by old systems of polish. When applied on the surface of iron, of zinc, of nickel, and metals of all descriptions especially, the Triple Extract Putz Polish for Metals, the "Lion" brand, liquid or paste, gives a brilliant and lasting sheen.

Insist upon getting PUTZ, "Lion" brand.

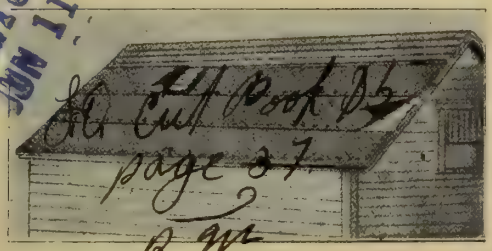
CONGO ROOFING

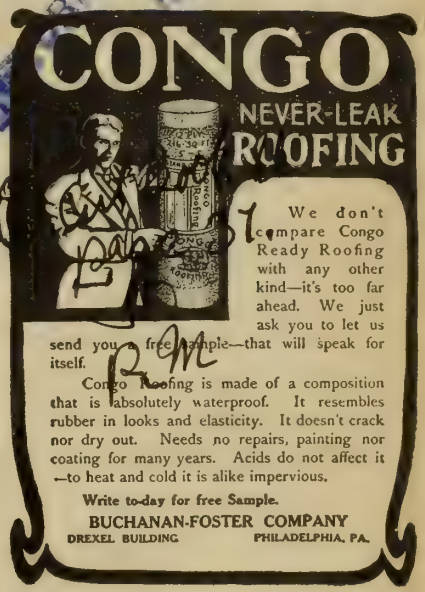
CONGO NEVER-LEAK ROOFING

It's proof against water, acids, alkali, climate.



It's a most excellent fire resistant. It is odorless and will not taint water.

Easily and quickly laid by anyone.



Suitable for flat or steep roofs.

Write for Booklet and Sample and learn more about it.

BUCHANAN-FOSTER COMPANY
DREXEL BLDG., PHILADELPHIA, PA.

Rain Proof
Air Proof
Climate Proof
Water Proof
Every Roll perfect

We don't compare Congo Ready Roofing with any other kind—it's too far ahead. We just ask you to let us send you a free sample—that will speak for itself.

Congo Roofing is made of a composition that is absolutely waterproof. It resembles rubber in looks and elasticity. It doesn't crack nor dry out. Needs no repairs, painting nor coating for many years. Acids do not affect it—to heat and cold it is alike impervious.

Write to-day for free Sample.

BUCHANAN-FOSTER COMPANY
DREXEL BUILDING PHILADELPHIA, PA.

Congo Roofing is easy to apply. Skilled labor is not necessary. You don't have to hire an expert to help. If you can drive a nail you can do all the work that is necessary. The directions for laying are simple, and it is hard to make a mistake. Every roll comes complete with plenty of nails, cement and caps. There is nothing else to pay for. The roofing is all ready to put down. Just rip off the wrapper and lay the Roofing on the building.

People who buy Congo Roofing for a building once, don't buy any more in after years—for that building, because it is THERE TO STAY, although the roof costs but little. They do buy more for their OTHER roofs. Everyone who tries Congo is soon a convert, and he becomes more enthusiastic the longer he waits for the roof to wear out.

ASBESTOS BUILDING PAPER

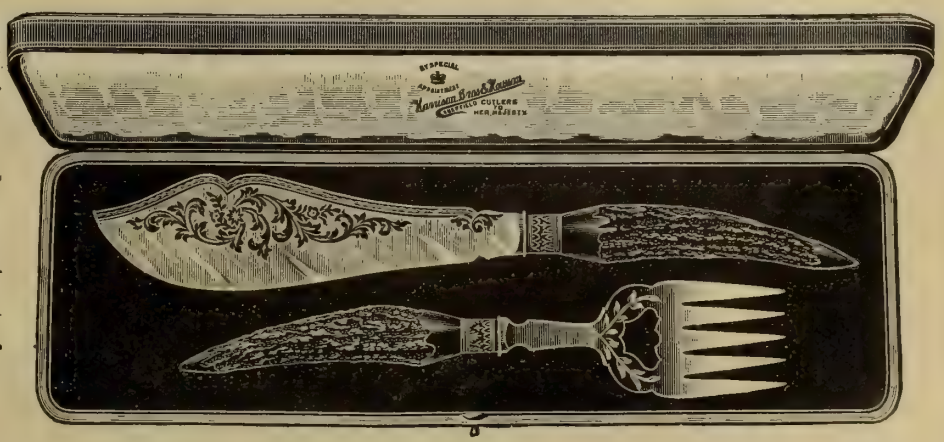
THE HOBBS HARDWARE CO., LIMITED

LONDON ***TORONTO***

HAVE YOU A WEDDING GIFT TRADE?

Some hardware stores do a considerable business in wedding gifts, and, when you come to think of it, the average hardware store stock contains many articles suitable for gift purposes. But, are you doing your share of the trade?



It depends on whether you have the goods and display them attractively. Why not devote a small space in your counter or wall show cases to plated ware and table cutlery?

Change the arrangement of your display frequently, and keep the right goods and the profit from sales will be enough to pay your rent.

This cabinet is filled with Harrison Bros. & Howson's cutlery and plated ware, and contains 95 pieces. We can give a choice of 3 grades of the same makers' goods in the case or out of it and in any quantity desired. The oak case is made in Canada, seasoned to our climate and will not crack.

We have sold Harrison Bros. & Howson's cutlery for 25 years, and it has given constant satisfaction.

We can quote you interesting prices if you will let us, or ask our travellers.

Always Remember These Features

Keep the following Points of Merit in mind regarding

DILLION HINGE-STAY FENCE

1—The Dillon has no locks to rust, break or come loose.
2—The Dillon is the strongest wire fencing made in Canada, is easily erected and always looks well.
3—The Dillon strand wires, whether heavy or light, are all High Carbon Hard Spring Wire.
4—The Dillon Stays are of medium temper and are never broken by wrapping.
5—The Dillon strands and stays are both extra well galvanized.
6—The stays are hinged to prevent bending when the fence is weighed down, between the posts.
7—The Dillon is less expensive than other wire fencing of similar weight.

You, of course, have the "Dillon" in stock.

Why You Should Sell
THE IDEAL FENCE.

You want to handle a fence that will appeal at sight to your customers, and that will satisfy them after they have bought it. You'd like to have a fence to sell of which you could say to a man, and say truthfully, that it does the fencing job for good and all. There is absolutely nothing that looks better, is better, that will give better satisfaction and that will sell better than this Ideal Woven Wire Fence. You can see from the illustration how it is made; crimped, locked, spaced and stayed. Then just remember, and this is all-important, that these wires are all big, heavy, strong wires, all No. 9 hard steel. And they are heavily galvanized so there's no chance for rust to get a hold. One fence sold always sells more. It's easy to get going. Very little talk required to convince a man who has fence to build. Seeing is enough. And then remember that while you're satisfying your farmer friends and doubling up your fence business, there's enough in it for you to make it an object. We see to it that dealers have margin enough to make them want to push it. If you want to handle that kind of a fence just drop us a card about dealer's prices.

It don't stay on the Shelf

There's a reason why **The Martin-Senour Paint** doesn't stay on the dealer's shelf and why it keeps him busy passing it over his counter. It's because of its quality. It's the satisfactory kind. It flows well, covers well, looks well and wears well. It pleases the painter who puts it on and the owner of the premises where it is used. No wonder the dealer is pleased too for it means money in his pocket—a pleasant proposition all around for everybody. If you do not yet belong to this pleased company we'd like to talk to you a little about our

100 Per Cent Pure Paint

We believe we can convince you that you can make money handling **The Martin-Senour Paint.** Not simply because of the profit realized on each sale, but because **The Martin-Senour Paint** is a builder of trade; one sale brings another. It's a paint you can recommend to your customers and the next time they visit your store it will be because they want more, not to enter a complaint. We'll be pleased to hear from you—write to-day.

The Fact that There is a Need for Maximum Light Glass is Sufficient Reason for a Hardwareman Presuming that it will Sell.

You must have noticed that some buildings have darker interiors than others.

You must have noticed that buildings which hitherto had dark interiors have been "changed" so as to get more light.

You must have noticed on the street level, squares of glass diffusing daylight through a basement.

Well, there are always some buildings with dark interiors, always some buildings being renovated, always some evidence of

MAXIMUM LIGHT GLASS

efficiency.

Now, if you had to go to a great deal of trouble to sell this glass it would be foolish of us to ask you to buy it. But that's just your vantage point.

Even if you don't budge from your store you are bound to get business. And **remember: the price of MAXimum Light Glass is the same as that of ordinary sheet prismatic glass.**

ANTIMONY AND ITS USES

By James G. Lorriman

In view of the ever-increasing consumption of antimony, and the threatened depletion of the world's supply, it seems remarkable that there are very few men, even in the business of selling that metal, who are familiar with its nature. But now that its price has reached four times the normal quotations a greater interest in the subject is being aroused, and an anxiety is shown to learn more about antimony in order to more thoroughly understand market conditions.

Antimony is a white and very brittle metal which, so far as known, is not used in the pure state, but is valuable as forming several valuable alloys and compounds. It is a peculiar product, as deposits of the crude ore are not found in the same way as lead, silver and the other better known metals. Antimonial ores are not deposited in strata which can be traced and their probable output estimated. On the other hand, they are discovered in mere pockets, which are liable to play out at almost any time.

Nature of the Ore.

The chief ore from which antimony is derived is the sulphide, which is known as stibnite or grey antimony, and which, when pure, carries 71.4 per cent. of metallic antimony. A considerable proportion of the world's output is also furnished by another ore, called stibiconite, or antimony ochre, which is an oxide, and contains 74.5 per cent. of antimony. The process of smelting and refining these ores to produce antimony regulus, the standard form in which the mineral is used, is a very complex and expensive one. It depends very largely upon special conditions, which prevent the exploitation of some small deposits of the ores in countries other than those which now furnish the chief basis of supply.

Sources of Supply.

The largest known deposits of antimony are in Spain, Portugal, and certain parts of South America. There are some small deposits of ore in Nova Scotia, but these have never been exploited. The Chinese have not been mining their ores for some time past, consequently it has been difficult, if not impossible, to purchase any quantities of the metal in Japan, practically all the Japanese antimony being refined from Chinese ore. Whether the wily Chinese are, for commercial reasons, husbanding their resources until prices have gone even higher, or whether their deposits are actually playing out, is something that Europeans have been unable to find out. It would not be surprising to learn that this latter is the case, for beyond a doubt all the other known deposits of antimony are being very rapidly exhausted, and already an end to the supply is seen. As a matter of fact, the production in 1905 was more than fifty per cent. lower than in 1904.

No substitute for this metal has ever been devised. As has been shown, the visible supply is being depleted at an alarming rate, and to accentuate the difficulty many new uses for the metal are being found. The whole question now hinges on the possibility of discovering new deposits of the ore. The pockets have not only to be found, but also developed, so that at the least another year must elapse before the present situation is relieved.

Uses of Antimony.

As has been mentioned, antimony is used solely in the form of alloys and compounds. Its chief importance arises from the fact that it hardens lead and kindred metals. It is largely used for britannia, pewter, babbits, and type metals, perhaps the largest proportion being consumed in these products. But increasing quantities are being purchased by the leading governments for war ammunition purposes, including the manufacture of smokeless powder and the hardening of bullets. The Japanese used large quantities during the recent war, and a severe drain was made upon the market within the past few weeks, when the Russian Government placed orders for about six hundred tons.

Besides the uses mentioned there are also several methods of employing antimony which, however, form only a small factor in the situation. For instance, tartar emetic and antimony salts, well known for their medicinal properties, are products of this metal. Furthermore, antimony trisulphide is used somewhat for painting, forming, as it does, a flame red pigment known as antimony cinnabar. Antimony pentasulphide, another form of the metal, is employed in vulcanizing rubber, and gives a red color to the product.

Antimony Prices.

In considering the figures quoted on antimony since the year 1900, we have all the more cause to wonder at the remarkable flight which began last Fall, and has not yet reached its limit.

The current price in Montreal for January, 1900, was 10¼c., with the market very quiet. During the next several months conditions were slightly better, and 10¼c. was the price quoted. The latter part of October developed a little flutter which sent the price to 11 and 11½c., but it declined to 10c. in November, and the year closed with this figure ruling.

In 1901 the situation throughout was even quieter than in the preceding year, the price of 10c. being maintained steadily, with the exception of ½c. advance in April. The year 1902 opened with quotations still 10c. per pound. In October the market weakened, and the price declined to 9½c., while November witnessed another slump of ½c. A temporary recovery to 10c. was effected in the early part of December, but 9c. was again the price quoted at the end of the month.

In the year 1903 the price of 10c. was steady during the first half, but a falling off occurred during the closing months, so that January, 1904, showed a price of 8c. In May a slight weakening was noticed, the minimum price declining to 7⅞c., which became the ruling quotation in June. Another drop in July resulted in a price of 7½c. being given, and this was maintained until the middle of November, when a startling advance in the Old Country boosted the Canadian quotation to 9½c.

The opening months of 1905 showed little change in this price. In February the price given was 9½c., and there it remained until May, when there was a decline of ½c. About the middle of June the beginning was made in that period of advancing prices which still continues. Prices climbed steadily until September, when the record price of 16c. was obtained. A temporary weakness then developed, quotations falling off to 14⅜c., and finally to 14c., which was the figure quoted at the close of the year. At the very beginning of the present year figures began to soar, and a steady upward movement has been continued ever since. The price now is hovering around 30c. per pound—just about four times the figures quoted but two years ago.

Nor can we hold out much hope of altered conditions in the near future. Even if new ore deposits are found promptly it will take at least a year to develop them, and in the meantime prices must be arbitrary and well nigh prohibitive. No orders are now being taken by the leading Canadian merchants for delivery earlier than September, and even at that the import price is such that jobbers will still be compelled to ask from 30c. a pound up. Indeed, very little surprise will be felt if 35c., or over, is reached.

CATALOGUES WANTED.

H. A. Gilbert, of the Windsor, Essex & Lake Shore Rapid Railway, Kingsville, Ont., writes us stating that he would be glad to receive catalogues from manufacturers of pipe and fittings, supplies, etc. Mr. Gilbert's company will shortly begin the construction of a large power house.

A PI LINE THAT MADE TROUBLE.

The copy was illegible and the linotype man slammed in a pi line so that the proofreader would decipher the manuscript of the account of the wedding and make necessary corrections. For some reason this was not done, which is why the next day a determined looking young man with "bridegroom" stamped all over him and a tearful young woman who still had rice in her hat appeared at the office and demanded an explanation of a paragraph that read:

"Then down the aisle came the bride, who looked like ffipouxthnbgfdertyhnb."
—Ex.

STORE CARD WRITING

Many persons with a desire to learn the art of lettering never make the attempt because they are deficient in penmanship, and think it useless to try. Most card writers who with a brush create ideal script letters, write so imperfectly with an ordinary pen that few can with ease decipher it.

"Practice makes perfect." A careful perusal of this department, and frequent trials of the suggestions which will be given, will soon bring results that should prove encouraging to the most untalented.

Utensils.

The best artisans use the fewest tools. We advise the beginner to buy only what is absolutely essential, and advocate the purchase of the best tools. Pointed sable lettering brushes are the kind to buy. With proper care they outlast any three of the cheap kinds, and the work you can do with them will be perfect and clean edged. Buy one each of No. 5, No. 7 and No. 11. Although they are all pointed, they can be manipulated to do all kinds of flat lettering. The handle should not be longer than six inches. Cut off the surplus length, using a pen knife. This set of brushes, once used for water colors, should never be used for oil colors. A palette knife is the only tool needed for mixing colors, and lettering brushes should never be used for mixing. Some brushes with proper care will last two years, so it is worth while getting the best grades.

Brushes should always be washed out thoroughly in water after using. All surplus moisture should then be squeezed from the brush by gentle pressure, sliding the thumb and forefinger towards the brush point. This will make your brush outlast any three of those carelessly handled. Never allow color to dry on the brush, always wash it out in water. Do this each time you are disturbed, and never allow the brush to stand upright leaning against the hairs, but be sure to rinse it and lay flat on your table.

When using colors that require mixing, the palette knife, which is made of very elastic steel, should be moved quickly from side to side, alternating at times by giving it a rotating motion, all the while giving it a fairly gentle pressure against the flat glass, marble slab, or plate on which the color is being mixed, and occasionally using the edges of the knife for scraping and gathering the paint, until it is thoroughly ground and mixed. A palette knife should be about the size of an ordinary table knife, though smaller ones can be used. The trowel-shaped kind is thought to be preferable. A flat cork is sometimes used for this purpose.

Two glasses or cups of water should be provided, one for washing out the color as much as possible, and the other for giving the brush its second clean wash.

Pens and Brushes.

Now we want at least two each of the flat Nos. 1, 2, 3 and 4 stub pens. The life of a pen when in constant use is one or two days, although two or three are sometimes necessary for one day's work. Two music pens should also be provided. Music pens have three points, but look exactly like any other pen until one presses down the point, which has two slits instead of one. These pens are used for small script letters, especially when white paint is used, and for "truing" or finishing off various kinds of irregularities or incompleted angles on letters that are written partly with the flat pens or brush. A soft pencil, two ordinary penholders, a few pieces of white chalk, a long ruler, a piece of very soft rubber, called sponge rubber, four thumb tacks, or Moore's push pins, some mucilage, besides any kind of color that may be desired by the learner, and a rag for wiping the palette knife and pens, and another for wiping cards and to use for pasting, as we shall explain later, will complete your outfit.

Dry paints that are mixed with water and mucilage are used for show cards. There are many kinds, but the learner should at first use only black, though any color may be used. To prepare it for lettering take a quantity and soak it with alcohol. This "cuts" the paint (loosens it). Now take enough mucilage to thoroughly mix it, by using a palette knife or cork, into a thick mass, gradually adding more mucilage until the paint is as thick as heavy syrup. Then from a water bottle having a cork with a quill through it, or the kind used as a catsup bottle, add a little water at a time, so that the paint does not become too thin. For pen work the ink must be only one-third as thick as for brush work. An ordinary ball of wash bluing, carefully mixed and thinned as described, will answer the purpose for practice, but will not satisfy as you gain proficiency.

Another paint that is all prepared, excepting that it has no "sizing," i.e., mucilage or glue, and which is also used by fresco painters, is called "distemper." It is sold in glass jars, with tin covers, and is already mixed with water, so about one-quarter inch of water should always cover the upper surface to keep it from becoming hard and lumpy. Fresco painters add dissolved glue (for sizing) to these distemper colors to keep them from rubbing off. You can take some paint from the jar and add only mucilage, mixing it thoroughly, and use it on show cards.

Still another show card paint is letterine. It is always ready for use, needs only a little water added when too thick, and dries rapidly with a gloss. Letterine can be had in white and all colors, and can readily be mixed to form any shade or tint. White letterine for grey or black cards "covers" better than any other paint, being solid and opaque. For outlining and for pen work use two parts of letterine mixed with one part of water. After the outline is dry fill in with pure letterine. Two ordinary glass inkstands, with covers, will answer best for this purpose. In green, red, blue and purple, letterine is of unusual brilliancy, affording an opportunity for color display not readily obtained by the use of ordinary pigments, besides drying more rapidly.

Students should remember that merely to dip a brush into color is not all that is required before using it for lettering. It is necessary that the color should be properly distributed, and that the centre hairs shall be charged with as much color as the outside. After you dip your brush into the liquid, take a piece of smooth paper or cardboard, then wriggle the brush sidewise, gently drawing it toward you, on one side; do the same on the other side. Now relieve the brush of any surplus color (according to the work you have to do) by one or two gliding rotating strokes against the paper, and you are ready to write your line any thickness you please. There are no soiled dishes to wash when your work is finished, and if you are using letterine you will save much waste by observing this rule.

All rules are violated, but the writer can vouch for the desirability of following this method, as it not only gives the best results for controlling the shaping of the brush, but prolongs its durability. The brush should be charged with color frequently in the manner described. Do not wait until all the color is freed from the brush. In this way your edge lines will always be even, clean cut, and your brush strokes continuous, making your letters appear more symmetrical and artistic.

Brush Strokes.

Always make your brush strokes continuous. Never make short, choppy strokes. Gliding the brush on its point, with a uniform gentle pressure in one stroke downward, crosswise, slanting either from right to left, or left to right, is the proper movement for outline or script work. Expert writers of script, or complex scroll work, make most letters not disjointed in their composition in continuous strokes.

The most difficult branches of card writing are script letters and scrolls. These should never be used until the rudiments of lettering are thoroughly mastered. An expert scroll writer does his work so rapidly that it is barely possible to realize that he is performing the delicate and intricate task of designing beautiful curves.

For rapid, one-stroke letters the brush is well filled with color, which should flow freely from its extreme point. For flat brush work the strokes are more varied, first using the extreme flat edge of the brush in an almost upright position, and then from one-quarter to one-half its length. No matter now thin the stroke may be, the entire flat width of the brush must always touch the card.

Rapidity.

In order that you acquire confidence in yourself, and to aid your future efforts, it is advisable to execute work rapidly. Do not be over careful. Start in boldly. It will be somewhat discouraging for you in the beginning to see that your lines are crooked, of varied thickness, and seem almost impossible for you to control the brush. Try often, follow the instructions carefully, watch the original copy and guide lines each time you make an attempt to copy a letter, and you will soon be rewarded for your diligence. Practice makes perfect.

An airship which hovered for a time over Toledo, Ohio, gave a school superintendent of that city a poser to answer. He had unguardedly introduced the subject of the new invention in his talk to the school.

"I say, Mr. Parley," interrupted a small boy in the front row, "is the world liable to come to an end most any time?"

"Why, yes, I suppose so," said the surprised superintendent.

"Well, then, suppose a lot of us were up in airships when the end came, where would we land when we came down?"

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers' Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.

Executive—Alberta, A. E. Clements, Olds; C. F. Comer, Calgary; A. R. Auger, Okotoks.

Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer, Winnipeg.

Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.

Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg, Man.
Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association.

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto
Secretary—Weston Wrigley, 10 Front St. East, Toronto.

Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.
Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

Work of the Executive.

A large bill of fare awaits the executive committee for action at their first meeting in Toronto next Tuesday morning, but if any member of the association has anything to bring before the officers the matter will be taken up if it is received by the secretary in time.

Matters which will come up at the meeting of the executive next Tuesday are the items of freight classification and express rates. These are expense items which are met with every day by retailers, and any readjustment which can be secured by the association will mean a great saving to every dealer in the province.

Association Work in Ohio.

One of the congratulatory letters received by the secretary after the recent convention was from Frank A. Bare, secretary of the Ohio Hardware Association, who has won a reputation for aggressiveness and thoroughness in his work as secretary. Mr Bare was written to for advice, and replied that "One of the strongest reasons for the success of the Ohio association had been the loyal support of traveling men. They talk Ohio Hardware Association wherever they go, and do us great good. The grievance committee covers the entire state, and investigates all complaints made by retailers. This work is done usually by correspondence, and in the large majority of cases this committee has been able to settle matters to the entire satisfaction of all parties concerned. Our grievance committee consists of three members, two of whom are appointed by the president, and work in connection with the secretary, who is also a member of the committee. Ohio expects to have one thousand members for the Columbus convention in February, 1907."

Ontario Travelers Co-operating.

The traveling salesmen in Ontario have not been slow to see the advantage of doing all in their power to build up the membership of the Ontario association, and already the membership roll is feeling the effect of their co-operation. An organized retail trade can overcome many of the evils which often result in failures and consequent losses to the wholesalers and manufacturers who supplied the retailer his stock. Anything, therefore, which tends to strengthen the position of the retail trade should have the earnest co-operation of every jobber and traveler, and that the present movement has is shown by the following extract from a letter sent the secretary this week by one of the largest jobbing concerns in Ontario: "We think this is a good move on the part of the retail dealers, and hope that you will be successful in interesting a large proportion, if not all, of the retailers who are handling hardware and stoves."

Knockers Still at Work.

In forwarding his membership fee, James D. Smith, of Baysville, Northern Ontario, writes: "I have received a printed letter from a Mr. Trowern commenting on our action in forming an association, and saying it was done at the instance of a trade paper. I am glad that Hardware and Metal had sufficient influence to accomplish so good a work, and wish the association every success. I wish I was only near enough to help in the progress, but that is out of the question."

If all of the circulars sent out have the same effect as on Mr. Smith, and the several delegates who had intended staying at home but attended the recent convention after receiving Mr. Trowern's circular letter, the membership of the association will grow even faster than it is. Every delegate to the convention decided that the association was a good thing to push along, and in the light of past experience all will agree that "every knock is a boost."

Fraternal Greetings.

M. L. Corey, Argos, Indiana, secretary of the National Retail Hardware Association of the United States, has written the secretary of the Ontario association as follows: "Am glad to know that the retail hardwaremen of Ontario are organized, and sincerely hope that they may build up a strong, useful association. I note that your president will attend our next national meeting in Boston, and assure you that he will be most cordially welcomed. I also extend an invitation to yourself, as secretary, to be present at that meeting, and will advise you later on as to the dates. While I suppose that the questions that face us as retailers are not identical with yours, yet on many things we may find that we can help each other. The catalogue house is by far our most disturbing factor, and the danger of legislation in their favor in order to raise more postal funds continually threatens. I am taking the liberty of sending a sample copy of the Bulletin to several of your members; they may find some things that will interest them, and also watch and prevent the developing of the mail order demoralizers in your section."

What are Associations for?

A. T. Stebbins, Rochester, Minn., President of the Minnesota Retail Hardware Dealers' Association, in his annual address to the recent convention in that state said in part:

"We occasionally hear criticisms from hardware merchants to the effect that our organization has accomplished nothing; that we meet annually, pass resolutions, go home and forget them, and thus end our efforts. My heart ever goes out in sympathy for such a deluded merchant, and I sometimes wonder if his digestive organs are in good working order or if his appendix needs attention. I never go home from a convention without a feeling that some good has been accomplished and a feeling that I could make good use of some suggestion or brother merchant's experience, and thus to some extent, at least, be the more competent to sell hardware at a profit. If there be such a pessimist here I would like to ask him: 'What have you done to help along the work? Have you offered any solution for the ills that beset us? Have you ever taken any part in the discussions? Have you even as much as dropped a question in the question box? Do you continue to buy goods that are quoted in catalogues at ruinous prices? Whose fault is it that we have not accomplished all we could have hoped for? Is it not your fault and mine? Have any of us been as loyal to our association as we ought?'

"What are some of the objects of our association? Allow me to suggest:

"1. To better the condition of the retail merchant.

"2. To correct the evils that now exist.

"3. To bring about better trade conditions.

"4. To weed out dead beats.

"5. To stop wholesalers selling consumers.

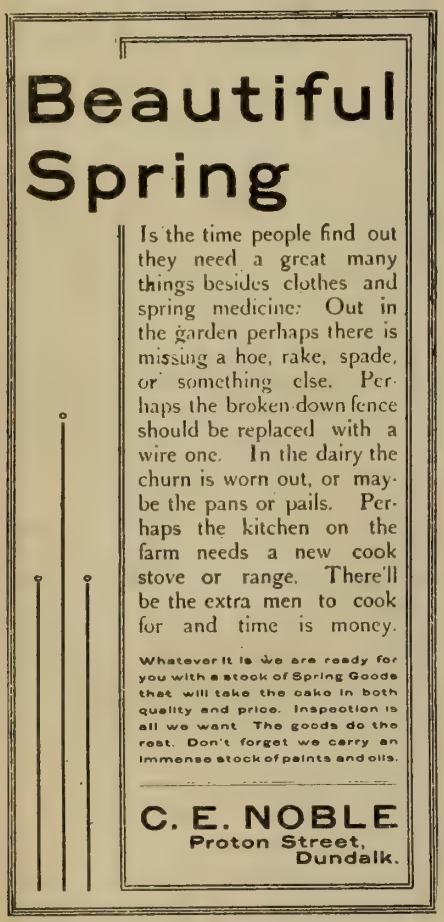
"6. To encourage co-operation of manufacturers, jobbers and retailers.

"7. To eliminate price cutting.

"8. To restore confidence between dealers, where petty jealousy now exists.

"9. To become honest with one another.

"10. To encourage a more general reading of trade papers."



EFFECTIVE ADVERTISING

A department devoted to the improvement of Retail Advertising. The editor of this department will be pleased to answer questions on advertising and review any advertisements submitted to him.

EFFECTIVE ADVERTISING.

As announced in last week's issue, the prize in the ad-writing competition was awarded to W. J. Illsey, with Ashdown's, Winnipeg.

The prize ad is reproduced herewith, along with the one adjudged to be second best. Ashdown's ad captured the prize because it was worded to the point, direct in message, timely in theme, and business-like in character. It was considered weak from point of individuality. No reasons were given why another merchant, with similarly priced cages, shouldn't get the order.

Typographically speaking, in the same ad there should have been more grouping of the prices, thus tending to free "parrot cages" from the crowded effect.

* * *

C. E. Noble's ad is a better typographical specimen than Ashdown's, but the matter is too general and too much space is devoted to rule work. General publicity is useful to the retailer when it has a point. But in Noble's ad such argument as is to be found in "Beautiful Spring" to "Time is Money" would sell anybody's goods, and therefore the results would not benefit C. E. Noble exclusively, while he, exclusively, would pay for the space. Mr. Noble is on the right track when he tries to lift his advertising out of the rut of commonplace utterances. Even "Beautiful Spring" could have been brought to serve Noble's store if that gentleman had just inserted some other matter in one or two places in the advertisement. For instance, after he had spoken about the "hoe, rake, spade, or something else," why not swing on to the advantages of buying his hoes, rakes or spades, the same as regards wire fencing, the churn, pans or pails, etc.

* * *

J. D. McBride, Cranbrook, B.C., could improve the layout of his advertisement on garden hose. Words with the letters arranged perpendicularly are hard to read and ineffective in attracting. The firm name is set disproportionately large, and the chief display line is not accorded sufficient white space. The wording of the ad is snappy and, with one or two exceptions, businesslike. This phrase appears at the bottom of the ad, in fact on all their ads, "Been here since 1898—Liable to stay longer." "Likely" would be a better word than "liable." G. Bruce Brown prepared the ad. Other ads of McBride's will be reviewed at another time.

The following suggestion was awarded the prize in a "Lunch Box Problem" contest, instituted by a large wholesaler:

"I would open every lunch box, select some goods out of every department worth from 7 to 15 or 20 cents, put the articles selected in the boxes with some good advertising matter, close the boxes and put them all in a show window, with a large sign (not less than 16 x 20 inches) and let the people know that the boxes and contents would be sold on a certain day for 10 cents each; customers to have their choice, without opening the boxes, of course, and being assured that the contents were worth more than the price for box and all. Some of the boxes would be left open to show the big values. The manager should see that mostly good but dead stock went into the boxes. The boxes should be kept in the window at least ten days before the date of the sale. It will be surprising to see the big crowd looking at the boxes every day, and still more so to see the hundreds of hungry bargain hunters on the sale day carrying off dead stock—and pleased at the chance. The store will be talked about for weeks afterward. Let each one choose his or her own box, and make them pass one by one in line."

NOVELTIES FOR THE HARDWAREMEN

Readers desiring the addresses of the manufacturers or jobbers of the articles described, or any additional information, can secure the same from the Editor of HARDWARE & METAL.

PRISM DASH LANTERN.

The Schultz Manufacturing Co., of Hamilton, Canada, are showing a splendid line of lanterns, known as the Prism Dash, which are equipped with their patent prismatic globe and white enameled reflector, and taking a No. 2 cold blast burner.

By this arrangement it is claimed that at least fifty per cent. more light is produced than with ordinary fixtures. From this fact, and also from its windproof qualities, it proves an ideal lantern for carriages, wagons, steamboats, warehouses, contractors and railroads.

These lanterns are packed in cases of half-a-dozen, and may be purchased from any hardware jobber.

NEW METAL CUTTING SAW

There is no carpenter who does not constantly have occasion to cut through a nail or piece of metal of some kind. Heretofore there has been no provision for a tool that will accomplish this work. E. C. Atkins & Co., the large and exclusive saw manufacturers, have realized the necessity for such a tool and have lately put on the market a saw for this purpose. It is put out in the shape of a nest of saws, as shown in the following illustration:

RETURNED
JUN 26 1906
To Owner
Cut Book 52
Page 14

Atkins' Metal Cutting Saw.

The large blade is the nail-cutting blade and is made of silver steel, especially hardened for metal cutting purposes. The teeth are cut straight across and the saw operates without a set. It is taper ground from tooth edge to back and is of sufficiently wide gauge to cut a kerf wide enough to permit the use of a properly set ordinary saw without damage to its teeth.

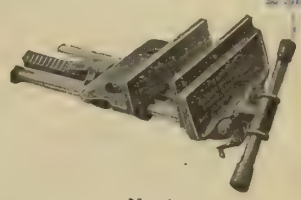
With the nail-cutting blade comes both a compass and a keyhole blade, made of silver steel and gas tempered to that particular degree essential in order to produce the best results, and hold their keen cutting edges the longest possible time. Any of these blades are made to fit an adjustable handle, which is operated by a thumb lever. The blades can thus be used in the regular way or made to operate at any angle or even reversed, if desired.

It can readily be seen that the operator by the use of this tool may reach almost any spot desired and after starting the kerf with either of the small blades, may insert the metal-cutting blade, this being made narrow on the point with that end in view. The nail can then be cut, after which the metal cutting blade may be withdrawn and an ordinary blade substituted. The nest of saws (known as No. 3) is already in the hands of most of the large dealers, or can be secured through the home office at Indianapolis, or at Toronto or any of the ten Atkins branches.

THE CALORIC GAS RANGE.

The McClary Manufacturing Co., London, have put on the market a new gas range made in several styles suitable for various sizes of houses. The Caloric, as it is called, is a particularly artistic range with four, six or eight holes, having an elevated broiler and ovens both below the cooking top and above the broiler attachment. The size of the cooking top is 23x24 inches, it being fitted with two extension side shelves, six inches wide, and having three four-inch loose cap burners, one six-inch loose cap burner, and a one-inch simmering burner. All top burners and tubes can be lifted out instantly, not being fastened with either bolt or button.

The size of the ovens is 16x16x11 inches, having two large burners full length of oven, with safety lighter attachment, which can only be operated by opening the counter poise doors made in two sections, the lower half of which forms a shelf, with a white enameled lining. This style of door overcomes the objectionable one-piece drop door. The oven bottom is made of bright polished steel, and can be used as a griddle for wheat cakes, etc. The oven is ventilated and all cooking fumes are carried off to the chimney. The broiler sits below the elevated oven and the same gas connection heats both at the same time.



An important feature of the range is the instantaneous water heater, which can be attached to the side of the range as an extension to the cooking top, two extra holes being thus provided. The valves are adjustable, allowing the flow of gas to be regulated.

Altogether the range has some exceptional points of merit which should find for it a large sale in all places where gas can be used for cooking purposes.

THE NEW OLIVER VISE.

A new quick-acting vise has made its appearance on the market, manufactured by the Oliver Machinery Co., of Grand Rapids, Mich. It is called the No. 56 Oliver vise with adjustable front jaw and is made in different sizes. Among the important features of this splendid tool for the carpenter, cabinetmaker, patternmaker and others working in wood are the following: Substantial casting for main frame, insuring rigid-

No. 2.

raised 1 inch above the bench top and is full length of the back jaw; does not indent the wood as small 1-inch dogs do; with this new style jaw, the tail vise is not needed. Will clamp taper, straight or circular work when used in conjunction with side clamping plate and dogs. Cut No. 1 shows vise with the front jaw raised to full height and gives a general view of the vise. Cut No. 2 shows the vise in position on the bench with maple faced jaws and a side clamping plate and dog in juxtaposition to it. Cut No. 3 shows the vise as located on the under side of the bench and gives a correct view of the working parts. This vise is guaranteed against breakage or appreciable wear for five years. It is worth investigating.

People who buy any one of the various styles of

EMPIRE QUEEN RANGES

soon find out just what the strong points are—Economical on Fuel, Efficient Utilizer of Heat,

These "house" points, as it were, become the "store" points of a live dealer.

What is to prevent you from placing an **Empire Queen** in your store window and arranging opposite the grate a card reading "This saves coal" and opposite the oven "This bakes perfectly"?

These are a few of the advertising "letters" which when put together spell S-A-L-E-S for **The Empire Queen Range.**

The Canadian Heating & Ventilating Co.

OWEN SOUND, Ontario Limited,

THE CHRISTIE BROS. CO., Limited, 238 King St., Winnipeg, Man., Western Agents.

THE CANADA STOVE AND FURNITURE CO., 126 West Craig St., Montreal, Que., Agents for the Province of Quebec.

The dealer who will do half as much pushing to sell the Imperial Oxford Range as we will do to sell it FOR him, can make every worth-while range sale that's made in his town this year. That's because the Imperial Oxford is the one Range that outsells every range on sheer merit,—and because we help the dealer sell ranges as no other maker even tries to help him. What argument beats that when it comes to a question of YOUR profit? We wish you'd ask us for that straightout proposition we are all ready to make to YOU. Just put a question-mark on your letterhead and mail it to

WESTERN BOARD OF TRADE CONVENTION.

All the indications point to a very successful convention when the representative business men of the west meet in Edmonton on the 13th and 14th of the month at the sessions of the Western business men's parliament, the Associated Boards of Trade of Western Canada. While this organization is confined in its membership to the boards of trade of the two Provinces of Alberta and Saskatchewan, representatives of leading boards of trade in Manitoba and British Columbia are invited to attend, thus making the gathering representative of the business interests of all Western Canada. One or two representatives of the Winnipeg Board of Trade will attend the convention.

This is the third convention of the Western Boards of Trade, the organization dating its existence from a meeting in Calgary in 1904. The convention in Regina last year was largely attended and its resolutions carried great weight because of its personnel and the serious fashion in which western business problems were discussed. This year all resolutions have to be in the hands of the secretary some time in advance of the convention and all delegates are being notified of the subjects to be discussed.

Realizing the importance of this gathering of western business men, this paper purposes publishing, as last year, a full report of the discussions and of the resolutions adopted.

BORROWING A NAME.

Some months ago attention was drawn in these columns to the fact that a prize competition company in New York was trading under a name almost identical with the MacLean Publishing Company. The only difference was that they spelled the name (Mc)Lean instead of (Mac)Lean, and some people had mistaken it for this company. At one time our New York offices were situated in the New York Life Building, Broadway. Shortly after we abandoned our New York offices we found that the company complained of had retained our sign on the door and were trading under our name. We set about a confidential investigation and found that a company had actually been incorporated under that name, and that a man named McLean was said to be connected with it. Our representative called several times at the office but at no time was he ever able to find that anyone named McLean was actually connected with the concern.

The Canadian and American post office authorities were notified, and we understood that some investigation had been made, but apparently the concern is still trading under the old name, for one of our subscribers, Mr. J. L. Naylor, Searchmont, Ont., writing May 23rd, says: "I enclose a communication from the McLean Publishing Company of New York, also my signature, apparently torn from a letter, which was enclosed with the circular letter referred to. I do not think I ever wrote a letter to the McLean Publishing Co. of New York, and would like to know how they secured my signature. If you know what this game is, let me know through The Grocer."

By the same mail the post office delivered to us a letter addressed "The McLean Publishing Co.," mailed from Deerfield, Mass., saying that the writer had sent money four weeks' ago and had not received any answer. The Canadian authorities have had several similar complaints, and we strongly advise our readers not to send any money to the concern. In fact such a hint seems unnecessary to give to the average business man, who should treat their circulars as Mr. Naylor has done, or pass them over to the post office authorities.

We notice from the correspondence that this concern has moved from the office formerly in the New York Life Building to another address in New York, but the blank forms used are exactly the same as those sent out from the New York Life Building, with the exception of the change in address.

A BARGAIN DEPARTMENT.

It is a common belief amongst hardware merchants that it is necessary to sell goods at a loss in order to conduct a bargain department. This, of course, is the general idea amongst shoppers, and it is, therefore, a great aid to the merchant if he finds he can, without loss of profits, work up a reputation for his store as being a headquarters for bargains or a place where counters of five and ten cent goods can always be found.

Old goods and slow sellers must sometimes be sold at a loss in order to move them, but in many cases bright new goods can be profitably sold at prices which are sure trade bringers. A hardwareman who recently looked into this subject made a list of what he found as follows.

A hand-saw with a 12-inch blade, tapering from about two inches width at the point to about three inches at the handle and firmly fixed into a varnished hardwood handle with double screws of brass. The saw blade was made of good spring steel that would not buckle and the teeth were filed and set instead of being stamped out of the blade as the average person would imagine.

Another was a 12-inch spirit level, in a cherry finish, with a nickel-plated spirit plate screwed over the top of the spirit.

A pair of carpenter's pinches, seven inches in length, all nickel-plated to prevent rusting and to add to their selling qualities. These have polished jaws and appear to as near a 40 as a 10 cent value.

Among pieces of enamelware were a lot of four-quart graymottled pudding pans; another lot was of No. 28 basins; three-quart gray saucepans and deep, three-quart stew pans with lips and long handles, lips, and ears for tipping them.

Twenty-five pound spring balanced scales, equipped with a hook, and having a pan suspended by chains. These scales are accurate and will serve many purposes in the household.

Glass bulb filters, aluminum trimmed, for attaching to hydrants, equipped with adjusting rubbers and brass non-rusting strainers, and filled with ground silex flint and charcoal for filtering water as drawn.

Towel rollers of three pieces, with nickel-plated fastenings at both ends and made of wood stained and varnished.

Three-piece child's table sets made of metal and retinned.

Galvanized iron scoops with riveted wooden backs and handles, very substantially made.

A heavy, full-polished, nickel-plated, octagon-base hammer with a strong nail claw and black enameled handle.

A carpenter's square, 12 x 7 inches, in bright, polished steel and marked in eights, quarters, halves and whole inches.

Eighteen-inch japanned waiters, very substantial in appearance and with the japan well baked on.

Sheet iron drip pans with handles at each end wire bound, size, 10 x 15 inches, and 2 1-2 inches deep.

Ten-inch polished sheet steel frying pans, with cold handles, extra heavy.

Meat cleavers, with 7-inch blades, three inches wide and red enameled wood handles.

Each of the articles enumerated can be profitably sold for 10 cents and all appear to be nearer a 25 cent retail value than the price at which they are designed to be sold. Aren't these a good example of the merits of a bargain department?

BOARDS OF TRADE AND CIVICS.

President Peleg Howland, of the Toronto Board of Trade, in an interview with a representative of this paper regarding the advisability of forming a permanent joint committee composed of members of the Toronto Board of Trade and the city council, said :

"The question in my mind is, what virtue would there be in such a committee if it had no executive power? We already have an arrangement whereby we confer with the city council and offer and receive suggestions on such matters as the proposed Yonge street bridge, the city sewerage and other questions, but I hardly see that a permanent committee would make any difference in dealing with them. I am thoroughly in accord, however, with every movement that will bring representative bodies together on public issues affecting the general welfare of our city. Personally I am in favor of a continuance of our present plan of working independently, but conferring from time to time as necessity requires. We are not elected by the ratepayers, and therefore have no legislative power, except of course indirectly, where we have representatives on the harbor commission and other boards, and I am not sure that a joint committee could do any more than is at present done as a result of our conferences. However, the board of trade is always ready to lend itself to any movement that will help along our city's growth and prosperity."

It will be seen that Mr. Howland, while endorsing the idea of board of trade activity in municipal affairs, rather doubts the advisability of the Halifax plan, a joint committee of council and the board with the mayor as chairman. Mr. Howland may be right. The thing is to bring the aggregate business wisdom and acumen as represented by the boards of trade to bear upon municipal affairs.

The Halifax plan has the advantage of being systematic and there's a good deal to be said for peering away at it. The revival of civic interest in the Toronto board is very gratifying, but during the past ten years the board has not much to its credit municipally. A standing committee avoids the necessity for someone exerting himself to bring the matter up every time a new municipal question comes to the front, or, what oftener happens, an old one is revived.

EXTEND THE BOUNTIES.

Under the existing agreement between the Canadian Government and the steel manufacturers, the bounties on steel products will materially decrease after the 1st of July. As the iron and steel industry of Canada cannot yet be said to be on a firm footing, an effort is being made to secure an extension of the bounty system.

In view of the great efforts which have been made to build up this industry and the large money Canadian capitalists have invested in the various iron and steel companies, it is hoped that the Government will accede to the request. Even so, they will not be spending what they originally set out to disburse in fostering the manufacture of iron and steel. For it will be remembered that, through delays and other causes, the sums of money drawn for bounties in the earlier years were very small.

One need not be too optimistic to see that the iron and steel industry will yet mean much to Canada. If the country continues to grow at its present rate, and there is no good reason for thinking otherwise, there will soon be a demand which will permit of economical production, and the bounties will then be unnecessary. Many countries have received great benefit from this industry and it has already contributed largely to the prosperity of Eastern Canada. By all means, let the bounties be extended.

THE SITUATION IN METALS.

Keen observers of market conditions are predicting that copper is now on the edge of a boom. This metal has escaped anything more than a passing attention for some little time now and prices given in the daily metal reports have been stationary. But it is pointed out that during the past week or two even the most influential buyers have been unable to secure deliveries at the figures currently quoted. The supply is unquestionably short, and it seems to be only a matter of a short time before prices generally will go up.

Tin has been somewhat weaker, but it is hard to see how this condition can last. The consumption is rapidly growing, and the utmost efforts have been unable to proportionately increase the output. There has been a constant decline in the visible supply for several years, as will be seen from the following comparative table, giving the total visible supply of tin at the end of each of the first five months since 1902:

VISIBLE SUPPLY OF TIN.

	1906	1905.	1904.	1903.	1902.
January ...	14,286	15,645	17,115	17,679	18,351
February ...	13,414	14,911	16,450	16,294	17,043
March.....	11,848	14,592	15,162	19,497	18 131
April	11,104	13,063	13,695	15,978	15,596
May	12,607	12,967	14,6.9	16 463	17,018

Zinc spelter is commanding a great deal of interest. Advices from the leading U. S. metal centres are to the effect that a very large export demand developed during the week, but offerings fell off and buyers could not satisfy their wants. The price of spelter is being very firmly held, and an early advance is considered not unlikely. Naturally, sheet zinc has also gathered strength as a result of the large transactions in spelter.

There is no prospect of any decline in antimony for many months yet. The existing pockets of antimonial ore are practically played out, and, until new deposits are discovered prices must keep up. When these are found and developed (which can scarcely be expected in less than a twelvemonth) quotations will come down. In the meantime, the leading Montreal interest can only quote on September imports, a price which will not permit jobbing under 30c.

Pig lead is slowly moving upward. An increase of five cents per hundred pounds was made this week and a good demand keeps the market firm at that price.

Aside from these features, metals are strong in tone and a lively turnover is the rule.

HARDWARE TRADE GOSSIP

Western Canada.

R. J. McConnell has purchased the hardware stock of Buettner Bros., of Carman, Man.

C. D. Waldon, manager of the Pease-Waldon Co., Winnipeg, went west last week on business.

John Thomson, hardware merchant, of Elm Creek, Manitoba, was in Winnipeg last week on important business.

The Munro Wire Works of Winnipeg are doubling the capacity of their wire fence department and installing another fine fence-making machine, capable of producing a mile per day of the patent, ready-to-erect, woven fencing.

The Moose Jaw Hardware Co., of Moose Jaw, Sask., have commenced the erection of a two-storey warehouse and shop 27 x 60. This firm are specializing in tin and furnace work, plumbing and steam heating, and the new shop will be devoted to these purposes.

A call at the office of Secretary J. E. McRobie, of the Western Retail Hardware Association, found that energetic official studying a pile of correspondence several inches deep; and every letter was a "kick" about some trade difficulty. The Western Hardware Association members give their secretary a great deal to do.

E. B. Loucks, sales manager of Marshall, Wells & Co., has resigned his position to enter into partnership with E. H. Bissett, of Winnipeg, as manufacturers' agents. His retirement was the occasion of a presentation by his business associates in the firm of Marshall, Wells & Co. He was presented with a gold watch suitably engraved and an illuminated address speaking of the high esteem in which he is held. Mrs. Loucks was also agreeably remembered by the gift of a handsome brooch. The presentation was made by T. Paynter, who referred to the fact that Mr. Loucks had been associated with the firm since it commenced business in Winnipeg, and much of its success was to be ascribed to him.

Ontario.

S. Bonathen, stove dealer, Bowmanville, was a visitor in Toronto this week.

C. F. Smallpiece, of Lewis Bros., Montreal, was in Toronto for a day or two this week.

S. McLachlan, of the McLachlan Carriage Works, Oshawa, was in Toronto during the week.

R. J. Bruce, of Port Perry, has sold his hardware business to his brother-in-law, A. J. Carnegie.

The Plating & Specialty Co., Brantford, manufacturers of hardware specialties, have assigned.

G. Carslake, of Carslake & Lockerbie, Collingwood, called on the Toronto plumbing trade during the week.

Robt. Munro, of Montreal, general manager of the Canada Paint Co., was in Toronto Wednesday and Thursday.

Mr. Whitfield, formerly of Anguish & Whitfield, Brantford, has taken a position with the Dominion Radiator Co. in the west.

H. S. Harwood, formerly accountant of the James Robertson Co., has been appointed manager to succeed the late A. A. McMichael.

Alfred Karges, representing the James Stewart Manufacturing Co., Woodstock, called at the Toronto office of Hardware & Metal on Tuesday.

James Piper, of J. & T. M. Piper, hardware dealers, Fort William, is spending a fortnight's holidays in Toronto and Western Ontario points.

Thomas Fullerton, hardware merchant, Monkton, is seriously ill with pleurisy, his brother, William E., looking after the business for the present.

The Late A. A. McMichael.

Edwin Hill, manager of the Toronto Plate Glass Co., has been indisposed for a week or so, but is now on the mend and hopes to be at business in a day or two.

D. Brocklebank, Arthur, has been unable to attend to his work as an executive officer owing to an accident met with a fortnight ago. He is expected to be around again in a week or so.

President A. W. Humphries, of Parkhill, visited Detroit and Windsor on Monday and found the hardware dealers in the latter city very enthusiastic over the association. Neveaux, Clinton & Baxter have been enrolled as members of the association.

"Bob" Harrison, of Harrison & Robertson, plumbers and steamfitters, Toronto, has returned from St. Catharines where he had been endeavoring to recover from his severe attack of muscular rheumatism. He has been unable to work for a couple of months and is now practically confined to his home. His many friends wish him an early recovery.

Quebec.

Berthiaume & Pepin, plumbers, Montreal, have dissolved partnership.

The W. C. White Boiler Works have been registered at Montreal by Hugh Vallance.

Messrs. Ryan and Sprague, of Lewis Bros., Montreal, staff, are summering at Lakeside.

F. Smith, secretary of the Haskill Lumber Co., Fasette, visited Montreal a few days ago.

It is understood that E. A. Wright, secretary of the Canadian Rubber Co., Montreal, has resigned.

C. E. T. Woodley is in Winnipeg this week in the interests of B. & S. H. Thompson & Co., Montreal.

R. B. Cherry, representing Sargeant & Co., was in Montreal this week, calling on the wholesale trade.

Mr. Lanigan, of Lanigan Bros., general merchants, Calumet, was in Montreal on a business trip recently.

A. Sweet, of A. Sweet & Co., Winchester, was a welcome visitor in the metropolis on his return from Cobalt.

Mr. Barrill, of the Shawinigan Construction Co., Shawinigan Falls, was a visitor in Montreal during the week.

T. H. Jordan, representing A. C. Leslie & Co., metal merchants, Montreal, is spending the week in the Maritime Provinces.

B. J. Smith, wholesale and retail dealer in hardware, Coaticook, paid a business visit to some of the Montreal jobbing houses this week.

The Canada Simonds Saw Co. are installing machinery in their Montreal plant, which will enable them to turn out all standard lines of saws inside of two or three months.

James Williams, who has been for a number of years superintendent of the Thos. Davidson Manufacturing Co., Montreal, has resigned his position there and will enter into business for himself in Edmonton, Alta.

The Williams Gauge Co., of Pittsburg, Pa., are opening a Canadian branch in the Temple Building, Montreal. W. N. Courtenay, who has for some time represented the firm in the United States, will be in charge of the office.

THE LATE A. A. McMICHAEL.

On Saturday last death came suddenly to Alexander A. McMichael, vice-president and manager of the Toronto branch of the James Robertson Co. He had been troubled with his heart for some time, and had recently taken a trip to Atlantic City for a rest, but it was not thought by anyone that his illness would terminate fatally. The late Mr. McMichael was born in the north of Scotland and came to Canada when six years old. For the past 25 years he

was connected with the James Robertson Co., becoming vice-president and manager of the Toronto branch shortly after joining the firm.

In his former place of business he will be greatly missed. Everyone there has a good word for him and the remembrance of many kind acts. His thorough grasp of his business made him one who was always looked to when questions of importance came up, and his many years connection with the Toronto branch of the company have been largely the cause of its present large proportions. He belonged to the Masonic fraternity, and in religion was a Presbyterian, being an active member of New St. Andrew's Church. A widow, four sons and a daughter survive him. Of the sons, John and William are with the James Robertson Co.

Among those from a distance who attended the funeral were James, John, Alexander and Charles Robertson, of Montreal; J. P. McPhail, manager of the James Robertson Co., of Baltimore; G. W. Armstrong, London; G. S. Trudell, manager of the Empire Manufacturing Co., London; Andrew Mann, London, and Alex. Saunders, Goderich.

Outside of his work in connection with the company, of which he was vice-president, Mr. McMichael was honored by his business associates by being chosen president of the Central Supply Association of Ontario, and chairman of the wholesale hardware branch of the Toronto Board of Trade. In these capacities he won the friendship of all his competitors, and his untimely death will be sincerely regretted by all.

"SHEFFIELD" CUTLERY.

The case against the Ontario Silver Company, Niagara Falls, being prosecuted by the Cutlers Co., Sheffield, England, and reported in last week's issue, was continued this week, George W. Clark pleading not guilty. It is understood that the company will be indicted for conspiracy, the case coming up again on June 12.

Evidence was given at the hearing this week that jobbers and retailers throughout Canada had been selling cutlery made by the company at Niagara Falls and marked "manufactured by Leonard & Lee, Sheffield," "Sheffield Knife Co., No. 12, Sheffield, Eng.," "Royal Cutlery Co., 12 dwt., Sheffield, Eng.," "Providence Cutlery Co. of Sheffield, Eng.," etc.

The use of these marks appears to be entirely indefensible, the company stating that they were disposing of the stock as quickly as possible, and when this was accomplished they would destroy the etching stamps and burn the labels. Chief Mains, in his evidence, said that Mr. Clark had been very open and frank about the matter, and he said that the stamp and dies had not been used by the newly organized company, that they were merely selling off the goods. There was no attempt at concealment in any way. They had no defence to offer, Mr. Nesbitt contenting himself with pointing out that they had abandoned all use of the labels complained of by the Sheffield firms.

Mr. Clark was committed for trial and his own personal bail accepted.

CANADIAN HARDWARE STORES

No. 3.

Some five years ago Jos. Akitt commenced a hardware and tinsmithing business in Creemore in a very unpretentious manner, and to-day he has a business and building that are a credit to himself and the smart little town in which he resides. The block which he erected at a cost of $3,000 a year ago is a handsome and substantial cement block structure, two-storeys high, with basement, the whole being fitted up and arranged to suit the hardware business, for which it is being used. The basement is used as a storeroom, and in the upper storey is situated the tinshop, where two men are kept constantly busy. The main floor of the building is, of course, where the general business is done. On the west side is where the shelf hardware is kept, stoves and other heavy hardware occupying the centre and east side of the store. The store is well lighted by two large plate glass windows in front, and a side window furnishes light for the office. In the evening a Siche gas plant illuminates the building very brilliantly and provides an abundance of light throughout. Besides himself, Mr. Akitt requires two clerks and a book-keeper to attend to his constantly increasing business.

Canadian Hardware Stores, No. 3—Joseph Akitt's Store, Creemore, Ont.

DEATH OF JAMES TEES.

By the death of James Tees, of Tees & Persse, manufacturers' agents, Winnipeg loses one of her best citizens. James Tees started his business life as a boy with the Canada Lead Works, in Montreal, ultimately going to Winnipeg as their manager there. In 1887 he resigned from the lead company and, with John Persse, formed the commission firm he was connected with at his death. He was only 52 years of age.

ATKINS PIONEERS.

Twenty years ago the pay roll of E. C. Atkins & Co., saw manufacturers, Indianapolis. Ind., contained the names of only 75 men, whereas 1,100 are now on the weekly time sheets. Of the 75 employes of a score of years ago 62 have formed an organization called the "Atkins Pioneers," they being banqueted by the firm a fortnight ago. Few manufacturing concerns can show such a percentage of their older employes still serving the company, a fact largely due, probably, to the fair treatment and profit-sharing system conducted by the Atkins Company.

SAVE RECEIPTS.

It is important that receipts should be properly filed and put away either in packages, dated and containing a list on the outside, or in some convenient form, says the Hardware Trade. Receipts have frequently saved merchants much trouble and expense.

The check is always a good receipt, but it becomes especially valuable when the account liquidated is stamped thereon, and the check then filed away—that is after its return from the bank upon which it is drawn.

"This check is in full payment of account due—." Or the partial payment on or of account for which it was issued, may be stamped on the lower corner on the back of the check, so as not to interfere with indorsements.

Keep a man busy on sharpening and repairing lawnmowers, saws, etc.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Solder—A further decline shown.
Turpentine—Prices are down 3 cents.
Window Glass—Quotations easier. Base price, $3.50.
Ingot Tin—Decline of 1 cent.
Pig Lead—Market higher.
Old Material—Yellow brass, quotations up one cent. Heavy red brass, an advance to 14½c. Stove plate scrap, prices easier, $10.50-$11.

TORONTO.

Turpentine—Quotations are down 2 cents.
Linseed Oil—Is quoted 1 cent lower.
Iron Pipe Fittings—Discounts increased from 2½ per cent. upwards.
Radiators—Discount increased from 5 to 10 per cent.
Ingot Tin—Outside markets are weaker.
Galvanized Sheets—Queen's Head is 5c. higher.
Old Material—Some prices have been shaded.
Bolts and Nuts—Prices are likely to advance.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 8, 1906.

While not quite up to last week's turnover, the business being done by the Montreal jobbers is very satisfactory.

Goods going out this week are representative of all staple and seasonable hardware lines, nor can special stress be made on any branch.

Guns and ammunition have begun to move fairly well, but the season has not yet really set in. The outlook for a big sporting goods trade is very bright.

An abnormal demand for cement exists. Nearly all the world's largest manufacturers, in England, Belgium and other European countries, as well as in Canada and the United States, are filled with orders for use in the reconstruction of San Francisco. Even the largest English interest, whose agents here have never before found any difficulty in obtaining early consignments of specifications, are now booked up for months ahead. Prices will no doubt be affected by this condition.

AXES—Business continues good with about the usual turnover. We still quote: $7.60 to $9.50 per doz.; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—There is nothing unusual to report. Our prices are: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—Trade is normal. Price remains steady at $4.25 for cold blast.

RIVETS AND BURRS—As usual, there are numerous orders coming in. Discounts are unchanged and are quoted as follows: Best iron, rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—The inquiry is satisfactory. We still quote: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b., Montreal.

MACHINE SCREWS—The customary trade is being done. We are still quoting the following prices: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—Prices are steadily held. We quote: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 and 5 per cent.

HORSE NAILS—Shipments are large and prices steady. Our prices are: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—The somewhat unsatisfactory situation mentioned last week, continues. We still quote, however, $2.15 per keg f.o.b. Montreal.

CUT NAILS—Business is only fairly brisk. We are quoting $2.20 per keg f.o.b. Montreal.

HORSESHOES—We are still quoting: P.B. new pattern, base price, $3.50 per 100 lbs.; M.R.M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes 25c. per 100 lbs. extra.

SPORTING GOODS—Business is commencing early this year, and it is generally expected that the season's aggregate will be very large.

BUILDING PAPER—The trade is quite without feature, and business keeps its normal status. Prices are unchanged.

CEMENT AND FIREBRICK—The demand just now is very heavy. Especially large orders are being placed for imported cement. White Bros.' English cement is experiencing a very large inquiry. We quote: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lafarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21 American, $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—Trade continues very brisk. Our prices are as follows: American Twin, 2 qt. $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—We are still quoting $1.45 per hundred square feet on an active market.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 8, 1906.

Summer and garden goods and tools have been the feature of recent business among the jobbing houses. Garden hose has had a particularly good run, and in lawn mowers the sale has been unprecedented, one firm reporting having sold twice as many as in any previous year.

Canvas and woven hammocks are going forward in large quantities, the many hued ones seeming to be the style asked for.

Cement prices are very firm, and manufacturers think there will be a shortage before the season closes. Everyone in the trade is working hard to get shipments out, but the demand keeps right up to them and there is little or no surplus stock anywhere.

Bolts, nuts, rivets and burrs are decidedly firm in price, and those who had contracts with the Toronto Bolt & Nut

Works have been compelled to look elsewhere for their supply, since part of that institution was burned. Stocks are by no means large, and it is not unlikely that an advance in prices may be made before long.

AXES AND HANDLES—Trade conditions normal, with no price changes.

CUTLERY AND SILVERWARE — A steady business continues to be done.

SPORTING GOODS — Baseball and lacrosse goods and fishing tackle continue in good demand, and guns, ammunition, etc., are selling well.

SCREEN DOORS AND WINDOWS — An exceptional business has been done in these goods, and many merchants are still sending in good sized sorting orders.

HAMMOCKS—The hot weather has created a large sale of these goods. A better class of hammock than usual is being asked for, and manufacturers are kept busy getting out stock.

LAWN MOWERS — The business in lawn mowers has nearly doubled that of last year, and jobbers have in some cases been compelled to re-order from makers to supply the unexpected demand.

LAWN HOSE—Plain hose is still going forward in good quantities, and some repeat orders are coming in. Other lines are also selling well.

REFRIGERATORS AND FREEZERS—A big business is reported in these lines, particularly the former, for family use.

WASHING MACHINES — Trade is on the increase and some large orders are reported.

CHAIN—We quote as follows : 1 inch, $6.60; 5-6 inch, $4.55; ⅞ inch, $3.95; 7-16 inch, $3.80; ½ inch, $3.65; 9-16 inch, $3.55; ⅝ inch, $3.45; ¾ inch, $3.35.

EXTENSION AND STEP LADDERS —Prices continue as follows : Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—Sales are reported large. We quote : 2-in. mesh, 19 w.g., discount 55 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE — We quote : $2.17½ f.o.b. Cleveland.

BARB WIRE — Prices remain the same. We quote : On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE — (Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues, with the usual business. We quote : $2.05 base.

CUT NAILS—We quote : $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7½ off list. "M.R.M." brand, 55 per cent off. "Monarch" brand, 50 and 7½ off. "Peerless," 50 per cent. off.

HORSE SHOES — Our quotations continue as follows : P. B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

RIVETS AND BURRS — Prices are very firm and stocks low. Indications are for still firmer prices, perhaps an increase.

SCREWS—All lines are selling well at present. No price changes.

BOLTS AND NUTS—The recent fire at the Toronto Bolt & Nut Works has had the effect of firming up prices, and it is not improbable that prices will be advanced as stocks are low.

CEMENT — Indications are that the market will be practically bare before the season closes. Builders and contractors are taking large quantities, and the recent San Francisco disaster has made the demand on foreign cement very heavy. We quote : For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIRE BRICK—There are no changes to record. English and Scotch firebrick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27½c. to 35c.

HIDES AND WOOL—Supplies are limited and business is very quiet. Prices are a cent higher.

Hides, inspected, steers, No. 1	0	12
" " " No. 2	0	11
" " cows, No. 1	0	11½

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 8, 1906.

A uniformly firm market is this week's metal report, in a nutshell. There is not a metal in the list which does not show added strength, with the exception of tin, which has declined again.

This latter metal is one on which it is impossible to make any safe predictions, as it is the favorite with speculators, and prices are at nearly all times practically artificial. After reaching its record price, tin began to decline, and another falling off occurred early in the week. Latest advices, however, are to the effect that firmer conditions prevail and higher prices are confidently expected.

While copper prices have remained unchanged for some time past, it does not mean that there has been any slackening in the demand. On the other hand inquiries are very numerous and there is a decided scarcity of spot copper. Local firms who are buying in New York really find prices higher in spite of the fact that no changes are made in the daily metal reports.

Zinc spelter is beginning to gain strength and there is a distinctly higher tendency to the market. In last week's U. S. markets, offerings were not up to the demand, which gave an added impetus to the situation. Sheet zinc is also firmer, though as the source of supply is different, advances have not yet been made to keep pace with the new values quoted last week on spelter.

Lead is going higher, the tendency being marked by an increase of five cents per hundred pounds this week. The tone is well maintained.

The same difficulty which was previously mentioned in connection with the pig iron market still rules. Many furnaces are unable to ship the softer grades on short notice, and this fact has increased the buying in the more expensive grades.

The most reliable reports on galvanized iron are to the effect that all the mills are very busy, and are heavily booked with orders. Prompt deliveries are almost out of the question and specifications have to be in well in advance. Market authorities say that prices are much more likely to go higher than lower.

COPPER—A scarcity exists and buyers find actual quotations really higher than those published. We still quote: Ingot copper, 21c. to 21 1-2c.; sheet copper, base sizes, 25c.

INGOT TIN—Another decline is reported, but the probability is that an early recovery from this temporary condition will be effected. Our price is from 45c. to 45 1-2c.

INGOT ZINC—Further advances are considered very imminent. Many of the large dealers are quoting higher prices than are given here, but the generally accepted figure is 7c. to 7 1-4c.

ANTIMONY—Though we do not change our prices, it will be found difficult to fill orders at these quotations. There is still no sign of an easier market. We quote: 29 1-2c. to 30c. per pound.

PIG LEAD—Another increase in price is shown this week and the new figures are very firmly held. We quote: $4.45 to $4.55 per hundred pounds.

PIG IRON—Conditions are unchanged. There is an active inquiry.

"Dom.," No. 1 $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19.00	"	"
" No. 3	18.50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	21 00	"	"
Clarence No. 1	18.00	"	"
" No. 3	17.65	"	"

BOILER TUBES—We quote: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 3-4c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our prices remain as follows: Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c.

MERCHANT STEEL— The market is firm all around. We give prices: Sleigh shoe, $2.17 1-2; tire, $2.27 1-2; spring, $2.75; toecalk, $2.82 1-2; machinery iron finish, $2.27 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and upwards; square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING— Our prices are: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch, to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—Prices are firmer, and in the opinion of experts, are very likely to advance. We quote: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge. $3.35; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—Market conditions are as firm as ever. We still quote: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

CANADA PLATES—Inquiry is active and we give the following prices: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TIN PLATES—Prices have not yet advanced, and we are still quoting: Cokes base size, IC 14 x 20, $4; charcoal, base size, IC, 14 x 20, $4.25.

TERNE PLATES—The situation shows no alteration. Our prices remain $6.85.

SHEET ZINC—This line is much stronger in tone, but has not yet followed the recent advance in spelter, the base of supply being different. We quote: $7.75 in casks; $8 in less than casks.

SHEET LEAD—Prices are being very steadily maintained. We still quote: 2 1-2 lbs., 5 1-2c. by the roll; 3 lbs. and heavier, 5 1-4c. by the roll; small quantities 25c. per hundred lbs. extra.

BAR IRON—No change in conditions is noticed. The market is still firm at $2.05 f.o.b. Montreal.

OLD MATERIAL—We give prices: Copper wire, 15 1-2c.; light copper, 14 1-2c.; heavy red brass, 14 1-2c.; yellow brass. 11 1-2c.; light brass, 7 1-2c.; lead, 3 1-4c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $10.50 to $11; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7 1-4c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 8, 1906.

While our quotations on ingot tin remain the same as a week ago it is largely because of a scarcity of stock locally. Speculation has been rife in outside markets, but at the time of writing the market is firming again after a slump, which carried priced down to a figure equalling less than 40c. in Toronto. The outside market is weaker than last week in spite of the latest advance, but as the tin market is in the control of a few speculators it is unsafe to make any predictions.

Copper and lead are both firm and zinc spelter is showing increased strength. Antimony is unchanged, and while iron remains as before bolts and nuts are understood to be on the eve of an advance, owing to the difficulty experienced in securing supplies since the burning of part of the Toronto Bolt Works plant. Queen's Head galvanized sheets have been marked up 5c.

PIG IRON—Trade continues active at the following prices: Radnor at furnace, $30; Hamilton at furnaces, No. 1, $20.50; No. 2, $20; Londonderry, f.o.b. Toronto, No. 1 $21.50, No. 2, $21; Middleboro, $21.50.

BAR IRON—Demand is keen and the market is firm at $2.15 base, f.o.b., Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Last week's figures of 43 and 45c. still hold good, with future prices in the hands of speculators.

TIN PLATES—We still quote: Cokes, base size, 14x20, $4; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS — Queen's Head has been advanced 5c. For other brands we still quote: 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. Buying is fairly active and quotations 23c. to 24c. per pound.

BOILER PLATES AND TUBES — The demand is steady and we continue to quote: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1½ inch, $8.50; 2, $8.80; 2½, $10.75; 3, $12; 3½, $15.80; 4. $20. Terms, 2 per cent. off.

LEAD—Lead is one of the finest and most active of metals just now. We quote $4.50 for imported pig, and bar lead at $5 per 100 lbs.

ZINC SPELTER — Conditions are firm with the market showing an upward tendency. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

COPPER—Business is brisk with prices unchanged. We quote: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

ANTIMONY — Prices are unchanged this week and we still quote 28½c.

OLD MATERIAL — No. 1 wrought iron is very active just now. Dealers' buying prices are as follows: Heavy copper and wire, 15½c. per lb.; light copper, 13¾c. per lb.; heavy red brass, 13c. to 14c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8¼c. per lb.; tea lead, $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4¼ to 4½c. per lb.; iron, No. 1 wrought, $10.50 to $11; No. 2 wrought, $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel, $5; old rubbers, 7¼c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Quotations remain as follows: Anthracite in cars at bridges, egg, stove and nut, $5.20; grate, $4.95; pea, $3.50, per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.50; ¾ inch, $2.40; mine run, $2.30; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, June 6, 19.6.

PIG IRON—Cleveland warrants are quoted at 50s. 1 1-2d, and Glasgow standard warrants at 50s., making prices as compared with last week 4 1-2d higher for Cleveland warrants and 6d higher for standard warrants.

TIN—Spot tin opened firm at £179 10s., futures at £178 15s., and after sales of 80 tons of spot and 470 tons of futures closed strong at £180 10s. for spot, £179 10s. for futures, making price as compared with last week £5 10s. lower on spot and £6 10s. lower on futures.

COPPER—Spot copper opened firm at £85 15s., futures £84 17s. 6d, and after sales of 150 tons of spot and 250 tons of futures, closed quiet at £85 15s. for spot and £84 17s. 6d for futures, making price as compared with last week unchanged on spot and 15s. higher on futures.

LEAD—The market closed at £16 15s. making price as compared with last week 2s. 6d higher.

SPELTER—The market closed at £27 10s., making price as compared with last week 5s. higher.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, June 7, 1906.

Statistics of ore shipments for May show that despite the recent ten days' idleness as a result of the longshoremen's strike, the movement of ore from upper lake ports to June 1 was only 60,000 tons less than at that time last year. This indicates that the present movement is at an unprecedented rate and that predictions of a record tonnage being brought down this season will be realized. The signing of an agreement by the marine firemen removes the last of the lake labor difficulties and insures peace for the remainder of the year.

The wide breach in prices between steel making irons and foundry irons continues, with the tendency toward a greater spread. As low as $15.75 Northern Valley furnace has been done on the latter, while Bessemer is exceedingly firm, a sale of 10,000 tons by the association to the Republic Iron & Steel Co. for August delivery at $17.25 indicating that no decline is to be expected. Basic is strong at $17, with some good inquiries pending.

An advance of $2 per ton on black and galvanized sheets has been announced. In view of the strength of this line, it was anticipated and no difficulty is looked for in establishing the new price. Tin plate is stronger than was expected since the recent advance.

U. S. IRON AND METAL TRADES.

From the Iron Age, June 7, 1906.

The market for steel making pig irons in the central west remains still, the largest transactions having been the purchase by the Republic Company of an additional block of 10,000 tons of Bessemer pig for August delivery at $17.25, Valley furnace. In the Chicago district negotiations are pending which may divert two merchant furnaces of the district from foundry iron to Bessemer. In the east one structural mill has purchased 15,000 tons of basic pig for the second half and a plate mill has taken 5,000 tons at $17.50 delivered.

Outside of some further buying of foundry iron by pipe makers in eastern Pennsylvania, the volume of business in iron for melters has been very light throughout the whole country. The associated Birmingham makers are firmly holding at $14, but outside makers are shading this 25c. In the central west $16 at furnace is being barely maintained. New England and southern New York are feeling the competition of Buffalo makers. The troubles with the molders in many sections of the country are causing consumers to hold up shipments.

Moderate sized orders for rails for this year's delivery are still being entered. The Baltimore & Ohio Co. have placed 4,000 tons. For 1907 there have been booked 35,000 tons for the Rock Island, 7,000 tons for the Raleigh & Pamlico Sound, and 4,000 tons for the Atlanta & North Carolina Railroad. Tomorrow the Transcontinental Railway of Canada opens bids for 65,000 tons of rails.

An advance of $2 per ton on sheets has been made, effective at once. The price of painted and galvanized sheets has been put up 10c. per square.

There are reports that concessions are being made by one very large interest on bars, thus meeting the demands of consumers who did not secure the 1.40c. basis.

There has been some heavy business in old material in the Pittsburg district, including from 12,000 to 15,000 tons of re-rolling rails and about 10,000 tons of melting scrap. Heavy offerings in Chicago and in the eastern markets have caused a sharp decline in scrap all along the line.

Japan has again appeared in our markets as a buyer of bridge material and of rails.

German iron and steel makers have been putting up prices rather sharply lately, and reports from England have been more encouraging. It is a significant fact that during last week a leading interest here has sold to England for delivery during the last quarter of the current year, 5,000 tons of sheet bars, at a very satisfactory price. This is regarded as illustrating the confidence which English buyers have in the continuance of present improved conditions.

U. S. TIN PLATE MARKET.

The American Metal Market Report of June 5 says: "There is no likelihood of any tin mills closing on account of the pig tin market. If the advance in tin is to be credited with any effect at all, it would be an effect already felt in the closing of mills now idle.

"There is every prospect that the production of tin plate by the leading interest will be as great in the third quarter as it is in this quarter and it may easily be greater. This is in striking contrast with the conditions last year and the year before, when the bulk of the tin mills were closed around July 1.

"At the present rate of production of tin plate by the leading interest, and with a continuance of as liberal specifying on old contracts, it could go through the balance of this year without booking a pound of new business.

"The larger independents state that from the present outlook they will keep their mills in operation right through the Summer months, at full capacity, except that, on account of the Fourth coming in the middle of the week, it is probable that they will close for that week.

"The condition in the sheet and tin plate industries this June is directly opposite to that prevailing in June last year or year before. In those years the material, particularly tin plate, was made chiefly in the first half, and largely shipped in that half. Now the stocks are nothing at mills, and apparently light in the hands of consumers. To June 1 the leading interest had shipped 50,000 tons more of sheets and tin plates than in the corresponding period last year, although its shipments then were very heavy, and easily a record to that time.

New Brunswick Trade News

St. John, N.B., June 4.

Some time ago mention was made in this column of several of the inventions recently perfected by Mr. Frank A. Harrison, of Sackville. Mr. Harrison has now almost completed the organization of a company which will put these and other inventions upon the market. The company, solely Canadian in its composition, and with a capital of $300,000, will be known as the Harrison & Knight Company, and will have its plant at Newark, N.J. Mr. Harrison speaking to your correspondent recently said that it is expected that the company will open a Canadian office as soon as circumstances make it advisable to do so. Among the inventions which are to be exploited are milling cutters formed on lines thought out by Mr. William Knight, a New Brunswicker associated with Mr. Harrison, and Mr. Harrison's adding machine, compound calculating machine, automatic newspaper addressing machine, office type of automatic addressing machines, multiple ribbon mechanism for typewriters and a typewriter with visible writing, no shift keys, automatic device, electric key action, etc. Two other inventions with which experiments are now being made are such, Mr. Harrison said, as promise to revolutionize two great industries. Among the stockholders in the new company are several St. John men and a larger number are men from other Maritime Province points.

* * *

John J. Lelachem has acquired the local hardware business formerly carried on by the late Mr. J. W. Addison. The business is one well established and as Mr. Lelachem has had considerable experience as an employe of the firm of Messrs. T. McAvity & Sons, his success in his new venture would seem to be assured.

Another business change that may be noted here has taken place at Dorchester. This is the purchase of the plumbing business of Messrs. Hebert Bros. by W. H. Carter, of Sackville. The latter will continue to carry on his Sackville business.

C. A. Atkinson, who for a number of years past has been in the employ of Messrs. T. McAvity & Sons, has left St. John to take a position in New York. Before leaving this city he was presented with a handsome ring by his fellow employes.

* * *

Trade generally is now such as may be rated as fair. Some lines show to slightly less advantage in the sales column than usual, but on the whole there is little cause for complaint. As noted a week or so ago, the demand for sporting goods and Summer household accessories is continuing strong.

* * *

A few weeks ago the outlook was that the call for building materials would not approach the average of most other years. Now, however, the signs are that the demand is to be equal to that of past seasons. The demand is more noticeable in provincial towns than in the city. In many of these towns the builders are to have much to occupy them and their activity will be reflected in the business of the hardware dealers.

Hardware and Metal Conditions in Manitoba.

Market quotations corrected by telegraph up to 12 a.m. Friday, June 8, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

Wholesale hardware business continues very active. Staple lines are pretty firmly held at present prices and there are no quotable changes of importance.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE—Retail competition is still reported as being very keen. Jobbing prices are steady. We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS—Revised list and discounts are now as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅜ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅜ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ¼, $7.20; ⅝, $4.60; ½, $4.30; ¾, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—The list on "Irwin" auger bits is now the same as on common bits. Discount on "Irwin" is 47½ per cent., and on the common bits 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES — The price is now 1¾c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 p.c.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 25c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Price has been reduced ½c. per lb. Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC. — We quote as follows: Cartridges, Dominion R.F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33½; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Elev's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.00; chilled, $7.50; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—We quote: Bar iron (basis), $2.70; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—As noted last week the price has been advanced to $5.25 per cwt. with a reduction of 25c. per cwt. for ton quantities.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are steady. We quote: Silver Star, per gal., 21½c.; Sunlight, 22½c.; Eocene, 24½c.; Pennoline, 25½c.; Crystal Spray, 24½c.; Silver Light, 22½c.; Gasoline, 70-72 (engine), 25½c.; in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE Quotations are: While lead, pure, $6.75; bladder putty, in bbls., 2½c.; in kegs, 3¾c.; turpentine, pure, in barrels, $1.07;

less than barrel lots, $1.12; linseed oil, raw, 64c.; boiled, 67c.

WINDOW GLASS — We quote : 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40. 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00; 26 to 40, $4.52; 41 to 50, $4.75; 51 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75;91 to 95, $17.30.

NEW ONTARIO COAL.

The announcement made by Hon. Frank Cochrane that anthracite coal had been found in Northern Ontario is of great importance to the province, as the industrial importance of coal to the country cannot be over-estimated. At present Canada's coal supply lies in the extreme east and the extreme west, hence the discovery of coal in Ontario, and hard coal at that, is a thing that means a lot for Central Canada. Until further evidence is produced, however, this discovery should not be too quickly taken for granted, for the same reports were circulated some few years ago, when hard coal was supposed to be found at Sudbury. A company was floated to develop these mines, but it was found that their find consisted simply of a material called anthraxolite, which is not at all valuable as a fuel.

The Intercolonial Railway has called for tenders for car and machine shops at Moncton. They will be 630 by 132 feet.

RANCH FENCING

We are putting on the market a Woven Wire Fence in 40 rod rolls. This is a special ranch fence and a winner—it competes with barb wire, weight of roll considered.

MUNRO WIRE WORKS, Limited

METAL CEILINGS

Hardwaremen who keep in touch with their customers, and our Ceiling, cannot be euchred out of their orders.

But you must have the ceiling in stock if you want to talk business.

You can get Samples and Prices.

METAL SHINGLE & SIDING CO., Limited

PRESTON, ONTARIO

Nova Scotia Trade News.

Halifax, N.S., June 6, 1906.

There need be no idle men in this city, or in any other part of this province, this season, as there is plenty of work going on, and in consequence money is in freer circulation. Sewer building, the preparations of the new buildings for the Dominion Exhibition, and the erection of many other buildings in Halifax this year, has made labor in good demand. The city works department has even had to advertise for unskilled labor, which is something out of the ordinary, as there are usually more men applying for work than there is room for. Not only is labor in good demand here, but also in Cape Breton, where it is stated that it is difficult to obtain the required number of men to work the various collieries.

* * *

Trade is steady and fairly good. Haying tools are selling freely and there is a good demand for paints and oils. The prices of these articles are unchanged, as well as white lead. Some of the jobbers are complaining of the slow delivery of goods from the American markets. They state that their goods shipped via Boston, by steamer direct here, are held at the American port for as long as two weeks, owing to the great crush of freight on the steamers plying between these two points.

* * *

The new brick power house at Dominion No. 2, C.B., which is to be used by the Dominion Coal Co. as its central station for the developing of electricity for the various collieries, is now completed. W. A. Foley, inspector of the Goldie, McCulloch Co., of Galt, Ont., superintended the installing of the engines and machinery. The engines, of which there are three, are of the most modern type constructed, with a cylinder speed of 20 and 40 by 36, with a speed of 120 revolutions per minute. They are of the direct-connected type, horizontal, 800 horse-power, and will run parallel to each other. The latest patent of the Westinghouse generator will be used.

* * *

At the annual meeting of the Canada Electric Co., held at Amherst, a dividend of 5 per cent. was declared. The old board of directors was elected, as follows: M. D. Pride, D. W. Robb, B. D. Bent, J. A. Dickey and N. A. Rhodes. At a subsequent meeting of the directors M. D. Pride was elected president, and J. Alder Davis secretary and treasurer.

* * *

The Robb Engineering Co., of Amherst, have shipped two one hundred horse-power engines to the Atikokan Iron Co., of Port Arthur, Ont.

* * *

Amherts, N.S., is to have another new industry. A company has been formed there called the Amherst Malleable Iron Co., with $100,000 capital. A large portion of the stock has been subscribed by Amherst men. Malleable iron goods of all kinds will be made, especially such as are required by railway and street cars, large quantities being used by the Rhodes Curry Co. A brick building 360 by 75 feet will be erected immediately at the south end of the town, and fifty skilled workmen will be employed at the start. The officers are N. Curry, president; J. Crossman and G. Sauber, vice-presidents; John J. Lawlor, general manager. These, with William Knight, are the directors. Messrs. Sauber and Lawlor are enterprising experienced men from the United States, the former having established successful electro plating works here a year ago, and the latter a capable foundryman from the Pittsburg district. The company starts with fine prospects of ranking among Amherst's successful industries.

* * *

An interesting booklet descriptive of "Rampart" Cement has just been issued by the Sydney Cement Co. The booklet is neatly and attractively gotten up and contains different analyses of the cement, testimonials from many persons who have used it, including General Manager Jones, of the D. I. & S. C.; City Engineer Yorston, and Jas. T. Burchell, president of the Gowrie & Blockhouse Co., and pictures of buildings where the cement has been used.

AMERICAN HARDWARE IN TRANSVAAL.

United States Consul Snodgross, of Pretoria, writes as follows in response to a West Virginia letter desiring procedure methods for selling axes and scythes in South Africa:

An interview with a leading hardware merchant of Johannesburg disclosed the fact that the firm made all their American purchases through a New York agent and they did not care to enter into new arrangements. The same reply came from other hardware firms. Hardware men say they are purchasing but little this year on account of the flooding of the country with $15,000,000 of army stores, which were thrown on the markets at very low prices.

The American ax will never find a valuable market here, on account of the lack of forests and timber, though the American hatchets (called axes here) will always be in demand for building purposes. The home or business block is usually erected with building cement, lumber being extremely high in price. Scythes are not needed, as the veldt is used only for grazing land.

Despite the fact that hardware merchants assert that they are overstocked, the United States has been making gains in her hardware exports to this country since the close of the war. The following table also shows that Great Britain sustained quite a loss in hardware sales last year:

Country.	19 3.	1904.	1905.
England	$1,022,000	$1,519,000	$2,047,000
America	172,000	530 000	591,000
Germany	13,000	333 000	440 000

America and Germany greatly increased their trade, and it is evident that they are going to hold it. I give herewith the leading hardware firms in the Transvaal. Those marked with an asterisk (*) are large buyers.

THE QUALITIES OF SOFT SOLDER.

As there is very little difference in the strength of the soft solders composed of tin and lead, it is apparent that the best solder is one which has the lowest melting point. The following figures from an English exchange illustrate the change in melting point which takes place when tin and lead are alloyed:

Mixture.	Melting point.
Pure tin	442 Deg. F.
Tin, two parts; lead, one part	340
Tin, one part; lead, one part	370
Lead, two parts; tin, one part	441
Pure lead	608

It will be seen that the solder with the lowest melting point is the mixture of two parts of tin and one of lead (or tin 66 per cent. and lead 34 per cent.) As this mixture is the eutectic—i.e., the mixture with the lowest melting point of the series—there is no white spot in the centre of the cast bar. White spots on bars of solder are caused by the presence of two or more sets of alloys. When a solder bar cools, the alloys with the higher melting point set first in the form of crystals, while the eutectic, being the one with the lowest melting point, and comprising the greater portion of the metal, is the last to cool. The crystals, therefore, are imbedded in the matrix of the eutectic, and so form white spots. By the use of a mixture of tin and lead which is all eutectic the whole bar sets at once and there is no crystallization or white spots. For this reason a two and one solder makes the best looking bar. Solder makers frequently make this mixture by mixing the tin and lead and pouring the metal on a cold iron plate. If the top shows the white spots, then more tin or lead must be added. For purposes where the very best solder is required and one with the lowest melting point, the mixture of two parts of tin and one part of lead is the most satisfactory.

PROGRESSIVE RETAILING

A PERCENTAGE SYSTEM OF DOING BUSINESS.

A percentage system of doing business offers advantages to a business man, whether manufacturer or retailer, for it gives him a track on which to run his business, and a time schedule with which he must keep up. It fixes the mark at which he is striving, a certain reward for his work, or profits at the end of the year, and it guides him in buying and selling his goods during the year. Percentages in various enterprises differ, and for a general illustration a theoretical case may be taken, and business men may adapt it to their own conditions.

Figuring it Out.

In a retail store let the total volume of business be 100 per cent. Let it be divided into profit at 10 per cent., cost of operating, or selling goods, at 20 per cent., and 70 per cent., the cost of stock. Profit is the vital point to the retailer. He must earn enough money from his business to secure for him a reasonable living. If he wishes $2,000 a year in profits, and estimates his profits at 10 per cent. of his volume of business, he must do a business of $20,000 per year. His 20 per cent. for operating, or selling his goods, will allow him $4,000 a year for that purpose upon a basis of a business of $20,000 a year, and then allowing 70 per cent. for stock, he will have $14,000 with which to buy goods. This divides his annual business as follows: $14,000 cost of stock, $4,000 cost of selling goods, $2,000 profit.

Basis for Reckoning.

The percentages may differ, according to the nature of the business, but the system will apply to any business. A retailer or manufacturer must secure his own percentages and fix them according to his own judgment. He may secure a basis for reckoning by taking the total volume of his business for the previous year, and then figuring the percentages of profit, operating expenses and cost of stock. Naturally he looks upon his percentage of profits as the most important item.

Keeping up to Standard.

Having made up this table of percentages, he has a guide for buying and selling, and running his store. He has a mark at which he is striving, a certain profit at the end of the year, and he regulates his business accordingly. He does not worry and guess what profits his books will show at the end of the year. He has in mind a certain profit which his business must bring if managed rightly, and he devotes his energies to managing it rightly. He allows a certain percentage for new goods and a certain percentage for expenses, and he fixes them so that he will get a certain profit, of which he is ambitious.

An Illustration.

An ingenious illustration of this percentage system in minute detail may be worked out on paper. Consider an article that retails at $2—a hat, shoes, gloves, a razor or any other article. Let its cost be estimated at 70 per cent., or $1.40; the cost of selling it at 20 per cent., or 40 cents, and the profit on it at 10 per cent., or 20 cents. This brings the seling price to $2.00. To get a profit of $2,000 a year a retailer must sell 10,000 of these $2 articles, or $20,000 worth.—F. A. Gannon in Ad Sense.

WHERE TO GET THE PROFITS.

One of the secrets of success in the storekeeping business is in knowing where to put the profits.

Marking a level per cent. of profits on all kinds of goods will not work out right, as many merchants who have tried will testify. The merchant who succeeds has his "leads" and "drives" which he sells possibly at cost and possibly at less. Staple lines, too, are usually sold on a close margin. It is on those goods which are not exactly like his competitors, and on those the value of which it is most difficult to judge that the shrewd trader makes his money.

A Good Reputation.

The problem which is constantly before the merchant is how to get a reputation for selling cheap, at the least expense. It is not so very hard to get the reputation, but where some men make money is in knowing how to get the reputation without making the cost too high. They do this by knowing how to adjust their profits.

A merchant should buy goods especially for leaders, and these should be of a kind not easily duplicated from his competitor's stocks. A drive in 10 cent goods is always effective. Most merchants find that the medium grades of merchandise will stand a better per cent. of profit than the highest or lowest qualities.

FOUNDRY AND METAL INDUSTRIES

The zinc smelter at Frank, B.C., will be in operation soon. Thos. Jones is manager.

The average daily output of the Dominian Coal Company's mines is now 14,000 tons.

The Ottawa Furnace & Foundry Company's plant is being offered for sale by the liquidators.

The earnings of the Lake Superior Corporation for the year ending June 30 next will amount to $5,200,000.

British Columbia lead production during 1905 amounted to over fifty-six million pounds, valued at $1,971,818.

The Dominion Steel Co. and the Soo Company are said to have enough orders on hand to keep them going for two years.

The Canadian Westinghouse Electric Co. have the contract for machinery for lighting the new Traders' Bank building, Toronto.

The Malleable Iron Company, of Amherst, N.S., will commence building their new plant at once. It will be of brick, 300 by 75 feet.

The Western Iron Works have opened up a new factory at Elmwood, Winnipeg, for the manufacture of ornamental and architectural iron work.

The United States Steel Co., which it is understood purposes erecting a million dollar plant near Sandwich, Ont., have paid over $17,000 cash for the land.

Preparations are being made to start the Belleville rolling mills. Cars of scrap and sortings are on the way. The new company will be known as the Toronto & Belleville Rolling Mills Co.

The by-law to give the Canadian Iron & Foundry Company a $20,000 site for the car wheel works was carried at Fort William and work will be commenced at once on a plant that will produce 75 tons of finished product a day.

A Glace Bay despatch says the Dominion Coal Company now have ten mines producing. Total shipments for the month were 330,015 tons. If sufficient labor can be procured the June output is expected to be the largest in the history of the company.

The Toronto & Belleville Rolling Mills have been incorporated under Dominion charter with a capital stock of $599,900 for the purpose of taking over the interests of the Iron & Steel Co. of Canada and carrying on the manufacture of iron and steel. The provisional directors are W. D. Morris, Henry Nicholson, G. E. Barber, R. G. Code and E. F. Burritt, with chief place of business at Belleville.

Cheap, Unreliable Paint is a Costly Investment That Pays Poor Dividends to the Dealer

The Man-in-Business, or the Man-about-to-go-into-Business, who contemplates handling paints, cannot be too careful of the line he selects. He can make or break his reputation on the goods he handles. Unless he gives honest paint value, his business will be neither stable nor profitable. Cheap, unreliable paints cannot get trade and hold it.

SHERWIN-WILLIAMS PAINTS

are dependable. They meet every requirement of both dealer and customer. The S-W. Co. manufactures a paint for every painting purpose, and every one of them is made just as good as paint can be made. The materials used are carefully selected and tested, expert paint makers are employed in their manufacture; the machines for mixing and grinding are made in the Company's own machine shops, and the paints are right in every respect. Behind *The S-W. Products* is a reputation of forty years of honest paint making. They are recognized universally as the standard of excellence.

If you want a line that will bring trade to you—and keep it—*The Sherwin-Williams Paints* should be on your shelves. We have strong selling helps for the dealer, and these, coupled with the high quality of our products, make rapid and profitable sales.

Write us today about it.

1617

THE WORLD'S IRON INDUSTRY.

It is estimated that the iron ore used to date aggregates 3,300 million tons, and that the consumption of raw iron has multiplied twenty-five times. In 1800 the world absorbed 2,000,000 tons, while at the end of the century the figures were 50,000,000 tons. The following table will show the rapid increase of cast iron since 1800, in millions of tons:

Country.	1800 to 1825.	1825 to 1850.	1850 to 1875	1875 to 1901.	Total.
United States ...	2	9	31	245	287
England	8	40	120	230	398
France	3	10	25	56	94
Germany	2	7	23	145	177
Others	5	14	31	94	144
Total	20	80	230	770	1,100

The following table shows the great increase in the average annual output of the individual blast furnaces of each country:

Country.	1870. Tons.	1903. Tons.
United States	6,344	95,000
Germany	6,400	41,000
England	9,120	26,100
France	4,400	24,800
Belgium	13,380	34,745

The manufacture of cast iron for the years 1904-5 is estimated as follows:

Country.	1904. Tons.	1905. Tons.
United States ...	16,497,033	25,000,000
Germany	10,103,941	11,000,000
England	8,562,658	9,000,000
France	2,800,000	3,000,000
Russia	2,300,000	3,000,000
Belgium	1,300,000	1,350,000
Other countries...	3,000,000	3,000,000
Total	44,563,632	55,350,000

President Hadfield, of the Iron and Steel Institute of England, said in May last that the demands of the century in cast iron, taking as a basis the production of the last thirty years, would amount to about 54,000,000,000 tons of ore. If this hypothesis is granted, which is considered arbitrary, the stock or supply on earth would be exhausted before the twenty-first century.

TURPENTINE IN JAPAN.

The weekly report of the department of trade and commerce, issued May 28th, contains an interesting letter from Alex. MacLean, the Canadian commercial agent in Japan. He says in part:

"Inquiry called for by Canadian correspondence, discovers that turpentine is so scantily manufactured in Japan that no statistics are kept of it. It is not so commonly used here as in Europe and America. The Japanese native houses are not painted either inside or outside; plain finish of natural wood being the universal practice. The houses of foreigners, built of course in foreign style with some far Eastern peculiarities of design and finish, are liberally painted; but these make a comparatively small aggregate. For other industrial and for miscellaneous uses turpentine is required to the same extent perhaps as in other countries. The importation is mainly from the United States, England and Germany, as the following quotations show:

Oil or Spirit of Turpentine.

	Quantity.	Value in yen.
1903.	38,935 gals.	49,515
1904.	25,540 gals.	42,164
1905.	27,648 gals.	35,628

Country.	Quantity.	Value in yen.
England.	12,235 gals.	15,512
United States. . . .	15,405 gals.	20,097
Germany.	8 gals.	18

Note.—(1 yen equal 50 cents.)

A foreign firm, extensively engaged in trade throughout the Far East, say that most of the turpentine used here comes from New York; but if the Canadian producer could supply the right quality at about 75 cents (gold) per American gallon c.i.f. Japan ports, some market might be found. It would be necessary, however, to send samples in advance. The packing best suited for this market is cases containing two five-gallon tins.

It may be remarked that, for reasons of greater cheapness, benzine or some by-product of coal oil takes the place of turpentine greatly in the matter of paint thinning.

TO BURN LETTERS ON GLASS.

The following instructions apply where each letter is to be outlined with a burnished line 1-4 inch wide, the interior of the letter being in a dull gold.

Lay the glass flat on the table, and for the parts of each letter which are to be in dull gold leave plain glass; plate coat the rest with embossing black. The exposed portions of the glass should then be eaten away with hydrofluoric acid, which will not attack the covered portions and will do its work in a few minutes to a half-hour, depending on the strength of the solution. To ascertain the depth to which the acid has eaten, draw a needle or other fine steel instrument against the edge of the letter. When deep enough, pour off the acid and wash the surface of the glass with clean water. Remove the black with turpentine.

Gild the letters, allowing the gold leaf to come beyond the edge of the letters to the required width of the burnished line. Use a weak solution of isinglass as a medium. When dry protect the gold line by a coating of red lead and gold size. When this is hard the surplus gold may be readily washed off.

If the plate glass cannot be removed from the sash, the acid cannot be used in the manner described. In such case lay the gold around the edges of the letters on the back, on a weak solution of isinglass. Cut the gold on a cushion and place on the wet size. When dry, the gold from the face side will appear bright. It may be further burnished, if desired, by rapidly pouring hot water on the letters and allowing it to run off, using great care to prevent the gold washing off, if a weak solution is used. Paint the line of gold in with a backing of gold size or varnish and red lead, and when it hardens wash off the gold beyond the edge of the line. To make the letters appear dull done to the edge with isinglass, write the inner part in with pale varnish and when almost dry, gild.

TO CLEAN WINDOW GLASS.

To thoroughly clean window glass pass diluted sulphuric acid, about as strong as vinegar, over it, and let it act a moment; then throw on just enough pulverized whiting to give off a hissing sound, directs the Master Painter. Rub both over the pane with the hand and polish with a dry rag. Rinse with clean water and a little alcohol, polish dry and clean. Treat both sides of the glass in the same way.

To business that we love we rise betime and go to 't with delight.—Anthony and Cleopatra.

"Say! that Elastilite of yours is great varnish, painters in our town will have nothing else."

The above is what a prominent hardware merchant told us in our office last week when placing a rush order for a further supply. If you haven't got the painters' trade in your town, try them on Elastilite. Send us the names of your painters and we will submit through you free samples for test.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 8, 1906.

The month of May, just closed, has been one of the busiest on record. Canadian manufacturers have been hard pressed to make deliveries with any degree of promptness. June, too, has opened up well, and although orders are not so heavy as during the previous month a good brisk business is expected to be shown.

Paris green is in very active demand and prices are firmly held. The condition of essential chemicals remains such that easier prices on this material cannot be looked for.

As predicted last week, there has been a decline in turpentine, this week's price being 87c. for single barrels. A good deal of excitement has been caused in this market by the ridiculously low prices quoted by some dealers, who appeared to lose their heads at the first sign of a falling market. Quotations this week are fairly steady.

Linseed oil has fluctuated somewhat during the past few days, but in spite of slightly shaded prices in the Old Country it is not probable that they will be effective here for some time yet.

There has been a very large inquiry for white lead. Most of the grinders have found it impossible to secure sufficient stocks of the domestic product, and imports are large.

As was foreshadowed in our last report, glass prices have dropped somewhat, a decline of 50c. per hundred feet having been declared. The difficulty experienced last week in transferring glass from the wharves to the trains has been to a great extent obviated by a majority of the striking carters going back to work.

TURPENTINE—There has been a decline of 3c., though present conditions do not really justify any expectation of the bottom being knocked out of the market. Our prices are: Single barrels, 87c. per gal.; 2 barrels or over, 86c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

LINSEED OIL—Easier prices prevailed early in the week, but the market has now firmed up, and we still quote: Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.

GROUND WHITE LEAD — Demand continues large and prices are stiff. We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC—Import prices have advanced but the local market is unchanged. Our prices are: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2 -lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD — Prices are firmly held as follows: Genuine red lead in casks, $5.75; in 100-lb. kegs, $6; in less quantities at the rate of $6.75 per 100 lbs.; No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

GUM SHELLAC — We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—The Old Country market continues to advance, but we still quote as follows: Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—We quote the following prices, which are subject to withdrawal or change: Barrels, 600 lbs., 19¼c. per lb.; kegs, 250 lbs., 19½c. per lb.; 50-lb. drums, 20c. per lb.; 25-lb. drums, 20½c. per lb.; 1-lb. pkts., 100 lbs. in case, 21c. per lb.; 1-lb. pkts., 50 lbs. in case, 21c. per lb.; ½-lb. pkts., 100 lbs. in case, 23c. per lb.; 1-lb. tins, 100 lbs. in case, 22c. per lb. Terms 2 per cent. 30 days.

GASOLINE—Price has risen of late, and ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at the advanced price of 24c. in bbls.

WINDOW GLASS—Lower prices are quoted this week. The carters' strike is practically killed, and all orders are going forward freely. We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break,

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 8, 1906.

Linseed oil is weaker again this week, although the outlook for seed is not any better. The only reason for the weakness is that the British demand this year is not up to the usual, so that while the production cannot be said to be extra large, neither is the consumption. The Canadian demand is large, but hardly large enough to permanently affect prices.

Turpentine is down another two cents. What turpentine will do it is hard to say. There is a feeling generally that it must go down several cents yet, but the fact that contracts at the present price have been refused by the producers in the south, would lead one to believe that prices will be well maintained.

Paris green holds at the same prices, but not much is being sold. There is still a lot to go out at old prices on orders taken before the rise, but outside of this trade is inactive.

There is no change in white lead. Shipments are hard to get, and the demand keeps up.

There is nothing to complain of in business. Everyone is on the go and orders are coming in good. This seems to be a year of specialties, every large house having some particular line which they are advertising and pushing.

TURPENTINE—Single barrels 90c., 2 to 4 barrels 89c., f.o.b. point of shipment, net 30 days. Less than barrels, 95c. per gallon.

TORONTO GLASS MARKET.

Something like a glass war has been going on among jobbing houses for months past, and it does not seem to have neared the end yet. An effort has been made to get prices back to the former figure, but, if anything, the cutting has become more keen, some houses offering an extra fine cut for preferred customers. Stocks have been, and still are, heavy, and although the large manufacturers in Europe have come together with a view to restricting the output, so far as this country is concerned no effect has been felt, and the indications are that while stocks are large the market will continue to be weak.

Handling a poor line of lawn hose don't pay. The customer won't remember you offered to sell a better line for more money. All that will be remembered is that the goods were bought at your store and it's two to one that another merchant will get the business next time.

AIDS TO CONTENTMENT

How often you hear the retail merchant say he would be perfectly contented in business if it were not for the credit system! Did it ever occur to you that you can to a large degree eliminate the credit business by having a simple method of rendering accounts? The

Crain Monthly Account System

is recognized as one of the greatest agencies to this end. By the use of carbon paper the same writing makes your day-book entry and charges the items direct to the customer's bill. It is simple, accurate and time saving.

Then render your accounts monthly and you will be surprised at the results. It is the nearest approach to a cash business.

Write us for information.

FIGURE UP YOUR SALES OF

WALL PAPER

You will find that out of last season's sales you made your biggest profits on the Staunton lines. Two ways to prove it—selling price over cost price, and so little Staunton stock among the "left-overs." Another reason why Staunton Wall Paper is best to carry is that in originating the season's patterns and colorings Stauntons get closest to what the actual demands of the market will be.

Stauntons' Travellers

will soon be on the road with samples for 1907. Don't place an order until you see their new colorings, new designs and new prices.

STAUNTONS

LIMITED

Wall Paper Manufacturers **Toronto, Ont.**

WALL PAPER.

At the present time the manufacturers are very busy with their samples for the next season. The season, according to what can be gleaned at this date, will be replete with novelties of every description. It is promised that the lines placed on the market this coming season will be better and of greater range than any seen heretofore. It is as yet a little too early to go into the matter of samples for the next season, that is to speak authoritatively on them, inasmuch as the manufacturers themselves have not yet completed their plans as to colorings; final decisions as to patterns and other matters still occupy the attention of many. A record season is anticipated on all sides, however, and steps are being taken which will place the trade in a position to fill all demands.

Possibly the outstanding feature of the new samples will be the brighter colorings. A richer coloring scheme is demanded and the mills have turned out already many neat designs. One large manufacturer stated he was convinced that red was a past favorite. Red, which has had such a run in the past, apparently has given way to greens, browns, and greys, which are expected to be excellent sellers. Greens and greys are held to be the favored shades by a great many, while others give preference to browns in place of greens.

Flat effects are prophesied for next season, many being of the opinion that they will be largely used. For the high-class trade German characters in fine coloring effects are being shown, among other lines.

The staple cheap lines do not show any great changes for the coming season. There are the usual number of new patterns and some good designs rather out of the usual will be shown.

Put the store literature, the trade and advertising journals in the way of the salesmen and encourage them to read them. Reading of that sort is bound to increase their efficiency and stimulate them to better work.

Clerks should understand that they are not paid merely to sell goods but also to make a profit for their employer and to send away every customer well pleased.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

Saskatoon has purchased four acres for a power plant site.

The McLaughlin Carriage Works will build a warehouse at Calgary.

A knitting factory is proposed for Ingersoll, Ont. $10,000 will be expended.

W. A. Preston, of Fort Frances, Ont., and others, will build a pulp mill at that town.

Kingston ratepayers carried their by-law to raise $85,000 to improve their lighting system.

Telford & Co., bankers, of Owen Sound, have sold their business to the Sovereign Bank of Canada.

E. F. Hutchings, of Winnipeg, and others will establish a harness factory at Portage la Prairie, Man.

Fort William ratepayers have approved a by-law to raise $125,000 to bring water from Loch Lamond.

Toronto is now the chief banking centre of Canada. It has more than doubled its business during the last ten years.

G. W. Archibald & Co., Winnipeg, have the contract for the mill for the Maple Leaf Milling Co., at Kenora, Ont. The price is $200,000.

In a 24-hour run the rail mill at the "Soo' has just turned out 859 tons, a few tons above the record run recently made by the Dominion Steel Co.

B. W. Snow, the Chicago crop expert, says Canadian crop conditions were never more perfect than at the present time. The increase in the entire Canadian wheat acreage is 10 per cent.

The Catholic School Board, of Montreal, have decided to purchase a lot on Haymarket square, for the purpose of erecting two schools for the parish of St. Helen. The construction of a school for boys will be undertaken at once, but the erection of the other, which is to be a girls' school, will be deferred until next Spring.

The Electric Heaters have been incorporated under Dominion charter with a capital stock of $100,000 for the purpose of manufacturing and dealing in apparatus for use in generating heat and light. The provisional directors are A. F. Leggatt, W. L. P. Smith, C. H. Stapeldon, C. L. Bishop and A. A. Sears, with chief place of business at Ottawa.

The Morse Hardware & Lumber Co. have been incorporated under Dominion charter with a capital stock of $100,000, for the purpose of conducting a wholesale and retail hardware and lumber business. The provisional directors are H. V. Morse, J. T. Douglass, Elise Morse, Martha Ellen Douglass and S. G. Sanford, with chief place of business at Swan River.

A Winnipeg despatch announces the turning on of the power at the Winnipeg Electric Street Railway Company's great plant on Pinnawa Channel, Winnipeg River. The plant is located 60 miles from the city, and is capable of developing 10,000 horse-power, which will be transmitted to Winnipeg for the company's street railway system, lighting, manufacturing purposes, and will enable them to practically cut their former charges in half.

BUILDING NOTES.

T. H. Jones, of Edmonton, will build a $4,000 house.

Winnipeg will erect a new fire hall in Elmwood district.

The Travelers' Club of London will build a clubhouse.

Dr. Bennet, of Tillsonburg, will erect a private hospital.

John Regan will build a $5,000 residence at Edmonton.

Toronto building permits during May amounted to $1,500,000.

McLeod, Alberta, has voted $95,000 for a waterworks system.

L. Goodridge, of Edmonton, is having the Jaspar House enlarged.

St. Johns Presbyterians of Vancouver will build a $47,000 church.

Winnipeg has passed the $5,000,000 mark for building this year.

C. W. Hall, Brandon, has the contract for a new school in that city.

A. St. G. Hamersley, of Vancouver, will build a three-storey hotel.

An Anglican church will be erected at Pembroke, Ont., to cost $15,000.

The Jordan block, Goderich, will be altered to suit the Sovereign Bank.

The Presbyterians of Vermillion, Alberta, ask tenders for a new church.

Brantford public school board will spend $45,000 in school improvements.

The Queens Hotel, of North Bay, Ont., is being enlarged at an expense of $10,000.

The Berlin Robe & Clothing Co. have begun an addition to their factory in that city.

The Charles Thackeray Co. have the contract for the new Royal Bank in Montreal.

Montreal building permits for the first four months of the year amounted to $2,064,818.

The Protestant School Commissioners of Quebec ask for tenders for a new public school.

Lyall & Sons have the contract for a large addition to the Windsor Hotel, Montreal.

ment ask for tenders for a post office at St. Mary's, Ont.

The Moose Jaw Brewing & Malting Co. will build a malt house that will cost about $250,000.

FROST & WOOD'S NEW PLANT.

Frost & Wood Co., Smith's Falls, have now well under way a larger plant than ever to replace the one destroyed by fire recently. The new building in course of erection is to be a four-storey brick structure of standard slow burning mill construction, with no openings in the floors, having a floor area of between 140 and 150 thousand square feet. The new buildings are so designed as to give a maximum production, with minimum handling. One feature is that the elevators, stairways, lavatories will all be in fire proof towers outside the building. The roofs are to be of felt and gravel. The best systems of drainage and ventilation are being installed. The heating is to be effected with exhaust steam probably by direct radiation. When completed the firm will employ 500 hands in their new works.

The entire plant will be electrically driven, a system of motor group drives at 440 volts alternating current being adopted. The power plant to generate the electricity for power purposes is isolated from the other building. Two Bellis & Morcom high-speed engines are being installed, direct connected to 140 k.w. and 220 k.w. generators, respectively. These engines are of the compound condensing type and will use superheated steam. Besides supplying power, these generators will light the works with about 500 incandescent lights and 125 arc lights. A complete sprinkling equipment with a 50,000 gallon tank on a steel tower is another feature as well as a 1,000 Underwriters' fire pump. The brick stack at the power house will be 110 feet high with a 66-inch inside diameter.

At present the Frost & Wood Co. are calling for tenders for boilers, generators and a large complement of iron and wood working machinery.

SALESMAN WANTED.

SALESMAN—Strong, active young man, experienced in hardware, stoves and tinware. Must be willing worker and pushing salesman. References; state age and wages. W. A. Hillhouse, Shelburne, Ont. (23)

Quality of material and construction makes it almost indestructible

Throws both stream and spray.

PLUMBING AND STEAMFITTING

THE PLUMBING OF A COTTAGE

By J. A. F. Cardiff in the National Builder, Chicago.
Aeticle VII. (Continued.)

Soil, Waste and Vent Stacks.

One of the marked improvements in modern sanitation is the reduction in the size of soil, waste and vent stacks and their branches. The use of pipe one or two sizes smaller than was heretofore used has been found entirely satisfactory, if not more so, and has the additional advantages of being more

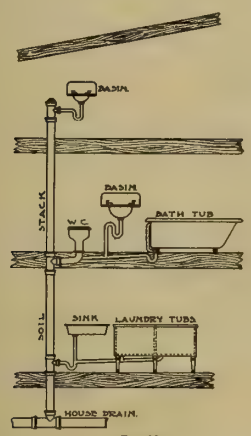

FIG 38.

economical and more easily concealed in ordinary stud partitions.

Formerly, water-closets were made with 4-inch outlets, discharging into a 4-inch soil pipe, which in turn emptied into a 5-inch soil stack. Three-inch stacks, with 3-inch branches, are now found to be ample, and the water closets are made with correspondingly smaller outlets.

Soil and waste pipes should be the same size as, and need be no larger than, the largest outlet of the fixtures discharging into them, for ordinary cottage work.

Soil and waste stacks are made the same size as the largest soil or waste pipe emptying into them.

Vent stacks, for soil or waste stacks up to four inches in diameter, should be not less than two inches, and for larger soil or waste stacks, should be of a diameter equal to one-half of the diameter of the soil or waste stack which it serves.

Vent pipes should be the following sizes :

For traps 3 inches or larger, use a 2-inch vent.

For traps 2 inches in diameter, use a 1½-inch vent.

For traps 1½ inches in diameter, use a 1¼-inch vent.

Soil or waste pipes should be the following sizes :

For water closets, 3 in. in diameter.
For bath tubs, 1½ in. in diameter.
For lavatories, 1¼ in. in diameter.
For shower baths, 1½ in. in diameter.
For kitchen sinks, 2 in. in diameter.
For pantry sinks, 1½ in. in diameter.
For slop sinks, 2 in. in diameter.
For laundry tubs, 1½ in. in diameter.
For other fixtures, 1½ in. in diameter.

There are two methods of installing vertical stacks—the two-pipe system and the single-pipe system. In the two-pipe system, which we will consider this number, siphon traps are used, and siphonage of their water seals prevented by vent stacks and pipes provided for this purpose. In the one-pipe system, the modern non-siphonable traps are used, with which no vent stack or vent pipe is necessary.

In figure 38 we show the old style plumbing, consisting of a single stack with its branches. The soil stack does not extend above the roof but terminates at the highest fixture. Siphon traps are used, but no vent stack is provided to prevent siphonage of the traps. This illustration is introduced for comparison with modern methods.

Figure 39 illustrates the two-pipe system, consisting of a soil stack with its branches and traps, and a vent stack with branches supplying air to each fixture trap. Care should be taken that the connection of the vent pipe to the stack is made at a point above the outlet of the highest fixture of the group, the traps of which are connected to that particular vent pipe.

Too frequently the connection is made below the outlet of the fixture. In such a case a stoppage of the waste pipe would cause the fixture to discharge through the vent pipe, which is intended for air only and should never be used to receive the discharge from a fixture.

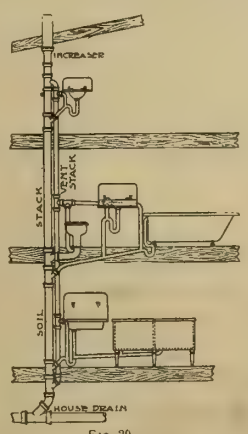

FIG 39

The fact that the discharge passes out through the vent pipe would probable cause the stoppage to remain unnoticed; whereas, if the connection was properly made above the fixture outlet, a stoppage of the waste pipe would be immediately noticed, because the waste would not pass away.

GROWTH OF PLUMBING BUSINESS.

The marvelous development of the plumbing business in America is well illustrated by the figures given in a recent address before the Eastern Supply Association, by Francis J. Torrance. Mr. Torrance said:

"Previous to 1880 there was no distinct record of manufacturers of plumbing goods in this country, as far as Government records or the census recognized it. The manufacture of plumbing goods, of course, was carried on in this country previous to that, but no distinct record was kept previous to that time by the Government. I have ascertained, however, that the entire product of plumbing goods made in the United States in the year 1840, was $200,000, and that the capital invested was less than half of this amount.

"At the opening of the Civil War there were 170 plumbing shops in the United States, as shown by the census of 1860, and according to that census there was a business of less than $2,000,000 in the entire country, and that included also part of the steam fitting and steam heating business, for it had not been separated.

"In 1880 there were 2,162 plumbing shops in the United States, doing a business of approximately $20,000,000. Those of you who have been in the business a quarter of a century will recognize that the period between 1880 and 1890 was that in which took place the wonderful change in sanitary conditions not only the installation of a higher grade of goods, but the commencement of the manufacture of goods in this country, instead of the importation.

"In 1890 there was registered by the census bureau 122 supply houses, whose business was valued in the plumbing line at $12,000,000. Even this included some steam fitting and steam goods.

"In 1900, for plumbing goods alone, the figures reached $15,000,000. In 1900 there were 12,000 recognized and registered plumbing shops, with a business of $132,000,000.

"I have given all these figures with a view to impressing you with the volume of the business done. I might say incidentally that in some cities each jobber is trying to do this amount himself at the expense of his profits and his neighbor's interests. I have always advocated trade relations and trade associations. I am not here as the advocate of price agreements. That policy is one that should only be discussed locally and

which local conditions alone should regulate. I am, however, a firm believer in a system of credit protection such as we have established in several of the cities, and which policy is a growth of the Central Supply Association. Against the object of these associations no argument whatever can be justly received. Their object is to prevent the 'dead beat' or 'skin' plumber or dealer, or whatever he may be, from living on the credulity of the manufacturer or supply man. While there may be arguments in general, there could be no just complaint found against the credit bureau or credit protection. This is a scheme which must appeal to both sides. Their object is to control or keep out of business the man who will not pay his bills, and it is a protection both to the seller and the honest competitor of the dishonest debtor."

BIOLYSIS OF SEWAGE.

In a recent number of the Plumber and Decorator of London, England, the well-known sanitary writer, J. Wright Clarke, gives the following information on the biolysis of sewage in response to a correspondent's inquiries:

Biolysis of sewage is the breaking up of the component parts of sewage by the action of bacteria or very minute organisms of a vegetable character, which set up a kind of fermentative action. The sewage is nearly all water, with which is mixed the waste matters from living animal bodies, from the preparation and cooking of food, cleansing the house, the clothing and the bodies of the occupants, respectively, and from the general economy of a dwelling or community of dwellings, which pass into the drains. Some matters, such as sand and minerals, cannot be changed, but most of the other matters can be decomposed and partially dissolved and broken up into their chemical constituents. It is the soluble matters that are acted upon by the bacteria referred to, which leads to either decomposition or to putrefaction, or to modification, or combinations of the two processes. Simply put, the process of decomposition is not offensive, but putrefaction is very offensive. The germs of bacteria of all kinds are ever present in the air, in water, in food, in the earth, and in the sewage, and live and thrive only when circumstances are favorable to their existence. Some of the germs are harmless to animal life, others, such as disease germs, are injurious, while others again may be looked upon as nature's scavengers. The bacteria may be divided into two classes: those which must have access of air (oxygen), and known as aerobic, and those which do not require air for their maintenance in an active condition, and known as anaerobic.

Dealing with three systems of biological treatment of sewage, that of irrigation, or distributing the sewage on the surface, or immediately beneath the surface, of land, is by far the best and most natural when suitable land is available. The land must be loose and open in texture, or it would not harbor the necessary bacteria nor allow sufficient air (oxygen) to enter the soil to keep them in an active condition. The water soaks away or is evaporated; other portions of the sewage are rendered soluble and suitable for assimilation, as food, by plant life, and other portions are reduced to a gaseous condition and are eventually diffused in the air. Dense clay soils are not all suitable, as they do not harbor the necessary bacteria, and, probably owing to their conducting powers for heat, carry away the warmth necessary for the activity of the germs.

By another system the sewage is run into a closed tank, where the impurities are reduced to a putrid condition by the anaerobic organisms, the liquid portion then flowing into a second, and sometimes a third, tank filled with coke or similar material, the top being open to the air, in which aerobic organisms do their parts. A third system is to run the sewage intermittently through a series of aerobic tanks or contact beds. Neither land, filters, nor contact beds are of any value when they are first used, and it is only when they have become charged with sufficient colonies of the proper bacteria that they become efficient.

The subject is one that cannot possibly be dealt with exhaustively in a brief article, as there are many other modifications besides those briefly described, and it is advisable to obtain and study Moore's "Sanitary Engineering" and Rideal's "Sewage and the Bacterial Purification of Sewage."

CHEAPER GAS MANTLES.

In January the "thorium convention" of Germans decided to kill all competition in thorium nitrate by suddenly dropping the selling price to $6.43 per kilogram (2.2 pounds), less 3 per cent. discount, states the Berlin correspondent of the London Times. Incandescent gas mantles at present consist of about 99 per cent. thorium and 1 per cent. ceria.

Early in 1894 thorium nitrate was sold at $476 per kilogram, but dropped in price year by year, being maintained during the period from May, 1904, to January, 1906, however, at $12.61 per kilogram. The sudden drop spread consternation throughout the gas mantle manufacturing trade. The result has been disastrous to the small thorium works outside the ring with large stocks of high-priced material on hand. Some suspended operations, others went bankrupt, and the "thorium convention" was left completely master of the situation. This leads the correspondent to conclude that the Germans have made a great blunder by their speculative tactics, and have only succeeded in drawing the attention of the mercantile classes everywhere, and of the Brazilian Government in particular, to an industry which they practically had in their own hands, and in which enormous profits were being made. Formerly Germany ruled the market both for the supply of thorium and cerium nitrates and also of incandescent mantles, but now probably the monazite sand proprietors and concessionaires in Brazil and the Carolinas will combine to form an international thorium syndicate, which will deprive Germany of its present predominance in the incandescent gas mantle industry and the subsidiary chemical trade.

The mineral monazite, which contains thorium, ceria, and other rare elements as phosphates, is found in Brazil and in North and South Carolina. The richest deposits are found in sand banks along the coast of Brazil in the States of Bahia and Espirito Santo. The exploitation of the monazite deposits was first undertaken by a shrewd American, John Gordon. The Brazilians regarded the sands as of little value, and consequently permitted him to ship large quantities to Hamburg as ballast, where it was sold at huge profits to German chemical works.

MISUSE OF SMALL VALVES.

Our observation has been that an immense amount of ignorance is shown in the use and misapplication of different lines of valves, says the Valve World. Attention was recently called to an incident where an extra heavy pressure valve, suitable for at least 300 pounds pressure, was used on a railroad car tank where the water pressure was not over five pounds. Upon further inspection of this road, it was found that common standard valves were used on a locomotive carrying 200 pounds pressure.

At the time the Crane Company started in business, there was practically but one pressure of steam, that called "high pressure," namely, about 75 pounds. There was nothing materially higher or lower than that, and consequently there was a demand for only one line of goods.

But upon the introduction of low pressure steam heating, and also in many cases where low pressure water was used, such as for wind-mill service, etc., it became evident that a valve lighter than the standard would answer many of these purposes.

On the other hand, when much higher pressure of steam came into vogue during the past twenty years, it was evident that something decidedly better than the standard valve was required.

STEAM FITTERS' CEMENT.

The following formula for steamfitters' cement was presented by S. S. Sadtler in a paper read recently before the Engineers' Club of Philadelphia. The body of the cement consists of either red or white lead. The red lead is often diluted with an equal bulk of silica or other inert substances, so as to make it less powdery. The best way that I have found to do this, however, is to add rubber or gutta-percha to the oil as follows: Linseed oil, 6 parts by weight; rubber or gutta-percha, 1 part by weight. The rubber or gutta-percha is dissolved in sufficient carbon disulphide to give it the consistency of molasses, mixed with the oil, and left exposed to the air for about 24 hours. The red lead is then mixed to a putty. Oxide of iron makes a less brittle cement than red lead. Probably fish oils and red lead would make good cements of the class for joining pipes, as the fish oils are not such strong drying oils as linseed, and their use might be a case of permissible substitution rather than adulteration.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 8, 1906.

Market conditions show little change over those of last week, though prices in nearly all lines are, if anything, firmer.

The only revision in quotations is in solder, which has again declined, in sympathy with the tin market. Guaranteed half-and-half has declined a full cent, and is now currently quoted at 24 1-2c. to 25c. No. 2 (wiping solder) contains a smaller percentage of tin than the higher grade and is consequently not affected so much by the slump in that metal. A falling off of 1-2c., however, has taken place, and we are now quoting 20c. net.

Prices on lead pipe are naturally firming up very considerably, owing to the high quotations now ruling in the pig lead market. No change has yet been made in the discounts on pipe, but this must be expected if the tone of pig is maintained.

Dealers continue to stave off the threatened advance in iron pipe, but the feeling is daily growing stronger in that direction.

RANGE BOILERS—Sales are numerous at steady prices. We quote as follows: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—Prices are firmer but unchanged. We give the following quotations: 20 per cent. f.o.b. Montreal, Toronto, St. John, N.B., Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—The same conditions prevail this week as for some time past. We are still quoting discounts as follows: Discounts on all sizes of nipples up to 6-inch, 67 1-2 to 70 per cent.

IRON PIPE — No advance has yet been declared. Jobbers are all experiencing a large turnover in nearly all sizes. Our prices are as follows: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—Quotations remain steady and there is an active demand. Our prices are: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent off. Fittings, 60 per cent. off.

SOLDER—The declining marke tin tin has affected solder in both the standard grades. A falling off on half-and-half and wiping solder of one cent and a half cent, respectively, is declared. We now quote: Bar solder, half-and-half, guaranteed, 24 1-2 to 25c.; No. 2, wiping solder, 20c.

ENAMELWARE—The leading makers' goods are being sold rapidly, at the same prices as have prevailed for some time. We quote: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, June 8, 1906.

Solder holds at about the same price as last week, although some houses are asking as high as 28 and 30 cents. The impression prevails that it should be a good price, but no changes to speak of have taken place either way.

Discounts on radiators have been increased from five to ten per cent. Competition seems to be the only reason for the change, as iron is firm in price. Business in radiators and boilers is showing up well and the indications are that stocks will be run pretty low before the end of the season, which will no doubt have a tendency to bring prices back again.

Cast iron pipe fittings are also subject to a larger discount this week, starting with some cutting but finally becoming general. An additional discount of two and a half per cent. upwards has been given.

Lead pipe is firm consequent on the higher price pig lead is selling at, but it is doubtful if there will be any change in price, as supplies are fairly large.

All lines are selling well. There is no particular rush feature, but everyone reports a good steady business.

LEAD PIPE—Prices are firm but the same as previous quotations. We quote: Lead pipe, 8c., discount 20 per cent.

SOIL PIPE AND FITTINGS—Prices continue as before with the usual business being done. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—Large quantities continue to go out. Prices are said to be cut in some quarters, but it is not general. We quote as follows: Black, 1 in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS—The usual demand is not at all lessened. Prices continue same as previous quotations. We quote as follows: Cast iron elbows, tees, crosses, etc., 67½ per cent.; cast iron plugs and bushings, 67½ per cent.; flange unions, 65 per cent.; nipples, 75 and 5 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 and 10 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 65 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65½ per cent.; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—Business is increasing weekly and an extra good year is looked for. Our quotations: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS — Discounts have been made larger this week, but business is good. We quote: Hot water, 50 and 2½ per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER—Prices are practically the same as last week. Some houses are selling two and three cents above quotations, but prices given are pretty general. We quote: Bar solder, half-and-half, guaranteed, 25c.; wiping, 21½c.

ENAMELWARE—There have been no price changes recently. We quote as follows: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

TORONTO CIVIC INQUIRY.

The investigation into the scandals arising out of the erection of the Toronto City Hall, which has been going on for about nine months, was practically closed this week when Crown Attorney Drayton summed up all the evidence given and made his charge against Architect Lennox. The architect was shown to have been mixed up in the giving and receiving of favors from contractors, himself receiving large "loans" from Bennett & Wright, contractors for the $169,000 plumbing job. That competition was shut out by paying other tenderers, that possibly tell-tale books of plumbing firms were burned, that witnesses who were material to the inquiry were sent away and received large sums of money at regular intervals to stay away—all this was made clear by the evidence.

Ald. Lynd was shown to have received certain sums of money in return for his influence—all the charges centreing in the city architect.

No decision has yet been given and the judge intends to keep the inquiry open indefinitely so that if S. S. Clarke, of the Bennett & Wright Company, ever returns to the city he can be put in the witness box.

BUFFALO PLUMBERS TO ENTERTAIN TORONTONIANS.

One of the most enjoyable events on the calendar of good times gotten up by the Toronto Master Plumbers' Association last Summer was the trip to Grand Island as the guests of the Buffalo association.

Another invitation to repeat the trip has been received by the recently organized Master Plumbers' Section of the Employers' Association and arrangements have been made to leave Toronto on one of the early Niagara boats on Saturday morning, June 16, returning in the evening.

The Buffalo master plumbers and steamfitters are arranging to eclipse their record of last year and from the time the boat reaches Lewiston until the Buffalonians bid their Toronto guests good-bye a royal good time is assured.

AN ORIGINAL ANNOUNCEMENT.

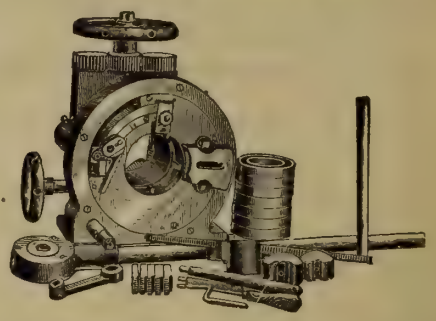
A Michigan plumber who recently bought out a shop and wanted to introduce himself to the townspeople sent out the following original announcement in the form of a personal letter:

"Dear Sir: Estimating your time is worth fifty dollars per day, enclosed please find check for four cents for twenty-seven seconds of it spent in reading my announcement on plumbing. I have just received a neat and handsome lot of plumbing fixtures and supplies. My assortment is the largest and choicest, and it is never any trouble to show all the goods to any intending purchaser. I am a new beginner, and am thankful for small repair jobs (of which we make a specialty) as well as large contracts. If it might, in cases of emergency, be necessary for you to have my services at any hour of the night, I will gladly attend to your wants as cheerfully as if it were any time during the day. Remember you are employing none but the best mechanics in this line when you call on us, and we will accomplish more sanitary work for you in one hour than many others will, of the opposite kind, in two hours. My modesty will not allow the use of too many adjectives, but can please all in price and workmanship."

THE ONE-PRICE STORE.

How many hardware merchants are there in the country who still follow the antiquated method of marking goods in cipher and selling them for any price they can obtain? asks an exchange. Although the method is beyond all question unbusinesslike, there are to be found a good many hardware stores struggling along with this handicap. This old plan is detrimental to the best interests of any business in these days of keen competition and alert progressiveness.

The day has passed when clerks and merchants can hold a personal following by showing favoritism—or apparent favoritism—and "throwing off" a little from regular prices in order to make a sale. Such methods, though prevalent fifteen or twenty years ago, have outlived their day of usefulness, and were always questionable. The public has learned that when it buys goods marked in cipher it is "buying a pig in a poke." Retail buyers have come to a stern realization of the fact that in such transactions they are placing themselves entirely at the mercy of the integrity—or the lack of integrity—of the seller. The system has been so much abused in the past that the customer becomes at once skeptical if he is offered a discount from a cipher price, no matter if he knows the clerk or merchant in question to be honest and honorable. So to-day the cipher system works harm. The stores marking goods in plain figures are the ones which are making the desirable business gains.



Mark in Plain Figures.

One of the most common objections of the old line merchant to this new system is that it gives his competitors an open opportunity to obtain and to meet his selling prices. Particularly will this be heard outside of the large cities. But it is mighty backward competition that will not obtain these facts under any condition. Mark all goods in plain figures.

In case of special advertised sales, goods should be reduced in price for the period advertised only. There are many staple lines which are seldom, if ever, advertised, and which never need to be changed in price if they are originally marked at a price which meets competition. Such goods need to be marked down only when closing out shopworn samples or broken lines.

Every merchant is familiar with the old adage, "Well bought, half sold." That's one thing that will never wear out in business. It was a live proposition twenty years ago and it is very much alive to-day. If competitors are underselling you it is not often safe to conclude they are going into bankruptcy. Perhaps they have bought to better advantage, and are making more profit than you are, and still selling at lower figures.

A Certain Sense of Satisfaction

Goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—Th Chasers, Vise and the large range of work covered.

The One Boiler that Has Every Merit that Counts

Even though The Oxford Hot Water Boiler earned you less profit (it really earns you **more** profit) than other boilers, it would still pay you best to push it. Because the Oxford Boiler, and only the Oxford, has every merit a boiler can possibly have to make it actually worth your trade's buying. It saves fuel as no other boiler can (that's the insloped fire-pot walls, the extra-big first-water section, the triangular hollow grate-bars). It can never spring a leak in the water joints (that's the Oxford metal push nipple and the total absence of rubber gaskets). It sells easier, it stays sold surer, it gives you less trouble and more repute first and last. And it's the easiest Boiler for you to erect—comes to you so far assembled that a tenth of the work gets it installed ready for use. It will pay you to ask us about our proposal to **LIVE** dealers on

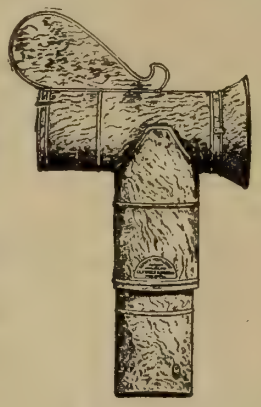
FIX UP YOUR CHIMNEYS

Even the best stove or furnace will be unsatisfactory, if the chimney does not draw well.
But the . . .



"ZEPHYR VENTILATOR"

will give a good draft to any chimney.

It will even allow the burning of soft coal in the stove, with good results.

WE WANT YOU TO SELL THE "ZEPHYR VENTILATOR" in your town. There is money in it, and the satisfaction that it gives will bring you new customers. **THE ZEPHYR** cannot be excelled for ventilating the rooms of **CLUBS, STEAM LAUNDRIES,** etc

"THE ZEPHYR" MAKES HIGH CHIMNEYS UNNECESSARY.

Lachine, June 5th, 1903.
The J. W. HARRIS CO., LIMITED, MONTREAL.
Dear Sirs,
Your system of ventilation installed in our Convent has given us absolute satisfaction.
Yours respectfully,
Sister MARIE PACIFIQUE, GEN. ECO.
Sisters of Ste. Anne.

THE J. W. HARRIS CO., LIMITED

CONTRACTORS - MONTREAL

THE SUN ECLIPSED BY "PUTZ"

Putz! What is Putz?

PUTZ, "Lion" Brand, is the most popular and satisfactory metal polish in the world. PUTZ, "LION" brand, is put up in boxes in the form of liquid as well as paste and is known as PUTZPOLISH.

The finest thing for metals is the "Lion" brand. "Lion" brand PUTZ contains no acid. Its use will not injure metal of any kind. PUTZ gives a lasting polish to all metals. It will neither scratch nor rub off. The "Lion" brand saves hours of work. It acts in minutes as compared with hours by old systems of polish. When applied on the surface of iron, of zinc, of nickel, and metals of all descriptions especially, the Triple Extract Putz Polish for Metals, the "Lion" brand, liquid or paste, gives a brilliant and lasting sheen.

Insist upon getting PUTZ, "Lion" brand.

THOS. BIRKETT & SON CO., LIMITED

OTTAWA, ONT.

American Twin Freezer

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS.

RETURNED JUN 18 1906

RETURNED JUN 18 1906

How To Do It

You don't need to own a mint—just keep your eyes and ears open, and take advantage of every opportunity that comes your way.

Opportunity No. 1

Don't refuse to stock "**DISSTON'S**" **FILES**, because you have enough of some other kind on hand to last you for years.

Set aside a conspicuous place in your store for a small stock of "**DISSTON'S**" **FILES** and watch the result—perpetual motion.

Listen !

If you're a hardware dealer you **must** keep files and "**DISSTON'S**" don't cost any more than inferior grades.

RETURNED JUN 18 1906

Better Than Bank Interest

RETURNED JUN 18 1906

They occupy small space and return you good interest on your investment.

There are no hardware dealers in Canada or the States who do not place "**DISSTON'S**" **SAWS** at the head of the list. In fact they make a standard of them to judge other makes. "**DISSTON'S FILES**" will hold the same place as soon as they are as well known.

If you have never kept this line before, it's up to you to get them **now**. If you're the only dealer in your town who keeps "**DISTON'S**" **FILES** you will get **all the sales**. If the other fellow keeps them too, you get only **half**—perhaps not that much if he's a hustler. Figure it out.

When you've decided that you need this line, send us a trial order.

We are Agents for this line and all orders must pass through our hands.

WRITE FOR PRICES.

Have you Potato Hooks and Manure Drags enough in stock?

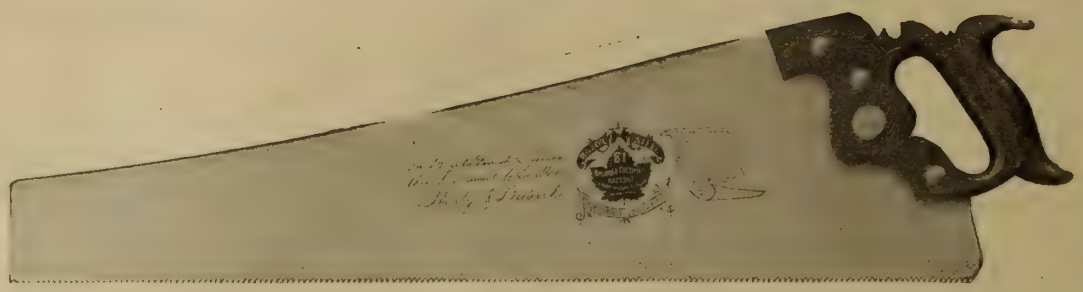
RETURNED
JUN 18 1906

If not you will need them soon, and had best have them in stock before compelled to make some excuse to a customer.

They are a staple line, selling as regularly as hay or manure forks. They are useful tools; the work they are made for can be done better and more easily with them.

These manure drags and potato hooks are forged from the best crucible steel, made in the most approved shapes, and handled with selected ash handles in a variety of lengths.

Show them and you will sell them.



Keep the variety, it will help to swell your sales.

Storage and Warehousing a Specialty.

First-class facilities in a thoroughly modern brick warehouse centrally located on the railway track.

The Dealer's Reputation Depends on the Quality of the Goods he sells.

H. & R. REVOLVERS

are known around the world for their safety, accuracy durability, perfect design, and general superiority.

Only the most skilled mechanics and only the finest quality of material employed in their manufacture.

Every piece is finished to the 1000th part of an inch and fits perfectly, NO RATTLE in 'H & R.", such as a quick shake reveals in other makes. Every revolver that leaves the factory has passed the most rigid inspection and is guaranteed perfect.

Barrel and cylinder drilled from solid piece of finest forged steel; solid steel frame; handsome rubber stock affording good grip Noted for smooth action, perfect accuracy and power.

Don't experiment with an unreliable make because low price is offered as a tempting bait. The retail price ranges from $2.50 to $6.00, and each model is the greatest value ever offered for the price.

They are the kind that do not come back, but give permanent satisfaction.

Put in a full line and you will be pleased with the results. Your jobber can supply you.

THE B. GREENING WIRE CO.
LIMITED

HAMILTON, ONT. MONTREAL, P.Q.

Put Your Attention on the "Dillon"

We ask you to give attention to **Dillon Hinge-Stay Fence**, because we believe it is an easy seller and the profits from its sales are worth the seeking. We know that farmers who have been somewhat posted on the question of wire fence will do a lot of querying, and we know that is just what "Dillon" sellers can stand.

What better arguments could you give a farmer or a gardener than that **Dillon Hinge-Stay Fence** has no locks to rust, break or wear loose, that the highest grade of wire is used in "Dillon" construction, that the stays are all hinged and will not bend, that this fence will stand any kind of wear and tear and practically last a life-time.

It should be a pleasure to handle an article embodying so many good points, squarely made and prices to suit the customer. Such is the "Dillon." Sell it.

GUELPH AXLE WORKS

THE GUELPH SPRING & AXLE CO.
LIMITED
GUELPH, ONT.

Why You Should Sell THE IDEAL FENCE.

You want to handle a fence that will appeal at sight to your customers, and that will satisfy them after they have bought it. You'd like to have a fence to sell of which you could say to a man, and say truthfully, that it does the fencing job for good and all. There is absolutely nothing that looks better, is better, that will give better satisfaction and that will sell better than this Ideal Woven Wire Fence. You can see from the illustration how it is made; crimped, locked, spaced and stayed. Then just remember, and this is all-important, that these wires are all big, heavy, strong wires, all No. 9 hard steel. And they are heavily galvanized so there's no chance for rust to get a hold. One fence sold always sells more. It's easy to get going. Very little talk required to convince a man who has fence to build. Seeing is enough. And then remember that while you're satisfying your farmer friends and doubling up your fence business, there's enough in it for you to make it an object. We see to it that dealers have margin enough to make them want to push it. If you want to handle that kind of a fence just drop us a card about dealer's prices.

Louden's Steel King Barn Door Hangers

Always give Satisfaction.

They are perfectly "stay-on," hold the door much closer to the track than others, and are better secured to the door, having three bolts well spread apart, instead of two bolts in the same line and close together, which is liable to split the board and loosen the hanger.

In addition to this, the pivot in all Louden Jointed Hangers is set a little ***outside of the centre line,*** which causes the door to hug the side of the barn, prevents it from rattling with the wind, and gives it more play to pass obstructions.

Can you afford to ignore that kind of testimony which in substance declares, "MAXimum LIGHT GLASS is ALONE able to combat darkness, and, therefore, holds the 'order' Palm"?

No, you cannot! And, when you consider that every element of risk is eliminated, there is nothing that prevents a Hardwareman going after the business except an aversion to extending his opportunities.

When a building is being altered why couldn't you, just as well as anybody else, see the contractor about installing

MAXimum LIGHT GLASS

Possibly he will tell you to see the owner, and when you meet that individual give him these arguments:

It costs a hundred times as much to alter a building for "light" purposes as to instal **MAXimum Light Glass.**

The owner can never be sure that even the "altered" building will always be "light." Other buildings going up may start the "dark" disease again.

MAXimum Light Glass price is the same as the price of ordinary sheet prismatic glass.

Remember, a postcard will reach us.

SENSIBLE SUGGESTIONS FOR SALESMEN

Selling Washing Machines.

C. W. Magill, of the Boss Washing Machine Company, Cincinnati, Ohio, at the last convention of the Missouri Retail Hardware Association delivered an interesting address on "How to Sell Washing Machines," as follows :

In selling washing machines to the consumer I would advise the dealer to be very attentive to the specialty man, if one presents himself, for it is his business to know his competitors' goods as well as he does his own, for from him oftentimes one can learn much about the goods he may have in stock that makes good pointers in selling. I have frequently found the retail merchant with rotary washers in his store who could not make any comparison between what he had for sale and what his competitor had. I have seen young men who were showing washers who said, "This machine is the best ; we sell more of this washer than our competitor does of the kind he has," and relies upon a statement which he is not sure is correct to influence the sale.

He must be able to tell his customer and show him that every statement he makes is the truth. If it is a rotary washer tell him the size of the tub, because all washers have not the same size tub ; next call his attention to the finish and the kind of lumber. If he has a quality of lumber in the tub he is selling that is less liable to shrink and swell than some other woods it is a good point to make. If the hoops are strong and good, attention should be called to this.

If the machine can be taken apart and put together easily dwell on that point, too. Show how easy it is to insert repairs that may be needed, for anything will wear out in time. Cover the general construction. Make your customer familiar with all the minutiae and then show him that the dasher makes so much of a revolution before reversal takes place, for that indicates one of the features of the washer just as much as anything else, and be sure to call attention to the number of reversals the dasher makes to, say, fifty turns of the hand wheel, because then you show the speed, and the more speed you have the less number of times you have to turn the hand wheel to produce the same result, or to do better work in the same time or as good work in less time. If you happen to have a larger dasher it only shows more agitation because it describes the large circle in the same time a smaller one does. If the tubs happen to be larger there is an advantage because it brings the clothes nearer to the rubbing surface on the side of tub. Especially call attention to the dasher if it happens to be constructed so that the shaft does not come through the dasher to entangle the clothes or pinch holes in the garments.

Go into the details. The little things count in showing up goods as much as the greater ones. If you have shields over the gears to prevent children from pinching their fingers, show the advantage, or if your machine is not made that way show why it is not needed. Quality and durability count as much as ease of operation. Always advise your customers never to load the washer so heavy that it works hard, and always use soap plentifully because it is a chemical action, this washing of clothes. The dirt must be loosened and the soap does it. Boiling hot water in which a large portion of soap has been dissolved loosens the fibers and permits the water to pass through, carrying the dirt with it. If it is a double-acting machine, one of the kinds that the Germans and Swedes prefer because of its rubbing propensity in opening up the meshes of the garment, then show its ease of operation. If you happen to have one that can be put together without the use of nuts or bolts or the hardware is interlocking and automatic in its action, call attention to this.

Show up all good points. The surest way to clinch a sale is to say, "Take it home and if, after using it for three or four times, you find it is not as I represent it, or does not do the work, bring it back and we will give you your money back."

Never run down your competitor's goods. Rather tell your customer if he asks anything about them, all their good points and show what way yours is superior.

Bear in mind that the water must get through the clothes, that soap loosens the dirt and that a machine that squeezes by any process the water through the garments is much better than one that forces the clothes through the water.

You all know that it is always best to get the money for your goods and you can refund if returned, but goods are not near so liable to be returned if they are paid for as they are when given for trial.

Some dealers in small towns have been very successful with washing machines by allowing a clerk or two to take a wagon in the dull harvest time loaded with washers and leave one at every farmer's house who has not a washer, telling him to try the machine for a month and it has been almost a certainty that the sale was made right then because it showed confidence.

Selling Hardware in the Streets of Cadiz, Spain.

How to Sell Saws.

At the recent convention of the Kentucky Retail Hardware Dealers' Association, G. W. Clark, of E. C. Atkins & Co., Indianapolis, read the following interesting paper on the art of selling saws :

Upon your sales force depends the success with which saws or any other tools can be sold to the very best advantage, as a saw possessing the finest qualities and highest merits cannot be successfully offered so as to obtain the greatest return of immediate profit and best results in creating an increased demand for more saws from the advertisements of a well satisfied customer unless your salesmen properly present the saw to

prospective customers in a skillful, forceful and courteous manner.

To sell saws easily a salesman must study the peculiarities of each customer, tell his tale and stop when he has said enough. He must try to discover the faults or weaknesses or prejudices of the prospective buyer and overcome them with tactful, logical arguments.

He should study the goods carried in stock, and in a general way be able to discuss familiarly any process of construction of the tool from raw material to the finished product and talk intelligently of the advantages of such process. This information can be had from studying manufacturers' catalogues, booklets and circulars and by talking with their traveling salesmen, as all who are posted are willing to talk freely on this subject. An earnest argument made by a cool, well balanced salesman will usually convince even an exasperatingly stubborn purchaser.

To select good saws a careful study of conditions in your locality, coupled with your past experience and consultation with saw salesmen, will enable you to put in stock patterns which will sell rapidly and which will give satisfaction. The number, the class and the skill of mechanics and the kind of work they

A Group of Tourists at Jerusalem.

are doing are all important factors to consider, but all saws should be selected for the real utility and actual intrinsic value which they possess, bearing in mind that nearly all good mechanics want the best tools they can afford to buy. They are willing to pay a fair price for a good saw. The real value of any article depends on the buyer's state of mind, and the size of his pocketbook influences his mind when he has a desire to purchase an article which he needs or fancies he needs.

The Stock to Carry.

For a stock of hand saws five or six different patterns, well chosen to sell at different prices, will be highly profitable. It would be well to have hand saws to retail each at $2.25, $2, $1.50, $1.75 and 50 cents, carrying mostly the better grades. By having saws of all prices you have an argument that strikes the purchaser forcibly, as you can give him a saw at most any price he wants to pay, and you have an opportunity to recommend and try to sell what you find most profitable and satisfactory. The assortment should consist of hand saws, 26 inches long; rip saws, 28 inches long; panel saws, 18 and 20 inches long, etc., with teeth assorted according to the quality of the saw and the work it must do. The greater majority of 26-inch hand saws are used with teeth 8 points to the inch, but in green timber are sold with but 6 and 7 points to the inch. For fine cabinet work and high-class interior finishing they are used with teeth as fine as 12 points to the inch. Rip saws with graduated teeth are usually used with 4½ to 5½ points to the inch, but the conditions of your trade may require carrying more or less of other sizes and points. This is true of all small saws, such as back saws, butcher saws, compass saws, hack saws, work saws, etc., as the variety and quantity of small saws to be carried depend on the volume of your trade and the location.

Crosscut saws are used in almost as great variety as hand saws, and the quality, length, pattern, style, teeth and finish should be determined by the size and character of timber in your territory and the extent of active timber operations carried on.

Great care should be exercised to have a full stock on hand at the beginning of the season to fully supply the demands.

Attractive displaying of saws in wall cases having glass fronts will help increase the demand for them, second only to a nice window display. Both methods should have attention, as anything which suggests to a prospective purchaser that you have a complete variety of saws will make him instinctively call on you when he is ready to buy, as your display will talk for your saws when the other fellow's saws, if hidden in drawers, will continue to sleep until they are out of date.

The arrangement can be in tasteful groups which attract the eye and leave a lasting impression of your stock.

Another business creator is a nice display board with a velvet or black background, showing a line of saws and fine tools of all classes. This is a medium especially valuable to such of you as carry a large line of high-grade mechanics' tools, as the articles can be grouped in artistic arrangement that unconsciously will be remembered by everyone who sees it.

You doubtless advertise in local papers and should during seasons mention saws and other tools. If you put a little "ginger" in your ad you will see results that will bring smiles of contentment to your face that will reflect the wisdom of your progressiveness when you look at the profit account.

A JAUNT THROUGH EUROPE.

A party of four Hamilton people, two of whom were John McCullough, traveler for Wood, Vallance & Co., wholesale hardware merchants, and Campbell S. Turner, of James Turner & Co., wholesale grocers, returned in May from a three months' tour through Southern Europe, Asia Minor and Northern Africa, the countries visited including Great Britain, France, Spain, Switzerland, Italy, Greece, Turkey, Palestine, Egypt, Algiers and Morocco. The travelers climbed Mount Vesuvius just before the recent violent eruption and had a most enjoyable trip throughout.

In the group picture shown, Mr. Turner is dressed in Turkish garb, he wearing a turban and holding an old-time musket in his hand. Mr. McCullough, in the upper right hand corner, is in the costume of a Bedouin, the photo being taken at Jerusalem, this being a favorite form of extorting money from travelers adopted by the photographers of that country The tourists felt "creepy" while in the rented costumes, but as a result of their experience they have the photo which we reproduce.

Constantinople's dog scavengers were one of the most startling scenes seen by the Hamiltonians while on the trip. Thousands of wolfish and ownerless dogs run wild through the streets, with a penalty of several years imprisonment for the killing of one of them, the penalty being half as severe as for the killing of a human being. The only service the dogs perform is to act as scavengers in disposing of the city's sewage and carrion.

The second photograph shows a stock of hardware displayed on the streets of Cadiz, Spain. As Mr. McCullough, who took the photo, says, "It was a pretty tough looking assortment, but they were selling old-fashioned padlocks, hooks, staples, etc., just the same, and stocks of other lines of merchandise were also displayed in a similar way."

Messrs. McCullough and Turner are back at work again and are receiving the congratulations of their friends on their eventful trip.

HARDWARE CONVENTION IGNORED.

The May number of the Retail Merchants' Journal, just to hand, does not contain a word of reference to the big convention of hardware and stove dealers in Toronto on May 15 and 16. A Journal reporter was present at all the sessions of the convention and made copious notes, but if the retail hardware merchants of Ontario relied upon the Journal for news of an organized effort to improve trade conditions they would still be sleeping the sleep of a Rip Van Winkle. The Journal devotes several pages to a report of the third annual convention of the grocers' section two months ago on April 3 and 4 at which there were in attendance about 40 retailers, manufacturers' representatives, reporters, etc., about half being from Toronto and the rest from outside points.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers Association of Western Canada:

Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.

Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; sec etary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg. Man.
Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association.

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.

Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.
Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

ONTARIO EXECUTIVE MEETING

Business of great importance to the retail trade throughout Ontario was transacted by the executive committee of the Ontario Association at its meeting in Toronto last Tuesday. While some matters were left over until the convention in September before definite action is decided upon, the executive dealt with other problems and mapped out a program of work the results of which are bound to be felt by every member of the association before many months ensue. What benefits a part of the trade is bound to benefit all to a greater or lesser extent, but the chief advantages are certain to be realized by those "on the inside" and now that it is clearly shown that the new Ontario Retail Hardware and Stove Dealers' Association is a fixture with a set of live and active officers there are few in the trade who will be content to remain "on the outside," reaping the advantages of organization without paying the nominal membership fee.

A Good Attendance.

Of the eleven members of the executive only four were forced to stay at home. President Humphries, Vice-President Scott, Treasurer Caslor, and Messrs. D. Brocklebank, Arthur F. W. Jeffray, Midland, and the Secretary, were present at the meeting, while Thos. Marshall, Dunnville, visited Toronto, but through a misunderstanding failed to locate the meeting in the Rossin House parlors. Messrs. Peart, Hambly, Paulin and Taylor wrote or telegraphed regarding their inability to attend.

Letters were read from a number of jobbers and stove manufacturers expressing their good wishes for the association and stating that, in their opinion, the retail trade should take hold and perfect a strong organization. The secretary also reported that many travelers were already doing good work in helping to increase the membership of the association. A proposal made that a valuable prize be offered to the traveler securing the most members was discussed and finally rejected, it being decided that the salesmen did not require any incentive to induce them to aid in helping the retail trade to better their conditions.

The matter of appointing another organizer was discussed, but no action will be taken until after the September convention, the co-operation of the travelers being looked for in the meantime.

The September Convention.

The dates of Tuesday and Wednesday, Sept. 4 and 5 (during the second week of the Toronto Exhibition) were chosen as the most suitable for the next convention, when it is hoped that fully 500 hardware and stove men will be in attendance. A committee was appointed to arrange a brief program, allowing the bulk of the business to be done before 3 p.m. so that the afternoons and evenings would be free for the delegates' enjoyment at the exhibition. A conference with representatives of the Wholesale Hardware Association will also be arranged.

Trade Grievances.

Various grievances referred to the executive by the recent convention and others reported by members of the association were discussed by the committee and a course of action decided upon.

One manufacturer of metal roofing was complained of as selling direct to farmers. A communication from a dealer in Wellington County to this effect was read and in the course of the discussion reference was made to another dealer who had interested a mill man in sheet metal goods and was expecting to land an order for roofing. The order did not come, however, and a trip to the mill found men from the roofing factory busily engaged in putting the metal on the roof of the mill. The injustice of asking a dealer to carry a stock of sheet metal goods only to be met by direct competition from the manufacturer, is apparent, and if the manufacturer in question continues to sell direct to the consumer, association members will probably concentrate all their business on factories which deal exclusively through the recognized trade channels.

Another complaint was regarding a stove manufacturer who is selling to a farmer's supply concern, which can hardly be regarded as a legitimate store while still another complaint referred to a wire nail manufacturer who is said to be selling direct to consumers in competition with the regular hardware dealers. In one case it is claimed that several grocers are selling nails on a close margin in a district well served by four or five hardware stores.

Larger Membership Required.

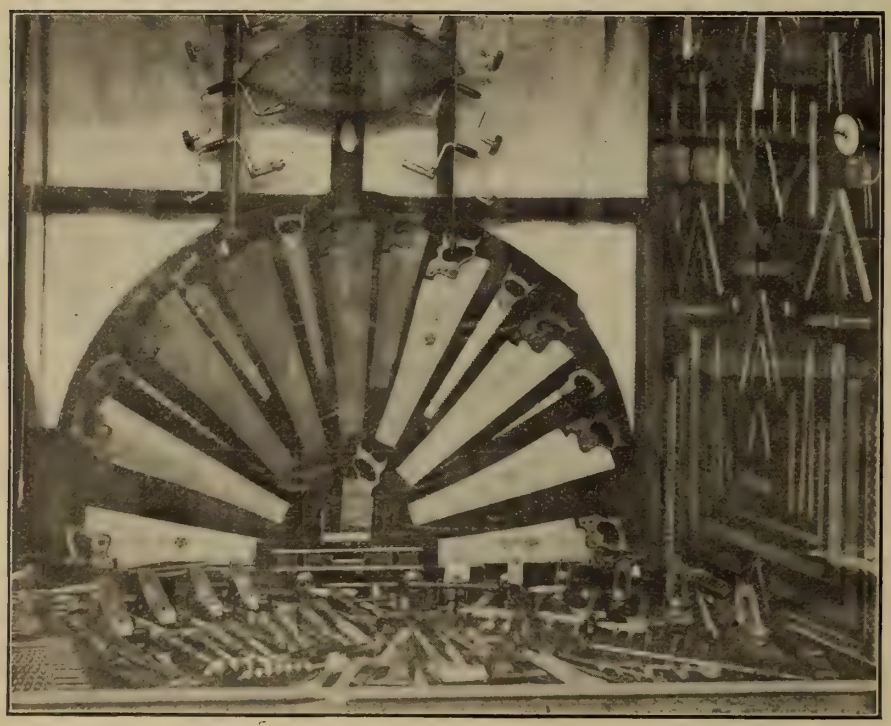
While nothing but extreme satisfaction can be felt at the splendid growth already enjoyed by the association, the executive feel that in dealing with grievances of the kind referred to they would be better able to secure satisfactory results if they could show a working membership of 300 or over instead of only 150. There must be dozens of hardware dealers in Ontario who are heart and soul with the present effort to organize the trade and remedy the existing grievances. Instead of being laggards and waiting for some traveler or organizer to call upon them they should show some initiative and forward their application for membership (together with the $3 fee) to the secretary. "Every little counts," is a saying which fits the present situation. Every name added to the membership roll means so much additional strength behind the executive in its efforts to bring about an improvement in trade conditions.

FUND TO FIGHT PEDDLERS.

The Inland Empire Implement & Hardware Dealers' Association held its second semi-annual meeting in Spokane this week and raised $10,000 by subscription, with which to fight the "buggy trailors" and "range peddlers." The association is determined to wage unrelenting war upon these men, whom they call enemies of the local dealers, and they have outlined an extensive campaign. Secretady E. W. Evenson, of the association, says the fund subscribed will be used to hire men to follow up the agents representing eastern houses to explain to the would-be customers the advantage of buying from the home dealers, the trickeries which the outside agent is supposed to resort to, and the superior quality of the buggies and ranges purchased from local merchants. It is expected there will be a merry war and a good deal of bitterness in the fight which the association is launching.

The association has a mutual insurance company newly organized. The insurance report shows: Premium receipts, $4,299.85; total at risk, $260,650; reinsurance, $154,000; amount at risk above insurance, $105,850.

The organization has appointed a legislative committee which will attempt to secure State legislation to assist the association in its fight against the country peddlers.



WINDOW AND INTERIOR DISPLAYS

CAMPING OUT DISPLAY.

An Illinois hardware store, which gives much attention to the attractive display of goods in the show window, recently caught the notice of the public with a camping out exhibit.

A small "A" tent was set up in one corner, with a camp chair at the entrance, and a hunting coat hung on the pole. A pipe and bag of tobacco lay on the chair. Three fishing rods, with reels, lines and hooks ready for use, leaned against the stump. A board laid across two low stumps formed a table upon which were camping dishes set for a meal. In the foreground was a fire place made of rocks, with ashes and charred sticks, a coffee pot, fry pan and sauce pan resting over the ashes on an iron grating such as campers use. The rocks and utensils had been previously smoked so as to look realistic. A red electric light lay in the ashes and a camp axe rested against a half chopped stick of wood nearby. Guns and cartridge belts were supported by the fence. Near the front was a folded camp bed lying on the grass, and on the extreme left of the window was a camera mounted on a tripod.

A window card propounded the query, "Isn't there something here that you can use on your vacation?" The upper portion of the cloth background was of a dark red, the lower part being black. The picture of the elk was set into the background to give depth to the scene. Tarred paper was laid on the floor and covered with fresh dirt, edged with newly cut sod. The shrubs were cut just before the buds were ready to burst into leaves. The vines were last year's morning glories. The other window at the same time was used to good advantage in an extensive and tasteful display of cheap watches, an exhibit which, by the way, enabled the firm to dispose of many goods of this class.

NEATLY ARRANGED WINDOW DISPLAY OF BUILDERS' TOOLS.

NOVELTY IN WINDOW DISPLAY.

The aim in all successful windows is usually novelty—something new. Unless the display has this element of novelty it cannot be otherwise than a greater or less failure. The use of too many canned goods in the window is usually objectionable, because they cannot easily be arranged in a manner that would attract by its originality. We urge the use of nothing in the window that suggests sameness of design and monotony of goods. Something new! Something fresh! Something original! That's what the window waits for.

That "hits the nail squarely on the head." Constant change, something new, something that will draw the attention of the passer-by and bring the customer inside your store. That is what the window display is for, and when it has accomplished this it is for you to follow up the work accomplished through your window display.

Not Too Many Lines.

Some merchants in their window display seem to have the idea that in order to be effective it is necessary to have a multitude of articles, and as is often the case the displays are overdone and the intended effect thrown out of proportion. Where only one article is used the effects created are usually most excellent. for the very neatest designs can be successfully accomplished with one or two articles only, it in a great measure depending upon the skill of the dresser in originating the design.

Window display embraces two very essential features—it serves the purpose of sampling new or especially choice goods, and at the same time adding a picturesque charm to the windows which set forth the real standard and capacity of the salesroom within.

ATTRACTIVE TOOL WINDOW.

A commendable display of mechanics' tools, arranged by J. R. Calkanan, a salesman in the employ of D. & H. Becker, New Hamburg, is shown in the accompanying illustration. The saws are arranged on a fan shaped background of black material and the side and bottom of the window are lined with the same material against which the bright steel tools show to good advantage. The picture, however, does not do justice to the effect, as it was taken on a sunshiny day when the buildings on the opposite side reflected in the window considerably. The display was one of the best entered in our recent window display competition and the merit shown in the arrangement indicates that Mr. Calkanan is an artist who must be counted upon as a strong competitor in future contests.

A CRUSHING REPLY.

The schoolmaster of a certain village asked his pupils the following question:

Suppose in a family there are five children and mother has only four potatoes between them. Now, she wants to give every child an equal share. What is she going to do?

Silence reigned in the room.

Everybody calculated very hard, till a little boy stood up and gave, to the great surprise of the schoolmaster, the following unexpected answer:

"Mash the potatoes, sir."—Birmingham (Eng.) Post.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

St. John's Model Store.

Emerson & Fisher, St. John, N.B., have issued a beautifully gotten up booklet showing about a dozen excellent exterior and interior views of their model hardware store as well as likenesses of five of their Maritime traveling salesmen. The printing is done on fine coated paper, neat descriptive matter accompanying each illustration and an artistic cover enclosing the whole. Views of the various floors and departments give an excellent idea of the lay out of the store building, which is modern in every respect and excelled by few hardware stores in America in points of convenience, display and equipment.

The booklet, as an example of all that a modern hardware store ought to be, is well worth sending for.

Ash Sifters.

The metallic ash sifters manufactured by C. M. Cutts & Co., Toronto Junction, have been well received by the trade during the past months, and a continuance of their use is assured for next season. They are a good thing to handle during the Winter season, and before buying ash sifters for the Fall, it would be well to have their circular.

Steel Ranges.

W. J. Copp & Son, of Fort William, are preparing a new catalogue which they will be glad to send to dealers who hand in their names. They make the Superb steel range, and from appearance it seems to be all the name implies.

Top-draft Stoves.

The season for heating stoves is about over, but for the selection of next year's stock it is none too early, and with this in view something of interest can be found in the catalogue issued by the Telephone City Stove Co., of Brantford. Their patent air-tight, top-draft stoves, which have had such signal success, are fully described in this booklet.

Yankee Tools.

Evidently the manufacturers of "Yankee tools" have not yet reached the limit of their inventive ability. A big line of these tools are now made by the North Bros. Mfg. Co., of Philadelphia, and a particularly handy outfit for the man who has to go to outside jobs is the "Yankee" tool set, which is a pocket package containing screw drivers, drill bits and countersinks. All information is contained in their tool book, which will be sent on request.

Malloch's Fishing Tackle.

A fishing tackle catalogue from P. D. Malloch, of Perth, Scotland, has come to hand. It contains 130 pages, well illustrated with everything the fisherman needs. It also gives some attention to taxidermy and preserving fish and game. A copy will be sent by the compilers upon request.

Stoves and Ranges.

The Percival Plow and Stove Co., of Merrickville, Ont., have issued a new catalogue of their ranges and heaters. The cuts show a trim, practical stove, and mark the progress that has been made in design and convenience during recent years. Their catalogue should be a valuable help to the selection of a stock for next season.

Schultz Lanterns.

The Schultz prism dash lantern is said to give 50 per cent. more light than other lanterns, in addition to which it is windproof. Special attention has been given to light producing qualities, and to making it adaptable for vehicles as well as for general purpose. The Schultz Manufacturing Co., of Hamilton, will send circulars on request.

Novel New Stove.

The James Smart Manufacturing Co., Brockville, are introducing a novel stove which is aimed to combine both cooking and heating qualities for either hard coal or wood. It is both a quick and perfect cooker and baker and very economical on fuel. Dealers should look into the merits of this "Perfection Tortoise" stove by sending a sample order and securing an exclusive agency. Printed description on application.

BIG CATALOGUE HOUSE FOR CANADA.

It is reported that a full-fledged mail order house with a large capital is to be started in Canada. They will not have stores, but will cater only to the mail order trade, sending their goods direct from the factory to the consumer, and keeping up offices only. They will follow closely after the methods employed by catalogue houses in the United States, some of which have been such a menace to American retailers. They have issued a circular letter to accompany their prospectus which tells of the fortunes to be made in the mail order business, and states that the field in Canada is just ripe for such a venture. It remains to be seen whether or not the present plans will culminate in starting such a business, but part of their circular is perhaps worthy of notice. It reads:

"Dear Sir,—We are establishing a purely mail order business in Canada, and desire to draw your attention to its phenomenal advantage to you.

"The mail order business is the latest method of handling merchandise in the great trade evolution of the twentieth century. The large department store proved a success because it supplied its customers with every want and made trading easy for them, and it only reached the people of its own city and suburbs; the mail order idea was therefore introduced to overcome this limitation and enable it to do business with people far and wide.

While this move was an immense success, it was nevertheless greatly handicapped by having the enormous expense of the retail department attached to it, and so long as that remained no material reduction in the price of goods could be made.

The result of this position was the evolution of the purely mail order house, which by reason of the lessened cost of handling goods, was able to correspondingly reduce the price to the consumer. As a consequence, business came to it by millions in place of thousands by the old way, and the financial success of the great mail order houses in the United States has reached a point in magnitude that can scarcely be credited."

The letter goes on to state that similar houses in the States earn from 40 to 60 per cent. in dividends, that Canada is just ripe for such a venture, and other statements of the usual kind handed out by stock promoters. The arguments used are plausible, but they savor of tactics used by the First National Co-operative Society of Chicago, now going through the bankruptcy courts, or the National Supply Company of Lansing, Michigan, which has just filed a trust mortgage for the benefit of nearly five hundred creditors.

DOOR TRACK AND HANGER.

Every season sees something new brought forth in the line of door tracks and hangers, and the latest addition to the collection comes from Wisconsin. Either single or double doors can be used with the track. Doors can be hung quickly, as it requires but the driving of six screws for a single door or ten screws for double doors. The track can be put up before or after the plastering is done, which permits its use in old as well as new buildings. Planed face double wheels of large diameter are used, with a yoke running over the axle on an anti-friction principle to enable extra heavy doors to move freely and smoothly. The track is made of maple to obtain a soft, easy and smooth sliding of the door. The adjustable feature is entirely in the track, the hanger being non-adjustable so as not to get out of order. The track rests on bolt heads, supported by brackets attached to the jamb studs on each side, and is not fastened at any point. There is a side swing or lateral motion in the hanger, so that the door will not bind, but will always carry plumb.

When selling lawnmowers include a grass catcher, a pair of shears, an oil can or some other useful article if your price permits.

HAVE YOU SEEN IT?

WE MEAN

"THE JOY"

To see it is to fall in love with it. To own it is the ambition of all who see it. To use it is to be delighted and constantly singing its praises. With such results it sells itself more nearly than can be claimed by any other.

What dealer would not want the agency for it? Range season is coming fast. Your competitor may get ahead ---if---you---don't---be---quick.

Joy Mfg. Co.

32 Humberside Ave. ...Toronto

Testimonials That are Real!

There are millions of so-called testimonials, but genuine testimonials are few and far between because the average person buys an article expecting it to be satisfactory. When they voluntarily write to sing the praises of a certain Range isn't it a sign that their expectations of satisfaction were exceeded—"beyond human ken?"

J. F. GOODFELLOW, Midland, writes:—" . . . My wife does her own cooking and is delighted with the success she has had since commencing to use the **EMPIRE QUEEN.**"

We have quite a number of such-like testimonials. Wouldn't it be worth your while to read "the others?" They are in our Booklet.

It Does Sell—

This season's sales of Oxford Chancellor Steel Plate Range (new series) are breaking records for Canada—

And No Wonder

This season's Oxford Chancellor is a better proposition than any stove dealer ever got hold of before—better built, better known, better advertised. The range itself will show you why it's the range YOU can sell—why it's the range your trade wants. It's a range you simply cannot match, dollar for dollar of price, dollar for dollar of profit—and you certainly can't match it in the selling help we put behind it to sell it FOR the dealer.

Let us send you a special NOW proposition that will make it plain that you need in your business the

Oxford Chancellor Steel Plate Range

Simply address our nearest house—the result will interest you considerably. Do it now?

ENCOURAGING TRADE.

Now that the fishing season is open and trade will be lively during the next month or six weeks the merchant should adopt some live methods of increasing his trade in this line. Window displays and advertisements in the local papers are methods which should not be neglected, but if at all possible some novel plan should be worked out to attract attention to this end of the hardwareman's business.

In the United States bait and fly casting tournaments have become very popular and the large number of clubs formed has encouraged many magazines to devote considerable space to this subject. The manufacturers of fishing tackle, rods, reels, baits, etc., are also advertising extensively and the interest of the sport-loving public is being aroused as never before.

To reap the benefit of this publicity and increasing popularity of angling Canadian dealers in fishing goods should interest themselves in the organization of fishing clubs and in the arrangement of tournaments. In tournament casting, so much depends upon the rod, reel and line that the caster will endeavor to get the very best tackle possible, and every dealer should be in a position to furnish each individual with what he requires. It is an established fact that if the fisherman wants an article and it is for sale anywhere, he will get it and the dealer who accommodates him will always receive additional patronage.

Tournament casting is more of an evolution than a growth, and was, in its infancy, more of a means to an end than the end itself. Many fishermen who loved the rod and reel in the early days could catch their share of bass, trout and other fish without going very far from home, but as the country became more thickly populated, they had to travel farther to enjoy their full share of the sport. This they could not do for financial or other reasons, so they began practicing at home. This practice became so fascinating that a number of kindred sports got together and formulated a set of rules that there might be an element of competition in their practice. As this competition became keen tackle was improved, new and better rules were adopted, until to-day tournament bait casting is in a class by itself and is distinctly one of the best, cleanest and most wholesome sports in existence.

If there are a few bait and fly casters in your vicinity, get them together and organize a club, even if you should find it necessary to go to some expense. Then keep the interest alive by talking casting at every opportunity, keep a bulletin of records and averages made by your club and others, in a prominent place in your store. Before this, study up on tournament casting rules so that you may converse intelligently with those interested. These rules can be obtained from any manufacturer or jobber, but it will not be well for the dealer to tie himself up to any one line of goods as the ideas and likings of customers vary, but by having catalogues and samples of different manufacturers to hand it will not be necessary to carry large stocks.

There is good money in sporting goods of all kinds, and every dealer should endeavor to win for himself a reputation for handling reliable and up-to-date goods.

THE SITUATION IN METALS.

Practically nothing in the way of price changes has developed this week. For all that, nearly every metal on the list is somewhat stronger, ingot tin being, perhaps, the only real exception.

The price on small lots of tin remains at the same figures as last week, but this will be shaded for larger orders. The depression of tin on the metal exchange has been due to some facts and several rumors. The facts are presented in the shape of a few good-sized carloads of the metal now en route to the London market, and the statement of unsold Banka tin, which is rather unexpectedly favorable. It is shown that there are now 1,261 long tons unsold, as against 2,093 tons at the corresponding period of 1905, and 880 tons in 1904. The rumors referred to deal chiefly with a reported increase in the output of the Straits mines. In spite of these circumstances the market continues exceedingly dangerous and is subject to further sudden changes in sentiment and price.

Until a couple of days ago the lead market continued to rule firm. Buyers found supplies light, but not having any pressing orders on hand, they preferred not to force matters, with the result that prices were stationary. Until Tuesday of this week an advance was confidently expected, but an easier feeling has prevailed since then—not sufficient, however, to affect the ruling price.

Zinc spelter is still a decided feature. The American market experienced a great awakening when foreign buyers were compelled by high prices abroad to enter into negotiations with producers on this side of the water. This export demand has been so great that spot zinc is now all but out of the question, and buyers find it necessary to bid high even to secure options on futures. Although their wants are urgent, trade is bound to be light until supplies increaee, and in the meantime the situation looks favorable for higher prices.

LUMBERMEN ASK GAME RIGHTS.

The lumbermen of Nova Scotia are a progressive company. They move on the John D. Rockefeller plan—all the goods for me; all the good advice for my neighbor. Just now their neighbors are the sportsmen of the province, the holiday fishers and hunters. A movement is on foot for the improvement of the fish and game laws. The Annapolis Royal Spectator advocates the proposed renovation and continues:

"A new feature has, however, arisen in the claim of the owners of timber limits to control the game and fishing privileges on their own areas. They also claim that they have been advised by the Hon. Attorney-General for Nova Scotia that the licenses granted to sportsmen by the Government entitles those sportsmen to hunt or fish only on Crown lands. If such is the case the Government is issuing licenses for a worthless privilege. The Crown lands of the province have been given away and sold at 40 cents per acre until nothing remains to-day but a few scattering sections impossible to reach without trespassing on the lands of some of the parties who make up the Lumbermen's Association of Western N. S. The claim, however, under present conditions, is a false one. These gaming privileges were not granted with the lands any more than the mineral rights, except in the case of some very early grants, too few to be of any real importance. Custom, too, is allowed to be almost as strong as law and for the past forty years a hunter might kill game in his neighbor's back yard and if no damage was done, no trespass was claimed or thought of."

BOARDS OF TRADE AND CIVICS

Mr. George Caverhill, vice-president of the Montreal Board of Trade, when interviewed by a representative of Hardware and Metal regarding board or trade activity in municipal affairs, and the Halifax plan of a joint committee of the board of trade and council, said :

"I fear there is no hope for the adoption in this city of a scheme similar to that in force in Halifax, nor do I believe that it would be to the best interests of the city that such a system should be adopted. There are many objections which occur to me at once, and doubtless there are others even more serious which would develop in the carrying out of the scheme of having a joint committee from the city council and the board of trade. In the first place, if the business men of the city are consulted on certain matters it follows that other interests should be consulted in the same way when subjects in which they are concerned come up, and while the aldermen may, if they desire, unofficially consult such bodies as occasion arises, it would be impracticable to have them properly represented on any committee.

Tie Aldermen's Hands.

"Again, should such a committee be organized, the aldermen are almost forced to follow its recommendations or, in other words, a body composed of some members at least who are not directly responsible to the citizens would have undue power in the transaction of the city's affairs, a principle which I do not think would meet the approval of citizens generally. So far as I can see the only hope we have of economical and businesslike administration of the city's affairs is in the active personal interest of every citizen in the choice of representatives on the city council. If the proper men are chosen for this office they can be relied upon to secure advice from those with more knowledge than themselves on any subjects requiring special knowledge which may come before them, but if this type of men is not chosen we can hardly hope that, even assuming that they received the best of advice, they would be disposed to follow it.

Government by Commission.

"The alternative of this is government of the city by a small commission. This proposal would, I am sure, meet the hearty approval of all business men, but, unfortunately, it is extremely unlikely that citizens generally would accept it.

"While I believe that the charge is generally made that the business men of Montreal do not take a proper interest in municipal affairs individually, I do not think that the same can be said about business men collectively, as the Montreal Board of Trade, the most thoroughly representative business organization of the city, has always taken an active interest in the larger questions which have come before the city council, and have lost no opportunity of giving the city council the views of the business men on such subjects. During the last two and a half years the council of the board of trade has taken up many municipal matters. I refer especially to this period, as having been a member of the council for that time I have been more familiar with its work than formerly.

Done in Montreal.

"In 1904, while the Act to amend the charter of the City of Montreal was before the Quebec Legislature, the board of trade council, which, by the way, appoints each year a special committee on municipal affairs, went most thoroughly into the provisions of the proposed amendment and made representations on all clauses which, in its opinion, required alteration, and was largely successful in securing a number of changes which would commend themselves to every thinking citizen. In the same year the city council had before it the subject of the much-needed increase of civic revenue, and appointed a special committee thereon. This committee very sensibly advised the council of the board of trade that it would be pleased to consider suggestions on the subject, and we went into the matter most fully, communicating to the city's finance committee our opinions on the whole question in detail.

GEORGE CAVERHILL, Montreal,
Vice-President of the Montreal Board of Trade.

Various Suggestions.

"In 1904, also, on two different occasions, the board brought to the attention of the city council the need for cleaner streets and sidewalks, the board also making recommendations with reference to the smoke nuisance. In connection with public franchises resolutions were communicated to the city council regarding the contracts between the city and the Montreal Street Railway Company and the Gas Company—this during the year 1905. The council of the board of trade took action also to prevent the intrusion of electric railways into Mount Royal Park.

"Quite recently the question of the desired extension of Western Square to Sherbrooke street was the subject of a memorial addressed to the city council, which memorial, upon being referred to the parks and ferries committee of that body, resulted in its decision to secure estimates as to the cost of such extension, which estimates will be presented to that committee shortly, and I trust the desire of the board of trade and citizens generally in this matter will be acceded to.

Better Fire Protection.

"One other question which has, and is still, receiving attention, is the need for improved fire protection service. As citizens we can hardly claim any special credit for taking such an interest in this matter, as it affects our pockets as business men, but at the same time it is a matter in which every citizen of Montreal has a direct interest. As I said, this matter is still receiving attention at the hands of the board, and the council expects shortly to receive a report on the subject from a very strong committee appointed early in the year.

"I could mention many perhaps smaller matters on which the city council have had the advantage of advice from the board of trade, but these will suffice to show that, as I said, collectively, the business men of the city, through the board of trade, have been fully alive to the citizens' interests.

"I do not see that any advantage would accrue to the city by the adoption of the scheme now in operation in Halifax, as explained in Hardware and Metal whereunder the board of trade appoints some of its members who, with a certain number of the city council, form a joint committee to deal with important civic matters. If in the election of representatives on the city council the individual citizen sees to it that none but reliable and capable men are chosen, we will have a considerable improvement in the administration of civic affairs."

HARDWARE TRADE GOSSIP

Ontario.

J. McCurley has retired from the Victoria Foundry Co., Ottawa.

James King, of the Warden King Company, Montreal, was in Toronto this week.

Col. Gartshore, of the McClary Manufacturing Co., London, is making a tour to the west.

T. McC. Hutchinson, of Drummond, McCall & Co., Montreal, visited Toronto on Friday.

Mr. McKinnon, of McKinnon & Walker, hardware merchants, of Cobalt, was married last week.

H. W. Mitchell, commission merchant, of Winnipeg, has been in Toronto for a few days this week.

Thomas Marshall, Dunnville, was a caller at the Toronto office of Hardware and Metal on Tuesday.

R. W. Harrison, of Harrison & Robertson, master plumbers, is improving in health and is able to be out again.

Wm. Taylor, of the George Taylor Hardware Co., Cobalt, has gone to New Liskeard to conduct their branch there.

Major J. A. W. Allan, hardware merchant, of Newmarket, is said to be favorably mentioned for the strievality of York County.

J. W. Sims, who was formerly in the plumbing business at Maffey, has opened in the same line at Haileybury, and is already carrying on a fine trade.

The Dominion Radiator Company, Toronto, defeated the Canadian Fairbanks Company at baseball last Saturday in a hot and closely contested game, by a score of 7 to 3.

A young man named Ernest G. Luxton, employed with the Marshall Wells Hardware Co., of Duluth, was killed by a street car in Portland, Ore. His home is said to be in Toronto.

Edward Gurney, president of the Gurney Foundry Co., has returned to Toronto from a month's auto tour to Boston and return, going via New York State and returning via Montreal.

John Archer, head clerk for Wm. Hughes, hardware merchant, of Marmora, Ont., was married last week to Miss Vera Butler, of the same town. They left for a short trip to Toronto and other points.

Albert Walker, of the A. R. Williams Machinery Co., pleaded guilty for taking goods his house had a lien on, but which were under siezure by the sheriff at St. Catharines. He was let off on suspended sentence.

H. B. White & Co., Walkerville, dealers in paint and wall paper, and decorators, have moved into their new store. This firm, of which T. E. Couse, late of Sanderson Pearcy & Co., Toronto, is a partner, carry a complete line of decorators' materials, and keep constantly employed from 30 to 50 men.

The Railway Commission yesterday heard the complaint of the Waterhouse Nail Co., of Brantford, who charge discrimination in railway freight rates. It is alleged that the Brantford concern pays $1.67 more for wire rods from Sydney, N.S., than Montreal firms do, and that the rate on keg nails is two cents more from Brantford to Winnipeg than it is from Montreal.

Quebec.

Hatte Foisy & Co. have registered as builders in Montreal.

Wm. Ware & Sons, plumbers, were registered in Montreal.

Berthiaume & Pepin, plumbers, Montreal, have dissolved partnership.

The Glasgow Lead Pipe Works are among the newest Montreal firms to register.

J. Crawford, of Howick, was in Montreal on Wednesday, buying materials for his fine new residence.

C. O. Gervais, of C. O. Gervais & Frere, general merchants, of St. Johns, was in Montreal this week.

Alfred Oliver, of the Clinton Fireproofing Company, Clinton, Mass., paid a business visit to Montreal this week.

John Loughrin, dealer in hardware, tinware and furniture, Mattawa, Ont., was in Montreal on a business trip a few days ago.

T. C. Davidson, of the Thos. Davidson Manufacturing Co., Montreal, is taking a trip to Winnipeg and other western cities this week.

E. D. Hoffler, of Buffalo, Canadian representative of the Roebling Construction Company, spent Monday and Tuesday in Montreal.

Mr. Morrow, of Morrow Bros., general merchants, Grenville, was a visitor at some of the wholesale hardware warehouses of Montreal this week.

Mr. O'Brien, of O'Brien & McDonald, the railway contractors, was a visitor to Montreal this week, looking after some of the firm's extensive interests.

A. D. Leblanc, formerly with the Canada Hardware Company, has joined the traveling staff of Lewis Bros., and will cover a portion of Quebec Province.

Thomas Oliver, hardware merchant, of Copper Cliff, visited Montreal this week, having come down from Toronto by boat. Mr. Oliver was accompanied by his wife on the trip.

J. R. Terrill, of Caverhill, Learmont & Co., has returned to Montreal after a successful two weeks' trip in the Ottawa Valley, where he relieved "Jack" Meikle during the latter's illness.

George Caverhill, senior partner of Caverhill, Learmont & Co., Montreal, has been suffering from illness for a week past, and was unable to attend to business during that time.

Arthur Leger, of Lacroix & Leger, hardware merchants, Montreal, is sailing on the Empress of Britain to-day for a ten weeks' trip to Europe. He will be accompanied by Alphonse Derouin, of L. H. Hebert's staff.

J. H. Roper, Canadian agent for John Shaw & Sons, Wolverhampton, Eng., has returned to Montreal after spending nearly six weeks calling on the trade in the Maritime Provinces. Mr. Roper found things very lively in that part of the country.

J. W. Hubbard, of Stacey Bros., cutlery manufacturers, Sheffield, England, will be in Canada early in July. As Canadian representatives, the name of F. W. Lamplough & Co., Montreal, is closely associated with Stacey Bros.' lines of cutlery, and no doubt many buyers will remember having met Mr. Hubbard on the occasion of his last visit to Canada in 1904.

Western Canada.

Archibald & Shea have bought the plumbing business of J. C. Orr & Co., Winnipeg.

Ross Neuman, manager in Winnipeg of the Canadian Fairbanks Co., was in Calgary last week on business.

A. B. Kent, of the Marshall, Wells Co., Winnipeg, was in Calgary last week on his return from an extended trip in California. He was accompanied by Mrs. Kent.

JAPANESE TRADE POSSIBILITIES.

Another opportunity will be given Canada, with other nations, to bring her products and manufacturers before the Japanese. From September 1 to November 30 of this year a semi-international exhibition will be held in Tokio under the auspices of the Japanese Government in co-operation with the business men of Japan. In a letter to the Toronto Board of Trade the directorate of the fair particularly ask that Canadian manufacturers be encouraged to send exhibits, and appear to be anxious that our manufacturers do not overlook the fair. When the exhibition proper is over it is the intention to keep the establishment up as an industrial commercial museum where those who have goods to introduce into the country may have a place where they will be kept in touch with the importers and purchasers.

Japan is one of the greatest unexploited markets in the world, but if Canadians are to share in the future commercial intercourse, every advantage we can get must be taken and energetic methods must be used so that we are not forestalled by other nations.

Only a few days ago Consul-General Nosse when making a trip across Canada stated that it was his intention when in Winnipeg and other western cities to see some of the business men and discuss with them trade relations between Canada and Japan, believing that now is the time for Canadians to get possession of the Japanese market. He spoke of the preference for all Canadian products in Japan since the late war on account of the British sympathy with the Japs, and also as a further proof of this feeling stated that before long there would no doubt be a vice-consulate established in Toronto by the Government of Japan. This friendly feeling means much for us, and if we fail to follow it up and appreciate what it means to us, most assuredly we will be the losers.

WESTERN WANTS.

Board of Trade Resolutions for Edmonton Convention.

Resolutions to be submitted to the convention of Western Boards of Trade at Edmonton, Wednesday and Thursday of this week, which will be fully reported in next week's Canadian Grocer, were required to be sent in beforehand and were then issued in phamphlet form to enable careful consideration being given them. The resolution that the Associated Boards of Trade of Western Canada continue as at present constituted for the year 1907, came from Regina, which city also asks that deputies of the receiver-general be appointed for the two new provinces, that the postal service be made commensurate with the growth of the country, and that the passenger rate on railways be lowered and excursion rates to the east be given in the Summer.

Wetaskiwin wants a C.P.R. land office opened up north of Red Deer and strict-

ALFRED LACROIX,
of Lacroix & Leger, Montreal.

er inspection of settlers' effects coming in from the States in regard to dutiable articles. Edmonton urges the necessity of uniform commercial laws in the two new provinces, the removal of the cattle embargo, better roads, the adoption of the metric system, the restriction of bonusing, municipal ownership and better postal service.

Calgary asks for better commercial legislation and the establishment of an intelligence bureau in connection with the Department of Agriculture.

Lethbridge also wants better commercial laws that will limit the garnishee to $25 in any one month, and provide for the arrest of absconding debtors; that claims for lost or damaged goods must be settled within 60 days by railway companies and that all shipping bills should be signed in triplicate.

Moosejaw suggests the better payment of school teachers, and the support of hospitals from public funds.

Strathcona asks that imported goods be marked in Canadian standards, that a fruit inspector be appointed, that bonusing be restricted and municipal ownership encouraged.

Wapella wants the municipal year to commence not later than February.

Raymond wants the encouragement of Albertan sugar.

North Battleford proposes that the laws relating to exemption from seizure be amended so that no provisions of the law shall defeat a personal promise to pay.

A SUCCESSFUL HARDWARE FIRM.

Among the younger firms of retail hardwaremen in Montreal, none has made more rapid progress than Lacroix & Leger, whose fine store on Mount Royal avenue is already one of the most prosperous in the city.

Both partners in the firm had a thorough training in the hardware trade before launching out for themselves. The senior partner, Alfred Lacroix, spent five years as office man with the large wholesale hardware house of L. H. Hebert, Montreal. He then, at an early age, started in the retail hardware business on Mount Royal avenue, in partnership with his uncle, under the firm name of Cardinal & Lacroix. For two years the business was carried on in this way, and its growth was rapid. At the end of that time Mr. Cardinal's share of the business was purchased by Arthur Leger. That was five years ago, and the firm has continuously prospered until it is now recognized as one of the foremost in Canada's greatest city.

Arthur Leger, who became the junior partner in the present firm on taking over the share held by Mr. Cardinal, also had a long experience with L. H. Hebert. In 1892 he entered that house, and was there for nine years in the capacity of sales manager. The addition of his capital and personality to the retail business in 1901 gave it a great impetus, as its increasing trade has shown.

Mr. Leger is about to take a ten weeks' trip to England and the continent, his object being as much to increase his firm's trade connections with the big houses there as to enjoy "the sights." Lacroix & Leger have for some time been importing a considerable quantity of their goods direct, and it is their intention to increase this end of their business.

DELIVERIES OF WINDOW GLASS.

Many importers of window glass are loud in their complaints on the manner in which their consignments are being handled this season.

The receiving docks at Montreal have not yet been whipped into shape for the season, and indeed they are in a disgracefully muddled condition. This was not improved any by the recent carters' strike, during which all kinds of goods were stacked up along the waterfront. It is estimated that thousands of boxes of glass were piled at the various docks during that time.

One of Montreal's largest glass dealers mentioned the other day that it had taken his men a full week to straighten out his latest arrival from Europe. Other importers express themselves as being equally dissatisfied with the service they are getting from some of the trans-Atlantic companies.

The obvious result of this bungling is that many retailers will be disappointed in their consignments of window glass at this, the busiest season of the year, and the probability is that they will heap blame on innocent shoulders.

ONTARIO SILVERWARE CASE.

The grand jury at Welland found a true bill against the Ontario Silver Company for using false trade descriptions, and also against the manager, G. W. Clarke, for conspiracy, for whom a bench warrant has been issued for failing to appear in court. While several jobbers are included in the indictment it is hardly possible that any proceedings will be taken against them, as they were not notified of any liability in the matter or cautioned to stop dealing in the Sheffield-marked cutlery.

ARTHUR LEGER,
of Lacroix & Leger, Montreal.

KINGSTON BOARD OF TRADE.

Kingston had a board of trade in 1872, but it tired by the way. The younger business men have seen that it is not good for Kingston to be without a board of trade and a new one has been organized with 120 members and two honorary presidents. The officers are: Honorary presidents, Hon. Wm. Harty, M.P., E. J. B. Pense, M.P.P.; president, W. T. Minnes; treasurer, W. B. Dalton; secretary, J. E. Cunningham; council—C. Bermingham, J. M. Farrell, L. L. Henderson, D. G. Laidlaw, C. A. Macpherson, Hugh Macpherson, J. A. Minnes, E. C. Mitchell, R. J. McKelvey, H. W. Richardson, T. J. Rigney, E. T. Steacy, and J. S. Turner.

SALESMAN WANTED

WANTED—An experienced, active hardware and stove salesman, must be good stockkeeper and capable of taking charge of front shop. Apply stating experience, references, salary. Box 839, St. Thomas, Ont. (24)

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Jenkins Valves—Discount of 42½ per cent. declared.

Iron Pipe—Lower prices in some quarters.

Pig Iron—Clarence, No. 3. $18.00; Cleveland, No. 1, $18.25.

Antimony—Minimum price, 30 cents.

Ingot Tin—Easier. Prices shaded for quantities.

TORONTO.

Bolts—An advance of 5 per cent. has been made.

Wood Screws—Quotations are 10 per cent. higher on gimlet points and 5 per cent. higher on cone points.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 15, 1906.

Most of the wholesale houses in this city had a rather light trade at the end of last week and the early part of this. On Wednesday, however, things began to look up and the mails since then have been bringing in some very large orders. It is thought that the temporary lull came as a result of last week's heavy rains. Reports are being circulated that even now the roads in the "back districts" are badly broken up, thus seriously handicapping business in that territory.

Prices generally are firm, but the only notable change is in Jenkins' valves, on which the new discount of 42½ per cent. has been declared. Some jobbers here have revised prices on iron pipe, showing a slight decrease in price. This, however, is not by any means general.

AXES—No change is to be noted in conditions. We are still quoting: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—Trade continues to be good, with prices steady at the following figures: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—There is the usual quantity going out. The price remains at the same figure of $4.25 for cold blast.

RIVETS AND BURRS—A first-rate turn-over is the rule among local jobbers. Prices are stationary and are quoted as follows: Best iron, rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—As the season for this line approaches, increasing inquiries are being received. Our prices are as follows: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b., Montreal.

MACHINE SCREWS — Business is large, with prices steadily maintained. We are quoting: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—There is nothing of particular interest to report with reference to this branch of the trade. Our prices still are: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 and 5 per cent.

HORSE NAILS—Trade conditions remain very satisfactory. Prices currently quoted are as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—The market is still somewhat unsteady, as a result of keen competition. We are quoting $2.15 per keg., f.o.b., Montreal.

CUT NAILS—Only the normal trade is being done, at prices the same as have been quoted for some time past. Our figure is $2.20 per keg, f.o.b., Montreal.

HORSESHOES—The situation is substantially the same as at our last report. The following prices prevail: P.B. new pattern, base price, $3.50 per 100 lbs.; M.R.M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes 25c. per 100 lbs. extra.

SPORTING GOODS—Guns and ammunition are already going out in good quantities, with other lines not far behind in volume of business done.

BUILDING PAPER—About the same conditions prevail as have for the past few weeks. Orders are being filled in fair volume and the trade on the whole is in a satisfactory condition.

CEMENT AND FIREBRICK — The heavy demand reported last week for the better grades of cement is keeping up and there will not likely be any lull during the whole season. Our prices are as follows: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lafarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21 American, $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—We are still quoting: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch. $3; 1 inch, $2.95.

FREEZERS—The number of freezers being shipped by all the local jobbers is very large, and prices are steadily maintained as follows: American Twin, 2 qt. $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—The demand continues brisk, the price quoted being still $1.45 per hundred square feet.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 15, 1906.

As predicted in our last report, bolts have advanced. The present quotations are 55 and 10 off instead of 55, 5 and 10. Screws have also been advanced 5 and 10 per cent. on cone point wood screws, and gimlet points respectively. Our present quotations now are 70 and 10 per cent. off on cone points and 70 and 5 per cent. off on gimlet points.

Some new samples of roller skates have come to hand The return of this one time sport is being widely felt now and different hardware jobbers are catering to the trade.

Cutlery has been particularly active for some week, and June deliveries have been larger this year than in any previous year at the same time. Booking orders are also good, and the Fall trade prospects never looked brighter.

Business continues good in all lines, but Summer lines, that is, screen doors and windows, lawn mowers, garden implements, etc., never sold better than during the present season.

AXES AND HANDLES—Trade conditions normal, with no price changes.

CUTLERY AND SILVERWARE — The largest business in many years has been done during June.

SPORTING GOODS — Baseball and lacrosse goods and fishing tackle continue in good demand, and guns, ammunition, etc., are selling well.

SCREEN DOORS AND WINDOWS — An increasing trade is experienced in screen doors and windows, as the season advances.

HAMMOCKS—The hot weather has created a large sale of these goods. A better class of hammock than usual is being asked for, and manufacturers are kept busy getting out stock.

LAWN MOWERS — Lawn mowers continue to sell well. Some jobbing houses report being nearly depleted.

LAWN HOSE—The hot weather has greatly increased sales in all garden sizes.

REFRIGERATORS AND FREEZERS—A big business is reported in these lines, particularly the former, for family use.

WASHING MACHINES — Trade is on the increase and some large orders are reported.

CHAIN—We quote as follows : 1 inch, $6.60; 5-6 inch, $4.55; ⅞ inch, $3.95; 7-16 inch, $3.80; ½ inch, $3.65; 9-16 inch, $3.55; ⅝ inch, $3.45; ¾ inch, $3.35.

EXTENSION AND STEP LADDERS —Prices continue as follows : Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—Sales are reported large. We quote : 2-in. mesh, 19 w.g., discount 55 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE — We quote : $2.17½ f.o.b. Cleveland.

BARB WIRE — Prices remain the same. We quote : On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE — (Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues, with the usual business. We quote : $2.05 base.

CUT NAILS—We quote : $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7½ off list. "M.R.M." brand, 55 per cent off. "Monarch" brand, 50 and 7½ off. "Peerless," 50 per cent. off.

HORSE SHOES — Our quotations continue as follows : P. B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

RIVETS AND BURRS — Prices are very firm and stocks low. Indications are for still firmer prices, perhaps an increase.

SCREWS—Gimlet points are up 10 per cent. We quote 70 and 5 per cent. off list. Cone point wood screws have advanced 5 per cent. We now quote: 70 and 10 per cent. off.

BOLTS AND NUTS— A 5 per cent. advance has been made on bolts. Former discount was 55, 5 and 10. We now quote 55 and 10 per cent. off.

CEMENT—Prices keep very firm, but there is no change. A heavy demand is still felt. We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIRE BRICK—There are no changes to record. English and Scotch firebrick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27½c. to 35c.

HIDES AND WOOL—Hide prices are unchanged and supply is in excess of the demand. Country buyers are said to be paying too much for wool.

Hides, inspected, steers, No. 1	0	12

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 15, 1906.

The week just past has been one of almost uniform steadiness in the metal market. Outside of a few slight fluctuations, which left things in the same condition as before, there has been practically nothing to remark about the prices. The demand for all classes of metals continues to be very large and the importing and jobbing houses in this city are well satisfied with the outlook. Their chief difficulty seems to be in securing deliveries of the goods ordered from first hands.

Ingot tin has sold actively during the week, but prices have fluctuated considerably. On the whole, though, no appreciable difference has been made in the quotations for spot tin, and we make no change in our price. It is thought that the scarcity which has existed in the tin market for a long time may be somewhat relieved during the Summer months by an increased production on the part of the mines in the Straits Settlements. Rumors to this effect are seemingly backed up by the fact that the present consumption is very large and badly provided, so that good prices are assured for some time to come.

Copper is still well to the front, and prices are yet ruling high. It is reported that a growing demand for copper is being experienced on the New York market from foreign consumers, who are buying more liberally. The general conditions of the market would really justify higher prices, but an effort is being made by the large producers to keep quotations as much as possible within present bounds, so as to distribute supplies more evenly. As previously mentioned, Montreal buyers find the greatest difficulty in purchasing at the prices currently quoted, when spot delivery is required. The difference between quotations and buying prices is so marked at present as to cause a very appreciable difference in the cost of large quantities. This is true of both copper and tin, but perhaps the latter metal is the more affected by this condition.

The complexion of the iron and steel market shows improvement. There is a splendid demand, but as this has been the case for some time, it is very difficult to secure deliveries of the softer grades of iron. Prices on these irons are considerably stronger.

Zinc spelter is keeping its present position on the market. Several weeks ago it was mentioned that advances were being made on the European markets, and this naturally caused foreign buyers to come into the American market where prices were easier. The result of this invasion is now seen in the rapidly increasing values reported from St. Louis and other centres. Producers have not been able to meet this export demand in spot spelter, and now even futures are no longer offered. Authorities look for early developments in spelter.

COPPER—It is hard to get reasonably prompt deliveries. The market is very firm, and would no doubt go higher, but for the attempt to limit prices. We quote : Ingot copper, 21c. to 21½c. ; sheet copper, base sizes, 25c.

INGOT TIN—Prices have been alternately up and down throughout the week, but the quotations at time of writing are somewhat firmer than earlier in the period. We still quote last week's price of 45c. to 45½c.

INGOT ZINC—The situation is becoming quite acute, and the expectation is that it will not be long before prices will be materially advanced. We are now quoting : 7c. to 7¼c.

ANTIMONY—Some of the local jobbers are selling fair quantities of antimony at a price rather higher than that quoted last week. For small lots it is now impossible to obtain a better price than 30c. per pound.

PIG LEAD—Advances took place in the early part of the week, but conditions are now somewhat easier. We do not change our quotations, which are $4.45 to $4.55 per hundred pounds.

PIG IRON—Demand is good, but there is still difficulty in deliveries. We quote:

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	21 00	"	"
Clarence No. 1	18.00	"	"
" No. 3	18.00	"	"
Cleveland No. 1	18.25	"	"

BOILER TUBES—There is no change

in conditions. We still quote: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 3-4c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our prices remain as follows: Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c.

MERCHANT STEEL—There are no price changes this week. Machinery steel shows an exceptionally strong market with an upward tendency. We give prices: Sleigh shoe, $2.17 1-2; tire, $2.27 1-2; spring, $2.75; toecalk, $2.82 1-2; machinery iron finish, $2.27 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and upwards; square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—Prices and general market conditions are unchanged. We are still quoting: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—American producers have increased the price of 28 gauge, and British makers are declaring a general advance which has not as yet affected the jobbing trade in this country. Our prices remain as follows: Queen's Head, 28 gauge, $4.35 to $4.60; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—This line is very strong at present. We give the following prices: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

CANADA PLATES—A very active demand is being shown, and prices are stiff. We quote: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TIN PLATES—No change has taken place. An active inquiry is being maintained. Our prices are: Cokes, base size, 1C 14x20, $4; charcoal, base size, IC, 14x20, $4.25.

TERNE PLATES—Nothing new has transpired since our last report. Quotations are steady at $6.85.

SHEET ZINC — Although gaining strength, there is as yet no change to make in the prices of this metal. We still quote $7.75 in casks, $8 in less than casks.

SHEET LEAD—Our prices remain as follows: 2½ lbs., 5½c. by the roll; 3 lbs. and heavier, 5¼c. by the roll; small quantities 25c. per hundred lbs. extra.

BAR IRON—No change in conditions is noticed. The market is still firm at $2.05 f.o.b. Montreal.

OLD MATERIAL—Things are almost exactly as given in our last report. Even rubber continues steady. About the only thing worthy of remark is that for some reason or other, foundrymen do not seem to be so anxious to get material as they were. Market values have, nevertheless, kept firm. We quote: Copper wire, 15 1-2c.; light copper, 14 1-2c.; heavy red brass, 14 1-2c.; yellow brass, 11 1-2c.; light brass, 7 1-2c.; lead, 3 1-4c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $10.50 to $11; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7 1-4c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 15, 1906.

Considerable irregularity still exists in the demand for ingot metals owing to slight fluctuations in prices, but notwithstanding this the demand is active and stocks are kept low by the persistent call for goods. The warehouses contain much lighter stocks of goods than is usual at this season and in iron and steel the mills are so busy that orders cannot be taken for delivery in less time than from three to six weeks. The pig iron market is firming up and the market is stiff at the prices we quote. Considerable difficulty is experienced in securing the fulfillment of orders.

Ingot tin has been fairly steady in price during the week and the quotations of a week ago still rule. Copper is firm but lead has fallen back to its old position after a rise at the beginning of the week. Spelter is firmer on the outside but unchanged locally.

PIG IRON—Both in local and outside markets firmer conditions rule and difficulty is experienced in securing early shipments. We quote: Radnor at furnace, $30; Hamilton at furnaces, No. 1, $20.50; No. 2, $20; Londonderry, f.o.b. Toronto, No. 1 $21.50, No. 2, $21; Middleboro, $21.50.

BAR IRON—Demand is keen and the market is firm at $2.15 base, f.o.b., Toronto, with discount of 2 per cent. net cash.

INGOT TIN—Conditions have been irregular owing to fluctuations, but the market is steadier and with more supplies in sight prices appear to be likely to remain steady at about 43c. to 45c. per pound.

TIN PLATES—We still quote: Cokes, base size, 14x20, $4; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS — We still quote: 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. Buying is active and quotations 23c. to 24c. per pound.

BOILER PLATES AND TUBES — The demand is steady and we continue to quote: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1¼ inch, $8.50; 2, $8.80; 2½, $10.75; 3, $12; 3½, $15.80; 4, $20. Terms, 2 per cent. off.

LEAD—The market is easier after the recent advances on the outside and we still quote $4.50 for imported pig, and bar lead at $5 per 100 lbs.

ZINC SPELTER—No change in prices has yet been made but the feeling is that advances are probable. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

COPPER—Outside conditions are very stiff and stocks hard to get, but locally we are still quoting: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

ANTIMONY—Locally prices continue the same and we still quote 28½c.

OLD MATERIAL — No. 1 wrought iron is very active just now. Dealers' buying prices are as follows; Heavy copper and wire, 15½c. per lb.; light copper, 13¾c. per lb.; heavy red brass, 13c. to 14c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8½c. per lb.; tea lead, $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4¼ to 4½c. per lb.; iron, No. 1 wrought, $10.50 to $11; No. 2 wrought, $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel, $5; old rubbers, 7¼c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Quotations remain as follows: Anthracite in cars at bridges, egg, stove and nut, $5.20; grate, $4.95; pea, $3.50, per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.50; ¾ inch, $2.40; mine run, $2.30; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, June 13, 1906

PIG IRON—Cleveland warrants are quoted at 50s. 4½d., and Glasgow standard warrants at 50s., making prices as compared with last week 3d. higher for Cleveland warrants and 1d. lower for standard warrants.

TIN—Spot tin opened irregular at £176, futures at £175 5s., and after sales of 200 tons of spot and 670 tons of futures closed firm at £176 7s. 6d. for spot, £175 17s. 6d. for futures, making price compared with last week £4 2s. 6d. lower on spot and £3 12s. 6d. lower on futures.

COPPER—Spot copper opened easy at £86, futures £84 15s., and after sales of 250 tons of spot and 350 tons of futures, closed quiet at £86 for spot and £84 10s. for futures, making price as compared with last week 5s. lower on spot and 7s. 6d. lower on futures.

LEAD—The market closed at £16 17s.

6d., making price as compared with last week 2s. 6d. higher.

SPELTER—The market closed at £27 7s. 6d., making price as compared with last week 2s. 6d. lower.

U. S. IRON AND METAL TRADES.

From the Ir n Age, June 14, 1906.

May, being a month of 31 days, showed a production of 2,098,746 tons of coke and anthracite pig iron, as compared with 2,073,222 tons in April, a month of 30 days, which proves that the stacks have not been doing as well lately, with the approach of Summer. With the same number of furnaces blowing the capacity at work declined from 484,031 tons per week on May 1 to 472,997 tons on June 1. The production of the plants owned by the steel companies was 1,372,423 tons in May, as compared with 1,333,591 tons in April.

So far as stocks are concerned, it may be stated, with the reserve which the absence of official statistics from the east and the central west imposes, that accumulations are very light. It is known that the steel corporation has been running along for months with a stock including all kinds of iron, which has fluctuated between 130,000 and 140,000 tons. The whole south had a trifle over 100,000 tons on June 1. Consumption, therefore, is keeping wonderfully close to an enormous production. Buying from the merchant furnaces outside of steel making irons and of pipe irons has now been light for months, and a sharp buying movement may set in as soon as the crop situation is clear. It is not believed that melters will anticipate crop results.

Only a moderate business for forward delivery is being done in foundry irons. Pipe makers have been buyers to a moderate extent, but the general foundry trade is holding back for the third quarter, and it looks like a test of strength, particularly with the southern furnaces, who, however, have this in their favor, that they are accumulating very little iron. Practically complete returns from the southern plants, including Virginia, Alabama and Tennessee, show an increase of only 4,665 tons for May.

In the lighter lines the mills continue exceedingly busy. The demand for sheets, tubes and wire products continues good. One order for 25 to 35 miles of 16-inch pipe was placed this week.

THE OUTLOOK FOR TIN.

An English report on the tin market says that largely in consequence of the big Straits shipments the visible supply has increased 1,561 tons in May, which is a good deal even for a Banca month, and brings the deficiency against last year to only about 700 tons. During the first five months 1906, Straits shipments have been about 1,350 tons larger, and total deliveries about 1,100 tons smaller than last year, the latter no doubt being partly affected by larger receipts of other tin, which goes direct to consumption and is not included in statistics.

During the time of excitement many American and European buyers have covered their requirements for some time ahead. We are now entering the dull consumption season, and with the larger quantities forthcoming, stimulated by high prices, a scarcity is much less to be apprehended than a little while ago. Considerable speculative interest is still engaged in this metal, and although holdings are not concentrated as they were recently, attempts may be made to rush prices whenever an opportunity offers, whilst on the other hand the existence of a widespread bull account also implies a good deal of danger to the market. It is not generally expected that consumption will materially suffer through the tinned provision scare due to the Chicago disclosures.

British Columbia Trade News

Vancouver, B.C., June 8, 1906.

British Columbia may look forward to the development of the pulp industry in extensive proportions shortly, the news having been received from London of the successful flotation of the company which is to take over the Quatsino Sound Pulp Co's holdings on the northwest coast of Vancouver Island. The Oriental Pulp Co., which has its limits on the mainland some distance further north, is also getting in shape for rapid construction of a mill. Both propositions are to be for making sulphite pulp. The enormous spruce timber areas of the northern coast districts of the province have long been looked on as the next source of supply for pulp, and with the extension of shipping facilities the field is opening rapidly for the disposal of the product on a large scale.

* * *

Persistent rumors of a third American railway seeking entrance into Vancouver are afloat. Surveys along the Fraser River in the vicinity of the city, purchases on option of land and of city lots to give entrance, have been announced as colorable evidence of something doing. The statement has been made that the Chicago, Milwaukee & St. Paul is seeking to extend its western lines and that it includes Vancouver in the plans.

* * *

James J. Hill's railway plans, as they affect B. C., still arouse great interest. The final surveys for the terminals on Burrard Inlet, Vancouver's deep water harbor, have been in hand for some time, slight changes being made from original intentions. The Great Northern's chief engineer from Seattle has been in charge of the recent operations which have been made in the east end of the city, looking to bringing the line, as it comes from New Westminster now, in a more northeasterly direction for the last mile or so. The present point at which terminals have been established in the heart of the city is altogether inadequate for a terminal, to say nothing of the fact that it does not give direct access to the deep water harbor. To come into Vancouver at all, a railway must have the trans-Pacific freight carrying in view. The Great Northern now owns a good water front location to which its surveys are being directed.

The alteration in the present line from Blaine, at the international boundary line, to Cloverdale, by building a connection from Cloverdale to Sumas instead is under way. When that is completed, the Northern Pacific trains, now running into the city over the C.P.R.'s line from Sumas via Mission Junction, will come over the Fraser River bridge at New Westminster.

The surveys for the V., V. & E. over the Hope mountain range from the Similkameen Valley into the Fraser at Hope, are now all complete and as the V., V. & E. (which is Great Northern) is being rapidly completed into the Similkameen from Midway, the announcement recently made by Mr. Hill in Ottawa that the Fraser Valley portion of the line would be constructed at once connecting Vancouver with the interior, can easily be carried into effect this season. Officials say that work is to be pushed right along after the Cloverdale-Sumas connection is finished.

* * *

The works of the Vancouver Fire Clay Co. at Matsqui, on the south side of the Fraser River, near Mission, have been completed so far that they will be put in operation at once. The production of fire brick, fire clay, sewer pipe, farm drain tile, etc., will be included in the enterprise. All local capital and local parties are interested in the project and as the very best quality of rock deposits has been secured in large quantities a permanent industry of great value is assured.

* * *

The plant of the Hall Mines Smelter at Nelson has been greatly increased and improved, and further extensions are contemplated. Recent increases in the market value of silver and lead have urged on the construction, which the growth and prosperity of the mining industry in the Nelson district has been making necessary for some time. The improvements include two additional furnaces with joint capacity for 200 tons lead ore daily; one new Heberlein roaster, now being constructed, six Heberlein convertors and an ore crusher and sampling mill. Another Heberlein roaster and six more convertors are projected. Various other improvements and additions have been made, the total expenditure on the plant being about $100,000 when construction is complete.

KEEP ON GROWING.

Keep on growing. Never be satisfied, because once you are satisfied, endeavor will cease and the first thing you know you will be on the retrograde.

It does not pay to be satisfied. This is the age when the hustler wins trade, and, if he is a man who keeps his word, he will hold that which he gathers in.

Do not let up; plan ahead and continue efforts to improve.—The Hardware Trade.

Hardware and Metal Conditions in Manitoba.

Market quotations corrected by telegraph up to 12 a.m. Friday, June 15, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

Wholesale hardware business continues very active. Staple lines are pretty firmly held at present prices and there are no notable changes of importance.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE—Retail competition is still reported as being very keen. Jobbing prices are steady. We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS—Revised list and discounts are now as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅝ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ½, $7.20; ⅝, $4.60; ¾, $4.30; ⅞, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—The list on "Irwin" auger bits is now the same as on common bits. Discount on "Irwin" is 47½ per cent., and on the common bits 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES — The price is now 1¾c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 p.c.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 25c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Price has been reduced ½c. per lb. Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC. — We quote as follows: Cartridges, Dominion R.F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33⅓; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.00; chilled, $7.50; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—We quote: Bar iron (basis), $2.70; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jessop $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—As noted last week the price has been advanced to $5.25 per cwt. with a reduction of 25c. per cwt. for ton quantities.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are steady. We quote: Silver Star, per gal., 21½c.; Sunlight, 22½c.; Eocene, 24½c.; Pennoline, 25½c.; Crystal Spray, 24½c.; Silver Light, 22½c.; Gasoline, 70-72 (engine), 25½c.; in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE Quotations are: While lead, pure, $6.75; bladder putty, in bbls., 2½c.; in kegs, 3¾c.; turpentine, pure, in barrels, $1.07;

less than barrel lots, $1.12; linseed oil, raw, 64c.; boiled, 67c.

WINDOW GLASS — We quote : 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40. 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00; 26 to 40, $4.52; 41 to 50, $4.75; 51 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75;91 to 95, $17.30.

Nova Scotia Trade News.

Halifax, N.S., June 12.

The hardware trade is in a very healthy condition. The travelers who are on the road are sending in good orders, particularly from the big mining centres, where there is unusual activity this season. Building is brisk, not only in the city but throughout the province, and as a result there is a good demand for supplies. The city council of Halifax evidently think that the establishment of a lead reducing works here will be a good thing for the city, as they have offered the Brandram-Henderson Company a bonus of $10,000 a year for a period of ten years, free taxation for a like period, and low water rates as an inducement to the company to locate their works in Halifax. The Mr. Brandram referred to is a member of the big British white lead manufacturing firm, and Mr. Henderson is of the firm of Henderson & Potts, paint manufacturers, of Halifax and Montreal. Mr. Henderson has just returned from England, where he completed the formation of the company, which is capitalized at $750,000. The company will erect a brick factory at a cost of $130,000, the site for which has already been bonded, they will employ about 75 hands and pay out annually for wages, $50,000. It is also stated that Henderson & Potts propose at an early date to enlarge their paint works.

Brandram's BB white lead is quoted here at $7.50 for 25, 50 and 100-lb. irons. Canadian white lead is $6.50 for 25 and 50-lb. irons. Sheet lead is $5.75 for rolls and $6.25 for smaller quantities. There is a good sale for poultry netting. Prices quoted here are : 50 yard, 2 in. mesh, 19 gauge, 30 in. wide, $1.85 ; 36 in., $2.20 ; 48 in., $2.95 ; 60 in., $3.70 ; 72 in., $4.40. Wire fencing is also finding good sale at about $2.65 for both barbed and plain. Wire window screens and doors are also in good de-

RANCH FENCING

We are putting on the market a Woven Wire Fence in 40 rod rolls. This is a special ranch fence and a winner—it competes with barb wire, weight of roll considered.

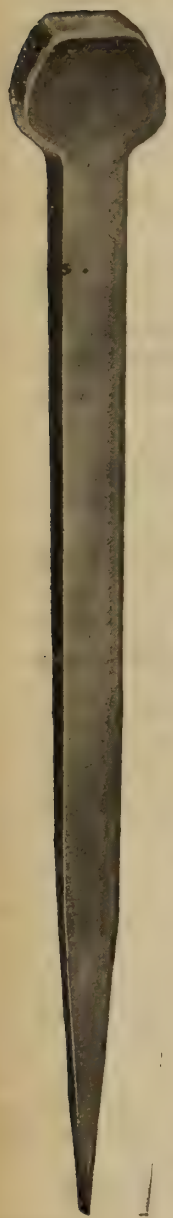
Metal Shingles Are Sure Sellers

Wood is too friendly with fire to be on the roofs of houses. Consequently

METAL SHINGLES

are in great demand. Besides resisting fire, they are rain-proof, snow-proof, lightning-proof.



A man in your town, say, is building a house. What is to hinder you getting after a Metal Shingle order ? Give the owner the insurance argument, the "fifty-years wear" argument. If he says to see the contractor, give that gentleman the "future" argument—That if he recommends wood shingles and trouble asises (as it is sure to) he will reduce his chances for getting contracts.

ASK US TO SEND YOU PRICES

METAL SHINGLE & SIDING CO., Limited

PRESTON, ONTARIO

No Horse Nails in the World

are made of better material than is used for the "C" brand. It is a special quality of Swedish Charcoal Steel Nail Rods, which have the highest tensile strength combined with great toughness. This is demonstrated by the average of several tests which shows that the test piece of these rods will stretch over one-third of its length, and require a force equal to 55,000 pounds per square inch before breaking.

No Horse Nails in the World

have ever, or do now excel the "C" brand in any test of quality impartially and scientifically applied. We challenge comparison with the product of any maker in the wide world.

No Horse Nails in the World

will drive easier or make better clinches, or hold the shoes on longer. They are of the right temper, which, combined with the fine hardened bevel points, penetrate the hardest hoofs easily. You will never bend or buckle a "C" nail in driving, or find split or crooked nails.

No Horse Nails in the World

can offer you forty years continuous manufacturing experience in producing by Canadian labour for Canadian requirements except the makers of the "C" brand.

No Horse Nails in the World

are better entitled to your preference for reasons of quality and fair price. They may be obtained on order from all the leading Hardware Merchants in Canada. If not obtainable through them, we shall supply you direct. Samples and quotations furnished on application.

Canada Horse Nail Company

MONTREAL

ESTABLISHED 1865

mand, the prices varying according to the quality of the wood frames. The sale of paints and oils is quite heavy, also brushes. Nails and spikes are selling freely, the previous quotations being unchanged. The hay crop throughout the province gives promise of being quite large, and there is a steady demand for scythes, forks, etc. Other articles which are selling now are hammocks, locks and chains used principally for boats, ring bolts and row locks.

* * *

The scarcity of labor is beginning to be a serious problem with the big coal and steel companies of Cape Breton, and if the conditions in this regard do not improve very shortly the loss of thousands of dollars in reduced outputs is bound to be the result.

At present the Dominion Iron & Steel Company are suffering from a shortage of labor at their iron ore quarries at Wabana, Newfoundland, and the output is not by any means sufficient to keep the three steamers which the company chartered for the Summer, to carry the product to Sydney, going regularly.

Indeed, only last week the company made an effort to have the Dominion Coal Company take the steamer Tricolor off their hands for a month at least, an offer which had to be refused owing to the company's output at Sydney being curtailed for the want of labor in the mines. A big advance in wages to laboring men, who are now receiving $1.40 per day at the steel plant, and $1.50 in the mines, is predicted shortly when the conditions are likely to improve. A Sydney contractor who lately secured a sewer contract from the city is offering as high as $1.75 per day for laboring men.

Percy C. Owen, who was employed with the Rogers Hardware Co., Limited, of Charlottetown, has gone to Lacombe, Alberta, where he purposes taking up his residence.

LARGE RADIATOR ORDER.

What is perhaps the largest radiator order for installation and shipment at once ever given in the Province of Quebec was last week awarded the Montreal branch of the Dominion Radiator Company. The radiation is for the immense building of the Sisters of the Congregation of Notre Dame, corner Sherbrooke and Atwater avenue.

COLD AIR PIPED FROM WELLS.

Cold air for keeping the houses cool and preserving butter, eggs, meat, etc., is supplied by the wells at Thompson Falls, Mont. The wells are about 60 feet deep and are fed through a gravel formation by the mountain streams. A current of cold air rises from them continually. To use the air the wells are closely covered and tapped with large pipes a few feet below the ground; by this means a temperature of 55 degrees is maintained in public buildings and dwelling houses. For cold storage purposes a house is built directly over the well.

THE TRAVELER'S LETTER.

The hotel 'bus from the midnight train
Brought only one passenger through the rain ;
A commercial tourist weary and sad,
For trade had been dull and collections bad.

Not a single order was on his book ;
The disgust he felt was shown in his look.
With a careless hand he wrote his name
On the page of a book unknown to fame.

The drowsy night clerk all signatures scanned,
Then a letter placed in the drummer's hand ;
See how he starts, what a smile of delight
Comes over his face at the welcome sight.

Open the envelope is quickly torn,
And over his face so weary and worn
Now flits like sunbeams after a storm
Smiles of joy as the message takes form.

Thus clouds of despair that will often appear
To the traveling man sometimes in the year,
Are quickly dispelled by such simple means
As one friendly letter—how queer it seems.

So wives, sweethearts, brothers and chums,
If you know where we'll be when Sunday comes,
Write us if your time will permit,
Draw on us at sight and our thanks we'll remit.

KEEPING UP THE PRESTIGE OF THE CLERK.

The light in which the clerk stands in the eyes of the customers is a matter which is deserving of very careful attention by every retail merchant. The customers should be brought to realize that they can get just as good treatment and just as low prices when buying goods from any one of the clerks as they can when buying from the proprietor himself. The mistake is often made by the average retail merchant of cutting the price on goods after the clerk has been unable to make the sale.

A Retailer's Experience.

A large retail merchant has given expression to the following sentiments on this subject, which are well worth the consideration of our retail readers. He says:

"I never will belittle my clerks by cutting the price after they have quoted a price to a customer and been unable to sell him goods. I have an understanding with everyone of my employes that when he gets to the place that it is impossible to persuade the customer into paying the price asked, that he shall come to me. If I think that we can go lower on the goods, I go down with the clerk to the customer and try to sell him at the price quoted by the clerk. If that fails to effect the sale, I appeal to the clerk and say, 'Do you think that we can cut the price any lower than that?' In my private conversation with this clerk, we have decided whether the price shall be cut or not, and when the above question is put to him he will say, 'Yes, I think we can shade that a little, as we have a pretty good stock on hand of that article,' and I then say, 'All right, go ahead and make the price which you think best.'

Improves Value of the Clerk.

"In this way the customer is brought to believe that the clerk has the privilege of making just as low a price as the proprietor, and the next time he comes in he does not ask for me in the belief that I can make him a lower price, as would have been the case had I cut the price in the first place myself. I have followed this plan now for the past five years, and I know that my clerks appreciate this kind of treatment. I think that my clerks will average up as loyal and as competent as any similar number of clerks to be found in a store anywhere, and it is a great satisfaction to me to know that any one of these clerks is competent to handle any customer who may come into the store.

Keep the Clerks' Interest Up.

"I have known retailers who endeavor to keep their clerks in the background, and do not believe in letting them use their own discretion in the matter of sales, and in such cases the clerk will always continue to feel that he is nothing more than an employe and has no interest in increasing the business, while with the plan which I have followed my clerks have all begun to show a genuine interest in the store's affairs, and it is a pleasure to have a business transacted upon that basis."

FOUNDRY AND METAL INDUSTRIES

The Brantford Screw Works have decided to remain in that city and will erect a large plant on a new site.

Victoria, B.C., fire department is considering a proposal to equip its fire engines with electric motors.

The Dominion Steel Co. received $674,800 in bounties last year. The Algoma Steel Co. received $404,900 and the Nova Scotia Steel Co., $125,768.

Woodstock council and board of trade sent a committee to Detroit to examine an iron working industry that desires establishing a Canadian branch. They reported favorably.

The coal and steel companies of Cape Breton are suffering from a scarcity of labor and their output threatens to be materially reduced this year if conditions are not improved.

Fredricton, N.B., council have about decided to purchase a boiler from Robb Co., of Amherst, and a hundred horsepower engine from Goldie & McCulloch, of Galt, for their lighting plant.

The output of the collieries of the Nova Scotia Steel & Coal Company for May reached a total of 59,289 tons, an increase over the corresponding month last year of 21,036 tons, and the largest in the history of the company for one month, except November, 1905.

The Transcontinental Railway Commission has received four tenders for 65,000 tons of steel rails. Two tenders were from the Canadian plants at Sydney and the Soo, one was American and the fourth English. It is likely the contract will be divided between the Canadians.

The Rheaume Foundry Company have been incorporated under Dominion charter with a capital stock of $49,000, for the purpose of carrying on the business of founders in all metals. The provisional directors are Jeremie Rheaume, J. L. Rheaume, Valere Rheaume, Donatien Rheaume, and A. L. Rinfret, with chief place of business at Montreal.

The A. R. Williams Co., Toronto, are looking for a site for a branch warehouse at Vancouver. The A. R. Williams Co. was started when Mr. Williams retired from the firm of Thompson & Williams, farm implement and threshing machine manufacturers, Stratford, Ont., and has since absorbed the Soho Machine Works, the Brantford Hollinrake Co., and the London Tool Works, besides smaller concerns.

Mr. Plummer's view that the Canadian market will not be able to take all the rails manufactured does not exactly agree with the more optimistic ideas held in other quarters. A man who is in close touch with steel rail conditions in Canada expressed the opinion that if the Sydney and Soo plants turned out 400,000 tons a year Canada would be able to take the whole business for at least three years to come. At the same time, if the Dominion Steel people find a foreign market it will be a good thing. The plant is in an ideal position, geographically, for export trade.

Says the Little Paint Man:

"Finished floors and rugs in the home have largely replaced carpets within the past few years, and are today more popular than ever. They're cleaner, more sanitary, look better and wear longer than carpets."

The dealer who is wide-awake to this fact can build up a profitable trade with

L. L. ANTHES ELECTED.

The annual joint convention of the American Foundrymen's Association and the Associated Foundry Foremen was held at Cleveland last week. Wm. H. McFadden, of Pittsburg, was elected president of the Foundrymen's Association, and L. L. Anthes, of Toronto, one of eight vice-presidents. The foundry supply manufacturers and dealers formed a permanent organization to be known as the American Foundrymen's Supply Association. S. T. Johnson, of Chicago, was chosen president.

STEEL SQUARES.

Silas Howes, a blacksmith of South Shaftsbury, Vermont, invented and patented the steel squares which are now commonly used by carpenters. The first ones he made in 1813, and they were fashioned by welding together at right angles pieces of worn-out saws on which he marked off the inches. They sold readily at $5 and $6 each, notwithstanding it was just after the war of 1812, when money was scarce. Howes became a millionaire from his sales of this simple device and did a great deal of good with his wealth. Squares are still made on the spot where the first one was made more than ninety years ago.

Two furnaces having a joint capacity of 200 tons of lead daily have been installed at the Hall mines, Nelson, B.C.

PAINT, OIL AND BRUSH TRADES

HARDWAREMEN AND PAINTS.

Every hardwaremen should handle paint for the simple reason that paint in reality is a part of the business. Anything that can be classed in with builders' supplies belongs to the hardware store, and all kinds of paint products come under that head.

Paint is bought and used by contractors and carpenters. They influence the sale of a great deal of paint, and the hardware merchant usually knows when an old house is going to be repaired or a new house going to be built. This information can be of value to him in selling a bill of paint. In these days of strenuous competition everything must be made to count. If the paint business is handled correctly it will afford the merchant a satisfactory profit; but that is not all.

A man may sell a bill of hardware or a stove without making much noise, but when he sells a bill of paint he cannot help making noise, and if he is handling a good paint, that will give his customer satisfaction, this bill of paint will be a standing advertisement in his locality. Every neighbor will see it, notice it and will be almost certain to ask the buyer what kind of paint he used on his house and where it was bought. It is well worth the hardware merchant's while to sell paint, if only for the advertising he will get from it.

Mixed paint to be good must be just as pure and just as honestly made as hand mixed lead and oil. It should be composed of lead, zinc, linseed oil, a little turpentine and dryer and the necessary coloring pigments to make the different shades, and in order to successfully displace hand mixed white lead you must give your customer a paint that is just as pure, just as honestly made, and superior in other respects.

It is not enough to have the manufacturer agree to sell no one else direct; he should make provision to see that none of his goods reach your community through any mail order or catalogue house, or through any other source, for if you work hard to build up a business on the line you control you ought to spare no pains to safeguard your interests and keep that line out of the hand of everyone else.

To sum the whole matter up, we have the following:

1. It is to the interest of every hardware merchant to carry paint.
2. He should carry nothing but the best.
3. He should carry a line that is effectively advertised.
4. He should have the exclusive sale of the full line manufactured by the firm he does business with.

THE USE OF RUBBER IN PAINTS.

Raw rubber is used in the paint trade in the preparation of cetrain materials of a special nature, such as damp-resisting preparation and paints used for certain protective purposes, says a writer in the Oil and Colorman's Journal. Much of the utility of these products depends on the retention by the rubber after solution of those unique properties on account of which it is used and experience has shown that the quality of the rubber exerts no inconsiderable influence on the elasticity and durability of the paint.

The question of the so-called solution of rubber in solvents is one on which those who have studied the subject are not quite agreed, although the weight of available evidence tends to support the view that the rubber does not "dissolve" according to the current acceptation of the term, but that the particles become swelled or jellified and so "extended" throughout the mass. The mass would therefore be in a sort of colloidal condition.

Be this as it may, the fact has been established that of late years different samples of nominally pure rubber yield entirely different results after treatment with solvents, and recent investigation has suggested a probable reason for this It is reported from the Para Botanic Gardens that a latex obtained from a tree entirely different from the "Heveas" (or true rubber tree) has been used to adulterate rubber and even to replace it altogether. Competent experts believe that this substitute is less elastic than the genuine article, and it is probable that it differs from the latter in other important properties. The increased demand for rubber on account of its numerous commercial applications has led to this adulteration or substitution, added to which is the important fact that the tree (of the Sapium species) which produces the substitute is more plentiful than the "Heveas," and is reproduced more rapidly.

BUG DEATH.

Bug Death is a new preparation for the destruction of potato bugs. It is a non-poisonous powder, containing no Paris green or arsenic and is not only destructive to all insect life, but is said to be a fertilizer which infuses life into the vines, thus increasing their productiveness.

"Say! that Elastilite of yours is great varnish, painters in our town will have nothing else."

The above is what a prominent hardware merchant told us in our office last week when placing a rush order for a further supply. If you haven't got the painters' trade in your town, try them on Elastilite. Send us the names of your painters and we will submit through you free samples for test.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 15, 1906.

No price changes are to be reported this week, but general business is exceptionally good. Although this is the season of the year for sorting-up orders, those that are coming in now are sufficiently heavy to show that a large trade has been done by dealers throughout the country.

The demand for paris green is increasing rapidly as the season advances. The supply in first hands is now reported to be limited so that dealers whose orders are not already booked are hastening to get under cover. Prices are maintained as quoted.

Linseed oil is fluctuating slightly almost every day, but the changes are so small that the market may be considered steady. Every drop in price is succeeded by a skirmish on the part of buyers to cover while prices are low, with the result that quotations are forced back to normal.

The white lead situation remains acute. Import orders continue to be large, but local stocks are so limited that some grinders are quoting prices only on application.

TURPENTINE — Single barrels, 87c. per gallon; two barrels or over, 86c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

LINSEED OIL—Raw, 1 to 4 barrels, 55c.; 5 to 9 barrels, 54c.; boiled, 1 to 4 barrels, 58c.; 5 to 9 barrels, 57c.

GROUND WHITE LEAD — We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC—Our prices are: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD — Prices are firmly held as follows: Genuine red lead in casks, $5.75; in 100-lb. kegs, $6; in less quantities at the rate of $6.75 per 100 lbs.; No. 1 red lead, casks, $5.50; kegs, $5.75, and smaller quantities, $6.50.

GUM SHELLAC — We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—We quote the following prices, which are subject to withdrawal or change: Barrels, 600 lbs., 19¼c. per lb.; kegs, 250 lbs., 19½c. per lb.; 50-lb. drums, 20c. per lb.; 25-lb. drums, 20½c. per lb.; 1-lb. pkts., 100 lbs. in case, 21c. per lb.; 1-lb. pkts., 50 lbs. in case, 21c. per lb.; ½-lb. pkts., 100 lbs. in case, 23c. per lb.; 1-lb. tins, 100 lbs. in case, 22c. per lb. Terms 2 per cent. 30 days.

GASOLINE—Price has risen of late, and ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at the advanced price of 24c. in bbls.

WINDOW GLASS—We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break, 50 feet, $2.05; second break, 50 feet, $2.25; first break, 100 feet, $3.90; second break, 100 feet, $4.30; third break, 100 feet, $5.25; fourth break, 100 feet, $6; fifth break, 100 feet, $7; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8.50. The Canada Paint Company, Limited

The Largest Color and Varnish Makers in the Dominion.

rent prices have not been accepted would indicate that this is not the case. Turpentine, however, is speculative, and controlled largely by trusts, so that outside of general conditions of weather, demand, etc., it is difficult to accurately forecast for any length of time.

There is not much of a demand for paris green in Ontario. As a pigment it is scarcely used at all, and the potato bugs have not increased in their wonted proportions so far. Jobbers are satisfied, however, that this is the case, for supplies are light.

There is no complaint as to the volume of business being done. Everyone is satisfied in that respect, but the scarcity and high price of white lead still stirs up feeling against the conditions that have made it so.

TURPENTINE—Single barrels 90c., 2 to 4 barrels 89c., f.o.b. point of shipment, net 30 days. Less than barrels. 95c. per gallon.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white 19c. per lb.; No. 1 American white, 15c. per lb.

PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2 to $2.10; bulk, in 800-lb. casks, $1.50; pure, $1.95 to $2; 100-lb. kegs, 25c. extra.

LIQUID PAINTS— Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL— English, in cases, 8 1-2c. to 9c. per lb., and 10c. for single tins

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM— We quote: Canadian, $1.38; Pennsylvania, $1.64; Ohio, 98c.

WHITE LEAD— Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2c.; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 500 lbs., —$5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50; ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7 1-2c.; No. 1, in casks, 6c.; in 100 lbs., 6 1-2c.

WHITE ZINC (ground in oil)—In 25-lb. irons. 8c.; in 12 1-2 lbs., 8 1-2c.

PARIS GREEN— Canadian Government standard, 600-lb. barrels, 19 1-4c.; 20c.; 25-lb. drums, 20 1-2c.; 1lb. packages, 21c.; 1-2 lb. packages, 23c.

SHELLAC VARNISH— Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 57c.; 5 to 9 barrels, 55c.; boiled, 1 to 4 barrels, 60c.; 5 to 9 barrels, 58c. Toronto, Hamilton, London and Guelph; net 30 days. Advance of 2c. for delivery to outside points.

PRECAUTIONS FOR USERS OF JAPAN LAC.

According to Tschirch and Stevens, the poisonous constituent of Japan lac is not a volatile substance, as hitherto supposed, but is difficult to remove from any parts of the body with which it may come in contact, though it smears easily from one place to another. The poisonous substance is soluble in petroleum spirit, and the solution retains its dangerous properties for a practically indefinite period. The poison acts even in minute quantities, and is difficult to eradicate from the hands and clothes, washing with soap and water being ineffectual. This is shown by the fact that if the hands are afterwards dipped in dilute caustic soda, a number of black spots and streaks will appear. Better results are obtained by cleansing the hands with a mixture of dry soap, pumice and soda, followed by soap and sand. All workers with Japan lac should either protect the hands by gloves, or wash them, as directed above, after using, and be careful to keep the hands out of contact with any other part of the body. One of the authors became seriously ill through neglecting this last precaution, mere traces of the poison being sufficient to set up violent inflammation.

NEW WAY OF MAKING GLASS.

Another new process of plate glass making is said to have been discovered in Belgium. M. Fourcault is the inventor. The new process draws the molten glass from pots and conducts it between a series of rollers, the last set leaving it polished and bright. The present way is to first blow the molten substance into cylinders and then flatten it for window glass, and for plate glass it is cast from pots and then rolled. If the new method is successful it will revolutionize the glass industry.

THE HAMMER GAVE OUT.

Not long ago an old gentleman brought a nail hammer to the office of a hammer manufacturer and said he was a carpenter, had just broken a piece from the face of his hammer, and asked if it was not defective. The manufacturer knew by the shape that it was very old, which was verified by the carpenter's admission that he had used the hammer continually for thirty years. He got a new one, not because the old hammer had not done its work well, but for the "cheek," which was certainly "well hardened."

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

George Green will build a sawmill at Carleton, N.B.

Rosthern, Sask., will install an acetylene gas plant.

J. A. Humble will build a saw mill at Cross Creek, N.B.

The Jones Co., manufacturers of office fittings. Toronto, purpose starting a branch factory in Winnipeg.

A. J. Mulvey, of Stillwater, Minn., is at the head of a company who will build sawmills near the G.T.P. terminus.

J. P. McArthur, of Winnipeg, has formed a million dollar company to engage in railway contracting business.

The Adams Wagon Works, of Brantford, will increase their factory and plant to handle increasing business.

The Ogilvie Flour Mills Co., will erect a million bushel elevator at Fort William as soon as the old one has been removed.

The Diamond Flint Glass Company are about ready to commence work. About twenty tons of composition will be treated daily, with an output of 1,200 dozen bottles.

American capitalists have been negotiating with Hamilton for some time with a view to establishing a carpet factory there, and it is said arrangements are completed.

Among the new buildings in Montreal on which operations have already begun are the Linton Apartment, the Montreal Light, Heat & Power Co's building, and the new Grand Trunk office building on McGill street. The latter will be a ten storey building covering nearly 10,000 square feet, and it will be constructed so that if the by-law of the City of Montreal limiting the height of buildings is altered at any time, more storeys can be added. The material to be used in the building of the structure will be a granite base with either stone or glazed terra cotta for upper storeys.

Companies Incorporated.

W. E. Dillon Company have been incorporated under Ontario charter with a share capital of $40,000 for the purpose of manufacturing and dealing in sheet metal goods, heating and fireproofing appliances. The provisional directors are W. E. Dillon, Daniel Batiste and Thomas Frampton, with head office at Toronto.

Monteith-Nixon is the name of a company incorporated under Ontario charter with a share capital of $50,000 for the purpose of manufacturing and dealing in windmills, wind-engines, pumps, tanks, etc. The provisional directors are F. W. Monteith, R. B. Nixon, W. S. Monteith, Mary Maud Monteith and Winifred S. Nixon, with head office at Toronto.

BUILDING NOTES.

F. E. Martin, of Winnipeg, will build an $8,000 residence.

Martin Shipley will build a block to cost $25,000 in Winnipeg.

James Burridge, Winnipeg, will erect a $26,000 apartment house.

C. W. N. Kennedy, of Winnipeg, will build a $75,000 business block.

The Modern Laundry, Winnipeg, will add two storeys to cost $25,000.

Halifax School Board have decided to erect a new high school to cost $35,000.

Mrs. Hample, caterer, of Winnipeg, will build a block of stores in Winnipeg.

Middlesex County Council will build a new bridge at Sylvan, Ont., to cost $10,000.

The Acton Publishing Co. will erect a four-storey warehouse in Toronto to cost $12,000.

The Dominion Department of Public Works calls for tenders for a new drill hall at Hamilton.

Chas. Mills, Hamilton, has taken out a permit for the new Gospel Tabernacle. It will cost $30,000.

Quance Bros., Delhi, Ont., ask for tenders for a concrete dam and power house at that place.

Crawford Street Methodist Church, Toronto, has taken out a permit for a $20,000 Sunday school.

The Brandon, Saskatchewan & Hudson Bay Railway will build a new station at Brandon to cost $30,000.

A Jewish synagogue will be erected in Toronto to cost $30,000. S. Freilick is chairman of building committee.

The contract for the new Bank of Montreal building at Quebec has been let to Walter Sharp of that city.

The Gillies hotel syndicate have decided to build a hotel and theatre building in Vancouver, costing $300,000.

Symons & Rae, architects, Toronto, ask for tenders, all trades, for Avenue Road Presbyterian Church, Toronto.

Thos. Ward has the contract to build the French Presbyterian College at Point Aux Trembles, Que. It will cost $50,000.

Raymond & Sons, lime and cement dealers, of Victoria, B.C., have opened up warerooms for the sale of mantels and tiles.

Halifax men have purchased the Dartmouth Electric Light, Heat & Power Company, and will extend and improve its service.

Sir Thomas Shaughnessy has announced that Windsor Station, Montreal, will be increased to four times its present capacity.

The Ontario Public Works Department calls for tenders for additions to the chemical building and the greenhouses at Guelph Agricultural College.

Port Elgin will instal a waterworks system at a cost of $30,000, and have guaranteed a loan of $10,000 to Ste-

phens, Hepner & Co. for additions to their brush factory.

Among recent permits issued in Winnipeg are: Apartment house for Mrs. H. S. Dick, $20,000; Bank of Commerce branch, $5,000; apartment house for Brown & Trenholm, $60,000; residence for T. A. Anderson, $18,000; residence for Marguerite A. Bell, $10,000; residence for F. W. Adams, $10,000; Imperial Bank building, $150,000.

ANOTHER CENTRAL HEATING PLANT.

A row of flats are to be built in Toronto by E. E. Sheppard to affect the old Mexican Mission House style. The buildings will be plain and simple in outline, being built of granolithic concrete. The internal design and plan of rooms are also simple, and economical of space and material, there being no partitions between the rooms in each flat, which will be merely curtained off as were the rooms in the old Mexican dwellings.

The lighting, heating and other arrangements are similar to those in other apartment houses, all coming from a central plant.

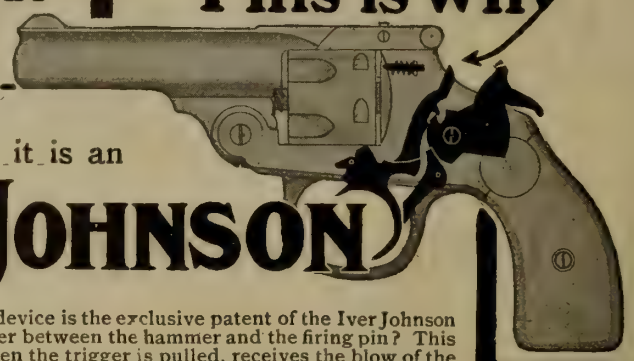
THE USE OF CONCRETE.

Practically speaking, Canadians have merely begun to realize the importance of reinforced concrete for construction purposes, and in spite of the amount of literature published on the subject, there are many, even in the building trade, who do not understand its application.

In a recent interview, Henry Holgate, vice-president of the Dominion Engineering & Construction Co., and one of the acknowledged Canadian authorities on the use of concrete, gave some interesting information in this regard, which is herewith repeated:

"The extensive use of reinforced concrete," said he, "is a matter of such recent growth in Canada that it is no wonder that the public has not grasped the full significance of its adoption in important structural enterprises. It is only a question of time, however, when its qualities will be as well known as those of brick or stone, which materials it is fast supplanting for building purposes wherever its advantages are appreciated.

"Concrete is composed of cement, sand and gravel or crushed stone. As cement is easily available, and as sand and gravel abound, it follows that concrete can be advantageously made in any part of the country. As concrete possesses in itself great power to withstand compression stresses, it has proved of tremendous value in building canals, retaining walls, and all manner of construction work where it is not subjected to great tensile stresses. When a structure is designed to meet tensile stresses, like a skyscraper or a large factory, it becomes necessary to use in connection with the concrete some materials capable of taking up this additional burden. Steel does this to the best advantage, and when employed in conjunction with the concrete, furnished the combination known as 'reinforced concrete.'



"Concrete alone is cheaper than stone or brick, but steel is extremely expensive, so that the problem confronting the man who designs a structure of reinforced concrete is how to use the minimum of steel and yet get out of it the maximum of strength. He aims to distribute his reinforcing rods in such a way that each will supplement the other and all will supplement the concrete. If he does this successfully he produces a monolithic structure in which every strain and stress, no matter how great, is distributed through and borne by the whole.

"As soon as architects, engineers and contractors began to use reinforced concrete for complicated work, numerous methods of reinforcement were invented. All these methods aim to increase the load-bearing power of the concrete and to insure accuracy of construction, and all have their advocates. It can not be doubted, however, that the best mode of procedure is to design the reinforcement not only so that it will fill its own function efficiently, but so that it will contribute its proper part toward strengthening the structure as a unit.

"It goes without saying that skill and experience in the use of reinforced concrete are requisites without which no successful structure of this kind can be either designed or erected. Not only must the design be without flaw, but the actual construction work must be done under the closest supervision to insure reliability. The reinforced concrete structure once successfully completed will stand practically forever, for the older concrete grows the harder it becomes. One of its most important attributes is its resistance to fire. To all intents it is fireproof. Steel is not, but imbedded in concrete steel is so well protected that the combination, or reinforced concrete, is as fireproof as concrete alone. This was the great lesson taught by the San Francisco disaster and by the Baltimore fire. The fire-resisting quality of concrete carries its own sequel; insurance rates on concrete structures are so low as to be almost negligible. In connection with its use with steel, concrete has another remarkable and unique advantage; it protects the steel absolutely from rust — something that no other material yet discovered has been able to do."

Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Please send for descriptive catalogue, free upon request. It tells all about it.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

P. LYALL & SON'S BIG CONTRACT.

Two of the largest building contracts of the year in Montreal were let during the past week, and both were awarded to the firm of Peter Lyall & Son, in competition with many of the largest contracting firms in Canada and the United States.

Work on one of the structures, the Windsor Hotel Annex, has already begun. The material to be used for the northwest end of the structure will be Montreal limestone. The lower storey of the Cypress and Stanley street ends will be of similar material, and the balance of Scotch fire brick. Peter Lyall & Son have agreed to hand over, completed, the six lower floors by July 1, 1907.

The other large building to be erected by the same firm is the fine new structure of La Patrie. The site chosen is the corner of St. Catherine street and City Hall avenue, this being considered the most desirable location for La Patrie's clientele. Building operations have already begun, and it is expected that it will be ready for occupation early next Winter.

A man's work is his best recommendation.

This cut represents Solid Adjustable Die Machine, which cuts from 2" to 4".

WRITE FOR BOOKLET.

A STEAMFITTER'S BEST FRIEND

A Bordin Hand Power Die Stock is almost indispensable in an up-to-date shop. Its presence precludes trouble, annoying delays and the extra time and expense of having large pipe cut elsewhere.

Made Either Solid or Adjustable.
Is Accurately Geared.
Mechanism is Perfect.
Easily Operated.
Can be Set Up where Job is Being Done.
No Backing Off to Release Thread.
Die is Reversible to Thread Pipe from Front or Rear of Stock.
Stock is Provided with Pipe-centering Guides.

WE HANDLE A FULL LINE OF STEAMFITTERS' TOOLS
Pipe Vises, Wrenches, Pipe Cutters, Stocks and Dies, Etc.

89-97 West Adelaide St. TORONTO

PLUMBING AND STEAMFITTING

THE MAKING OF VITREOUS EARTHENWARE FIXTURES.*

In the cellar the bin containing the pulverized clay was first examined and the following clays found to be used in the manufacture of the goods: English china and Ball clays, which are imported from England, and the following American products, flint and china from Connecticut, feldspar, and china clays from Florida. Flint does not fuse, and the stone, spar and clay does. The American feldspar melts like glass under fire.

A combination of these clays is used for the body of the fixtures in proportions which are secret and which the manufacturer will not divulge. These clays are taken to a room, closed to the public, where the various proportions of clays are weighed and measured according to the mixture desired to be made, and then are taken to a plunger tank containing a constantly moving arm, which mixes water and clay to the consistency of stiff whitewash, the liquid being constantly kept in motion by machinery. While in this state it is pumped through pipe over twenty wooden sectional molds previously bolted together, and when water has been pressed out the molds are opened and the clay is found to be in each section of the mold in sheets about six feet long, twenty inches wide and about one inch thick. It is then removed from the molds and rolled up like a blanket, taken to a seasoning room, where it is kept for an indefinite period—the longer the better. At this stage the clay is cut with wire (the easiest kind of cutting implement) in large pieces and put into a mill known as a pug mill, which has a number of knives in it, over which water is fed. When the clay comes out in long continuous cylinders it is about six inches in diameter and has all air pressed out. The clay is then cut with wire in suitable lengths for handling and is then ready to be taken to the pressers, who form the various parts of the fixtures. The plaster of paris molds are made from carefully prepared drawings by skilled workmen, who receive good wages. This branch of the work requires competent men and is an expensive part of fixture manufacture, as some of the models cost $75, $100 and $150 for water closets and basins. The siphon jet water closet requires fifteen distinct molds, which when put together form the complete fixture in clay. Workmen are assigned to various parts of the plaster mold to form the parts of the fixture in clay, which is left in the plaster mold to dry over night, when it is taken out of the mold and the workman assembles the parts and joins them together by a small row of wet clay, placed on the edge of each piece desired to join separately with any other part. This joint is pressed as close as possible and smoothed over with water and sponges and the joint finished before any other piece is added. It can be seen this takes considerable time and the workman can only assemble the parts and make three siphon jet closets, or five ordinary closets, and complete them in clay in one day.

In making fixtures the plaster molds are made larger in all its parts to allow for shrinkage; for instance, if a piece is to be eight inches when finished it must be made in a 9-inch mold; while drying and when burning it will shrink to about eight inches.

When the bowl is finished in clay it is taken to a drying room, which is heated to about 100 degrees, and remains there from eight days to two weeks before being placed in what is called the biscuit kiln, where they are placed on a bed of unfusible sand and enclosed separately in a two-part fire clay oval receptacle called a "saggar." The clay of which the "saggars" are made must stand a temperature of 2,500 degrees and must of necessity be made of unfusible clay to stand this heat, as some of them are placed in contact with the heat and fire from the furnace located under the kiln. The heat and flame enters the side of the kiln above the floor through flues in about ten different places. The fixtures are placed in the lower section of the "saggar" on a bed of unfusible sand to prevent the clay or fixture fusing to "saggar," and the upper section of "saggars" is placed on the edge of this lower section upon a bed of clay to form an airtight receptacle. The "saggars" containing the fixtures are then stacked inside of the kiln, which will contain about 420 when filled.

The "saggars" are frequently broken and ruined by the heat and two men are kept constantly employed mixing clay and forming them. They are made of fire clay and grog (broken "saggar" pieces ground fine under mill and mixed with clay and water) and after being formed have to be burned. In stacking a kiln with "saggars" containing the fixtures to be made requires about two and one-half days. The fires are then started and are kept increasing till a temperature of 2,500 degrees is reached, this process taking about fifty hours. An ingenious device is used to tell when the clay of which the fixture is made has been under fire long enough. A flat piece of fire clay has four upright cones inserted in it, each cone fusing at a different temperature, corresponding to and made of the same clays as the fixtures to be burned. Each of the cones is numbered and placed consecutively corresponding to the fixtures of which clays are made. These cones are placed in the kilns opposite peep holes in sides of the kilns, so the action of the heat on them may be observed, for while the temperature it is desired to obtain is 2,500 degrees and the number of hours the kiln is under fire is supposed to be fifty hours, this time often varies and it is necessary to have some safeguard to prevent the ruining of the entire contents of the kiln, and these little cones are for this purpose, for when the right temperature is obtained the upright cones curl over and touch the base of the clay, when it is time to slow down the fires. It is necessary to observe great caution in firing the kilns, for if the temperature is too high all fixtures placed therein made of clay which will fuse at a certain temperature would be ruined if the heat is maintained above the limit allowed for that particular clay.

At the expiration of fifty hours' continuous firing, all openings into the furnace and kiln are carefully closed with clay and allowed to remain in that condition for one and a half days. Then the fires are drawn and doors opened and kiln allowed to cool off for twenty-four hours more. At the end of this time the "saggars" with fixtures therein are removed. The burned fixtures are then assorted and defective ones thrown out, the perfect ones taken to the stamping room, where the name of the manufacturer for whom the goods are made and the title of the fixture is printed on the earthenware by an ingenious method; the color is mixed and heated and the mixture is spread on the die plate containing the names; prepared paper from England is laid over lettering and put under a heavy roller, the names then appear on the paper. This piece of paper is given a size after being cut to the proper shape and pressed on the fixture at the required position, the paper is moistened and removed and the name left on the fixture, similar to the decalcomania.

When the fixtures are stamped with the names they are then taken to the room where the glaze bath is applied. This bath is simply dipping the fixture in the liquid, composed of various clays mixed with water. The clays used to form the glass are spar, flint, china, clay, boric acid, lime and lead. Care has to be taken to see that all portions, inside and outside, are covered with the liquid and properly drained off, otherwise the glaze will be imperfectly applied; the same will be the result if any grease is on the fixture. After this process the fixture is placed in a drying-room for twenty-four hours and then taken to the kilns again and placed in "saggars" and in the kilns and again fired for fifty hours, thus going through the same procedure in glazing as was done in burning the clay into the china.

In visiting potteries which make earthenware fixtures I found the process to be about the same, with the exception that the clays are molded into the fixtures and the glazing mixture put on with a brush, and when dry the completed fixture is then baked, thus doing in one process of baking what it requires two processes for the vitreous ware.

* Report of a visit to a pottery factory at Trenton, N.J., by Henry B. Davis, President of the American Society of Inspectors of Plumbing and Sanitary Engineers.

It will thus be seen that this is a time taking process, requiring much handling and great liability of breakage from handling and from defects in burning, and points out the fact that manufacturers are justified in complaining that insufficient time is allowed them to make and ship this type of plumbing goods.

THE ABUSE OF VALVES.

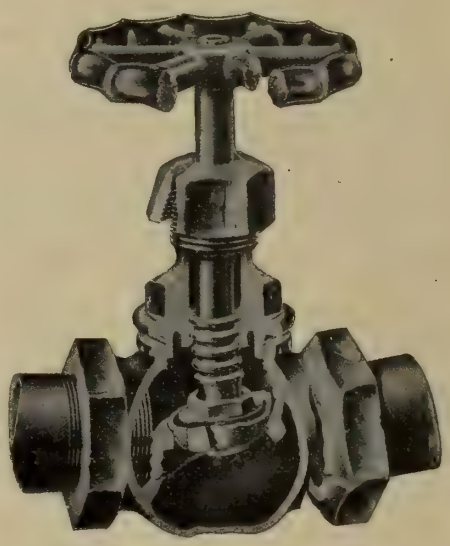
A large number of valves are returned to the manufacturers in the course of time by purchasers, who claim that the valves are defective in workmanship and not tight, says the Valve World. The manufacturer is not only requested to credit the valves returned, but must bear the expense of taking valves out of lines and putting them back, the carrier's expenses both ways and also the criticism and injury to his reputation.

When the goods claimed defective are received and have been submitted to the most careful examination and tests, it has been found that in ninety-nve cases out of a hundred the valves leak on account of the abuse and carelessness of the parties who installed them.

It is a very easy matter for a practical valve maker or a good steamfitter to determine when and just how a valve has been abused, and if customers would take a little pains to examine leaky valves before returning them, they would find that the valves had been abused by their own men.

Anyone who has done considerable steamfitting work should be able to determine for himself whether a valve had been abused, or would have in his employ someone capable of doing this, and be able to remedy the trouble without annoying the manufacturer with it.

The following are a number of reasons why valves leak after being placed in a pipe line :



1. We are confident that ninety per cent. of all the trouble with leaky valves arises from the improper use of cement, and from the failure to remove the particles of cement, scale, chips, dirt, etc., that naturally get into the pipe while it is lying around a building and then lodge on the valve seat after steam is turned on. When applying cement, it should be put on the male part only, for if placed on the female part, it goes through the pipe and gets on the valve seat. In any case much more cement is used than is really necessary. If steamfitters would take pains to apply the cement as above directed, and also make sure the pipe is clean by standing it on end and striking it a few times with a hammer, before putting it into place, in order to loosen any scale or dirt that may be inside, an immense amount of trouble would be avoided. As a further precaution, it is well, when a job is started up, to open all the valves throughout the building and blow the steam through them thoroughly. After doing this properly there will be very little material in the pipes to cause trouble. After the job has been run a short time it would be well, as an additional precaution, to clean out all the valves thoroughly.

2. It occasionally happens that threads on pipe are cut longer or smaller than standard, in which case, if the pipe is screwed into the valve, it very likely will run up against the partition and injure it.

3. In the lighter class of valves, one of the common abuses is the application of a pipe wrench on the opposite end of the valve from the end which is being screwed on the pipe. This should never be done, as it invariably springs the valve and of course causes it to leak.

4. If a light valve is put into a vise for the purpose of removing the centrepiece, the valve should certainly be clamped lengthwise. In all cases when removing centrepiece care should be taken to have the disc some distance from the seat, as otherwise the disc will be forced onto the seat and some part of the valve become strained. Never use an old strained monkeywrench on a centrepiece, as such wrench is quite likely to squeeze the corners of centrepiece out of shape. If found impossible to remove the bonnet or centrepiece by ordinary methods, heat the body of the valve just outside the thread with a blowtorch, or any other available means that can be applied to the body and not to the centrepiece. Then tap lightly all around the thread with a soft hammer. This method never fails, as the heat expands the body and breaks the joint made by the litharge or cement.

5. Often when a stuffing-box leaks, a steamfitter will endeavor to stop the leak by straining the stuffing-box with a large wrench, when the difficulty is due to the packing having become worn out and needing to be renewed.

Abuses of Valves Illustrated.

6. It sometimes happens that when a valve is to be used on a header, the steamfitter will start out with a long piece of pipe that is unsupported, and, through carelessness, will allow the strain of the pipe to come on the valve, thereby springing it.

7. Serious trouble is also likely to occur in a pipe line where light valves are used through the fitter not making proper allowance for expansion and contraction and allowing the strain to be thrown on the valves. The pipe and fittings are much more rigid and stiff than the lighter brass valves, and in consequence the expansion strains will relieve themselves at the weakest point, unless otherwise provided for. A very good example of this is illustrated in most high buildings heated by steam, where it is difficult to take care of the expansion. The steamfitter will branch out of his riser with a feed pipe to radiator. The radiator will have high legs and the air valve end usually stands close to the riser. He runs this branch (from three to six feet in length) underneath the radiator to the front end, and usually connects same to the radiator valve by a short nipple. This cross piece or branch under the radiator is supposed to take up the expansion and contraction of the riser, which may expand from one-half inch to one and one-half inches. He does not appreciate the fact that the ordinary light angle radiator valve is the most flexible of all the connections and will spring or distort itself before anything else in the branch. He makes his radiator valve serve as a swing joint and universal connection, yet wonders why the valve leaks. In such a building it is very difficult to provide sufficiently for this expansion, and probably the safest way to insure good work is to use, in such parts of the job, a valve of very much heavier construction, so that there will be no danger of its springing.

8. Very often, when a valve leaks, some one will stupidly undertake to tighten it by using some kind of a lever on the wheel. This should never be done as it will in all probability injure the valve. As the trouble undoubtedly is due to the presence of dirt in the valve, it is very much better in such cases to take the valve apart and clean the seat.

NATIONAL PLUMBERS' CONVENTION.

It is now assured that the annual convention of the National Association of Master Plumbers of the Dominion will be held in Ottawa late in July or early in August. During the week just past the following letter was sent out to each of the provincial vice-presidents by J. A. Gordon, Montreal, the Dominion secretary :

"The executive of the National Association of Master Plumbers of the Dominion have decided, after a full consideration of the situation, to hold their eleventh annual convention in Ottawa in July. Owing to the attacks made in several places in Ontario against the master plumbers' associations, considerable opposition was presented to holding the convention this year in Ottawa. But when circumstances of the acts show that it was not the aims or objects of the associations which were objected to, but rather the methods which a few members in certain localities had unfortunately employed, it was accordingly deemed proper that the dignity and prestige of the association could only be maintained and the confidence of its members restored by having the convention at the place and time appointed. The executive are confident that the resolution will result in a large and enthusiastic attendance, to show that the objects and aims of the association are above reproach, and that they are determined to adopt and enforce methods which will be legal and respected throughout the Dominion.

"The provincial and local associations should at once take action to have their delegates appointed—men with the ability and energy to clearly express themselves on this important occasion.

"(Signed) J. A. GORDON,
"Dominion secretary."

There are two reasons why some mortals don't mind their own business. One is that they haven't any business, and the other is that they have no mind.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 15, 1906.

Outside of the fact that business is still brisk, there is little to remark about the market situation at present. The local plumbers are now being called upon to tender on some of the largest jobs of the season, including several new apartment houses and office buildings. With these looming up in the near future, a steady demand for all plumbing supplies, locally, is assured.

All lines remain firm, but the strength of primary markets has not yet been keen enough to advance the price of lead pipe. Iron pipe, as well, remains in the same position as before, the output of the mills being steadily bought up and sold by the jobbers into consumption.

RANGE BOILERS—The demand continues lively. Prices are: Iron clad, 30 gallon, $5; 40 gallon, $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—A slight weakening in pig lead has rather lessened the chance of an increase in price. The turn-over is large at present. We quote: 20 per cent., f.o.b., Montreal, Toronto, St. John, N. B., Halifax; f.o.b., London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—The market situation shows no new development. We are still quoting: Discounts on all sizes of nipples up to 6-inch, 67 1-2 to 70 per cent.

IRON PIPE—This line is especially firm and there is lots of business doing. We give prices and discounts as follows: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—Prices are the same as at our last report, and there is no new feature to report. We give quotations: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—No further drop has taken place during the week, and we still quote: Bar solder, half-and-half guaranteed, 24½ to 25c.; No. 2 wiping solder, 20c.

ENAMELWARE—Trade is as usual, and prices are steady. We still quote: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 15, 1906.

Solder is somewhat stronger this week, from 22c. for wiping to 26c. for half-and-half being the ruling quotation. Some houses are still asking up to 30c. and claim to be selling a lot without trouble at that price.

A feature of the plumbing business for 1906 is the amount of country business that is being done, the smallest village having its houses with baths and closets. Where there is no waterworks the reservoir and cesspool system is finding favor.

Toronto plumbing trade is brisk. Besides the new residences, a lot of hotels are being compelled to change their plumbing in accordance with the provisions of the Liquor License Act, which is being enforced.

Prices on all general lines remain the same, nor are there any indications of changes. Lead pipe is firm, but stocks are fairly good. Iron pipe is the same and so far as can be learned there is no cutting. Demand is good in all lines, and there is nothing like a good demand to keep prices steady.

LEAD PIPE—Although firm, lead pipe has undergone no change in price. We quote: Lead pipe, &c., discount 20 per cent.

SOIL PIPE AND FITTINGS — Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—Large quantities continue to go out. Cutting seems to have ceased. We quote as follows: Black, 1 in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — Prices continue same as previous quotations. We quote as follows: Cast iron elbows, tees, crosses, etc., 67½ per cent.; cast iron plugs and bushings, 67½ per cent.; flange unions, 65 per cent.; nipples, 75 and 5 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 and 10 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 65 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65½ per cent.; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS — No further changes have been made. We quote: Hot water, 50 and 2½ per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER—Prices are firmer this week; 22c. to 26c. are the ruling quotations, although some claim to be getting 30c. We quote: Bar solder, half-and-half, guaranteed, 26c.; wiping, 22c.

ENAMELWARE — We quote as follows: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

TORONTO'S SEPTIC TANK SYSTEM.

Work on Toronto's sewage disposal plant in the Kew Beach district, covering Waverley, Kenilworth, Woodbine, and Kew Beach avenues, has been completed. One of the three septic tanks at the foot of Woodbine avenue has been installed, and the contractor is losing no time in preparing for the installation of the other two. The work on the filter beds has not yet been commenced.

TORONTO AND BUFFALO CELEBRATE.

Toronto and Buffalo master plumbers and steamfitters are fraternizing at Grand Island to-day, the Toronto men being guests of the Buffalonians. Last year's good time is being repeated, the Buffalo men knowing well how to entertain. About 100 Toronto men made the trip.

WATERWORKS CONTRACTS.

Section 1, of the waterworks at Fort William has been let to Wm. Newman, of Regina, for $97,000. The same man has also the contract for a concrete lined reservoir to cost $16,000.

THE MAKING OF BROOMS.

Begin in the basement, where there is storage room for ten carloads of broom corn and handles. The corn comes from Kansas and other middle western states, in wired bundles about four feet in diameter. It is grown for the purpose and some seed is taken from it for fodder purposes. The handles are plain round maple sticks done up in bundles of 50.

Preparing the Handles.

Follow the handles first. Four days' supply is placed in a drying room, which is then steam heated to a temperature of 125 to 150 degrees. After four days the handles are removed, perfectly dry, every vestage of moisture having been driven off. If this were not done, and in some factories it is not, the handle will shrink and the wire will come loose. The next stage of preparation for the handles is the sorting and decorating room where they are graded, varnished and the characteristic decoration in the nature of colored rings added, when they are ready for the broom makers.

Getting Ready the Corn.

The corn passes through half a dozen hands in a course of preparation before meeting the handle in the tying room. It breaks bulk with two or three men, who stand at benches and sort it, that is, divide the hurl, the fine corn for the outside of the broom, from the insides. The hurl is then put through a machine or rather over it, that sizes it in seven different lengths after cutting off most of the stalk. Hurl cutting is the next operation. It consists in cutting off the remainder of the stock so as to free the stems and culling out the large inside stem of each piece of corn. The hurl passes then to the scraper. This is a rapidly revolving toothed cylinder, and the workman holding a handful of hurl by the lower ends, whips the flying teeth. This is to remove the seeds. The next process is taking out the short lengths. A man stands at a bench on which are several rows of long upright spikes. He grasps a handful of hurl, by the lower end again, and combs it through the spikes. This is termed "pulling."

Into the Dye Vat.

The corn is by this time prepared and has gone quite round the room. It is next dipped in a vat of green dye and placed wet in a small room called the bleach room. There, a pot of sulphur is burned and the corn left over night. This evens up the color.

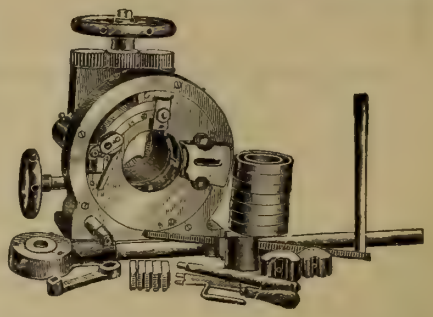
Its next progress is the tying room. There it meets the handle and takes form somewhat as the thrifty housewife and the dusty janitor know it. In this room are 25 broom makers, each at a separate machine. The broom making machine is mostly human; that is to say, the work is really done by hand with some assistance from the apparatus. The machine holds the handle and the wire; the man does the rest. An expert can turn out six dozen of high grade brooms in a day.

To the Sewing Machines.

But the broom maker does no sewing, and the broom would leave him looking like a witches' hair did he not put a loop cord about it to hold it in a bunch. In this form it goes to the sewing room at the entrance to which it goes through another scraping operation to remove any seeds that may still adhere. The operator grasps the newly formed broom by the handle, tweeks off on a hook on the wall the band confining the corn and floggs a rapidly revolving toothed cylinder for about two winks; the cord is replaced and the operation completed while you say "Jack Robinson."

The broom is then ready for the sewing. The sewing machine does not much resemble the domestic variety. The broom handle down, is placed in a vice, the jaws marking the line where the sewing is done. The operator, by a double twist of the wrist, wraps a strand of colored twine about the broom, and two long arms, one on either side, and each armed with a needle big enough to point Goliath's javlin, swing back and forth and do the sewing. There are six sewing machines in the room. One of them has a record of 65 dozen brooms in a day, but its average output is 50.

The Drying Test.



The brooms are made while the corn is still wet. After being bundled in dozens, they are removed to a steam-heated drying room. There they remain at a high temperature till perfectly dry. There can be no moulding in hot weather after that. This process is indeed a hard test of the broom, because if the handle is ever going to shrink and loosen up the wire, it will do it in this heat.

THE U. S. CONVENTIONS.

The National Association of Master Plumbers of the United States will hold their twenty-fourth annual convention at Atlantic City on June 26, 27 and 28, and the National Association of Master Steam and Hot Water Fitters will hold their eighteenth annual convention in Atlantic City on June 20-23.

Hardware dealers should practice what they preach by having a good screen door with the latest springs, checks, pulls and other attachments in use.

A Certain Sense of Satisfaction

goes with every MERRELL PORTABLE HAND MACHINE, PIPE THREADING and CUTTING MACHINE. We build them that way.

For doing ALL kinds of threading—under ALL conditions—labor trouble and faulty material included—where speed, durability and ease of control count for something, our word to you is to investigate the MERRELL.

Whether it be stationary or portable—hand or power driven—30 DAYS FREE TRIAL must prove conclusively that your choice should be the MERRELL.

This Portable Hand Machine has encased gears, MERRELL standard quick opening and closing die-head, and the latest improved Cutting-off Knife.

Let us tell you more about this machine—Th Chasers, Vise and the large range of work covered.

Put All Your Eggs in the Basket Labelled Oxford

Handling three or four makes of heating apparatus never can pay you half so well as handling ONE make—if you choose the RIGHT make. That's the modern way of doing business—putting all the eggs in one basket, and watching that basket.

Choose the Oxford Boiler as the ONE boiler for your trade, and push it half as hard as you'd need to push the variety. Then expect us to do the other half the selling—we WILL do it. We DO do it, for live dealers all over Canada. We can AFFORD to do it, for the live dealer who once takes up the Oxford never can be induced to drop it—it is sold FOR him, as well as TO him; and it satisfies the people who want the most boiler their money can buy.

There are twelve things about the Oxford Boiler that make it outsell and outsatisfy every boiler you know of. Send us a request that we tell you those things and we'll throw in for good measure a special proposition for NOW that will interest you a lot. Address nearest headquarters of

The Gurney Foundry Co., Limited

We also manufacture Cast Iron Stoves and Ranges, Steel Plate Ranges, Gas Stoves and Heaters, Hotel Ranges and complete Hotel Kitchen Outfits, Warm Air Furnaces and all kinds of Cooking and Heating Apparatus, Plumbers' Supplies.

OSHAWA, - CANADA

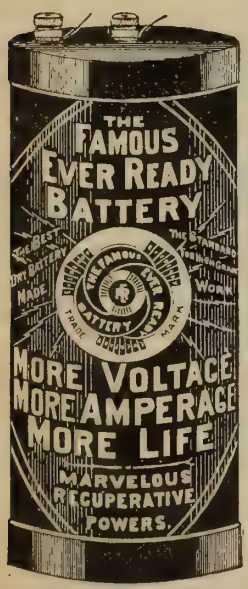
The Ability to Perform

Do you see that boiler there? That's the **DAISY IMPROVED.** Its construction is very simple. making it possible for anyone to do the operating.

DAISY BOILERS

last longer than other kinds. The material from which they are made is more genuine, the principle on which they are made is more meritorious. The people who make them are more experienced.

Wouldn't you like to be a Daisy Dealer? Drop us a line.



We can ship promptly any quantity of Iron Pipe, Cast and Malleable Fittings, Brass Goods, General Heating Essentials.

CURRENT MARKET QUOTATIONS.

June 16, 1906.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

WORKS ALL THE TIME

Some ventilators will work only in a windstorm. That spoils their effectiveness.

AEOLIAN VENTILATORS

are so skilfully constructed and so nicely balanced that they are driven, not only by the slightest current of air, but by the difference in temperature, within and outside the building.

Montreal, June 1st, 1903.
St. Peter School.
Messrs. THE J. W. HARRIS CO , Limited.
Dear Sirs,
In answer to yours of 3rd inst. in connection with your system of ventilation which you have placed in the Brothers' House, in the School, etc., I beg to state that we are getting the greatest satisfaction we may desire.
Brother JORDANUS, Dir.

"Royal Jewel"

JEWEL
JEWEL
JEWEL

The body is made of the very best quality **cold rolled blued sheet steel,** with lining of heavy asbestos mill board.

The oven is well ventilated in a thoroughly effective manner.

In perfect working, beauty of design, durability and all approved up-to-date features no line of ranges can surpass the "Jewel" line.

TREASURE STOVES AND RANGES D. MOORE CO.

TREASURE STOVES AND RANGES D. MOORE CO.

TREASURE STOVES AND RANGES D. MOORE CO.

"Western Treasure"

The standard of Steel Range construction. Nothing that would add to its efficiency has been omitted. Made both to cook and look.

Fire Box and Oven Flues are so proportioned as to bake, cook or broil to the utmost satisfaction.

A good seller and a great Range where competition is strong.

"Monarch" Malleable Range

The "Stay Satisfactory" Range, manufactured on a scientific basis, containing an accumulation of new ideas, and valuable improvements in Steel Range construction.

Made of **Malleable Iron,** which will not crack or warp under a pressure of heat three times as severe as would damage other iron. Highly polished, so that blacking is unnecessary. Reasonable in price.

Study your own interests and write for Catalogues of the above three lines. If you are not now handling them, determine to do so without delay.

No Horse Nails in the World

are made of better material than is used for the "C" brand. It is a special quality of Swedish Charcoal Steel Nail Rods, which have the highest tensile strength combined with great toughness. This is demonstrated by the average of several tests which shows that the test piece of these rods will stretch over one-third of its length, and require a force equal to 55,000 pounds per square inch before breaking.

No Horse Nails in the World

have ever, or do now excel the "C" brand in any test of quality impartially and scientifically applied. We challenge comparison with the product of any maker in the wide world.

No Horse Nails in the World

will drive easier or make better clinches, or hold the shoes on longer. They are of the right temper, which, combined with the fine hardened bevel points, penetrate the hardest hoofs easily. You will never bend or buckle a "C" nail in driving, or find split or crooked nails.

No Horse Nails in the World

can offer you forty years continuous manufacturing experience in producing by Canadian labour for Canadian requirements except the makers of the "C" brand.

No Horse Nails in the World

are better entitled to your preference for reasons of quality and fair price They may be obtained on order from all the leading Hardware Merchants in Canada. If not obtainable through them, we shall supply you direct. Samples and quotations furnished on application.

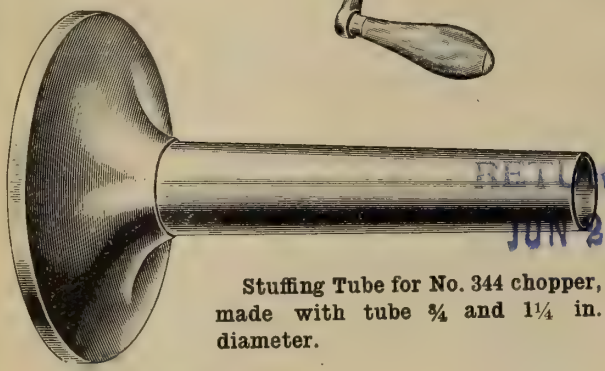
DON'T YOU THINK

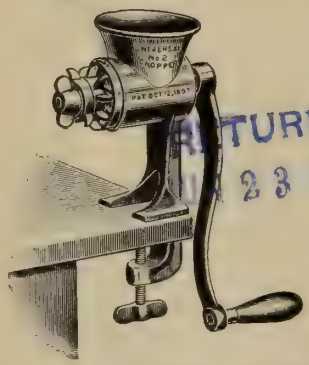
the disclosures in Packingtown will make a difference in the sales of meat choppers ?

Lard, head cheese and sausage made at home, or by the local butcher, can be relied upon.

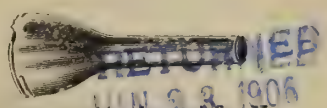


The "Universal" food choppers and sausage and lard presses will do the work. They are mechanically perfect, strong, durable and easy running. They are widely advertised by the makers in the papers women read, and sell themselves

Is your stock of them complete ?



It ought to be, for they are steady sellers, and the present agitation will increase their use.



No. 344 Geared Market Chopper, chops 4 lb. of meat per minute. The best machine for small meat markets.

Stuffing Tube for No. 344 chopper, made with tube ¾ and 1¼ in. diameter.

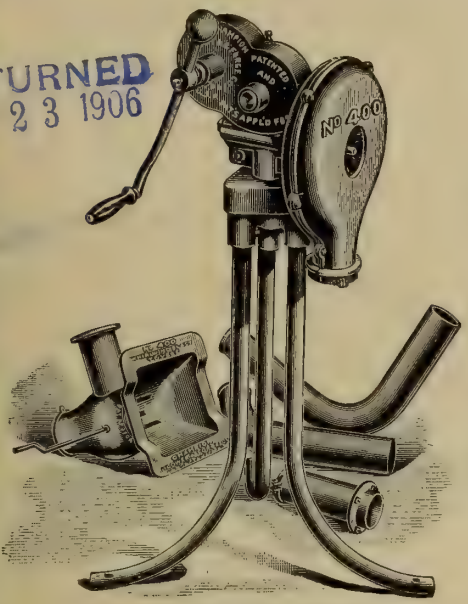
No. 2 Family Meat and Food Chopper, made in 3 other sizes. A sausage stuffer can be had for this size.

Sausage attachment for No. 2 "Universal" Chopper.

"Universal" Fruit and Lard Press and Sausage Stuffer, 2 sizes, 4 and 8 quarts, made of sheet steel, tinned, ball bearings.

Examine the "Universal" line and get our prices. We handle the complete line of "Universal" labor saving kitchen devices.

FROTHINGHAM & WORKMAN, LIMITED



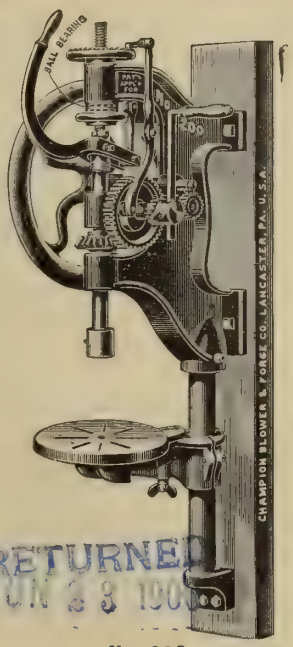
1809 WHOLESALE HARDWARE AND IRON MERCHANTS 1906

MONTREAL, CANADA.

210,000 No. 400 Champion Steel Blowers and Steel Forges

have been manufactured and placed in the hands of their users in the last seven (7) years. Now No. 400 Champion Steel Blowers and No. 408 Steel Forges are furnished with the "Whirlwind" Blast Anti-Clinker Heavy Nest Tuyere Iron without extra cost.

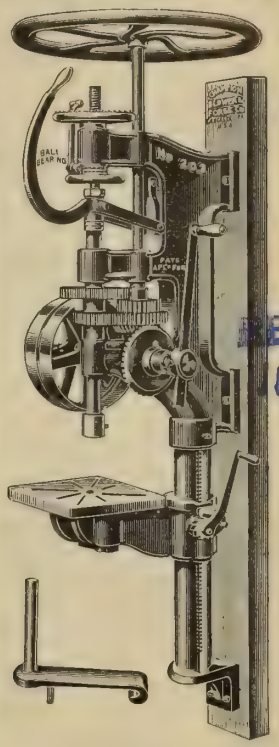
RETURNED JUN 23 1906



No. 400—Champion Blower

With "Whirlwind" blast, anti-clinker, heavy nest tuyere iron. Fan 12 in. diameter. Weight 160 lb.

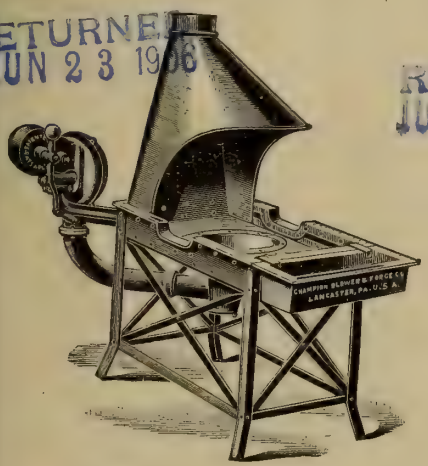
They are the only High Speed Spiral Geared and Adjustable Ball Bearing Blowers and Forges manufactured.



The No. 400 Champion Blowers and Forges have revolutionized the world's blacksmith fires and made blacksmithing a most profitable business.

CHAMPION Self-Feed and Lever-Feed Drills

No. 200



Drills to centre of 16-in circle. Drills holes up to 1¼ in. diameter.

No. 203

Drills holes up to 1½ in. to centre of 21-in. circle.

RETURNED JUN 23 1906

No. 408—Blacksmith's Forge

Will do the work of any regular custom shop. It has a 12-in. fan, heavy steel hearth 30x36 in., and a heavy nest tuyere iron like that shown with the No. 400 Champion Blower. With water tank it weighs 240 lbs.

No. 401—Rivet Forge

Is a necessity in every manufacturing establishment, though it is made for machine and boiler and bridge shops. It has a 9-in. fan and hearth 18 in. in diameter. Weight 90 lbs each.

THEY SAVE **95%**

in time and labor by instantaneous, quick return of the drill bit, with both Self-Feed and Lever-Feed, and

50%

of time is gained by use of the Lever in drilling small holes, reaming or countersinking.

The Lever-Feed or Self-Feed is changed from one to the other in a fraction of a second.

Champion Lever-Feed and Self-Feed Drills can now be had in six different styles and sizes.

Write for catalogue illustrating the complete line of Blowers, Forges and Blacksmith Tools.

PEDLAR'S CORRUGATED IRON is made on a **38,000-pound Press** (the only one in Canada), one corrugation at a time, and is guaranteed true and straight to size.

We carry a **600-ton stock in Oshawa, Montreal, Ottawa, Toronto and London,** and can ship ordinary requirements the same day order is received.

Made in 1″, 2″, or $2\frac{3}{4}$″ corrugations in sheets any length up to 10 feet, in 28, 26, 24, 22, 20, 18 gauge, both painted and galvanized.

This class of material is most suitable for fireproofing **Factory, Mill, Barns and Warehouse Buildings,** and is water and wind proof.

Corrugated Ridges, Lead Washers and Galvanized Nails carried in stock.

Send specifications to your nearest office for catalogues and prices.

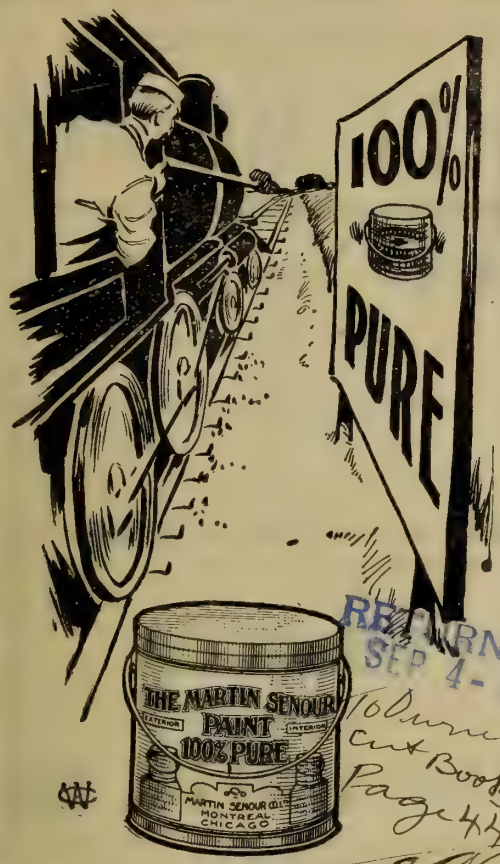
Home Office and Factory—Indianapolis.

Canadian Branch: 56 King St. E., Toronto, Canada.



The Bennett Metal Shelf Box Has

1. ***METAL SIDES*** This saves at least 20 per cent. shelf room; makes a stronger box and is cheaper than wood.
2. ***OAK FRONT*** Hard oil finish, and bevelled, the goods are displayed on the front of the box and in this way the sales are increased.
3. ***LIP . . . .*** Note the lip on the front of the box, this lip fits tight against the shelving and keeps out the dust.
4. ***PRICE CARD*** This card is inserted in a depression and never becomes soiled.

Write for Illustrated Folder and Price List.

CAMERON & CAMPBELL, Toronto, Sole Manufacturers for Canada

LOOK AHEAD

It's not just for to-day nor to-morrow. We are not urging you to handle our goods just simply for the profit you can make on present sales, although that counts too, but it is the future we want you to think of as well. Build up a solid, steadily-increasing trade. Establish your reputation and the rest will be easy.

The Martin-Senour Paint
100% PURE

will assist you. It's a great trade-builder—always reliable, always the same, always good. It's a paint people buy over and over because they like it and because they know when they buy the Martin-Senour they get PAINT—nothing else. It's worth something to have an article like that go over your counter, and it will bring you many an extra dollar. Better write to us about it and let us explain our proposition to agents. It's a winner.

AIDS TO CONTENTMENT

How often you hear the retail merchant say he would be perfectly contented in business if it were not for the credit system! Did it ever occur to you that you can to a large degree eliminate the credit business by having a simple method of rendering accounts? The

Crain Monthly Account System

is recognized as one of the greatest agencies to this end. By the use of carbon paper the same writing makes your day-book entry and charges the items direct to the customer's bill. It is simple, accurate and time saving.

Then render your accounts monthly and you will be surprised at the results. It is the nearest approach to a cash business.

Write us for information.

THE B. GREENING WIRE CO.

LIMITED

HAMILTON, ONT. MONTREAL, P.Q.

ARE YOU GETTING YOUR SHARE?

Dealers sometimes write us about

DILLON HINGE-STAY FENCE

to the effect "What is there in it for us?" Well, there is just this: Wood fences on farms and gardens are fast disappearing. Besides being unpicturesque, considerable expense is attached to keeping them in repair. Lots of Hardwaremen do a big farmers' trade. Why not get the orders for wire fence (at a good margin of profit) as well as for utensils?

Where a patron makes no mention of wire fencing you can introduce the subject. Where he makes mention of it, you can immediately demonstrate the "Dillon's" superiority when you have goods on hand.

It doesn't matter whether your store is large or small. You can find a place for the "Dillon" and every sale you make will pay you well.

Write us for particulars.

EDMONTON, THE GOLDEN

A Century's Slow Growth and Recent Rapid Rise—The Place where the Saskatchewan and Alberta Boards of Trade Held Their Third Annual Convention.

Magnificently situated on a high bank overlooking a curve in the North Saskatchewan, it is small wonder that from the earliest visits of adventurous white men wandering far from the remotest confines of civilization, Edmonton's location has impressed all who visited it as a spot marked by nature for the site of a great city. The first impression of a visitor to Edmonton to-day is the natural grandeur of its situation.

It was more than a century ago, when the American Republic was still in swaddling clothes, when "Canada" meant Quebec and Montreal—in 1795, to be exact—when the Hudson Bay traders founded a trading station on the north bank of the upper Saskatchewan River and called it Fort Edmonton. Tradition has it that Edmonton was built to compete with Fort Augustus, a fur trading station which had been founded in 1788 by a rival concern known as the Northwest Trading Co. There is also a story to the effect that there was a third trading post in the vicinity known as the X. L. Trading Company, and if this be so it would seem that the rival merchants of a century ago were agreed as to the commercial advantages of the Edmonton location as a centre of communication. The railways of to-day seem to bear witness to the sagacity of the early traders.

C.N.R.R. DEPOT, EDMONTON.

Temporary Government Buildings, Edmonton.

Coming of the Boom.

It was almost a century after the Hudson Bay trading post was established that the "boom" struck Edmonton, following the building of the C. P. R. line north from Calgary. But the railway stopped short at the river, hesitating at the heavy expenditure a bridge across the broad Saskatchewan would entail, and the northern terminus of the road was, and is, the town of Strathcona on the south bank of the river. Until the entrance of the C.N.R. main line last Fall, Edmonton was without a railway, although freight trains were run across the bridge originally designed for vehicular traffic and foot passengers only.

The Gold Seekers.

It was not until the days of the Klondike rush that Edmonton attained to any particular importance as a business centre. A good proportion of the multitude of gold seekers outfitted in Edmonton. Experience proved that the route north from Edmonton was a very unwise one to take, but it is from the days of the early Klondike rush that Edmonton dates its present commercial importance.

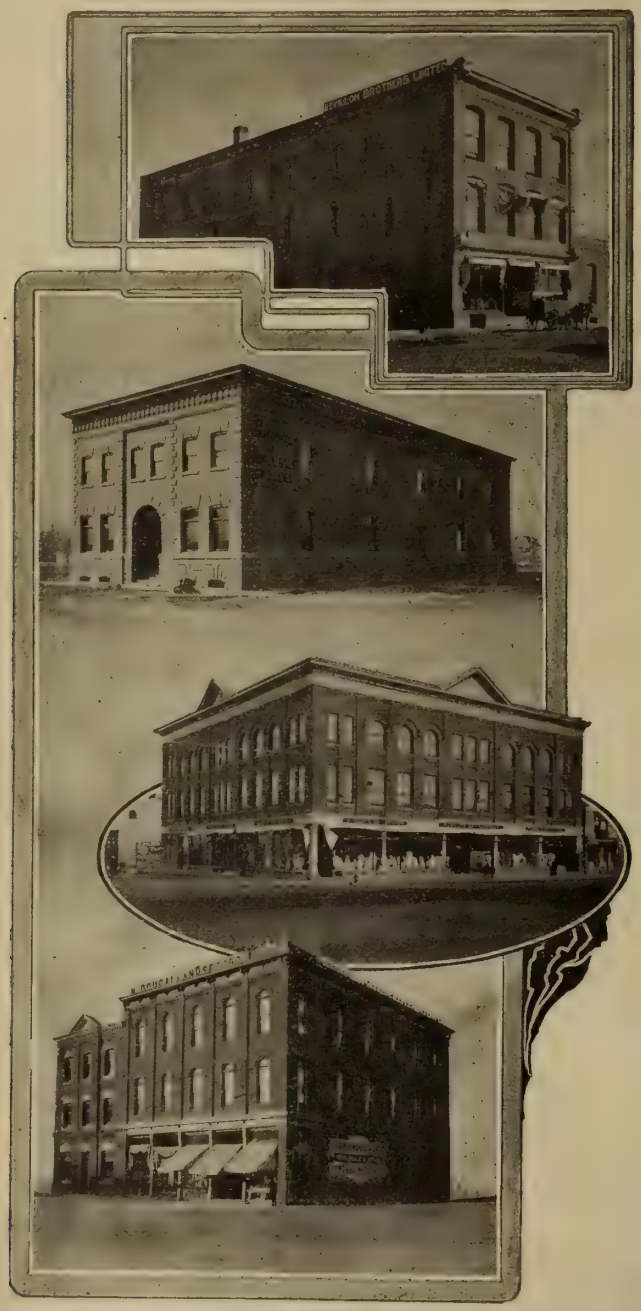
The little trading post is now a substantially built city of at least 11,000 inhabitants. Real estate men estimate a larger population, but the conservative, hard-headed business men say there are at least 11,000 people in the city. Every train coming in from the south and east is crowded with newcomers and the growth of population has so completely outstripped the building operations that hundreds of people are living in tents. It is no speculator's dream that next Spring will probably see a population of 20,000.

Perhaps the best evidence of conservative business belief in Edmonton is the number of chartered banks that have located branches there. There are now eleven and others are projected. The banks already in Edmonton are the Montreal, Molsons, Merchants, Commerce, Hamilton, Imperial, Traders, Northern, Dominion, Union and Nova Scotia.

What is Behind it?

The growth and prosperity of Edmonton depend upon the resources, developed and undeveloped, of the surrounding country. Perhaps in all Canada there is no district possessing more forms of natural wealth. For miles in all directions there is an immense area of arable land capable of sustaining great agricultural and live stock industries. The town itself is built on a vast coal bed extending for miles up and down the river. On the banks of the Athabasca River there are known to be immense petroleum beds, expected to rival many of the largest in the United States. To the east of the Athabasca River are

salt mines of very large extent. Practically every real estate office in Edmonton—and their name is legion—displays samples of gold, copper, zinc, lead, iron, silver and galena brought by trappers and travelers from Northern Alberta. Up the Saskatchewan are timber limits of great extent as yet scarcely touched by the Edmonton mills, and north and west millions of spruce and pine in a country not yet even explored. Farther north is the fur-bearing country, a heavy consumer of Edmonton goods.



The Fur Trade.

The fur trade, which was the first to be developed in Edmonton is still, perhaps, the first in importance. For years it was the practical monopoly of the ancient and honorable Hudson's Bay Company, who, with their chain of trading posts, had an unequalled organization for handling this large and profitable business. But of late years opposition has appeared and the fur trade is shared now by Revillon Bros. and McDougall & Secord. Coming into the field only some half dozen years ago, the big French house of Revillon Bros. has already established a chain of trading posts and has become a formidable rival of the Hudson's Bay Company.

The writer believes he has discovered the secret of the wonderfully rapid success of Revillon Freres. The other day when being shown through the firm's big wholesale warehouse he was introduced to the young Mr. Revillon, who is at the head of the Edmonton business. He found him, not in his private office, but down in the fur-packing room, lending an efficient hand in an emergency in the none too pleasant work of packing muskrat skins in bales. This young man, an heir to the Revillon millions, shows the spirit which animates the Revillon family and has made of their immense business in Europe and Canada the great success that it is to-day.

Wholesale Houses.

In addition to their big fur trade, Revillon Bros. have established in Edmonton a big department store and a wholesale dry goods, grocery and hardware business which is doubling every

Some Edmonton Warehouses.

Three Edmonton Banks.

year. A visit to their wholesale warehouse is a revelation to the visitor, who never dreams of finding in Edmonton a wholesale establishment rivalling in every respect the big warehouses of Winnipeg and the east. He soon sees nothing impossible in the ambition of the firm to build up a wholesale trade that will rival that of the largest Winnipeg and eastern houses.

Revillon Bros., the Hudson's Bay Co. and Ross Bros. are extensive jobbers of hardware and heavy goods. Starting away back in 1880 as tinsmiths, Ross Bros. have steadily extended their trade until they have now one of the finest wholesale hardware establishments in the west.

Edmonton's wholesale interests are as yet only in their infancy, but they give promise of a great development in the early future.

Wonder if the people in Edmonton know where Strathcona is.

How many times did A. S. Noble remind the convention of the natural gas at Medicine Hat?

Too much credit cannot be given Secretary F. T. Fisher, of Edmonton, for his hard work during and before the convention. He was untiring in his efforts to render all possible assistance to delegates and press, and unfailing in his courtesy.

Much of the success of the convention this year was due to the fact that the delegates were nearly all notified in advance of the subjects to be discussed.

BUSINESS MEN'S PARLIAMENT

Saskatchewan and Alberta Boards of Trade in Third Annual Convention— Uniform Commercial Law—Cheap Power.

It is two years since the first convention of delegates from the boards of trade of Western Canada was held in Calgary on the invitation of the Calgary board, and largely as a result of the enthusiastic and persistent efforts of C. W. Peterson, the secretary. Mr. Peterson is an optimist, but probably even he did not expect to see the organization of which he is the father attain, in so short a time, its proud preeminence as the business men's parliament of Western Canada. That this preeminence has been attained by this organization in so short a time is due entirely to the high class of intelligence which, at all three conventions, has represented the western boards of trade, and to the serious way in which the delegates have always entered upon their duties, always remembering that weight would be attached to their decisions by the public men of the provinces concerned and by the general public. As was remarked in this paper one year ago in connection with the report of the convention held in Regina, it is an easy matter to understand the rapid development of the western towns when one has seen their business men.

A Majority of the Delegates.

A Single Association.

This association of boards of trade was formed before autonomy had been granted the western provinces and it was, accordingly, named the "Associated Boards of Trade of the Northwest Territories." A year ago it was known that there were to be two new provinces carved out of the old Northwest Territories, and owing to the vast extent of territory included there was at first a strong movement in favor of the division of the organization along provincial lines. Happily this was averted by a narrow vote, the result being in great measure due to the strong speech by the then Premier, F. W. G. Haultain, who, at the banquet, urged upon the convention that although there were to be two provinces, their commercial interests would always be much the same, and that accordingly it was greatly to be desired that there be some one body in a position to speak for the business men of the two provinces. The vote was close a year ago, but there was no opposition whatever in the convention last week to the resolution offered by the Regina Board of Trade in favor of continuing the present organization for another year. The Associated Boards of Trade of Western Canada will still continue to represent the commercial thought of the two provinces of Alberta and Saskatchewan.

It is unfortunate, perhaps, that some other name was not chosen, for the term

"Western Canada" is usually taken to mean the whole territory from the western boundary of Ontario to the Pacific coast. Manitoba and British Columbia are not included in the association, and the name is, therefore, slightly misleading. In the convention discussions Manitoba was, however, ably represented by Andrew Strang, the president of the Winnipeg Board of Trade, who was present by special invitation and who was accorded all the privileges of the convention except the right to vote.

OPENING SESSION.

The opening session of the convention was called to order Wednesday morning, June 13, by First Vice-President Hutchings. The first business was the appointment of F. T. Fisher, Edmonton; Wm. Cousins, Medicine Hat, and M. Barford, of Lethbridge, as a credentials committee. After a few minutes they reported the following in attendance:

Calgary—R. J. Hutchings, J. Emerson, Wm. Pearce, A. J. Stewart.

Cardston—D. S. Beach.

Edmonton—A. T. Cushing, Wm. Short, W. Dowsett, K. W. KacKenzie, T. W. Lines.

Lacombe—John McKenty, A. Urquhart.

Leduc—C. W. Gaetz, J. G. Tobin, E. C. Wells.

Lethbridge—W. C. Ives, M. Barford.

Milestone—R. S. Anderson.

Medicine Hat—Wm. Cousins, F. L. Crawford, A. S. Noble.

Melfort—W. W. Rutan.

Moose Jaw—Hugh McKellar, E. M. Saunders.

North Battleford—J. B. Ross, J. A. Gregory, J. T. Simpson, R. R. Earle.

Olds—A. E. Clemens.

Prince Albert—John H. Wilson.

Ponoka—J. A. Jackson.

Raymond—R. H. McDuffie, B. S. Young.

Red Deer—J. R. Cowell.

Regina—H. W. Laird, A. E. Boyle, P. McAra, Jr., W. McCausland.

Saskatoon—T. Copland, A. E. St. Laurent, W. H. McBeth, W. J. Davidson.

Stettler—Wm. Dunlop, Geo. Bentley.

Strathcona—D. H. McKinnon, J. H. MacDonald, O. Bush, W. H. Sheppard, W. J. Cluff.

Vegreville—Chas. Gordon, A. S. Thompson.

Winnipeg—Andrew Strang.

Brandon—J. L. Connell.

Dauphin—H. P. Nicholson, J. A. Campbell.

Lacombe—M. J. MacLeod.

Regina—W. G. Pettingell.

Wetaskwin — W. J. Loggie, V. C. James, J. Fowler.

The following boards of trade are members of the association but were not represented at the convention: Balgonie, Brandon, Cardston, Caron, Dauphin, Cardston, Caron, Davidson, Grenfell, Indian Head, Lumsden, Macleod, Rouleau, Wapella, and Weyburn.

Vice-President's Address.

Owing to the lamented death some months ago of President Thomas Tweed, of Medicine Hat, the chair was taken by First Vice-President R. J. Hutchings, of Calgary. In opening the convention Mr. Hutchings spoke as follows:

"Gentlemen: It is with a great deal of pleasure that I rise to open the proceedings of the third convention of boards of trade delegates. At the same time this pleasure is mixed with regret; as I look over the faces of those who are present to-day, I am once more reminded of the irreparable loss which our convention has sustained in the death of our late president, Mr. Thomas Tweed,

The Late Thos. Tweed, Last Year's President.

of Medicine Hat. Those of you who, like myself, attended the first convention at Calgary, and the second convention at Regina, at both of which Mr. Tweed was unanimously chosen president, will be able to realize, in a measure, the extent of our loss.

The New Arrivals.

"Since we last convened at Regina a great many changes have taken place in our country. Thousands of people who were then residents of various parts of the world are now good citizens of Saskatchewan and Alberta, and our country has gained such widespread publicity that hundreds of thousands of eyes are at present turned towards our great Canadian west. The present good crop outlook is the means of making our country more favorably known than ever before. The rapid agricultural development of the new provinces during the past few years has been truly wonderful and has established a record never approached elsewhere. Our crop production has doubled and trebled, and everything points to an even more astounding development in the future.

"The only cloud on the horizon seems to be the continued depressed condition of the beef market, and it is to be sincerely hoped that this convention may be able to take steps that will lead to a better understanding and the restoration of confidence. I am pleased to see that a resolution is to come before the convention on this subject.

Question of a Name.

"Our old name, 'Associated Boards of Trade of the Northwest Territories,' has outlived its usefulness as a consequence of the granting of provincial autonomy to Alberta and Saskatchewan, and it will be necessary for you to decide upon a new name, or names, as the case may be, before the convention adjourns. This perhaps will involve a consideration of the future scope of the organization.

"You have all no doubt received a copy of the memorandum of resolutions which will be presented to the convention, so that it is unnecessary for me to comment upon the large amount of business which is before you, the resolutions numbering about forty-five. The fact that there are so many subjects to be dealt with is ample evidence of the usefulness of this organization. At the first convention 67 delegates convened; 74 representatives attended the second convention, and if all attend who promised to come we shall have fully 100 at the present meeting.

Value of Getting Together.

"It appears to be almost impossible to estimate the value of an annual convention of this nature, representing as it does the business interests of this vast country. It must necessarily establish a strong bond of fellowship between the various towns and cities represented and materially assist us to acquire a broader, more intelligent and more sympathetic view of the commercial and economic conditions as they exist throughout the country, and I feel confident that the result of the deliberations of this body from year to year will have a very material effect is establishing a good, sound commercial and social life in our fair Canadian west.

"It is with very deep regret that I announce to you the unavoidable absence of Mr. C. W. Peterson, secretary of the Calgary Board of Trade, on account of the very serious illness of his esteemed wife. Mr. Peterson, I may say, may be called the father of this organization, as it was through his efforts that the first convention was so successfully conducted. I am sure that you will all join with me in extending

him our deepest sympathy in his present trouble, and hope that Mrs. Peterson may be speedily restored to health again.

Hope for Harmony.

"In conclusion, I trust that this convention may be characterized with the same spirit of harmony as that which prevailed at Calgary and Regina, and that your deliberations on the various important questions that will be brought before you will be of lasting benefit to the country. I also desire to take this opportunity of thanking you for the honor you have done me in appointing me chairman of this important gathering, and to express my hearty appreciation of the efficient manner in which the organization work of this convention has been carried out by the Edmonton Board of Trade.

"I wish you all unbounded prosperity and a safe return to your homes."

At the conclusion of Mr. Hutchings' address a vote of thanks to him was carried on motion of Andrew Strang, of Winnipeg.

A Good Man Gone.

W. C. Ives paid a glowing tribute to the late Thos. Tweed's many admirable qualities of head and heart, styling him a true representative of the best qualities of the men of Western Canada.

On motion of Hugh McKellar, of Moose Jaw, a letter of condolence was ordered to be sent to the relatives of the late president.

The New Officers.

A finance committee consisting of Messrs. Short, of Edmonton, Pearce, of Calgary, and Laird, of Regina, was appointed, and the convention then proceeded to the election of officers, which resulted as follows :

President—R. J. Hutchings, of Calgary.

First vice-president—Thomas Copland, of Saskatoon.

Second vice-president—P. McAra, of Regina.

Secretary—F. T. Fisher, Edmonton.

Alcohol Duties.

Cheap power is the object for which most western municipalities are striving and one phase of the question was brought up by the Regina board's resolution submitted by A. E. Boyle, secretary, who sees great possibilities in wood and grain alcohol. The resolution stated that the question of fuel was a serious one, that the cost was steadily rising ; that the United States Congress had removed the duty from denatured alcohol ; that alcohol could be manufactured for 10c. a gallon from many by-products in Canada ; therefore be it resolved that the Dominion Government be urged to abolish all taxes levied on denatured alcohol.

Fight With Standard Oil.

Mr. Boyle explained that denatured alcohol meant pure alcohol diluted with methylated spirits to make it unfit for use as a beverage. The action asked for was not new, as it had recently been adopted by the United States Congress and Senate after a long up-hill fight in which the measure was opposed by the Standard Oil Co., who saw in it a blow at their monopoly, since the alcohol could be used instead of oil for fuel.

"The taxes at the present time really amount to about $3 per imperial gallon," explained Mr. Boyle, "whereas alcohol can be manufactured from grain at a cost of about 25c. per gallon and diluted with wood alcohol (made from sawdust) costing about 7 cents per gallon to produce. At this cost of production denatured alcohol can be economically used as fuel for the production of heat and power, whereas under the present taxes its use is prevented except in a very limited way. By removing this tax we can have at our doors the most economical fuel that it is possible to have in Western Canada.

R. J. Hutchings, Calgary, the New President

From Waste Material.

"Moreover, this fuel may be obtained from materials which, at the present time, are entirely wasted. Decaying vegetables, frozen wheat and other vegetable matter now a total loss can be used to make grain alcohol and this grain alcohol can be then combined with wood alcohol made from sawdust that is now entirely worthless."

Mr. Boyle concluded his remarks by reading an extract from the Scientific American of June 2, in which it is stated that denatured alcohol furnishes an inexhaustible and economical supply of fuel.

The Drink Danger.

The motion was seconded by P. Mcgently, as very few of those present understood the differences between the various kinds of alcohol. He thought it would be dangerous to have this alcohol in the country and in support of his contention referred to the recent death of a number of Indians from drinking Florida water. He thought the whole matter should be referred to a body of scientists to be dealt with.

A. S. Noble, Medicine Hat, said the speech of Mr. Copland reminded him of the objections urged against the locomotive, that it would kill the cattle. Stevenson had replied, "So much the worse for the coo" ; similarly he would say that if people drank denatured alcohol, so much the worse for them.

Progress in Germany.

"Germany," continued the speaker, "is the great centre of modern scientific research and for years the best minds of that country have been looking into the question of cheap power. They have investigated the briquette (made of peat, sawdust, etc.) and they have found it unsatisfactory. Finally someone suggested alcohol and various experiments were accordingly made. It was found that the much despised potato will produce great quantities of alcohol and a very profitable market for the potatoes of the German farmer has accordingly been found. By intensive cultivation he can grow 300 to 400 bushels of potatoes per acre, which is double the Canadian production.

"For the use of this alcohol Germany has evolved the most economical motor in existence and cheap power has been attained thereby."

Hugh McKellar, of Moose Jaw, thought the supporters of the motion were dealing in mysteries about which the delegates knew nothing, and he therefore opposed the resolution.

T. A. Lines, Edmonton, thought this the most important question before the convention and he was surprised to hear it referred to as a mystery. The recent passing of an act in the American Senate abolishing the taxes was the result of a long up-hill fight against the Standard Oil forces, and he thought that this fight was pretty well known.

"Gallon for gallon," he continued, "denatured alcohol is almost as good for motive power as is gasoline. I have this on the authority of the Scientific American. It can be produced at much less cost than gasoline as it is produced from refuse which otherwise would be wasted entirely. The arguments against the resolution are purely sentimental."

On a vote the resolution was carried,

Hugh McKellar, of Moose Jaw, alone dissenting.

Law Amendment.

The meeting then received the report of the law amendments committee appointed last June. The report stated that owing to the creation of the new provinces it had been thought well to divide the committee, and Hon. Ex-Chief Justice McGuire of Regina and H. F. Mylton, of Regina, had devoted their attention to Saskatchewan and R. J. Hutchings, of Calgary, and Wm. Short, of Edmonton, to Alberta. The report of last year's committee on law amendments had been printed separately and sent to the members of the provincial legislatures. Messrs. Hutchings and Short and Barrister L. M. Johnstone, of Lethbridge, had interviewed the Premier and the Attorney-General of Alberta to urge upon them the enactment of legislation to carry out the convention's recommendations. The proposals had been considered reasonable but it being the first session of the new legislature the ministers did not think it possible to bring in the legislation desired this year. The deputation had suggested a commission to consider suggestions for consolidation and amendment of the statutes. The only result thus far was the enactment of a provision requiring the registration of a caveat to enforce an agreement of sale. The committee therefore recommended that last year's report be again adopted.

Need for Uniformity.

Regarding uniformity of commercial law in the two provinces, the committee recommended that a joint commission be appointed by the two governments to report upon the consolidation and amendment of the laws. In that way uniformity would be secured. The appointment of a committee from both provinces to arrange concerted action by boards of trade and the presentation of views at the various centres where such a commission if appointed would sit in order that the views presented might be on fairly parallel lines, was recommended.

Of the First Magnitude.

In moving the adoption of this report William Short, of Edmonton, said that nothing more important could come before the present convention. The new provinces were starting with a clean slate, as no vested interests had grown up around legislation; consequently it was important that a wise start should be made. The committee therefore suggested the appointment of a strong commission from the two provinces to take in charge the codification of the commercial law and to receive suggestions from the various boards of trade as to the amendments desired.

The adoption of the report was seconded by K. W. MacKenzie in a brief speech, and after a short discussion participated in by W. C. Ives, Wm. Short and D. H. McKinnon, the convention adjourned, on motion of Thomas Copland, until 2 p.m.

Corking the Natural Gas.

When the convention met again Chairman Hutchings suggested that, in order to expedite business, the mover of a resolution should be limited to 10 minutes, and all other speakers to 5 minutes each; and this was agreed upon, a formal motion being offered by Wm. Pearce, Calgary, and K. W. MacKenzie, Edmonton.

Mr. Hutchings then briefly reviewed the report of the standing law amendments committee. The main feature was the recommendation that the Governments of the two provinces should appoint a commission whose duty it would be to codify the existing commercial law and consider amendments offered by the boards of trade. This, he thought, was a good suggestion, as business men might spend a month on the matter and be little further ahead. It was suggested that the boards of trade act in concert in placing recommendations before the commission, should it be appointed.

A. T. Cushing, President Edmonton Board of Trade.

The report was then adopted.

P. McAra, jr., of Regina, then brought in the following resolution on behalf of the Regina Board of Trade:

"That the Associated Boards of Trade of Western Canada continue as at present constituted for the year 1907."

Mr. McAra said there were many reasons for continued unity and no good reasons for division. Looking down the long list of resolutions, he was sure that the two provinces were equally concerned in them, and it was important that there should be some one body competent to speak on behalf of the commercial interests of the west. It would be noted that the resolution spoke only of 1907; that was because the time might come yet when division on provincial lines would be advisable, but that time had not yet come.

When the motion had been seconded by H. W. Laird, of Regina, Andrew Strang, president of the Winnipeg Board of Trade, raised the question of the name given the organization, claiming that it was misleading as the two provinces of Manitoba and British Columbia are not included. Messrs. Copland and McKellar did not see it that way, and after a short discussion the question of name was dropped and the resolution carried.

Canadian Measure Standards.

In championing the resolution from the Strathcona Board, "That the Dominion Government be requested to pass legislation compelling all imports of goods to be marked according to Canasian standards," J. H. Macdonald said it had reference particularly to liquids. "We use the Imperial measure in Canada," he said, "while the wine measure is used in the United States. The result is that a comparison of quotations is always to our disadvantage, as only a few consumers are aware of the difference. Lubricating oils are sold in large quantities by American firms to the foreign population in the Canadian West, who do not appreciate the difference in standards of measurement. As a remedy it was, therefore, suggested by the Strathcona Board that all packages be marked by the customs authorities showing the quantity in Canadian or Imperial measure." The resolution was seconded by another Strathcona delegate.

M. Barford, of Lethbridge, contended that the provision asked for was already on the statute books, although, perhaps, not enforced very strictly. After some further discussion by Thos. Copland (Saskatoon), Hugh McKellar (Moose Jaw), and Andrew Strang (Winnipeg), the motion was finally amended and adopted as amended. In its final wording it reads as follows:

"That the Dominion Government be requested to enforce legislation compelling all imports of goods to be marked according to Canadian standards of weights and measures."

Redemption of Bank Notes.

P. McAra, jr., Regina, seconded by W. Cousins, of Medicine Hat, moved:

"That the Dominion Government be asked to nominate, in each of the new provinces, a point of redemption for bank notes, and appoint deputies of the receiver-general to reside at such points."

After a short discussion this resolution was lost on a vote.

Commercial Legislation.

On motion of R. R. Earle, North Battleford, and Wm. Short, Edmonton, the following resolution was, after a short discussion, carried unanimously.

"Resolved that it is desirable on behalf alike of mercantile interests and of those people who are obliged to struggle to establish and maintain homes that the laws relating to exemption from seizure should be amended in such manner as to render a personal promise to pay a debt incurred for actual necessaries a more valuable security than it now is, by providing that none of the provisions of such laws shall be available to defeat any such claim, and that the executive of the Associated Boards of Trade of Western Canada be requested to urge favorable consideration of this resolution upon the legislative bodies concerned."

The preamble to the resolution set forth that the present law made it imprudent for merchants to give credit without requiring a pledge of personal property otherwise exempt; that thereby competition was lessened for a class that should be benefitted by it, and that experience had shown that the present operated more as a hindrance than as a help to those it was designed to benefit.

Teachers' Salaries.

E. M. Saunders, Moose Jaw, strongly championed a resolution in favor of a higher scale of remuneration for teachers, in order to obtain a higher degree of efficiency in the public and high schools by securing and retaining the best teachers in the profession.

In support of his resolution, Mr. Saunders stated the maximum and minimum salaries paid to teachers in a number of centres in Alberta and Saskatchewan, easily establishing his contention that salaries are ridiculously low. He thought this one of the most important resolutions under consideration, as it could not be expected that such salaries would retain the right class of teachers, and the west was vitally interested in the sound education of its children.

The resolution was seconded by Hugh McKellar, of Moose Jaw.

J. A. Gregory, of North Battleford, pointed out two practical methods of raising salaries. The first had been adopted in North Battleford, where the trustee board, when advertising for a teacher, now stated the salary offered, and no longer followed the old practice of putting teachers up at auction. The second remedy, a more radical one, was for the Government to fix a scale of salaries.

K. W. MacKenzie, Edmonton, sympathized with the underpaid teacher, but was not sanguine as to the results of fixing salaries by legislation. He was convinced that few ambitious men or women would stay in the teaching profession, no matter what the salary paid, and a good salary would retain in the profession a few who would be a disgrace to it.

D. H. McKinnon, Strathcona, supported the resolution, citing the case of his native Province of Nova Scotia, which had been compelled to adopt a minimum scale of salaries fixed by law.

The resolution was carried.

Cattle Embargo.

T. W. Lines, Edmonton, introduced a strong resolution dealing with the embargo on Canadian cattle entering the British Market. It pointed out that the statement that Canahian cattle were infected with contageous diseases

P. McAra. Jr., Mayor of Regina.

had been repeatedly refuted; that countries of Continental Europe zealous in protecting their cattle herds had not put an embargo on Canadian cattle; that it had been alleged the embargo was for the protection of United Kingdom cattle raisers from Canadian competition rather than for protection from disease, and that such authoritative condemnation of Canadian cattle worked a serious injury to one of Canada's most profitable industries. The resolution then calls upon the Imperial Government to make definite official declaration as to the reasons for maintaining the embargo. The resolution continued:

"If it should be declared that those regulations are solely for the purpose of protection against the introduction of contagious diseases, then His Majesty's Government should be urged, as a matter of equity, to the appointment of a commission of veterinary experts chosen from the United Kingdom, from Canada, and from other self-governing colonies, who will investigate the matter, and whose conclusions will determine the maintenance or repeal of the regulations complained of. If it should be stated that such embargo is maintained only as a protection against Canadian competition, then the injury now done to the reputation of Canadian cattle would be removed, and the right of the United Kingdom to adopt such fiscal policy as seems best to His Majesty's advisers would not be questioned."

Government's Plain Duty.

Mr. Lines said there were only two questions to be answered. First, "Is there good and sufficient reason, because of disease, to keep out our cattle?" and, second, "If this reason does not exist, will the British Government remove the embargo?" There should be an investigation to show whether or not there was disease among Canadian cattle. He was confident that expert evidence would show conclusively that there is no disease, and in that case it was the plain duty of the British Government to remove the embargo or to acknowledge that it was imposed for protective purposes.

A. T. Cushing, Edmonton, seconded the resolution.

J. R. Cowell, Red Deer, said he would speak from the viewpoint of the Englishman. He had spent the greater part of his life in the British Isles, and he knew it was absolute gammon to pretend that the English Government kept out Canadian cattle because of disease. "No one over there," he continued, "thinks for a minute that Canadian cattle have pleuro-pneumonia. Everyone understands that the embargo is there for protective purposes. It is simply a dose of the protection we have here, the only reason for the embargo being a desire to protect the British farmers. That is all, and it is well understood. As a life-long free trader, I regret the embargo, and believe that it is very injurious to the best interests of Great Britain. But we have no reason to complain, as we are simply getting a dose of our own protective medicine."

Andrew Strang, Winnipeg, agreed with the last speaker that the real reason for the embargo was a desire to protect the British farmers. The matter had occupied the attention of the Winnipeg Board several times, and the Ottawa Government has made repeated representations on the subject to no avail. The resolution had the sympathy of the Winnipeg Board.

Cattle Shippers Unfair.

W. C. Ives, Lethbridge, in a stirring speech, said that he had a resolution from his board which related very closely to this subject. His resolution was

in favor of the Government of Alberta taking up the export of live stock on behalf of the people of Alberta. The Alberta cattle men were in the hands of two large buyers, one in Calgary and the other in Winnipeg, and they didn't get a fair price. Those cattlemen who shipped to England themselves obtained much higher prices. He would ask the mover of this cattle embargo resolution to incorporate the Lethbridge resolution in his own.

Mr. Lines was not willing, and the subject was dropped.

Canada Not an Exception.

W. Dowsett, Edmonton, brought up the point that cattle from all countries are under the embargo. Canadian cattle are not singled out.

Wm. Pearce, Calgary, said he was in sympathy with the resolution, but he did not agree with the statement that serious injury was being worked the Canadian cattle trade. In so far as the embargo resulted in the establishment of Canadian packing houses, it was not a bad thing for Canada. He would move that the resolution be referred back to the resolutions committee.

J. A. Jackson, Ponoka, seconded the motion of Mr. Pearce, adding that "all we can do is ask the British Government to remove the stigma of disease from our cattle."

The motion carried and the resolution was referred to the resolutions committee to be re-drafted.

Fruit Inspection.

W. J. Cluff, Strathcona, brought in a resolution from his board that the Dominion Government be requested to appoint a fruit inspector for the Provinces of Alberta and Saskatchewan. At least this is the form in which the resolution was finally passed; in its original form it applied only to the Province of Alberta.

Mr. Cluff said the people of Alberta and Saskatchewan were large consumers of apples and other fruit, and frequently they suffered from the poor quality of fruit supplied them. There was a fruit inspector in Vancouver, but he can not do justice to the big territory in his charge; the two provinces needed an inspector of their own. The resolution was seconded by O. Bush, of Strathcona.

Wm. Pearce, Calgary, thought the resolution should be amplified a little, but was in sympathy with its purpose.

The resolution was carried.

Good Roads.

T. W. Lines, Edmonton, introduced an important resolution, which proved of a contentious nature. It related to good roads, and after pointing out the importance of means of communication, the fact that present methods were temporary, and that permanent improvements would effect a great saving of public funds, resolved:

"1st. That the Government should be requested to provide for the appointment of good roads commissioners throughout the province, under whose direction all local improvement taxes should be expended, and

"2nd. That a comprehensive plan be adopted with a view to providing by means of debentures charged upon the lands benefited, such roads as shall be permanent and shall be available in any season of the year and in all seasons, irrespective of rainfall."

Good Work Had Been Done.

Mr. Lines said he was merely seconding the efforts of the 1904 convention, at which a similar resolution was passed and following which the various boards of trade throughout the west had taken the matter up with good results in many localities.

Hon. Ex-Justice McGuire, Retiring 2nd Vice-President.

He urged that there was an absolute necessity for immediate scientific effort, and he was firmly of the opinion that the work should be under the control of the Government, as the present system of statute labor had proved an utter failure.

In purely grain-growing sections there was an immense loss to the farmer because of bad roads. The average farmer, in order to market 1,000 bushels of wheat, had to make an average of 16½ trips and travel say 165 miles; that was, he was unable to carry a full load because of bad roads, and the aggregate loss was something immense. Ontario had probably the best roads in Canada, and yet it was estimated that the annual loss in that province from bad roads was at least $19,000,000 per year. In all provinces the movement for good roads was pronounced. Statute labor having proved a failure, the road making should be undertaken by the Government.

Railroads Versus Common Roads.

Wm. Short, Edmonton, seconded the resolution and in doing so said he had followed carefully for several years the discussion of this subject in the magazines and newspapers. It had been said that the United States Federal Government had spent $150,000 for common roads and $400,000,000 for railways; and about the same proportion would be true in Canada although 10 men used the highways directly for one who used the railway directly.

"There can be little doubt," continued the speaker, "that most of the money and labor spent on road-making is wasted under the present system. Very little more expenditure per annum would be required to give us good roads if the money were wisely spent by a special committee of experts. And just think of it, gentlemen, a really good road will last forever, as we can see from the durability of the old Roman roads in England. That being so, we can afford to spend money in road-making. Suppose we spend $50 per quarter section, why, it would come back to us almost immediately in the increased value of the land. But if you want that money spent wisely you must have it spent by an expert who understands road-making."

Specially Constructed.

Wm. Pearce, Calgary, offered a suggestion that the resolution be amended to read "specially constructed" instead of "paved" roads and this was agreed to by the mover.

B. Young, Raymond, called attention to the advisability of a recommendation in favor of the use of wide-tired vehicles. These would preserve good roads indefinitely.

O. Bush, Strathcona, didn't believe in road commissioners. "The experience of the Province of Ontario," he insisted, "shows that the money spent by commissioners is wasted in graft and doesn't go to the roads."

Replying to Mr. Short, he pointed out that Alberta lacked stone and gravel and therefore could not make Roman roads. It would be a good road that would last five years. In Ontario the best results were obtained by having short stretches of road built by Government experts as an example to the farmers. Lectures on road-making were also a great assistance.

Any Change Would be Better.

T. W. Lines, Edmonton, admitted the possibility of graft but didn't think it should be considered very much. At all events nothing could be worse than the

present system. Wm. Short pointed out that it was not intended to have the commissioner spend the money himself; he is merely to direct the expenditure into proper channels.

Thos. Copland, Saskatoon, rose with a very pertinent inquiry. Did the convention propose to ask the Government to say how people in municipalities are to spend their own money? Surely this was contrary to British practice.

"If people pay taxes," he continued, "they have a perfect right to make blunders with their own money if they want to. People wouldn't stand for Government dictation in a matter of this sort. Either let the commissioner act entirely in an advisory capacity or let the Government take over road-making altogether."

W. C. Ives, Lethbridge, took objection to the last clause in the resolution as being quite impractical and finally the whole matter was referred back to the resolutions committee with instructions to report at the evening session.

Law of Agency.

W. Short, Edmonton, moved that because of the great amount of business transacted in the west through agents, the measure of whose authority there was no convenient method of ascertaining, therefore "it is desirable that, on the one hand, corporations and others doing business in the west should be compelled to give protection to the public by clear disclosure of the extent of the agent's authority, readily accessible to the public at large, and, on the other hand, that the agency should be laid down by positive legislative enactment, and to this end the law of agency should be codified."

Mr. Short spoke briefly in support of the resolution, urging the importance of dealing with agents who had power to bind the corporations they represent.

After a short discussion the resolution was carried.

Markets for Agriculture.

Wm. Pearce, Calgary, introduced a resolution looking to better marketing of agricultural products. It set forth in preamble that the west depended solely upon agriculture; that the opening of markets was not keeping pace with production; and that prices were decreasing while cost of production was increasing. The resolution then urged upon the Dominion and Provincial Governments the establishment of bureaus of information and statistics relating to agriculture. The duties were thus classified: (1) Gather and compile statistics; (2) investigate and report upon values of agricultural products in foreign markets; (3) compare foreign with domestic values and estimate the profits of middlemen; (4) investigate alleged inadequate transportation facilities and excessive transportation rates; (5) inquire into improved methods of placing agricultural products on the market.

In support of his resolution, Mr. Pearce spoke in part as follows:

"The resolution which I have been requested to introduce is under the head of markets for agricultural products. I think that might well be broadened so as to include all the necessaries required by the agricultural population; at least to obtain statistics as to their cost and selling price. I would include among such necessaries fuel, building materials of all kinds, clothing, and the prime necessaries of life such as meats, flour, sugar, etc., etc.

A Practical Age.

"This age has been termed by many a practical age. To be practical we require knowledge; the more comprehensive and concrete our knowledge, the more practical will we be. All the great commercial nations of the world are continually gathering statistics relating to commerce. The Germans, who have perhaps made greater strides in the way of trade and commerce since 1870 than any other nation, are, par excellence, a people of statistics.

Wm. Trant, Regina, Retiring Secretary.

"One cannot conceive how the best possible progress in amelioration of grievances or in the development of the country can be attained without full and complete statistics.

"The other day in Calgary I was told that the price of mutton by the hind quarter was 18c. per lb. With a discount of 5 per cent. for cash, this is about 17c. per lb. Probably that is not an undue profit, but it would be interesting to know how much of the price the grower of the mutton received, what went for slaughter, sale, etc. The same question arises regarding beef, pork, veal, eggs, poultry and many other things which enter into daily consumption.

Publicity a Corrective.

"Coming now to the large question of exports, it is plain that the same data are required. In the case of meat shipments we need to know what the producer receives, what the transportation companies receive and what the dealer receives. With such data at our command, we can at once discover the cause and probably apply the remedy if there is anything wrong with the handling of the trade. Without such data one is groping in the dark.

"Publicity is an effective remedy for most evils. Once having the facts collected and a good system adopted for illustrating them, the maintenance of the bureau outlined in this memorial would not be very expensive; but no matter what it cost it would be well worth while."

At the conclusion of Mr. Pearce's speech a resolutions committee was appointed consisting of Messrs. Pearce, McDuffie and Laird. The convention then adjourned for dinner.

At the opening of the evening session President Hutchings congratulated the convention on the businesslike way in which it was getting through the program of resolutions.

Cattle Embargo Again.

The committee on resolutions then presented an amended cattle embargo resolution which read as follows:

"Whereas, for some years past the introduction of live cattle from Canada into the United Kingdom has been forbidden, except for slaughter within ten days after arrival on the soil of the United Kingdom, for the alleged reason that Canadian cattle are affected with contagious diseases, although such assertion has been repeatedly refuted by those who are believed to be qualified to give a correct opinion and the honesty of whose opinion has never been questioned;

"And whereas, from the utterances of several leading public men in Great Britain and from the debates in the Imperial Parliament it would appear that the embargo is intended for trade protection rather than for protection against the spread of disease;

"And whereas, it is asserted by many that this condemnation of Canadian cattle works serious injury to Canada;

"Therefore be it resolved, that the Imperial Government be requested to appoint a competent commission to inquire thoroughly into this matter, care being taken that every interest that desires may be represented so that it may be known that if the embargo on cattle is really intended for protection the

charge against the health of Canadian cattle may be removed."

Would not Admit Protection.

In presenting the amended resolution Wm. Pearce, Calgary, said that in the recent debate on the question in the Imperial Parliament the Government took no positive stand, while the Irish members frankly defended the embargo as a measure of protection urgently required by the Irish grazing interests. The object of this amended resolution was to furnish material for the Congress of the Chambers of Commerce of the Empire which is to meet very soon in London, England.

"We want to get the Government," concluded Mr. Pearce, "to say frankly that it is a measure of protection, for very many people are of the opinion that before the British Government would make this admission it would withdraw the embargo altogether."

Mange in the West.

W. C. Ives, Lethbridge, said this resolution was merely playing into the hands of the British people. "There is mange in our western herds," he said; "it is contagious, and if there is an investigation by experts they will find it; and if they find it, it will serve as an excuse just as well as pleuro-pneumonia with the important difference that there will be something in it."

Thos. Copland, Saskatoon, was sorry to find the words "from Canada" in the resolution as cattle from all countries come under the embargo and one might infer from the resolution that there was some discrimination by the mother land against Canadian cattle. There was not. "We are asking for a discrimination in our favor," he asserted.

After some further discussion the resolution was carried in the amended form.

Hon. W. T. Finlay.

At this juncture President Hutchings noticed in the gathering Hon. W. T. Finlay, Minister of Agriculture in Alberta, and invited him to address the convention.

Mr. Finlay is evidently impressed with the responsibilities of his portfolio, for he expressed the opinion that the Department of Agriculture was the most important in the Government: the most important because all realized that the prosperity of the farmer was the foundation of the greatness of the Canadian West.

Outlining the work of his department, Mr. Finlay said that it had taken over from the Dominion Government the operation of the Government creameries in Alberta. Last year these creameries had manufactured about 2,000,000 lbs. of butter, for which the farmers had received, roughly speaking, $500,000. The Government creameries were popular because they realized such a handsome price for the farmer, and extensive enlargements of the plants were urgently required.

"Last year," continued the honorable gentleman, "we shipped 50,000 lbs. of butter to Japan and sent a large shipment to the Yukon. These shipments relieved the local market and helped those who were not selling cream to the Government creameries to get a good price for their butter."

The speaker reviewed the possibilities in hog raising and the Winter feeding of cattle. For all the various products of the province extensive markets would have to be found very soon. It was for the business men to assist the farmers in finding these markets.

Good Roads Again.

At the conclusion of Mr. Finlay's address, the resolution committee brought in their amended good roads resolution. No change was made in the preamble, but the resolution proper was amended to read as follows:

"That the Government be requested to provide the legislation that will best give effect to the construction and maintenance of good roads, keeping in view an equitable basis of taxation to give effect thereto."

In explanation of the change, Wm. Pearce, Calgary, said the resolution had been so amended in order to avoid the question of taxation without representation. The methods might well be left to the Government.

No Mortgage for Him.

W. C. Ives, Lethbridge, was not willing to support the debenture plan. "A debenture, long or short, is a mortgage on my farm," he exclaimed. "You propose to mortgage my farm to pay for the construction of a road which a man living six miles behind me may use as much as I do, and yet pay nothing for."

A. T. Cushing, Edmonton, didn't believe the municipalities would go into debt to build roads. They had the power now to incur liabilities to the extent of $8 per quarter section, but few, if any, had done so.

B. Young, Raymond, replying to Mr. Ives, pointed out the great increase in the value of lands caused by good roads and said he failed to see the force of objection raised by the Lethbridge delegate.

The resolution was carried as amended.

The Metric System.

K. W. MacKenzie, Edmonton, moved that because of the development of international trade having made the metric or decimal system of weights and measures more desirable, and having given general satisfaction where tried, therefore "the Government of Canada be urged to take the necessary steps to have this system made compulsory in Canada, securing at the same time the greatest possible co-operation on the part, both of the Imperial Government and that of the Government of the United States."

In the course of a very able and incisive speech, Mr. MacKenzie explained the metric system, and dwelt upon its many advantages with telling emphasis. He considered the objections to it to be sentimental and not practical. A. T. Cushing seconded the resolution.

A. Strang, Winnipeg, congratulated Mr. MacKenzie on his lucid exposition of the system, and said the Winnipeg Board of Trade had endorsed the metric system some time ago. Until Great Britain and the United States made the change, Canada could only play a waiting game.

Respect Our Ancestors.

D. H. McKinnon, Strathcona, was inclined to be conservative, and he depreciated the folly of being wiser than our ancestors.

J. R. Cowell, Red Deer, retorted in a brilliantly sarcastic and humorous speech, in which he ridiculed the present system.

A. S. Noble, Medicine Hat, offered an amendment urging merely education of the people to the advantages of the metric system, but after a long discussion it was thrown out and the original motion was adopted.

The convention then adjourned, having done a big day's work.

THE SECOND DAY.

Resuming on Thursday morning, the first business of the convention was the appointment of a standing law amendments committee for the coming year. The old committee, consisting of ex-Justice McGuire, Prince Albert; W. F. Mylton, Regina; R. J. Hutchins, Calgary, and Wm. Short, Edmonton, were re-appointed.

Aid to Hospital.

Hugh McKellar, Moose Jaw, moved that "It is advisable that all local improvement districts or municipalities be given the option of levying and collecting a special hospital rate, not exceeding one per cent. per acre, the proceeds of such tax rate to be granted to any hospital or hospitals, as the council of the municipality or local improvement district levying such rate may direct."

Mr. McKellar said the matter had been brought up last year and the Saskatchewan Legislature had increased the per diem grant per patient from 25c. to 50c. per day. He made a strong plea for public aid to hospitals, and the resolution was seconded in an able speech by E. M. Saunders, of Moose

Jaw. After a short discussion the resolution was carried.

Inspection of Settlers' Effects.

V. C. James, Wetaskiwin, championed the following resolution: "That a much stricter inspection of cars containing settlers' effects coming into Canada from the United States be enforced, to prevent the importation of dutiable goods as settlers' effects."

K. W. MacKenzie, Edmonton, opposed the resolution. He thought that in general the inspection of settlers' effects was pretty thorough; if the Wetaskiwin board had any special grievances they should take the matter up with the Government themselves. It would not be fair for the convention to cast a reflection upon the whole inspection service on such slight grounds.

The convention agreed with Mr. MacKenzie, and the resolution was defeated.

Municipal Bonusing.

W. C. Ives, Lethbridge, referred to the evils of municipal bonusing, and moved the adoption of the following resolution for the protection of municipalities from the greed of railway corporations:

"That the convention recognizes the advisability of legislation restricting the bonusing of railways, corporations and industries by cities, towns, and municipalities."

The resolution was seconded by M. Barford, Lethbridge, and carried unanimously.

Postal Service.

In a strong speech, Mr. McCausland, Regina, moved that in view of the enormous influx of settlers into the two new provinces, the large amount of railway construction now in progress or under contemplation, and the rapid development of the country generally, the convention urge upon the postmaster-general the necessity of endeavoring to maintain the postal services on the basis which the progress and development of the country require.

He regretted that it should be necessary to introduce such a resolution. It was not necessary to particularize as from one end of the two provinces to the other there had been a constant outcry at the inefficiency of the postal service.

"Our friends living in Ottawa," he continued, "move more slowly than we do; they don't understand our situation here. We urgently require an official in the west—a deputy postmaster-general, if you will—to devote his whole time to improving and extending the western service. The centre of the postal system is too far away from the circumference; that's where the whole trouble lies."

Eighteen Miles in Eight Months.

Thos. Copland, Saskatoon, seconded the resolution and was followed by W. G. Pettingell, Regina. The latter cited an instance of a letter taking eight months to go rom Regina to a post office only 18 miles away.

P. McAra, jr., Regina, characterised the postal system of the west as a disgrace to Canada.

W. Dowsett, Edmonton, agreed. "We can get goods shipped by freight over the C.N.R. and the new branches of the C. P. R. and have them delivered 10 days before our invoices will reach our customers by mail. The Edmonton post office would be a disgrace to Fort MacPherson or Siberia. The Government need take no credit to themselves for their big postal surplus while they are starving the service in the west. I hear the surplus is larger than ever this year, but the service is steadily growing worse."

The resolution carried unanimously.

Sugar Resolution.

B. Young, Raymond, then introduced the following resolution, plainly intended as an endorsation of the Raymond refinery as opposed to its rival the B. C. sugar refinery:

"Resolved, that the members of this convention be pledged to use their influence wherever possible to promote the use of sugar grown and manufactured in Alberta in preference to that grown in foreign countries and which is refined only in British Columbia and certain other provinces in Canada."

In an eloquent and forcible speech Mr. Young urged that it was the "religious duty" of every loyal Albertan to support home-grown products and particularly Raymond sugar. He stated that there had been an investment of $500,000 in the Raymond refinery in 1903, that the production in that year had been 800,000 lbs.; in 1904, 1,300,000 lbs., and in 1905, 4,600,000 lbs. of refined sugar.

A Home Industry.

"This is a home industry," he continued, "yours and mine; and it becomes us as patriotic citizens to support our own. It is the extent of our production that measures our strength in this country. It is our religious duty to support what is for the benefit of our own country."

H. W. Laird, Regina, strongly opposed the resolution on the ground that it would be a vicious principle to pass a resolution referring to any one industry. "We might as well mention Regina flour as Raymond sugar," he said.

"I cannot believe that this is a struggling industry," he continued. "Raymond sugar sells at 10 cents per cwt. less than B. C. sugar and we know that the 'sugar barons' are making a great deal of money, probably more than those in control of any other industry. There is no greater monopoly than the sugar business, there are no greater robbers—and I use the term advisedly—than the 'sugar barons' and surely the Raymond people, selling so near to the price of the big refineries, have no need for pap. I am prepared to accept a general resolution in favor of the purchase of goods manufactured in the west, but I will not designate Raymond sugar."

The convention agreed most emphatically with Mr. Laird and the following amended resolution was finally passed:

"That the members of the convention be pledged to use their influence in favor of products manufactured in the west in preference to those manufactured in other parts of the country or in foreign countries."

Government 'Phones.

O. H. Bush, Strathcona, introduced a resolution re-affirming the principle of Government ownership of telephones, as set forth in a resolution passed a year ago.

The resolution was amended by the addition of the word "municipal" so as to include municipal as well as Government ownership; it then passed unanimously.

Condolence to Mrs. Tweed.

H. W. Laird, Regina, then read the following resolution of condolence, which the special committee had prepared to be sent to the widow of the late President Thomas Tweed:

"That we, the delegates in attendance upon the third annual convention of the Boards of Trade of Saskatchewan and Alberta, hereby record our deep sense of regret upon the death of our late greatly esteemed President, Thomas Tweed, Esq., of Medicine Hat, who, during the past two years, bore a leading part in the formation and establishment of the annual convention now assembled. We gladly embrace the opportunity of acknowledging his distinguished services during that period; his unflagging interest in the success of our association; his wise counsel and sound judgment; his manly qualities and kindness of heart. And we regret that death has removed such a commanding figure in the commercial life of Western Canada."

Timber Preservation.

William Short, Edmonton, next brought to the attention of the convention an important resolution dealing with reforestration and the preservation of timber. It pointed out that in the Province of Alberta, along the eastern slope of the mountains and in the foothills and for a considerable distance eastwards, there formerly existed a large area of merchantable timber of excellent quality; that this timber has been largely destroyed by forest fires; that from the 49th parallel to the 54th parallel this timber area is estimated to comprise upwards of 25,000,000 acres capable of producing, at a low estimate, 3,000 feet of lumber per acre; that there are other portions of the two provinces such as the Cypress Hills, where the strongest reasons for promoting timber growth might be urged; that new timber, if protected and preserved, would in 30 or 40 years grow naturally; that in the matter of

climate and water supply the value of forest areas is very great.

The resolution asked that the Dominion and Provincial Governments be requested to take such action as will tend to promote and preserve the growth of timber upon those areas which otherwise would not have any considerable economic value; that this convention heartilf endorses the action of the Dominion Government in setting apart various areas as permanent forest reserves; in the fire ranging system carried on by the forestry branch of the Department of the Interior, and in the assistance given by the same department to settlers towards tree planting on the prairies; that the Dominion Government be requested to embody in the homestead regulations provisions for retaining on wooded lands and for tree growing on prairie lands from 20 to 30 acres of wood per quarter section.

The resolution was seconded by Wm. Pearce, Calgary, and carried unanimously.

The convention then adjourned for lunch.

Townsites.

Resuming after lunch, the first resolution was introduced by A. T. Cushing, president of the Edmonton Board of Trade, and referred to townsites. It pointed out that a large number of townsites would, in the course of the next few months, be laid out in respect of the Grand Trunk Pacific, Canadian Northern, and Canadian Pacific Railway lines, in the Province of Alberta.

The resolution continued: "Be it resolved that the Government be requested to provide that no townsite should hereafter be laid out in the province until the location has been approved by the Lieutenant-Governor in Council, a proper plan has been submitted and approved, providing for drainage, water supply it any available, and parks and public squares, and that the plan should comply with proper standards to be laid down in that behalf and that any addition to any townsite now laid out, subject also to the foregoing, be made to harmonize as to streets and general plan, with the original plan."

Feature of Medicine Hat.

A. S. Noble, Medicine Hat, first took occasion to remind the convention of the natural gas to be found at Medicine Hat, and then opposed the resolution strongly on the ground that to give such powers to a Government would be to open the way for unlimited graft.

J. A. Gregory, North Battleford, in a strong speech supported the resolution in its entirety, and referred in scathing terms to the action of the Saskatchewan Valley Land Co. respecting townsites.

The resolution was finally adopted in the following amended form:

"Therefore, be it resolved that the Government be requested to provide that no townsite shall hereafter be laid out in the provinces except in conformity with general Government regulations providing for drainage, water supply if available, etc."

Railway Claims.

W. C. Ives, Lethbridge, moved the adoption of the following resolution referring to claims on railway companies:

"That in the opinion of this convention all just claims against railway companies for lost and damaged goods be settled inside of sixty days, and that steps be taken to have this matter brought to the attention of the railway commission."

W. G. Pettingell, Regina, seconded the resolution, saying that his business experience of 23 years had taught him that claims against a railway company might just as well be put in the stove as presented to the company.

The resolution was carried.

Another Railway Resolution.

The following railway resolution was also adopted, on motion of W. C. Ives:

"That in the opinion of this convention all transportation companies should be compelled to issue and sign shipping bills in triplicate, each of which should be as efficacious for proof of claims as any of them, and that a copy of this resolution be forwarded to the Board of Railway Commissioners."

J. H. Wilson, Prince Albert, undertook to champion a Government railway to Hudson Bay. His resolution was as follows:

"That in the opinion of this convention the future prosperity of this great western country, and of Canada as a whole, largely depends on cheap transportation, and that as the Hudson Bay is the natural outlet, and in our opinion is a perfectly feasible route, the Dominion Government be requested to build a road from some point on the North Saskatchewan River to Fort Churchill, as a national undertaking."

A Hard Critic.

A. S. Noble, Medicine Hat, spoke of the natural gas wells of his town, and then opposed the resolution in a speech of great clearness, force, and weight of testimony and argument. Metaphorically speaking, he knocked the project down and then stood upon it.

"I know a little about that northeastern country," he said.

A voice—"Very little."

"I was born in Newfoundland," he continued, "and I ought to know. Now what is the extent of our knowledge of the Hudson Bay route? Simply that vessels can get into Hudson Bay and that they can get out. That is all..

"We might build our railway and then find that the Hudson Bay route is utterly impracticable. Let us first learn something definite about the route. If we want to spend money, suppose we spend it in having a half dozen ships make repeated journeys from the bay to Liverpool. They will learn whether or not the route is practicable."

"We all know the troubles with the St. Lawrence route and how the insurance companies charge such high rates. Now the dangers of the Hudson Bay route are 100 times greater, and it would be impossible to get any insurance at all."

A Substitute.

Wm. Pearce, Calgary, and D. H. McKinnon, Strathcona, also opposed the resolution in strong speeches, and finally the following amendment was carried:

"That the Dominion Government be requested to continue its investigations as to the feasibility of the Hudson Bay route, and, if that route be found feasible, to build a railway from some point in the west to Fort Churchill, as a national undertaking."

Hands Off Jim Hill.

President A. T. Cushing, of the Edmonton board, then introduced the following resolution, plainly intended as a reproof to the few newspapers in the east which have opposed the entrance of the Great Northern into the Canadian West:

"Whereas there are in Western Canada many millions of acres of land of great economic value still unsettled and unproductive, owing principally to the lack of transportation facilities,

"And whereas, owing to the great distance of those western communities already settled from the seaboard and from the great industrial and commercial centres, the success and prosperity of such western communities is dependent in an extraordinary degree on the sufficiency of transportation facilities for the expeditious handling of traffic at the lowest possible cost,

"And whereas the extraordinary rapidity with which the newer portions of Western Canada are being settled promises to cause such an increase in the volume of traffic as is likely to overtax the capacity of existing means of transportation, even with the addition of new systems now under construction,

Most Effective Control.

"And whereas, experience has proved that the most effective control of freight rates is healthy and active competition for traffic,

"And whereas, it does not appear that the producers and consumers of Western Canada are yet enjoying the

lowest rates of freight compatible with successful operation of existing railways,

"Therefore be it resolved, that in the opinion of this convention the Dominion Government should be strongly urged to afford all reasonable encouragement to any proposition looking to the increase of transportation facilities in Western Canada, and that no legislative obstacles should be placed in the way of any railway wishing to build lines in any direction."

The resolution was seconded by K. W. MacKenzie, Edmonton, and carried unanimously.

Passenger Rates.

H. W. Laird, on behalf of the Regina board, moved that in view of the growth of trade and traffic in the west the time has arrived when passenger rates should be reduced to the scale prevailing in other provinces, and that the Federal Government should take such steps as will result in the removal of the present discrimination.

He pointed out that rates are 3½c. to 3¾c. per mile on the main lines, and 4c. per mile on the branch lines in Alberta and Saskatchewan. This was unjust.

The resolution was adopted.

Tuberculosis Among Indians.

J. A. Gregory, North Battleford, secured the adoption of a resolution calling upon the Dominion Government to establish sanitariums for the treatment of consumptives where there are Indian industrial schools. There are eight Indian reserves within forty miles of Battleford, and consumption among the Indians is rapidly increasing.

Summer Excursion Rates.

W. G. Pettingell, Regina, secured the adoption of a resolution calling upon the railways to grant Summer excursion rates from Western to Eastern Canada.

A resolution introduced by the Edmonton representatives in favor of the control of municipal undertakings such as street railways, water, light, etc., by commissions, was finally laid on the table for consideration next year.

Prince Albert Chosen.

The next convention will be held in Prince Albert. This was finally vecided after two ballots had been taken, and the aspirants for the honor of being the next convention city were Prince Albert, Medicine Hat, Moose Jaw and Saskatoon.

It was also decided that the next convention is to last three days.

The convention then adjourned, after giving three cheers for the president of the association and for the Edmonton Board of Trade.

THE BANQUET.

The convention was brought to a close by a brilliant function in the Thistle Rink, where the visiting delegates were tendered a dinner by the Edmonton Board of Trade. No expense had been spared in fitting up the banqueting hall, and the decorations attracted the attention of all present. President A. T. Cushing, of the Edmonton Board of Trade, presided, the vice-chairmen being Wm. Short and T. W. Lines. The menu and toast list speak for themselves :

CONVENTION NOTES.

Prince Albert a year hence.

Three days next year.

No city could have been more hospitable than Edmonton. Her citizens and board of trade officials did all in their power to entertain the delegates and visiting press representatives.

On Tuesday morning the representative of this paper had a delightful drive for several miles south and east of the city in company with the presidents of the Edmonton and Winnipeg Boards of Trade. The drive was an eye opener as to the varied resources of the Edmonton district. Not the Calgary brand of "Eye Opener," either.

Is there any delegate to the convention who doesn't remember the town from which First Vice-President Copland hails ?

Those Raymond men were orators. B. Young nearly carried the convention off its feet in his eloquent advocacy of his sugar resolution. Had it not been for the speech of H. W. Laird, of Regina, it is possible that the resolution might have been passed unamended.

President Hutchings made an admirable chairman ; had it not been for his watchful control of the debate, the long list of resolutions could not possibly have been disposed of in two days. As it was, all received adequate consideration.

Several of those prominent at last year's convention were missed this year. Among these might be mentioned W. F. Mylton, of Regina ; Secretary Wm. Trant, of Regina ; G. K. Smith, of Moose Jaw ; Ex-Justice McGuire, of Prince Albert ; C. W. Rowley, of Calgary, and Secretary Peterson, of the Calgary Board of Trade.

Municipal and government ownership were not debated in the convention ; they were taken for granted.

For several of the Edmonton illustrations used in this issue, this paper is indebted to the courtesy of the Edmonton Board of Trade.

The privileges of the Edmonton Club were accorded the delegates to the convention, a courtesy which was very much appreciated. The representative of this paper also wishes to express his appreciation of the courtesies extended to him by the club during the days of his stay in Edmonton.

WONDERFUL ANTS.

"Talking of ants," said a Winnipeg real estate man, "we've got 'em as big as crabs out west. I've seen 'em fight with long horns, which they used as lances, charging each other like savages."

The quiet man blew a cloud of smoke up to the ceiling. "They don't compare to the ants I saw in the east," he said. "The natives have trained 'em as beasts of burden. One of 'em could trail a ton load for miles with ease. They work willingly, but occasionally they turn on their attendants and kill them."

But this was drawing the long-bow a little too far.

"I say, old chap," said a shocked voice from the corner, "what sort of ants were they ?"

"Eleph-ants," replied the quiet man.

EDMONTON'S CALL FOR FACTORIES

History's Lesson for the Manufacturers of Eastern Canada—Transportation, Market, Raw Material.

Edmonton offers to the Eastern Canada manufacturers some very attractive inducements to follow the movement westward and establish in the Alberta capital branch factories, which in less than a generation will probably be as large as, or larger than, the present size of the parent factories in the east. Edmonton is calling for industries, a large and rapidly increasing market in the vicinity of Edmonton is calling for manufactured goods; and Edmonton's call will not long remain unheeded, the Alberta market will not always be supplied with manufactured goods from the east. Manufacturers will appreciate the opportunities in Edmonton and they who "get in on the ground floor," those who are first to commence operations, will reap the largest benefits. If Canadian manufacturers do not seize the opportunity others will.

The Lesson of History.

Perhaps the Canadian manufacturer who reads this will remark that it is an old story, that the market is limited and he can very well continue to supply it from his eastern factory, that Edmonton is an over-boomed town, that there is bound to be a crash sooner or later, that the time isn't yet ripe for branching out in the west.

But what is the lesson of history? From the very first, Western Canada has suffered (and the east has also suffered) from the timidity and lack of confidence of the people of Eastern Canada. It was only after a bitter political struggle that the building of the C. P. R. was accomplished. Probably only a few of those who supported Sir John A. Macdonald and Sir Charles Tupper in the fight for the building of the first transcontinental really had any measure of their enthusiasm and confidence. The personal magnetism of the leaders and loyalty to party—these were the factors which had the most potent influence in securing the support of the vast majority of those who voted for the construction of the C. P. R.

The great majority of both political parties lacked faith and were wanting in those powers of imagination without which men can accomplish very little constructive work.

The Initial Boom.

When the C. P. R. was building adventurous and restless spirits from the older provinces moved west, and very soon their hope of agricultural, commercial and industrial possibilities became profound conviction. They began to tell their eastern friends of the great opportunities in the new Canada beyond the lakes.

The boom of the early '80's, an east-Canadian boom almost wholly, rose and fell, enthusiasm waned, faith turned to doubt and for ten years the east lost interest in the west. The dauntless spirit of those whom the prairies had adopted kept up the propaganda and a few responded to their call.

But Eastern Canada merely shrugged its shoulders and laughed at the enthusiasm which seized every man who moved west. It was plainly hinted that the western air was hard on truthfulness and the west was jokingly referred to as

"That bourne from which no truthful traveler e'er returns."

Eastern Canada lacked faith!

Still Wanted Men.

The west still called for Ontario farmers and there still traveled eastward the same stories of the fertility of the western soil. Two Ontario counties, Huron and Bruce, responded to the call, but for the most part the invitation came to too cautious or unheeding ears. There could be nothing but "western blow" in the stories he heard of western opportunities. So the eastern farmer stayed where he was, in many cases to eke out a scanty existence on a stoney 50 acres when he could have had for the asking 160 acres of the most fertile soil in Canada.

The Eastern Canada farmer lacked faith!

No one now doubts the agricultural possibilities of the west for they have been proven by a succession of golden harvests, and thousands are moving into the land of promise. The appeal to Eastern Canada had for years fallen upon deaf and skeptical ears, and the west then turned to the United States with its story; and the result was that in two years more settlers came from the United States than had come from Eastern Canada in the preceding ten years.

The Manufacturers' Testing.

Will the Eastern Canada manufacturer be wiser than was the Eastern Canada farmer from 1885 to 1900? Just as insistently as the west called to the east for settlers it is now calling for manufacturers, and with stronger claims, for while there is still plenty of land for the newcomer, the manufacturing trade, once secured, will be held, and those that get in now will grow with the country.

Winnipeg, Regina, Calgary, Edmonton and other centres present strong claims upon the serious attention of the eastern manufacturer and it remains to be seen whether he will profit by the lesson of the last two decades, or whether he will wait for the American manufacturer, with his optimistic aggressiveness, to show him the way. Does the Eastern Canada manufacturer also lack faith? The next two years will answer the question.

American capital has reaped the largest profits from land speculations, and there is now very little land remaining which can be obtained by capitalists en bloc; but American faith in the future of Western Canada is growing stronger every day and there is nothing more sure than that if the Canadian manufacturer does not soon awaken to his opportunities, American capital will very shortly build large factories in the farthest west. People will not forever be content to send 2,000 miles east for their goods, and the manufacturers who first commence to supply Alberta with goods "made in Alberta" will be apt to secure and hold the Alberta trade. The market is already a large one, but it is only in its infancy. A generation from now it is more than likely that the population west of the lakes will be larger than the population east and the western market will be larger than the eastern! Will it be served by Canadian manufacturers who have established their factories in the west or will it belong to the alert Americans?

What Edmonton Offers.

What, then, are the special advantages which Edmonton offers to the manufacturer? Cheap power, abundance of raw material, good transportation facinties for the assembling of raw materials and for the distribution of the finished products, and proximity to a good market —these are the principal requirements of a good manufacturing town, and all of these Edmonton has to offer.

Cheap Power.

Is there any other place in the world where abundance of good coal may be had at $1.50 per ton, where expensive mining operations are not required, but where the coal may be loaded directly into barges and wagons? This is what Edmonton has to offer in the way of cheap fuel and consequently cheap

power, and apparently she can offer it in practically unlimited quantities. For miles in all directions from Edmonton there is abundance of good coal at a very small depth below the surface of the ground. Extensive mining operations have not yet been attempted; no shafts have yet been sunk, all the mining being done on the level. The coal has practically all been obtained along the high river banks into which the miners dig and load their coal directly into barges. Until a short time ago coal was selling in Edmonton at $1.50 per ton; at the present time, owing to temporary circumstances, the price is a little higher Practically the whole cost is transportation, and as teamsters are now commanding wages of $4.50 to $5 per day, as compared with $3 a short time ago, the price of coal has been slightly advanced. With mining operations on a large scale and up-to-date methods of delivery, coal will be less than $1.50 per ton. This coal is well adapted for both manufacturing and domestic purposes, and there are great opportunities for the development in Edmonton of an immense coal mining industry.

Coal being so cheap, little attention has yet been paid to the development of water power; but Edmonton is rich in "white coal" as well as in black, and should the supply of the latter ever be exhausted there is any amount of the former now going to waste. The city now has its own electric light and water plants and is prepared to assist small industries by supplying cheap power, water and light.

Transportation Facilities.

Abundant raw material for various industries is also close at hand, but as this phase of the situation can be best treated by example it is discussed below in connection with specific industries. Equally important is the question of transportation. Two railways, the C.P.R. and the C.N.R., now serve Edmonton and a third, the G.T.P., is assured in the very near future. While the plans of James J. Hill are not yet definitely known, it is unlikely that he will overlook Edmonton. It may therefore be safely assumed that in the very near future Edmonton will be served by four different railroads.

The Market.

What of the market for Edmonton-manufactured goods? Not so large yet as it very soon will be, but nevertheless a market of respectable proportions. Moreover, it is a market with larger proportionate buying powers than a market in the east. Westerners make money more easily than easterners and they spend it more readily. At the present rate of immigration it will be a very short time until there are as many people west of Winnipeg as east. The manufacturer first in the field will possess a very considerable advantage. Some manufacturers somewhere will very soon appreciate the possibilities of profit in supplying western people with western-made goods. If the Canadian manufacturers do not seize the opportunity others will.

Opening for Packing Houses.

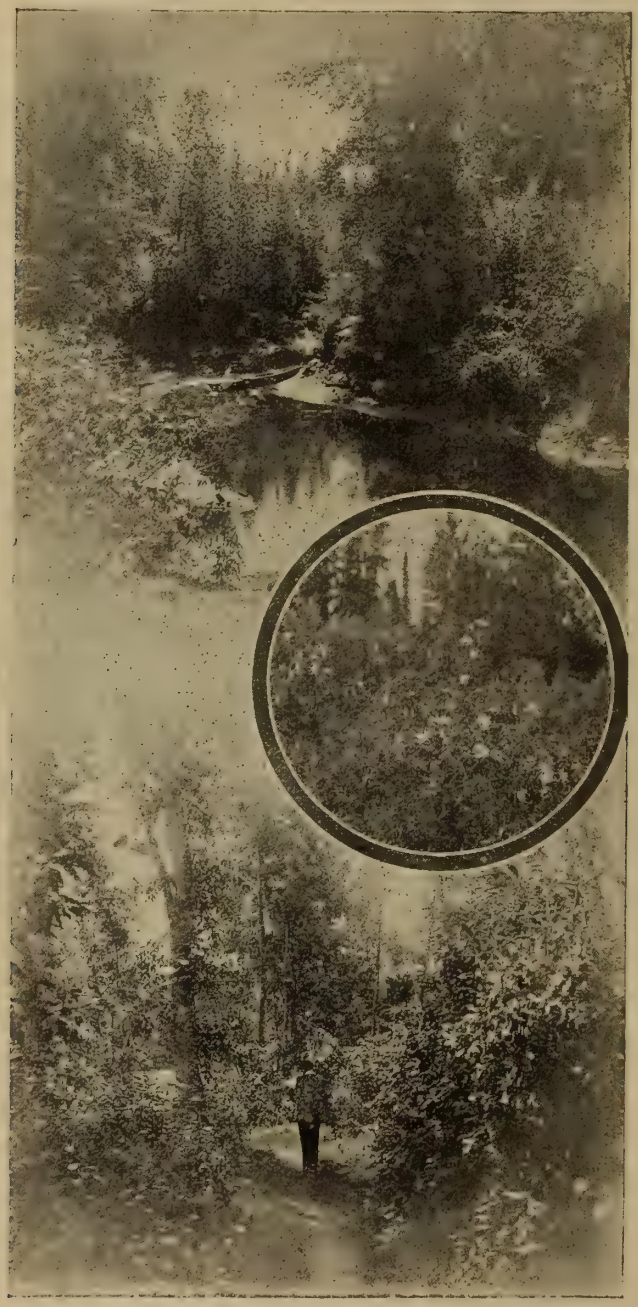
The farmers in the Edmonton section of the west do not, like their fellows in Saskatchewan and Manitoba, devote all their energies to the growing of wheat. but go in for mixed farming and the raising of stock. There would be large profit in the raising of hogs if an adequate market were provided. The majority of the farmers come from the corn states of the republic and have been accustomed to raising hogs. Alberta can grow the best of barley and, as everyone in the business knows, the Canadian barley-fed bacon is much in favor on the English market. The natural pasture is also well adapted to feeding hogs, and clover and alsike are easily grown. Scores of American farmers living in Alberta have told the secretary of the Edmonton Board of Trade that they would raise hogs if they had a market. Within 100 miles, or easy shipping distance, of Edmonton there are, at the very lowest estimate, 15,000 farmers. When the industry was established a million hogs a year would not be too much to expect from them.

As a home market the industry would have from Manitoba to the Pacific, now largely supplied with American products, and on goods for export the C.P.R. is prepared to quote a rate from Edmonton to Liverpool only one-half cent per pound higher than the rate from Eastern Canada. The lower cost of raw material would more than counterbalance this disadvantage.

Soap Makers.

As a consumer of by-product the soap factory is a natural adjunct of the packing industry. At the present time there are two soap factories in the west with a third projected in Saskatoon. These factories can not supply the rapidly growing western market. Eastern-made soap is sent in by the carload. A factory in Edmonton would be in a splendid position to compete for western business.

Although Edmonton is a milling centre of considerable importance, every pound of biscuits consumed in Alberta is brought hundreds and thousands of miles over railroads which have already hauled east the wheat or flour of which the biscuits are made. Is it reasonable to suppose that this will continue indefinitely? There can be but one answer, and again the question arises whether the industries of the Edmonton to be will be built by Canadian or by American capital.



Coal Mining near Edmonton.

Flour and Cereal Mills.

Already the flour milling industry of Edmonton and the neighboring town of Strathcona has reached large proportions, but it is capable of great expansion and the production of cereals has scarcely commenced. Oats weighing 40 pounds per bushel are ordinary in Alberta and 48-pound oats are not un-

common. In many quarters the impression seems to prevail that the only Winter wheat section in the west is in Southern Alberta but this is a mistake as it has been demonstrated that the best Winter wheat in the world can be grown in northern and central Alberta. It is now being grown successfully in the vicinity of Edmonton but it has attracted comparatively little attention. Sanday & Co., the Liverpool grain firm, who purchase probably more actual grain than any other firm in the world, were so much impressed with the superiority of the red Winter wheat grown near Edmonton that as an experiment they bought 16,000 bushels at an advance of 4 cents per bushel over the price of No. 1 northern. This is equal to an advance of 1 cent per bushel over No. 1 hard wheat. There are three mills in Edmonton and seven in the vicinity.

There is a heavy demand in the west for building material, including paint, and consequently a large market for linseed oil, which makes the opportunity for linseed oil mills at Edmonton. The Alberta climate is admirably adapted for the growing of flax.

Beauty Spots in Edmonton.

Pressed Brick Works.

The manufacture in Edmonton of pressed bricks is already a very considerable industry and the product is entirely consumed in the home market. Orders have come unsolicited from as far east as Winnipeg, but Edmonton manufacturers are not yet able to fill them. This industry is capable of large expansion.

Edmonton is also a lumbering centre of some importance, the mills cutting about 20,000,000 feet of lumber last year. A new mill is now being built which, it is estimated, will increase the output 50 per cent. The timber is brought down the Saskatchewan River and the supply will last for many years to come.

An integral part of the lumber industry is the planing mill and sash and door factory, and they are on a large scale in Edmonton. These manufacturers are branching out and are now making a fine line of bank and office fittings as well as store fixtures, etc.

Manufacturers Coming.

In three months' time the Canadian Manufacturers' Association will come west to their annual convention in Winnipeg. Following the convention there is to be a tour of the west, and Edmonton is among the points to be visited. Manufacturers will then have opportunity to see for themselves the solid advantages which Edmonton has to offer. They will appreciate the opportunities offered by cheap power, unsurpassed distributing facilities and a rapidly growing market. They will also appreciate the equitable system of taxation in force in Edmonton, for the city has practically a single tax. Land values only are taxed and a manufacturer is not fined by the city, by way of increased taxes, when he erects valuable buildings. Moreover, the rate of taxation is not high, the average for several years having been about 16 mills.

When they consider all these advantages, it is confidently believed that many Canadian manufacturers on their western tour will decide to establish branches in Edmonton. One thing is certain, industries Edmonton must and will have; whether Canadian or American remains to be seen.

SUMMER SUGGESTIONS.

Keep the store cool in the summertime.

Refrigerators are a good line to push just now. Don't call them ice boxes.

Ice picks, tongs, shavers, etc., ought to sell on sight.

Keep some good lawn mowers at your store front; also some garden hose.

A machine doesn't need brains. A man does. You must be a machine or a man.

A washing machine is an interesting thing in hot weather. It's a labor-saver you know.

WINDOW AND INTERIOR DISPLAYS

INTERESTING DISCUSSION PROMISED.

An interesting question has been raised by Mr. Illsey in the letter reproduced below. It will be remembered that Mr. Illsey won the recent ad writing competition conducted by Hardware and Metal, and his window display, reproduced this week, was considered second only to the one prepared by S. S. Wetmore, with A. M. Bell & Co., Halifax, and shown in Hardware and Metal of June 2.

Mr. Illsey's point is that special or "fancy" displays, prepared at intervals or special seasons, for publicity are not as effective result-bringers as consistent selling goods displays carried on during the entire year, and this is undoubtedly the correct position. In making our awards, however, we had to judge which was the most seasonable and effective display of hardware lines in April.

The question of results having been raised, there is room for an interesting discussion. "Does the 'fancy' window bring new customers to the store, and how long does it 'wear'?" "Does the trade attracted by the special display stay with the store?" "How often should a hardware window be dressed?" "Which is the most effective method — regular weekly displays or special windows at busy seasons?" "Does it pay a hardware merchant to allow a clerk one day each week to attend to window displays—or if the work is done after closing hours to pay the clerk an extra day's wages for the work?" These are all important questions which might be discussed.

In order that this subject may be threshed out, Mr. Wetmore, of Halifax; Mr. Kayes, of Woodstock; Mr. Pow, of Tillsonburg, and other travelers or clerks who have made a study of hardware window displays, are asked to express their views on the questions raised above and in Mr. Illsey's letter. Articles of from 200 to 500 words are invited from any reader of Hardware and Metal, and a year's subscription will be given to the sender of every article we publish in reply to this invitation.

Mr. Illsey's letter follows :

Editor Hardware and Metal,—Many thanks for your criticism and notice given in the last week's issue. My knowledge of what makes a good ad has been helped, thanks to your valuable paper.

Now, in regard to the window display competition, Mr. Bell's window, from an artistic point, is good, and his method of window dressing is thorough to a degree. But the question in my mind is : "Does the merchant get results from such a display, which will compare favorably with an exhibit of goods well displayed and priced without any fancy trimming?" My term of window dressing covers about twelve years, and in that time my idea has always been to display one line well, price tickets in plenty, and change displays often. The "fad" or "fancy" window, I admit, brings crowds to the store. They see the window and probably come in and purchase something. The display of goods (less the "fancy" part) of which I speak is right in the possible patron's eye. If he needs any of such goods he looks at the price. If suitable in this, too, nine cases out of twelve he comes in and buys. Results to the dealer, in my estimation, are far greater than in the other case. Do not think, please, that I condemn "special" window displays. But as I have before said, "Does one style pay better results than the other?"

In regard to my recent contribution to your window display contest. Had I been able to have given you a full window photo I'm quite satisfied that my display would have captured the prize. This may sound boastful, but it is not meant for such. I simply speak as I feel in comparing the two styles of display. As I before wrote you, my exhibit of the lines photographed sold directly considerable stock.

However, please do not think I'm "sore," or anything such. I'm not. Simply writing you to see what your ideas are, and possibly you might have a chance to ask through your columns opinions of other window dressers.

Wishing your journal all success.

WM. J. ILLSEY.

Winnipeg, June 14, 1906.

WINNIPEG PAINT WINDOW.

What was considered the second best display in Hardware and Metal's recent window dressing competition is reproduced herewith, it showing an exhibit of brushes and paints in one section of the large retail store front of the J. H. Ashdown Hardware Co., Winnipeg, the display being arranged by Wm. J. Illsey, manager of the cutlery department.

Dry colors are arranged in small piles in the foreground, a number of small bristle brushes, etc., being displayed alternately with the colors. In the centre are shown small cans of hat enamel and screen paint, together with an assortment of various sizes of varnish and paint brushes. The background is made up of pints, quarts, half gallons and gallon cans of mixed paints, behind this, on the wall of white cheesecloth, being shown a display of wall brushes of all kinds.

An Effective Paint and Brush Display Shown at Winnipeg.

Only a portion of the display is shown, but enough can be seen to realize its attractiveness to passers by. The exhibit is not marred by an overdisplay of window cards and could, in fact, readily stand one or two more. The use of window tickets is an effective method of inducing customers to enter the store, but it is better to err on the side of having too few than too many. There is nothing that detracts from an effective window display more than an over supply of cards.

THE HOT SPRINGS CONVENTIONS

American Hardware Manufacturers and Southern Jobbers Hold Interesting Conventions at Hot Springs, Virginia

The sixteenth annual convention of the Southern Hardware Jobbers' Association and the tenth semi-annual convention of the American Hardware Manufacturers' Association was held at Hot Springs, Va., June 12, 13, 14 and 15.

In his opening address President Dunlop, of the Southern Jobbers' Association, said the United States had witnessed the dawn of a commercial era pregnant with the richest possibilities for an enormous increase in the value of her export trade. Upon the profitable distribution of the surplus products of fields and factories depends the future prosperity of the United States. New markets must therefore be found and trade relations with foreign countries cultivated. The revenue derived from the disposal of that portion of our products remaining after the wants and necessities are supplied, contributes to the surplus wealth of the country which is needed in meeting the demands and requirements of civilization.

In many respects the most significant feature of our export trade is the business in manufactured products. All statistics on this subject are followed with the greatest interest, and the international supremacy of the United States in the coming decade will be very largely based upon its grasp of the world's markets for finished products of the great manufacturing industries.

Coming almost simultaneously with the report of the United States Steel Corporation, the annual statistics of the American Iron & Steel Association emphasizes the fact that the year 1905 was one of unprecedented activity and what is particularly impressive as regards the outlook for results in the current year is the fact that the closing days of last year were much the most active and the new year opened with a volume of business which continues to the present time, and promises to provide a new high record for the year 1906, notwithstanding the rapid pace set by the preceding year, unless some serious disaster should occur such as a protracted industrial war, or a serious failure of the crops.

Credit and confidence are essential to progress under civilization, and it cannot be expected that either can ever be spared. The greater progress a nation makes in civilization the more general becomes the extension of credit, the greater the confidence and the more stable the relations existing between communities and between individuals. Care in granting of credits, moderation in using them, and the average trade ability of our business men have clearly increased during the past few years. The lesson is one of care, courage and confidence, not one of vain-glory and overboldness.

Uniform Size Loose-Leaf Catalogues.

In the executive committee report the suggestion was embodied that the time was opportune for the adoption of a uniform size leaf for loose-leaf catalogues. Several reasons were given why this course should be followed.

1st. It will enable the manufacturers to supply descriptions and illustrations of new goods in such a manner as will enable the jobbers to keep careful track of the same, as the majority of the jobbers are using loose leaf binders for the use of the office and of their traveling salesmen. The same is true when the manufacturers issue new lists and discounts, and, in fact, many manufacturers have already adopted the plan of supplying the jobbers with their requirements in loose leaf sheets of their general line.

2nd. By securing the manufacturers' co-operation in the adoption of these uniform size loose leaf catalogues, the jobbers will be enabled to classify and file the catalogues in a very simple manner, compared to the great variety of sizes of catalogues which have previously reached the jobbers from manufacturers throughout the country.

3rd. It will lead up to some uniform plan whereby a number of jobbers may prepare catalogues together at a minimum expense.

With regard to the size of the sheet 8 1-4 x 11 inches was suggested for regular printed bound catalogues and 9 1-2 x 11 inches for loose leaf catalogues. The printing space would be the same on each, the loose leaf sheet being wider to permit of its being inserted in the loose leaf binders.

Expenses and Profits.

"Increased expenses demand increased profits" was the subject of a very interesting address by Mr. Fred Fox, of Pine Bluff, Ark., and as Canadians are as interested in getting a profit on everything they sell as their friends in the United States, we have reported this address at length.

The subject is a proposition so patent on its face that were it not that the subject admitted the question of ways and means it would hardly admit of argument.

The high wage idea seems to permeate all branches of business. Never in the history of the country have the wage earners been more completely master of the situation than now. A good bookkeeper can command from $100 per month up, and no business can afford a cheap bookkeeper. Good salesmen command from $75 and up, and I find then the men to whom I pay the best salaries are the cheapest. These ideas extend to porters and drivers. In these positions we run colored help and they can get work any time at what we would consider excessive wages not long ago, and when we have these fixed expenses worked out to the best of our ability we must see the assessor and then the tax collector and the fire insurance agency, and now here comes the district for paving, sewers and other public improvements that must be met. So when we foot up the totals we wonder where the tide will turn and where the money is to come from to pay the expense account. Now just so sure as we go into business just so sure will we fall heir to these contingencies, to such an extent that when we make our footing at the end of the year we think ourselves fortunate if it does not take more than 10 per cent. of our gross sales to meet them. These are fixed facts and the burning issue with us all is what is the best way to provide for this feature and leave a reasonable profit on our investments. Negatively you cannot meet them selling nails and wire at a profit that barely pays the expense of handling. You cannot meet them selling rope, galvanized ware and wood and willow ware and other items that the wholesale grocer puts on the market at prices that do not pay the hardware merchant the expense of doing business, and I wish to say here that I do not endorse the idea that these lines should be cut out of the hardware merchant's stock. They legitimately belong to us. Let's hold them. But right here is where we need to be thoughtful and bring our brains to bear in the handling of this question. This is the place that we want to draw the line on items I have touched on. I have not mentioned them all, and those that do help us out and pay their way. Let our salesmen understand that it is quality and not quantity that you are more particular about—that you think more of the sale of a dozen razors than 20 kegs of nails—in other words to fix their minds and energies on profit-paying items and not think so much of trying to sell large bills—carloads if you please—that pay an exceedingly small percentage—in some cases less than the fixed expense of doing business.

Good Goods Bring Good Prices.

Sell as good an article in any line as your customer will buy. It will, in nearly all cases, enable you to realize a better profit and is less apt to get you into trouble. Impress on your salesmen seasonable lines—not too many at a time—that you want pushed specially.

Have him take a sample of some novelty occasionally. Put good goods at the disposal of your selesmen, and do not be afraid to ask a price for them.

There is one other idea I wish to mention, and that is, let the jobbers doing business in a given territory arrange a meeting once a year and have a heart to heart talk over trade conditions and prices, but our mistake is being overzealous to get orders. Let's ask and answer questions and I think it will go a long ways in blotting out a number of our troubles that perplex us not a little and frequently cause unnecessary cutting of prices.

The increased expense has come to stay. Let's inject the profit-getting idea into our business, not that we may impose on any one, but that we may obtain our honest dues, which is a reasonable profit on capital invested.

Remarks were called for on the subject and Mr. Eshleman said: "There are two or three little points I would like to bring out before you pass from this subject. I suggest that as I think all of you employ your salesmen more or less on the percentage basis, a plan upon which to meet these contingencies is that of allowing a man credit only for such goods as he actually makes a profit on. I was formerly troubled a great deal with the matter of competition until I reached a point when I absolutely refused to give the privilege of meeting anybody's prices, and I have cut down my sales, but whatever I sell I get a profit on.

"Following the flag, the goods into which metal enters as a basis of them belongs to the hardware trade. I believe that we have got into that rut where we concede to the furniture dealers the sale of stoves, to department stores certain other lines of goods, the crockery houses certain others and the jewelry houses certain other lines. We are making the mistake of our lives at that point.

"Now there is another thing I wish to suggest to you and that is this antique furniture. This is the day of antique furniture, and people are hunting all over the country for it. Now we are hunting around like the old fore-runners of the Spanish invasion in this country for the perennial spring of youth, hunting for those things to bring us fabulous wealth when we have them lying around in our own stores. We are imagining that Mr. Simmons has a sort of way of creating profits out of things, and if we could get on to his mode of doing it we would make a fortune too. I don't believe we will make it in that way. I suggest this: that the tea scale that costs you 75 cents you can sell for $2.50 by calling it the Rose of Sharon or some other sort of name.

"Another thing, your expenses are too large and you are allowing the small things to get away in that way, by not taking care of the incidental expenses of the house, and the money we take in across the counter is slipping through the cracks in the floor and we absolutely don't know where it is going. If I had a criticism to make of the jobbers it would be that there is slipping through the cracks in the floor, through the backdoors and through careless clerks a great deal of our profits, and it is the little things that are eating away the profits."

John Donnan expressed the opinion that the only thing lacking to make better prices was backbone and commonsense on the part of the jobbers.

Quantity Differentials.

A very interesting paper was read by W. W. Webber, of Fort Smith, Ark., on "The Effects of Quantity Differentials."

"Ere I am done I may dig up more snakes than I can conveniently kill in the time allotted," said Mr. Webber, "but I am conscious of the correctness of my position and am not afraid that even my most radical opponent here today will accuse me of chasing an Aurora Borealis. The term quantity differentials, and the effect of same for the purpose of this argument means the making by a manufacturer of low price to a large buyer, and a price that is higher on the identical goods to a smaller buyer when each one buying must compete in the same territory for the same trade. That this is true and has been true from time immemorial cannot be successfully denied, but the fact that it has obtained is no argument in defence of it and does not prove that the practice is right or that it is good business.

"At the time each manufacturer was operating his plant independently of all others in the same line of business it was possible for the small or medium buyer to get concessions that would put him in line, but in this day of consolidations or gentlemen's agreements, or pooling where there is a fixed and fast price, and the trade is parcelled out and assigned to A, B and C, lists with a 5 or 10 per cent. differential prevailing between each— the man whose business does not warrant the purchase of the first or second quantity is handicapped to the extent of the differential, and just so long as this practice prevails, just that long will the manufacturers' product be distributed in an unnatural and unequal way. I do not believe there is a manufacturer here to-day who will controvert this statement.

"This is an age of quick transportation and a time when a buyer is not confined to the business at a margin whereas if (B) makes a price on an article that is not satisfactory to the buyer, he interviews (A) and if the latter has the former bested in buying he has him on the hip in selling, and the result is (A) gets the business at a margin whereas if (B) takes it at the competitive price he has lost money—and he must take it or keep his goods because (A) has set the pace. This is not confined to one or two items in a man's business, but on the contrary has grown limitless in its ramifications until it affects our entire line.

"I have always been led to believe that it was my duty to foster and encourage a customer—to build him up and help him to expand to the end that he may be useful to me, that I may use him to make money for myself while he makes money for himself—that it is a foolish and mistaken policy to load him to the gunwales with an item that I know he cannot sell profitably in competition with his neighbor, and of course I do know because I am master of the situation, and when I thus make fish of one and fowl of the other and expect both to be useful to me disappointment awaits me around the corner. We only ask that we be put on an equitable basis—that if differentials must be made they should not be so glaring and unequal as to amount practically to a prohibition. You can never hope to have an even distribution of your business and numberless loyal and satisfied customers when with this knowledge aforethought you deliberately equip one man to annihilate another. It is one of the impossible things in business.

Effects of Favoritism.

"Those to whom you give the hot end of the poker will never remember you very kindly, and to those to whom you give an inside, put on the ground so to speak, always have a sneaking idea that some other fellow is in the cellar. That is human nature to a hair. Whenever you place a customer at a disadvantage you must know that in so far as your line is concerned he cannot make a success of it—that if he sells your goods at all it must be done at a niggardly margin or no margin at all and that eventually he must cease to be useful to you. Were he to give you an order for enough goods to command the inside, you would remark that he needed a guardian and then and there advise your credit man to keep a weather eye on him—and yet you place temptations before us every day, knowing that if we take the small amount at the long price we are destined to unload at no margin, and if we take the greater quantity to get the short price we have water on the brain.

"We are not croakers, but we do insist that we should not be expected to accomplish the impossible, you must not expect us to get $1 for an item that can be bought for ninety cents, especially when the item is one of your own make and this difference in price made possible by you. If all your customers had the same buying and distributing capacity this question would never rise, or if it did would solve itself. There is no necessity for specialization or the calling of names, but there are seated here to-day manufacturers who know that my allegations are true though their deductions may not be the same as mine, and I would not have them infer we are making a demand, but only an effort to demonstrate to you that under the present conditions your policy is wrong, and as proof of this we cite that on any item where there is free and open competition with no strings tied to it in the way of classified lists, the business is done by those who are favorably located in the matter of freight rates. But on all items the sale of which is manipulated by a joint agreement of those

producing them and where the quantity governs the price, you find a different state of affairs.

Justified Under Certain Conditions.

"I concede there may be conditions under which a quantity price must be made by a manufacturer. One would be where he has produced too much or the consumption has not reached the proportions he figured on, and he must unload to lighten his burden, but where a manufacturer has a steady and even demand for his product and his output is controlled by years of experience in his line, such a condition is really seen, and in naming his selling price it occurs to me that wisdom would dictate that he make it possible for all who handle his product to make a reasonable margin.

"There are jobbers before me to-day to whom some hardware items are absolutely distasteful and they are striving with might and main to eliminate them from stock, and while the manufacturer whose goods come under this ban may be strongly entrenched and hard to oust, the time will surely come when he will feel the effects. The constant dripping of water will wear out the hardest stone."

Mr. Garland was called on for remarks and pointed out that it was very hard for manufacturers to make the same price on any quantity whether it be to the jobber or the consumer. He went on to say the laws of trade did not seem to be in favor of such a move. When a manufacturer buys raw material he usually gets a lower price on a thousand ton quantity than a man who purchases but fifty tons. The speaker referred to the natural tendency of manufacturers to sell in bulk where it was possible to avoid numerous credits and added expenses occasioned by goods sold in small quantities.

CANADIAN HARDWARE STORES
No. 4.

In the two illustrations shown a good idea is given of the progressiveness of hardware stores in Western Canada, the views being taken of the store of Curry & Mitchell, Souris, Man., opened on January 15 last by a public "At Home" to which the people of the town and district were invited and entertained with refreshments, etc. It is in a block of two stores 50 x 80 feet, and has a plate glass front, the huge panes of glass being fitted into oxydized copper sash, which do not obstruct the view of the interior. Along the right side of the store runs a series of very fine combination patent glass front drawer and sliding glass door Warren cabinets, lined with rich red felt. A large silent salesman of bevel plate glass and southern oak quarter cut, is another notable feature wherein silverware, carving sets, knives, scissors, and other kindred goods are displayed with great effect. The general effect of the store is greatly enhanced by the metal ceiling, which is of light artistic design and gives the effect of good height, painted in several tints.

Stoves and Tinware Department of Curry & Mitchell's Store at Souris, Man.

CANADIAN HARDWARE STORES, No. 4 - Curry & Mitchell, Souris, Man.

One illustration shows the fixtures described, together with a row of lamps neatly arranged, and a table in the centre for seasonable goods, behind which are a number of carpet sweepers, patent churns, washing machines, scales, broom stand, etc., together with artistic radiators for heating purposes. One of two counters is shown, the one not in the illustration having a cash register resting upon it, a fine set of nail bins and a large tool rack being behind the counter. The photo showing the stove and tinware department shows that side of the store fully with the exception of a rack for horse goods in the front, the paint stock being at the rear. Altogether there are 2,200 feet of display room, with plenty of storage space available in the cellar.

Both the partners are from New Brunswick, the senior, A. Curry, hailing from Andover, and the junior, Wm. Mitchell, from Fredericton. Mr. Curry went west in 1886, and in 1889 he and his brother-in-law, Mr. Mitchell, bought out George Munro's hardware business at Souris, the business having grown steadily under their management.

EFFECTIVE ADVERTISING

A department devoted to the improvement of Retail Advertising. The editor of this department will be pleased to answer questions on advertising and review any advertisements submitted to him.

The western country, along with other portions of Canada, is enjoying a plethora of building. With new settlers the first item for consideration is a home, then barns, shops, etc. This building business, when it reaches the proportions the west can now boast of, is a boon to the hardwareman—wholesale and retail.

The wholesaler is now shipping builders' hardware, farm essentials, etc., into the west as fast as trains can carry the wares. The retailer is receiving these wares and must necessarily get after the consumer. Just how to do this in the most productive and least expensive way is the desideratum.

Besides advertising in the newspapers it ought to be worth a dealer's while to prepare a list of builders and contractors within a certain radius of his store and, say, every week during building season send them a circular containing items of interest, such as new arrivals, special prices, etc.

McBRIDE'S AD.

The ad on "Stransky" opens up with originality and closes in the same way. But original statements, if not gone over carefully, may lead to humiliating conclusions. "Mr. Printer to enameled ware" — with the substitution of the word "it" for "this"—is passable as a mere statement. But when Mr. Printer doesn't set the word "Stransky" in "your largest type," is one to draw the conclusion that "Stransky" is not "the best there is"? Substituting the words "in large type" for "your largest type" would have got around the difficulty. Large may mean anything.

The cuts in McBride's ad are not first-class. The kettle is about the only one of any value. When good small cuts can be secured, however, they can be used to good advantage in display — especially when prices can be quoted on each line displayed.

A Lawn Mower Ad.

The ad. of Geo. A. Elliott, jr., is a pleasing sample of the successfully-worded single-theme announcement.

Lawn mowers couldn't have been bolder, the border more appropriate. The ad. is just about the right size for a short talk, too.

Mr. Elliott's ad. is timely, and the reader is doubly impressed with this fact.

A sufficiency of white space ensures reading. A clarity of wording ensures correct reading.

ADLETS.

The man who advertises not is lost—and hard to find.

* * *

First convince yourself that your advertisements tell the truth. Then the people will believe you.

* * *

Sow an advertisement: reap an order.

* * *

Type will talk if you know how to "set" it going.

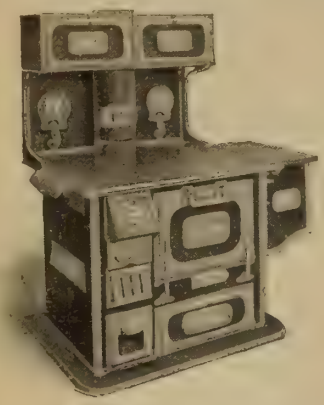
* * *

An advertisement in print is worth two on the file.

* * *

One touch of good advertising makes all the world read.

* * *



Profitable advertising is nothing more than the best salesmanship—on paper.

* * *

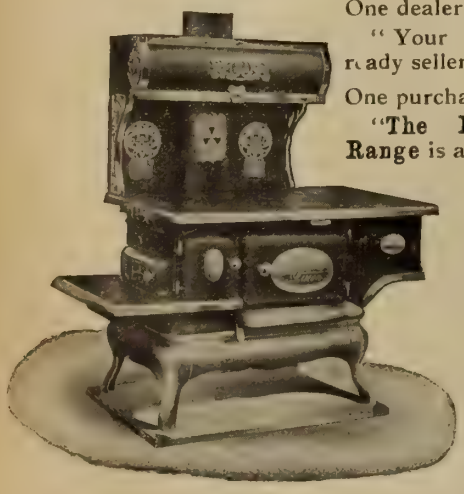
A little advertisement sometimes captures a big order.

Modern Competition

is so active that the dealer who handles articles just like his competitors is at a disadvantage. Look the Stove catalogues over and the close similarity of the various ranges is apparent. Specializing is the secret of successful retailing to-day. Take another look at

The Joy Malleable Range

It is in a class by itself in appearance, material and construction ; thus is a specialty, promising large sales and satisfactory profits.



A sample on your floor now is the proper thing. May we ship ?

Joy Mfg. Co.

32 Humberside Ave. ...Toronto

THE EMPIRE QUEEN RANGE

has the confidence of hundreds of dealers and thousands of users.

One dealer writes:

"Your ranges prove ready sellers."

One purchaser writes:

"**The Empire Queen Range** is a perfect baker."

These unsolicited testimonials express exactly what we have tried to impress on your mind—viz., the excellence of the "Baking Quality," "Selling Quality," of **The Empire Queen Range.**

We will send a booklet free.

The Canadian Heating & Ventilating Co.

OWEN SOUND, Ontario Limited.

THE CHRISTIE BROS. CO., Limited, 238 King St., Winnipeg, Man., Western Agents.

THE CANADA STOVE AND FURNITURE CO., 126 West Craig St., Montreal, Que., Agents for the Province of Quebec.

Even as perfect a range as the Imperial Oxford for 1906 can't depend only upon its quality to sell it for the dealer who carries it in stock. That's why we spend so much money and take so much pains to sell it for the dealer, after we've sold it to him--which is the big reason why we advertise Imperial Oxford so much. The trade doesn't have to take a chance with Gurney ranges--neither on quality nor on quick selling. We insure both--the one by keeping our standard higher than competition ; the other by liberal and vigorous selling help placed freely at your service. Back of it all is the range that bakes better, looks handsomer and will satisfy any trade more surely. Wouldn't our special summer proposition for live dealers be worth asking for right now? Your request brings it by next mail back to you. Address nearest office.

WAR NOT PROFITABLE.

On another page of this issue will be found a report of the joint convention of United States jobbers and manufacturers held at Hot Springs, Va., last week.

In the morning each association held an executive session to which only members were admitted. The afternoon sessions, however, were open to members of both associations and subjects were discussed in which the jobber was as interested as the manufacturer.

In these days when the railroads have become so powerful and dictatorial the members of both associations must line up and fight side by side for a more efficient and more reasonable service.

The old opinion that formerly prevailed that the manufacturers were seeking every opportunity to beat the jobbers and the jobbers lay awake at nights scheming whereby they could get the best of the manufacturers, has, we hope, entirely disappeared, not only in the United States but in Canada as well. The interests of these two classes are and should be so closely interwoven that the most perfect understanding should exist.

The social aspect is one of the most important features of these conventions, and what could be more desirable than a personal acquaintance and friendship between those engaged in the same line of business and who come in almost daily contact through correspondence or in some indirect way? Men are in a more conciliatory and generous mood when they are away from the whirling hum-drum of flying machinery and from the petty worries of business which tend to make men narrow. There are many complications and irregularities in the wholesale manufacturing and retail trades which could easily be remedied if the heads of the firms would only get together and honestly try to straighten the matter out. Nations are gradually realizing that war is unnecessary and expensive, and as soon as business men realize this their profits will be larger.

ANOTHER SUCCESSFUL CONVENTION.

In every respect the Western Boards of Trade Convention, held in Edmonton last week, was a striking success. There was a large attendance of the best business men of Western Canada, the subjects discussed were of live interest in the west, and the delegates brought to their consideration a trained intelligence and a detailed knowledge which were the result of long familiarity with the problems in question. Moreover, every delegate seemed to remember the responsibility of his utterances, and in no case was a resolution rushed through without proper consideration. The convention is recognized throughout the Dominion as the Western Business Men's Parliament, and it was never once forgotten that weight will be attached to the soberly expressed opinions of the solid business men of the west. In a word, the delegates remembered that they were engaged in serious business.

While the functions of this gathering are purely advisory, it is, nevertheless, the case that their decisions are bound to have considerable effect upon the commercial legislation of the two new provinces. They are rash legislators who think they can afford to ignore the conclusions of the Western Business Men's Parliament.

ORGANIZATION PAYS.

The past quarter of a century has seen an era of organization such as never existed before in the world's history. With the passing of hand and the development of machine production, competition became more and more keen. Individual business men became partners in larger concerns, then directors in joint stock companies and later on shareholders of large corporations which to overcome the evils of competition were merged one by one into the gigantic trusts of to-day.

Where it used to be said that "competition is the life of trade," most business men now realize that "competition means the death of the trader," and just as business concerns have evolved from small individual enterprises to vast semi-co-operative corporations, so has it become necessary for those business men and companies outside the trusts to endeavor to overcome the evils of competition by "getting together" in trade associations of some sort.

Manufacturers, jobbers and retailers have each formed associations and each branch of industry has benefitted as a result of meeting and working together. As a result of organization the manufacturers have secured tariff protection and the jobbers have, amongst other things, secured better railway rates and freight classifications.

The retailers have not been organized so long, but they, too, have felt the benefits of association. In Western Canada the retail hardware dealers got together a couple of years ago and the fact that the membership is steadily increasing in the face of an increase in the membership fee from $2 to $10 is sufficient evidence that "getting together" has been to the financial benefit of all in the trade. In Ontario, where the Retail Hardware and Stove Dealers' Association only organized two months ago, important benefits have already been secured by members of the association. One member a few days ago said he had made a clear saving of $4.50 on one shipment of goods last week as a direct result of information gained at the recent conventions. His savings on his year's business from this one item alone will be over $100 on his investment of only $3 for a membership fee and the expense of his trip to Toronto, probably $10 more. Altogether this member hopes to save from $200 to $500 each year by joining the association and inducing his competitors to do likewise.

Knowing the advantages of organization, the manufacturers and jobbers cannot but wish the retailers success in their efforts to improve trade conditions. Realizing that the retail association tends to make more sound the financial position of the retailer, thus improving the security of the jobber and manufacturer, many wholesalers have expressed themselves as desiring to see the retail association flourish and enable the local dealers to partake of the advantages of organization so long enjoyed by the city jobbers and manufacturers.

WINDOW DISPLAYS.

An interesting point is raised in our Window Dressing Department on another page as to whether occasional window displays made with the object of securing publicity are as valuable as regular

displays of seasonable goods, marked with price tickets and shown with the direct object of selling goods. Readers are asked to express their views as to the merits of the two methods.

Mr. Wetmore, a Halifax traveler who makes lengthy trips, gives considerable thought to arranging a novel display which will attract the attention of the multitude to his employers' store during the holiday seasons when he happens to be in town. Mr. Illsey, a Winnipeg clerk, makes a study of regular displays of seasonable goods during the entire year. Both have seen direct results from their efforts and both have, in all probability, enlarged their earning power as a result of the brains they give their employer in addition to the daily routine of their work as traveler or clerk. With the best of good feeling, Mr. Illsey has raised an interesting question which every person in the trade can take part in with profit to himself.

The example set by Messrs. Wetmore and Illsey might well be followed by others in these occupations who now pay little attention to anything except their own labors. All travelers have not the opportunity of dressing a window for their own house, though the editor could name a wholesale and retail hardware house whose retail windows are neglected as much as the advertising of the concern which is still pushing hot drinks for hockey players in the country papers.

Every traveler, however, has a splendid opportunity of making a study of window dressing, seeing dozens of displays every week. A little attention and thought would soon make the traveler an intelligent critic and display artist—an accomplishment which can be turned to good advantage by offering to arrange a customer's window when business has been concluded and train time is an hour or two off. Another method of winning a customer's favor is to send Hardware and Metal a short description of any creditable display made by a retailer. The merchant may be too modest to do this himself, but will appreciate commendation when good work merits it.

Clerks can advance themselves in no more rapid or better way than by putting some brains into their work—by taking over the window dressing or ad writing from their employer. Good work in these departments will soon result in an increased salary or an offer of a better position in a larger and more progressive store.

GOOD ROADS IN THE WEST.

The subjects dealt with by the western merchants in convention at Edmonton were all important and none could be singled out as of first magnitude or remote interest, but the question of good country roads is probably the largest and longest lived of them all. In a country where the wealth is agricultural, where the coming and going of the farmer is to the body politic and commercial as blood circulation is to the human organism, the importance of road building and maintenance can scarcely be over estimated.

To get the situation close at hand, imagine a great city with its concentrated commercial activities doing business on mud roads. A wet day comes and everything would be tied up, a wet season and trade would be ruined. Each of the new western provinces will in a few years represent many cities rolled out and spread over the prairies, millions of people who unless the good roads apostles prevail will waste their energy on water-logged highways in wet seasons and rough and dusty ones in dry. There is no deliverance for the country that will not improve its roads. The merchants are directly interested. The millions of treasure good roads would save the farmers would go to swell the volume of every department of trade.

If the ways of the east prevail in the west the losses of many big cities with mud roads will be borne by the farmers and merchants of the prairie provinces. Of course they won't look so big because so spread out, but the losses will be there and will be an incessant drain upon the business and industrial life of the country.

INTEREST OR DISCOUNTS?

"No man knows the value of discounts more than the merchant who has not the money to take advantage of them," said a western merchant the other day who has been working hard to get a start in the world. He began business with little money. All of the time he is busy figuring on how to meet his bills as they fall due.

Not a question of discounts, but a question of being there with the money when the money is due.

You know how it is. Sometimes on hand, again asking for extensions. Then notes and interest.

When will he be able to discount? That is the golden age so far ahead, to him.

What a big difference between paying interest and taking your discounts. He knows it. He has figured it up many a time. He swears that if he ever reaches the discount realm nothing will ever dislodge him.

Other merchants have said that and then as soon as they arrived at Discountville they proceeded to get into the mire again through overbuying.

Are you one of them?

BRITISH CONSULATES IN U. S.

The Department of Trade and Commerce in its Weekly Report dated June 18 gives the result of a circular letter addressed to the British consulates in the United States regarding the possibility of services being rendered by these consuls to Canadian manufacturers who desire to do business in their districts. The report of the superintendent of commerical agencies on this matter is in part as follows:

"In view of the somewhat general impression, especially among the manufacturers and exporters of Canada, that the commercial agency service should be greatly extended, Canada not having a single commercial agent in the United States, the superintendent of commercial agencies recently addressed a circular letter to all British consuls-general and consuls in that republic seeking if possible to bring about some measure of harmony between these officials and the Canadian business community, and thereby if possible unofficially enroll their services more directly in the interests of Canadian trade. As is well known, the impression has existed for many years among Canadians that British consuls do not interest themselves in Canadian trade, and, therefore, could be of little or no use to them. On the other hand the statement was made to the superintendent of commercial agencies that Canadians as a rule seldom availed themselves of the advantages offered by British consuls in the United States by calling upon them, or by writing to them, and that Canadians had no ground to hold such an opinion when they seldom or ever sought their assistance. The result has been a splendid testimony to the efficiency of the British consular service in the United States, many of whom replied at considerable length, offering excellent suggestions, and in general terms stating that the facilities of their respective offices were at the service of Canadian business men.

SATISFACTORY STATEMENT.

The annual statement of the Traders Bank of Canada, printed in this issue, provides interesting reading to all interested in the commercial development of this country. The increase in net profits, the larger capitalization and the establishment of nineteen new branches are points well worthy of comment and congratulation. The re-election of the old board of directors, which includes such men as C. D. Warren, president, Toronto; C. Kloepfer, Guelph, and Hon. J. R. Stratton, Peterboro, all connected with the hardware and metal jobbing and manufacturing industry, is also of interest to readers of this paper.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B. Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.

Executive—Alberta, A. E. Clements, Olds; C. F. Comey, Calgary; A. R. Auger, Okotoks.

Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer, Winnipeg.

Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.

Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man.; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg, Man.

Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association.

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.

Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.

Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

COMING EVENTS.

Convention of Retail Hardware and Stove Dealers' Association of Western Canada, in Winnipeg, July 25.

Convention of Retail Merchants of Western Canada in Winnipeg, July 26 and 27.

Convention of Ontario Retail Hardware and Stove Dealers' Association, in Toronto, on September 4 and 5.

THIS NEEDS REMEDYING.

A retail hardware dealer in a New Ontario town who sent in his membership fee during the past week accompanied his fee with an interesting account of the conditions he has to contend with—conditions which cannot continue if the executive committee of the association receives the support it deserves from the trade throughout the province. Too many merchants when sending in their membership cards say nothing regarding their local conditions or the grievances they suffer under. If each one sent a few lines similar to the letter below from the New Ontario merchant the readers of this page would be provided some interesting food for thought. The letter follows:

"We have quite a lot to contend with up here, as I see by Hardware and Metal they have elsewhere. One large wholesale firm from Montreal calls regularly on the mill company here for orders for their lumbering supplies, and in some cases give them better prices than they give me. Another Montreal house sold about half a car of iron to a local blacksmith who has been running an account with me for years, the account being still open. A Toronto concern has called several times on private parties and sold stoves, and in two cases furnaces, after getting my order, while another Toronto house sells tinware to some of my customers."

THE EXECUTIVE'S "YOUNGEST."

J. Walton Peart, of the St. Mary's Hardware Co., whose photo is reproduced this week, is one of the younger members of the association and a member of the executive and mutual insurance committees. Mr. Peart had, until January 1 last, been engaged with the Maxwell firm at St. Marys, as accountant, but severed his connection with that firm to become personally identified with the company which he and W. H. Bartlett had formed to take over the business of John C. Gilpin, one of the largest and best hardware businesses in the province. Mr. Peart is also secretary-treasurer of the G. Carter Son Co., millers, and a member of the Western Hardware Co., of Regina, of which company his brother, T. W. Peart, is president and manager.

J. WALTON PEART, ST. MARY'S,
Member of the Executive and Mutual Insurance Committees of the Ontario Association.

CASH VS. CREDIT.

"My experience," writes a western hardware merchant who belongs to the Retail Hardware Association, "has been that it is a very hard proposition to conduct a strictly cash business of any great volume in the local retail hardware trade, as the larger proportion of the business comes from the farmers, a great many of whom, even the well-to-do, do not find it convenient to pay cash at all times. I remember of a number of merchants during the close times of 1894 to 1897 who attempted to change from a credit to a strictly cash business, and later on abandoned it, but benefited no doubt by the attempt, as they later put their credit business on a more restricted and conservative basis. It is very essential to limit credits as near as possible to responsible persons and to have an understanding as to time of payment. A book account that is not worth more than the goods themselves is a losing transaction; no sale is satisfactorily completed until you either have the cash or its equivalent. Frequent settlements are an absolute necessity, as the old saying, 'short accounts make long friendships,' is surely a true one.

"Dealers should not be backward in notifying creditors when accounts are due, and to follow up with a more forceful notice once a month until the account is paid, even if it ends in being forced to sue the account, as in most such cases the creditor has ceased to be a customer for the time being. When the account is collected you have an even chance with your competitor for his patronage again. The ability to say no and to draw the line on safe amounts of credit to extend is an essential cannected with the running of every business. If you are losing in this direction get nearer to a cash basis. It is well to keep down the amount carried in open accounts as low as possible. I think on an annual business of say ten thousand dollars, ten to twelve hundred dollars, and on a twenty thousand annual business not to exceed two thousand dollars would be considered a conservative amount to carry, and would advise all to keep within these amounts. Where it is asked for credit of the larger amounts it is not out of the way to ask for a note, which can be drawn so as to secure a lien on the goods sold, and is more easily collected than an open account, and repays you in the way of interest for your accommodation. By using care, conservatism and caution the retail hardware merchant can so conduct his business as to reduce his losses by reason of extending credit to his customers to a very small per cent.

"I can best illustrate my meaning by drawing upon my personal experience. During the hard times, commencing in 1894, we were engaged in the retail hardware business at a small western town that had at that time the reputation of being a hard town to do business in successfully. During the years of 1894 to 1900 we sold to our customers on credit no less than $21,000. About the first of the year 1901 we moved our business to another town, and, of course, commenced 'prior to this' to collect our outstanding accounts. In this we were remarkably successful, and upon our books there remains to-day not to exceed $150, which is, of course, almost a total loss; but the point I am endeavoring to bring out is that by using care and caution a credit business within a reasonable limit can be safely done. At one time it became necessary for us to enforce by bringing quite a number of suits against our delinquent customers. This made some of them angry at the time, but they were among our best customers and friends at the time of our leaving their midst."

HARDWARE TRADE GOSSIP

Ontario.

Bell & Waugh, plumbers, Ottawa, have dissolved, L. S. Bell continuing.

Philip Field, and East Toronto steamfitter, broke his arm in Toronto on Wednesday.

C. C. Ballantyne, Canadian manager of the Sherwin-Williams Co., Montreal, was a visitor in Toronto during the week.

Albert Karges, traveling salesman for the James Stewart Mfg. Co., Woodstock, called on Hardware and Metal, at Toronto, on Monday.

W. G. Jones, treasurer of the Pease Foundry Co., Toronto, is on a three weeks' trip to Winnipeg, in the interests of his company's business there.

Baseball teams from the hardware houses of D. H. Howden & Co., and James Cowan & Co., London, played a few nights ago. Howden's won by 8 to 4.

James R. Phillips, superintendent of the Pease Foundry at New Toronto, was presented with a silver service by the employes on the occasion of his marriage.

F. D. Palmer, accountant for Shurly & Dietrich, Galt, qroke his collar bone last Saturday in a football match between the Galt Old Boys of Toronto and Galt.

R. B. Baker, formerly head salesman for the F. Hamilton Co., Hamilton, but now in the woodworking manufacturing business at Hamilton, was a caller on Hardware and Metal, at Toronto, on Wednesday. Mr. Baker says he still looks for Hardware and Metal every week in order to keep in touch with the trade.

The Nicholson File Co. have recently made improvements in machinery that makes horse rasps of greatly improved quality. They have installed these machines at their Dominion Works, Port Hope, Ont., and are putting the rasps on the Canadian market under their Kearney & Foot Brand. Blacksmiths who have used these rasps report that they give excellent satisfaction.

J. Martin Nash, who passed away in Toronto on Tuesday last, was for over ten years in the New York office of W. Jessop & Son, the well-known steel manufacturers of Sheffield, England. Upon the organization of the Canadian Brass Rolling Mills Mr. Nash came to Toronto from New York, and later was appointed general manager. He was highly thought of by his company, and was popular with the trade.

T. F. Shurly and O. H. Vogt, of Shurly & Dietrich, Galt, called on Hardware and Metal, at Toronto, on Tuesday. They report a splendid trade in harvest tools this Summer, and stated that the foundation had already been laid for an addition of 100 x 60 feet to the plant of the Maple Leaf Harvest Tool Co., at Tillsonburg. A new stockroom for saws is also to be built for Shurly & Dietrich, Galt.

The Ontario Silver Co., of Niagara Falls, pleaded guilty to the charge of fraudulently using the word "Sheffield" on their trade mark, and were fined an aggregate of $600 on four counts. The charge of conspiracy against Manager Clark was dropped. The statute is said to make the retailer equally responsible in these matters, and the prosecution has evidence against merchants from all over Canada, but it is unlikely that any proceedings will be taken now that the source of supply has been stopped.

Western Canada.

John McKeown, blacksmith, of Prince Albert, Sask., has sold out.

Chas. Waalstedt, machinist, Dauphin, Man., has sold out to Meredith & Myers.

H. Cochrane, hardware merchant, Carlyle, Sask., has sold out to G. W. Stockton.

Burglars stole $100 from the safe of Boyle & Co's hardware store, Neepawa, Man., on Tuesday last.

A new hardware store was opened last week in Edmonton by J. E. Lundy and G. B. McLeod, the firm being known as Lundy & McLeod. Both gentlemen were formerly connected with Ross Bros. and later with Revillon Bros., with which firm Mr. McLeod had charge of the retail hardware department, while Mr. Lundy was the first hardware traveler from Edmonton. The new hardware firm has a good connection in Edmonton and has opened a handsome store.

A WINNIPEGER'S OPINION

"Each week's issue of Hardware and Metal is like my home letter. A good line of news from all over Canada. I always enjoy it."—

Wm. J. ILLSEY,

Manager of the cutlery and window dressing department of J. H. Ashdown's retail store at Winnipeg.

Quebec.

Huet & Co., hardware, Montreal, have assigned to H. Lamarre.

J. E. Brosseau has registered a hardware business in Laprairie.

J. J. Murphy, contractor, of Quebec, was in Montreal this week looking after some big contracts.

J. N. Windsor, of Lewis Bros.' purchasing staff, Montreal, is spending his vacation at St. Faustin.

A. Albin, of A. Albin & Co., general merchants, Glen Robertson, Ont., was in Montreal recently on his firm's business.

N. J. Dinnen, who is in charge of Lewis Bros.' Winnipeg business, visited Montreal headquarters for a couple of days this week.

Geo. R. Minnie, of the Canada Paint Company's traveling staff, spent a few days this week at the firm's headquarters in Montreal.

Mr. Normandin, president of La Compagnie J. & S. Bessette, manufacturers of threshing machines, Iberville, was in Montreal recently.

J. E. Seale, general merchant, of Morin Flats, was among the hardware buyers from outside points to visit Montreal this week.

Geo. B. Frank, representing the Georgian Bay Engineering Works, Midland, Ont., paid a business visit to Montreal a few days ago.

W. J. Clelland, general merchant, of Hemmingford, visited Montreal during the week and called on some of the wholesale hardware houses.

W. J. Wall, of Montreal, who represents several well known American manufacturers of enamelware and plumbers' supplies, is spending a couple of weeks in Chicago.

A small fire occurred in the paint and varnish works of R. C. Jamieson & Co., Montreal, a few days ago. The damage done was not sufficient to interfere in the least with the firm's deliveries.

W. H. Evans, of the Canada Paint Co., Montreal, was foreman of the jury in the recent murder trial in that city and had an interesting article describing his experiences in the Montreal Gazette of June 20.

J. W. Cameron, of the Cameron-Dunn Manufacturing Company, of Strathroy, Ont., visited Montreal this week to attend a meeting of the Wholesale Hardware Association. Mr. Cameron seized the opportunity to call on a number of the Montreal trade.

Mr. R. J. Younge, general sales manager of the Canadian Rubber Co., of Montreal, returned home on June 19 after a six weeks' trip to Western Canada and several American cities. Mr. Younge is most enthusiastic regarding the great future of the west, and found the business of the company's western branches expanding in a very marked manner. Whilst in the west Mr. Younge arranged for the opening of additional branches at Regina, Sask.; Calgary, Alta., and Victoria, B.C. Mr. Younge also visited Seattle and San Francisco, and returned east via Chicago.

The management of the Canadian Rubber Co., of Montreal, are tendering a complimentary picnic to all their employes on Saturday, July 14. Two steamers have been chartered, and the festivities will be held at the quaint old town of Berthier, P.Q. Over 2,000 of the company's work people and officials will take part in the picnic, which promises to be a most enjoyable and successful affair. D. Lorne McGibbon, vice-president and managing director, is the moving spirit in the picnic, and intends that all taking part shall have a very enjoyable time. Ever since Mr. McGibbon connected himself with the company, some four years ago, the happiest relations have existed between the management and employes.

Maritime Provinces.

Robertson, Foster & Smith, wholesale and retail hardwaremen, have been incorporated at St. John, N.B.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 90.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Turpentine—Declined 1 cent.
Linseed Oil—1 cent lower.
English Vermilion—5c. per lb. advance.
Dry White Lead—Up ¼ cent.
Red Lead—Advance of 25c.
Ingot Tin—Nominal prices given.
Zinc Spelter—Advance of ¼ cent.
Sheet Zinc—25c. per 100 lbs. higher.

TORONTO.

Antimony—Now quoted at 28 cents, a half cent reduction.
Paints and Oils—No changes to record.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 22, 1906.

Business has picked up well during the week and though orders have been inclined towards the light side, there have been quantities and varieties.

General business is good in shelf and heavy hardware, and the fine weather has stimulated orders for building hardware of all descriptions. All the freight steamers have carried away large cargoes to local ports, and the river boats have manifests that indicate prosperity and activity in the trade.

The discounts on Jenkins' valves have been maintained, and trade is fine in these lines. The new Canadian Jenkins Valve Co. are getting ready to build fine premises in a neighboring suburb. Further announcements will be made.

AXES—No change is to be noted in conditions. We are still quoting: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—Trade continues to be good, with prices steady at the following figures: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS—There is the usual quantity going out. The price remains at the same figure of $4.25 for cold blast.

RIVETS AND BURRS—A first-rate turn-over is the rule among local jobbers. Prices are stationary and are quoted as follows: Best iron, rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—Plenty of inquiries are in order now as the hay season is at hand. We quote: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS — Business is large, with prices steadily maintained. We are quoting: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—There is nothing of particular interest to report with reference to this branch of the trade. Our prices still are: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 and 5 per cent.

HORSE NAILS—Trade conditions remain very satisfactory. Prices currently quoted are as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—The market is still somewhat unsteady, as a result of keen competition. We are quoting $2.15 per keg., f.o.b., Montreal.

CUT NAILS—Only the normal trade is being done, at prices the same as have been quoted for some time past. Our figure is $2.20 per keg, f.o.b., Montreal.

HORSESHOES—The situation is substantially the same as at our last report. The following prices prevail: P.B. new pattern, base price, $3.50 per 100 lbs.; M.R.M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes 25c. per 100 lbs. extra.

SPORTING GOODS—Guns and ammunition are already going out in good quantities, with other lines not far behind in volume of business done.

BUILDING PAPER—About the same conditions prevail as have for the past few weeks. Orders are being filled in fair volume and the trade on the whole is in a satisfactory condition.

CEMENT AND FIREBRICK — The heavy demand reported last week for the better grades of cement is keeping up and there will not likely be any lull during the whole season. Our prices are as follows: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lafarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21 American, $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—We are still quoting: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch. $3; 1 inch, $2.95.

FREEZERS—The number of freezers being shipped by all the local jobbers is very large, and prices are steadily maintained as follows: American Twin, 2 qt. $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—The demand continues brisk, the price quoted being still $1.45 per hundred square feet.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 22, 1906.

There are no new prices to record this week. Bolts and nuts are firm at the advanced prices and a steady trade is being done in those lines.

Ordinarily the wholesale trade experiences a little falling off about this time of year, but there is no let-up so far. Sorting orders are coming in better than was ever anticipated, which shows a general prosperity throughout the country.

Some large shipments of glass have come to Toronto by water during the week. The same conditions of selling still prevail, each jobber having his own discount, but 15 per cent. or a little better is about the regular discount.

AXES AND HANDLES—Trade conditions normal, with no price changes.

CUTLERY AND SILVERWARE — The largest business in many years has been done during June.

SPORTING GOODS — Baseball and lacrosse goods and fishing tackle continue in good demand, and guns, ammunition, etc., are selling well.

SCREEN DOORS AND WINDOWS — An increasing trade is experienced in screen doors and windows, as the season advances.

HAMMOCKS—The hot weather has created a large sale of these goods. A better class of hammock than usual is being asked for, and manufacturers are kept busy getting out stock.

LAWN MOWERS — Lawn mowers continue to sell well. Some jobbing houses report being nearly depleted.

LAWN HOSE—The hot weather has greatly increased sales in all garden sizes.

REFRIGERATORS AND FREEZERS—A big business is reported in these lines, particularly the former, for family use.

WASHING MACHINES—This is a line that shows a wonderful increase this year.

CHAIN—We quote as follows : 1 inch, $6.60; 5-6 inch, $4.55; ⅞ inch, $3.95; 7-16 inch, $3.80; ½ inch, $3.65; 9-16 inch, $3.55; ⅝ inch, $3.45; ¾ inch, $3.35.

EXTENSION AND STEP LADDERS —Prices continue as follows : Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—Sales are reported large. We quote : 2-in. mesh, 19 w.g., discount 55 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE — We quote : $2.17½ f.o.b. Cleveland.

BARB WIRE — Prices remain the same. We quote : On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE — (Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues, with the usual business. We quote : $2.05 base.

CUT NAILS—We quote : $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7½ off list. "M.R.M." brand, 55 per cent off. "Monarch" brand, 50 and 7½ off. "Peerless," 50 per cent. off.

HORSE SHOES — Our quotations continue as follows : P. B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes. No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

RIVETS AND BURRS—As yet prices remain the same but very firm, with no heavy stocks.

SCREWS—We quote : On gimlet point 70 and 5 per cent. off ; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—Prices are held firm at the recent advance. We quote : 55 and 10 per cent. off list.

CEMENT—Prices keep very firm, but there is no change. A heavy demand is still felt. We quote: For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIRE BRICK—There are no changes to record. English and Scotch firebrick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27½c. to 35c.

HIDES AND WOOL—Hide prices are unchanged.

Hides, inspected, steers, No. 1	0	12
" " " No. 2	0	11
" " cows, No. 1	0	11½
" " " No. 2	0	10½

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 22, 1906.

A market generally firm, with a brisk demand for nearly all metals, sizes up the present situation fairly well. There have been some few declines in value, but for the most part recoveries have been effected.

The ingot tin situation is again a peculiar one. Montreal metal merchants are now day by day dealing with orders strictly on their merits, so that prices are really nominal. Some fluctuations have occurred during this week, and tin is weaker on paper. But for all that, there is apparently no extra tin on the market, as buyers are still experiencing difficulty in securing quoted prices on their orders. A fair demand for the metal exists.

Zinc spelter is justifying our predictions for some two or three weeks past, local prices having advanced a quarter cent. Stocks are very light in the hands of Montreal dealers, and it is reported that the majority of smelters are sold out until September, so that they cannot supply orders before that time.

Antimony showed a slightly lower tendency early in the week, but the market has since stiffened, and 30c. remains the current price. Nearly all the local jobbers now have small stocks of antimony and they are selling quite briskly at this high price.

A good demand for copper is felt, but the supply in sight appears to be decidedly limited. The big dealers are said to be holding their stocks, as they evidently anticipate higher prices.

Among sheet metals the same firmness as formerly exists. The only advance of the week, however, was in sheet zinc, which has been forced up by the scarcity and high price of spelter.

COPPER—The only change in conditions is an increasing difficulty in securing supplies. Prices remain at the following figures : Ingot copper, 21c. to 21½c. ; sheet copper, base sizes, 25c.

INGOT TIN—Only nominal prices are given. The market condition is such that quotations are continually fluctuating. For the present we give price as 44½c. to 45c. per pound.

INGOT ZINC—As we predicted, prices have been advanced. The shortage of this metal is very real, and spot deliveries from first hands are impossible. The following price is firm : 7¼c. to 7½c. per pound.

ANTIMONY—All local dealers now seem to have small quantities in stock. After a temporary weakness we again quote : 30c. per pound.

PIG LEAD—The market is somewhat firmer, and the current price remains $4.15 to $4.55 per hundred pounds.

PIG IRON—A good demand is maintained. Our prices remain as follows :

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	21 00	"	"
Clarence No. 1	18.00	"	"
" No. 3	18.00	"	"
Cleveland No. 1	18.25	"	"

BOILER TUBES—We quote : British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 3-4c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our prices are unchanged : Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c.

MERCHANT STEEL—Trade is good in nearly all lines. Prices remain as follows : Sleigh shoe, $2.17½ ; tire, $2.27½ ; spring, $2.75; toecalk, $2.82 1-2; machinery iron finish, $2.27 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and upwards; square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—We are still quoting: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78 ; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON—Prices are very firmly held, but no advance has yet taken place. The scarcity of spelter will probably affect this market in the near future. We quote : Queen's Head, 28 gauge, $4.35 to $4.60 ; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge, $3.35; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—Strong conditions prevail. Our prices are : 28 gauge, $2.40; 26 gauge, $2.35 ; 22-24 gauge, $2.30 ; 19-20 gauge, $2.30 ; 8-10 gauge, $2.45.

CANADA PLATES—Our prices remain as follows: 52's, $2.60; 60's, $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TIN PLATES—Jobbers report a good turn-over. Prices are unchanged: Cokes, base size, 1C 14x20, $4; charcoal, base size, 1C, 14x20, $4.25.

TERNE PLATES—The usual demand is shown. We quote $6.85.

SHEET ZINC—Jobbers have been forced to advance prices owing to the rise in spelter. Our prices are: $8 in casks, $8.25 in less than casks.

SHEET LEAD—We quote: 2½ lbs., 5½c. by the roll; 3 lbs. and heavier, 5¼c. by the roll; small quantities, 25c. per hundred lbs. extra.

BAR IRON—The same healthy demand remains a feature of the market. We quote $2.05 f.o.b. Montreal.

OLD MATERIAL — We still quote: Copper wire, 15 1-2c.; light copper, 14 1-2c.; heavy red brass, 14 1-2c.; yellow brass, 11 1-2c.; light brass, 7 1-2c.; lead, 3 1-4c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $10.50 to $11; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7 1-4c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 22, 1906.

The local market is quite active, a good demand existing for both ingots and sheets. Ingots are still irregular but prices on the whole keep very firm, as stocks are comparatively light. The only price change during the week is a reduction of half a cent in antimony. Though dealers claim to be getting 30c. in Montreal, 28c. is now the ruling figure here, the sales in the past month having amounted to a large total at quotations very close to present prices.

Iron and steel stocks continue bare with several weeks asked for delivery of orders, and as long as this condition exists prices are bound to keep very firm. Brass and copper remain firm with an expectation of higher prices. Lead is firmer than a week ago, and a better demand is evident. Sheets are all meeting with a good sale, zinc being higher in outside markets but unchanged locally. An advance appears likely for both spelter and zinc sheets.

PIG IRON—Firm conditions rule; difficulty is experienced in securing early shipments. We quote: Radnor at furnace, $30; Hamilton at furnaces, No. 1, $20.50; No. 2, $20; Londonderry, f.o.b. Toronto, No. 1 $21.50, No. 2, $21; Middleboro, $21.50.

BAR IRON—Demand continues keen with stocks light and prices firm at $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN—The market is active with outside conditions continuing irregular and having a slight effect locally. Quotations remain steady at about 43c. to 45c. per pound.

TIN PLATES—There is a good demand for plates and we quote: Cokes, base size, 14x20, $4; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS — More activity is developing, the effects of the prevailing high prices not seeming to be felt very much. We quote: 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. Buying is active and quotations 23c. to 24c. per pound.

COPPER—Outside conditions are very stiff and stocks hard to get, but locally we are still quoting: Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

LEAD—Firmer conditions exist, the demand being more active and prices held stronger. We quote $4.50 for imported pig, and bar lead at $5 per 100 lbs.

ZINC SPELTER—As predicted, advances have been made in outside markets, but last week's quotations are still the ruling figures in Toronto. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — The demand is steady and we continue to quote: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1¼ inch, $8.50; 2, $8.80; 2½, $10.75; 3, $12; 3½, $15.80; 4. $20. Terms, 2 per cent. off.

ANTIMONY—A half cent reduction has been made and 28c. is quoted as a result of the easing off.

OLD MATERIAL — Dealers' buying prices are as follows: Heavy copper and wire, 15½c. per lb.; light copper, 13¾c. per lb.; heavy red brass, 13c. to 14c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8½c. per lb.; tea lead, $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4¼ to 4½c. per lb.; iron, No. 1 wrought, $10.50 to $11; No. 2 wrought, $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel, $5; old rubbers, 7¼c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Quotations remain as follows: Anthracite in cars at bridges, egg, stove and nut, $5.20; grate, $4.95; pea, $3.50, per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.50; ¾ inch, $2.40; mine run, $2.30; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, June 20, 1906

PIG IRON—Cleveland warrants are quoted at 50s. 1¼d, and Glasgow standard warrants at 49s. 11d, making prices as compared with last week 3d lower for Cleveland warrants and 1d. lower for standard warrants.

TIN—Spot tin opened easy at £175 10., futures at £175 5s., and after sales of 180 tons of spot and 200 tons of futures closed easy at £175 5s. for spot, £175 for futures, making price as compared with last week £1 2s. lower on spot and 17s. 6d. lower on futures.

COPPER—Spot copper opened firm at £83 5s., futures £81 5s., and after sales of 250 tons of spot and 600 tons of futures, closed firm at £84 10s. for spot, and £81 2s. 6d for futures, making price as compared with last week £1 10s. lower on spot and £3 7s. 6d lower on futures.

LEAD—The market closed at £16 15s., making price as compared with last week 2s. 6d lower.

SPELTER—The market closed at £27 7s. 6d, making price as compared with last week unchanged.

U. S. IRON AND METAL TRADES.

From the Iron Age, June 21, 1906.

Almost like a clap of thunder from a clear sky has come the dissolution of the Southern Furnace Association, an unusually short lived organization based upon a gentlemen's agreement among the leading Birmingham furnace companies. For months northern furnaces have taken the greater part of what business was coming up in foundry iron, while large consumers, notably in the west, have ostentatiously withdrawn from the market again and again. The crisis was reached this week, one of the southern makers entering the market. Just how much business was secured cannot be accurately determined, but one of the principal transactions was the sale of 10,000 tons to the International Harvester Co., on the basis of $13 for No. 2 Birmingham, a decline of $1 per ton below the nominal price recently quoted. Since the company named has been inquiring for more than double that amount, it looks as though the consumer is expecting further inducements before covering the entire requirements. There are reports to the effect that a cast pipe foundry in Ohio has also taken a large tonnage.

This break in prices cannot help but have a disquieting effect. It came at a time when in other sections the makers were showing some strength. Thus only a few days since leading Buffalo makers had sent out orders to their salesmen to advance prices 25c. per ton. In competitive territory an adjustment of prices on foundry iron must follow, unless the tonnage which the southern makers feel it necessary to book should be only moderate. In such competitive markets southern iron is now freely offered at $13,25 to $13.50 for No. 2 foundry, Birmingham.

It must be clearly understood that the situation is entirely different in the markets for steel making irons. For Bessemer pig the markets are absolutely bare, and there is not much basic immediately available. It is in the latter, however, that the changed conditions in the foundry markets may be felt to some extent.

The demand for finished material is very good. The leading interest, during the first 15 days of this month, booked an aggregate of orders in excess of its best shipping records.

There has been a surprisingly large volume of business lately, considering the season, for wire products, and sales aggregating 100,000 tons of steel bars, for delivery during the year beginning July 1, have been made to consumers outside of the implement trade, who

were disgruntled at not securing the concession granted on season contracts to the latter some time since.

The Eastern Bar Iron Association is to meet to deal with the price cutting which has become more prevalent lately as the result of poor business.

The cast iron pipe trade is under a terrific pressure for deliveries. Premiums of $1 to $2 per ton are being offered in vain to eastern makers for delivery prior to September 1. Only one bidder put in a figure for the 40,000 tons of water pipe for Philadelphia, and he scorned the specifications. The contract for the 6,000 tons of plates for the riveted pipe has not yet been placed.

New Brunswick Trade News

St. John, N.B., June 19, 1906.

The dissolution of the partnership formerly existing between J. M. Robertson and William Kerr, was the ending of the history of one of New Brunswick's best known hardware firms. The dissolution has, however, been followed by the formation of a new company, and one which promises to be very successful. The new concern is to be known as Robertson, Foster & Smith. Mr. Robertson will be the company's president, W. H. Smith will occupy the position of vice-president, and F. A. Foster that of secretary-treasurer. The company will carry on its business at the stand that was occupied by Kerr & Robertson, on Dock street.

Mr. Kerr left several weeks ago for the west. It is understood that he may decide to locate in that section of the Dominion, probably in Calgary, or its immediate vicinity.

* * *

As we have been writing of a dissolved partnership, this will be a not unfitting point at which to refer to one of the consequences of the termination not long since of the partnership between M. J. Sliney and J. Joseph Mitchell. These gentlemen did business on Union street, under the firm name of Sliney & Mitchell. On dissolution Mr. Mitchell continued to occupy the Union street premises, and is reported to be doing a nice trade. He is making a specialty of sheet metal work, as a prominent sign, "The Sheet Metal Man," shows. Mr. Sliney has secured a shop on Waterloo street, and is also reported to be meeting with a goodly measure of success. He is more fortunate than his former associate in one regard—his store is so constructed as to give him an excellent chance for displaying his wares where they will attract the attention of the passer-by. A showing of stoves and ranges a few days ago was the target for a good many glances, and called forth considerable praise. But of its timeliness there might be question.

Indeed, while there are cases of exception, it is too generally the rule here that our hardware merchants do not show evidences of as careful attention to details of window dressing as they might well give this department. In at least one of our largest hardware establishments the lack of care in window dressing is very marked. W. H. Thorne & Co., to look at the other side, frequently deserve especial praise for tastefully dressed windows. It is open to question, however, whether or not window dressing ability is given due recognition in St John.

* * *

While complaints are not heard to any great extent, it seems true that the city trade in hardware is proving a little disappointing at present. Naturally, the time might be expected to be a bit quiet. Several dealers have expressed themselves, however, as feeling that existing conditions, and conditions of the time recently past, cannot be described as wholly satisfactory. The outlook for the Fall trade is, at the same time, such as to give the dealers a feeling that the year as a whole will not furnish much ground for dissatisfaction.

The price situation is continuing unchanged. Apparently there is a feeling of uncertainty as to whether prices are to go still higher, remain about as at present, or tend downward again. The belief seems to be, however, that copper goods, at all events, have not yet finished their course upward.

* * *

The strike in the local timber mills threatens to prove serious for all concerned. The strikers number but upwards of one hundred, nevertheless their work is such as to throw seven hundred or more into idleness. The question at issue is the old one, that of wages. The pilers, who are the strikers, are asking an increase of 30c. per day.

Nova Scotia Trade News.

Halifax, N.S., June 19.

Trade has slackened off considerably since last report, due, it is said, to the elections for the Provincial Legislature, which will be held this week. So wrapped up in politics are the people in certain sections of the province, that firms have recalled their travelers and sent them to other parts until the close of the campaign. Collections still hold good, and prices show little change. Ingot tin is a trifle easier if anything, but jobbers have little confidence in it remaining stationary owing to the unsettled condition of the market. Metals also keep moving up and down, though the changes are not very great. Zinc is quoted at 8¼ for casks and 8¾ for less than casks. Builders' materials are in good demand and it is expected that it will keep up for some time. Paints and oils are selling freely, and ice cream freezers are also in very good demand. The nail market is rather unsettled, owing to some disagreement among the manufacturers on prices; $2.15 is the price quoted for nails, but it is known that some lots have been sold as low as $2.

* * *

Big shipments of ore from the mines at Wabana, Nfld., are being received weekly at the Dominion Iron & Steel Company at Sydney. The steamer Tricolor has just landed a cargo of 6,050 tons, and the steamer Bergenhus, 5,300 tons. The latter cargo was discharged in thirteen hours, which is the best performance the men on the ore piers have yet accomplished.

* * *

It is thought that the Dominion Coal Company's electric plant will soon be in operation. Only one of the four large alternating machines will be started at first, the others being kept in reserve until everything is in complete working order. The electric power will first be used for pumping only, and will advance as the machinery will be extended to haulage purposes.

* * *

The scarcity of labor in Cape Breton continues, and operations at the steel plant and at the coal mines are seriously hampered. One contractor who has a large excavating contract is offering $1.75 per day to men, and cannot even secure them at that price. Work is progressing favorably at No. 2 colliery. An increase in the output is expected providing enough loaders can be obtained. This mine in particular is very short of loaders and drivers, due to the large number of Newfoundlanders going home to work in the iron mines.

* * *

David Mitchell, of the Chignecto mines, is visiting Glace Bay for the purpose of obtaining information in regard to the town's electric light plant for use in the installation of a plant in Cumberland County.

U. S. TRADE WITH CANADA.

The Iron and Coal Trades Review of London in the current issue expresses its disappointment editorially at the continuance of "the almost unconquerable supremacy which the United States enjoys in the market of the Dominion." The tonnage of iron and steel has increased, and the variety of products has broadened.

The chief reason for this, to our mind, is that the United States and Canada are contiguous, and the manufacturers in the United States are alert to pick upon every opportunity to increase or establish their trade. Canada is growing, her needs are varying, and her own manufacturers are constantly adding to their production in one line or another. The American manufacturers are alert to jump in whenever they see an opening and when they lose in one branch of trade they quickly try to build up another.

There has been an impression in some quarters that there was an international division of rail territory, in connection with the foreign rail pool, whereby the United States was given the American continent, except Canada, that being reserved for the English manufacturers. Statistics of exports would show that no such agreement has been carried out, the British exports to South America being large, but the Iron and Coal Trades Review definitely says: "No such arrangement could possibly have been made."—American Metal Market Report, June 19.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

731. Agent—A London company of engineers and boiler makers manufacturing heating and ventilating apparatus, vacuum pans, and other specialties, wish to do business in Canada, and are prepared to appoint suitable resident agents.

Hardware and Metal Conditions in Manitoba.

Market quotations corrected by telegraph up to 12 a.m. Friday, June 22, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

PRICE CHANGES :

Solder—Advanced 2c.

White Lead—Quoted 25c. higher.

Wholesale hardware business during the past week has shown no abatement in activity, and wholesalers report a continued good demand for all seasonable lines. Prices hold firm, and in some instances show advances, such as solder, which is 2c. higher, and white lead at an advance of 25c. per hundred pounds. Pig lead is also stronger and an advance is looked for, but so far prices are quoted at the previous level. The activity in the building trades continues, and supplies required by such are in good demand.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE—Retail competition is still reported as being very keen. Jobbing prices are steady. We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows : Iron, No. 0 to No. 1, $4.65 ; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS—Revised list and discounts are now as follows : No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows : "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows : ½ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅝ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows : Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows : Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅝ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows : Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote : 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ¼, $7.20; ⅜, $4.60; ½, $4.30; ¾, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows : Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—The list on "Irwin" auger bits is now the same as on common bits. Discount on "Irwin" is 47½ per cent., and on the common bits 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows : Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50 ; malleable unions, 55 p.c.

GRINDSTONES — The price is now 1¾c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows : Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows : 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 p.c.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are : Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows : Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows : Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows : Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows : Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows : "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Price has been reduced ½c. per lb. Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" at $6.00. The "1904" sheep shearing machines are sold at $13.60.

AMMUNITION, ETC. — We quote as follows : Cartridges, Dominion R.F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33½; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells : Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.00; chilled, $7.50; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—We quote : Bar iron (basis), $2.70; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jesson $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—As noted last week the price has been advanced to $5.25 per cwt. with a reduction of 25c. per cwt. for ton quantities.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are : Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95 ; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows : IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote : Canada plate, 18 x 21, 18 x 24,

$3.15; 20 x 28, $3.40; full polished, $3.90.

BLACK SHEETS—Prices are : 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are steady. We quote : Silver Star, per gal., 21½c.; Sunlight, 22½c.; Eocene, 24½c.; Pennoline, 25½c.; Crystal Spray, 24½c.; Silver Light, 22½c.; Gasoline, 70-72 (engine), 25½c.; in barrels f.o.b. Winnipeg.

PAINTS, OILS AND TURPENTINE Quotations are : White lead, pure, $7; bladder putty, in bbls., 2½c.; in kegs, 3¾c.; turpentine, pure, in barrels,$1.07; less than barrel lots, $1.12; linseed oil, raw, 64c.; boiled, 67c.

WINDOW GLASS — We quote : 16-oz. O.G., single, in 50-ft. boxes—16 to 25 united inches, $2.25; 26 to 40, $2.40. 16-oz. O.G., single, in 100-ft. cases — 16 to 25 united inches, $4.00; 26 to 40, $4.52; 41 to 50, $4.75; 51 to 60, $5.25; 61 to 70, $5.75. 21-oz. C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75;91 to 95, $17.30.

WHOLESALE FOR CALGARY.

J. H. Drewe, manager of the J. H. Ashdown Hardware Company's store at Calgary, has announced that the Ashdown firm will build a large wholesale house in Calgary, making it a distributing point for the west. Work will be commenced in the near future on property already owned by the company.

A Calgary report also says that a Toronto wholesale hardware firm doing a large business in the west will also make Calgary its western headquarters, but for the present are saying little about it.

Lawn swings and hammocks are seasonable. A sample set up in the store will attract attention—and sales. Tents and flags ought to be good sellers also.

A man doesn't know how to live until a woman has taught him, and then it often happens he prefers to live alone.

SALESMAN WANTED

WANTED—An experienced, active hardware and stove salesman, must be good stockkeeper and capable of taking charge of front shop. Apply stating experience, references, salary, Box 839, St. Thomas, Ont. (24)

RANCH FENCING

We are putting on the market a Woven Wire Fence in 40 rod rolls. This is a special ranch fence and a winner—it competes with barb wire, weight of roll considered.

Wood is too friendly with fire to be on the roofs of houses. Consequently

METAL SHINGLES

are in great demand. Besides resisting fire, they are rain-proof, snow-proof, lightning-proof

A man in your town, say, is building a house. What is to hinder you getting after a Metal Shingle order? Give the owner the insurance argument, the "fifty-years wear" argument. If he says to see the contractor, give that gentleman the "future" argument—That if he recommends wood shingles and trouble asises (as it is sure to) he will reduce his chances for getting contracts.

		$22,100,761.02
		$27,973,445.77

H. S. STRATHY, General Manager.

The accompanying statement shows the result of the business of the bank for the year ending 31st May, 1906; also its financial position as on that date.

The business of the bank continues to show satisfactory progress. The net profits, 13.21, are in excess of the previous year, when they were 11.34.

New business of a most desirable character continues to be offered, and in order to take advantage of the large and growing business offering in the Northwest, and especially at Winnipeg, where results have far exceeded the best expectations of the management, your directors considered it was in the best interests of the bank to increase its capital, under the authority given at a special meeting of the shareholders held on the 17th of April. An allotment of two million dollars was therefore made on the 21st of May in the proportion of two new shares for each three held at the close of business on the first day of June. This allotment was made at 40 per cent. premium, being slightly below the proportion the Rest then bore to Capital, and, while it is only two weeks since the allotment was made, it has been most gratifying to the directors to find that subscriptions have already been received for nearly one million dollars, a large proportion of which has been paid, and with still many shareholders yet to hear from.

At the special meeting of shareholders above referred to the date for holding future annual meetings after the present one was changed by by-law to the fourth Tuesday in January of each year, and as our stock is held almost entirely as investment, it is proposed that dividends hereafter shall be paid quarterly, and in order to bring those into even quarters for the year a dividend for four months will be paid on the first of October and quarterly thereafter on the first of January and each succeeding three months.

Your directors hope to welcome the shareholders at the annual meeting in January next in the new and commodious bank premises now nearing completion on Yonge street. The bank has provided for ample accommodation in the building for future growth and expansion, and your directors have pleasure in stating that the demand for offices is quite equal to the most sanguine expectation. The vault accommodation will furnish absolute protection to the bank's securities, and it will be gratifying to know that every precaution has been taken in this respect to guard against loss by fire or otherwise.

During the fiscal year just closed nineteen new branch offices have been opened, viz.: thirteen in the Province of Ontario, two in Manitoba, including Winnipeg, three in Alberta, including Edmonton and Calgary, and one at Regina, Saskatchewan.

The different offices of the bank continue to receive the usual careful inspections.

C. D. WARREN, President.

The usual resolutions were moved and adopted.

The scrutineers reported the following gentlemen duly elected to act as directors for the ensuing year, viz.: C. D. Warren, Hon. J. R. Stratton, C. Kloepfer (Guelph), W. J. Sheppard (Waubaushene), C. S. Wilcox (Hamilton), E. F. B. Johnston, K.C.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade, a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Western Paint Goods.

G. F. Stephens & Co., of Winnipeg, offer their catalogue free to those who ask for it. Their specialty is ready-mixed paints, "made with Manitoba linseed oil," which they extensively advertise in order to help the dealer sell it.

Sleigh Bells.

The Carriage Mountings Co., of Toronto, have brought out catalogue "S," showing their new saddle chimes and sleigh bells for next season. Some new screens and dash rails are included, which are very stylish. A copy will be sent those dropping a line for it.

Cement Block Machines.

The James Stewart Manufacturing Co., Woodstock, in their catalogue show what has been done with the Dunn hollow block machine in real artistic construction. A photogravure of a cement block house on page 3 would at once dispel any doubt as to the beauty of this kind of structure when properly built. The broken ashlar construction is particularly good. Catalogue will be sent on request.

Ice Cream Freezers.

A seasonable catalogue is that of the Dana Manufacturing Co., of Cincinnati, who are large manufacturers of ice cream freezers. A good feature of the Dana make is that the gearing is outside the freezer, thus insuring cleanliness and freedom from salt and oil.

Electrical Specialties.

The R. E. T. Pringle Co., Toronto, Montreal and St. John, are sending out a new catalogue and price list on electrical and chemical specialties which includes arc lamps, shades, fuses, cut-outs, etc. They have the newest appliances made and will send catalogues on request.

SHEET METAL
Building Materials

We make only reliable goods at right prices. No cheap trash.

Prompt shipment and careful attention to details guaranteed.

Do you handle "Metallic" goods? If not, why not? No trouble, no expense, simply a little persuasive talk and the profit is yours; besides you have a satisfied customer who sends others.

WE PROTECT THE DEALER.

We have always done so for the past 21 years.

Catalogue sent upon request.

The
Metallic Roofing Co.
MANUFACTURERS *Limited*

TORONTO and WINNIPEG.

Western Canada Factory, 797 Notre Dame Ave., Winnipeg, Man.

Floor and Wall Registers.

The James Smart Mfg. Co., Brockville, are showing a large range of round and square registers for floor and wall use, in their latest catalogue. Many specialties in the way of dampers are also included.

Rotary Washing Machine.

The Pan-American Rotary is the name of the washing machine being pushed by the London Foundry Company, of London. This machine has special merits which the company will describe on receipt of a card.

Corrugated Roofing.

The Pedlar People are making a specialty of corrugated iron for building purposes this year. Their goods are constantly growing in favor, and for factories, barns and all outbuildings there is nothing more satisfactory. A card addressed to them at Oshawa, Ont., will bring full information.

At a subsequent meeting of the newly elected directors Mr. C. D. Warren was re-elected president, and Hon. J. R. Stratton, vice-president by a unanimous vote.

June 19th, 1906 :

H. S. STRATHY,
General Manager.
The Traders Bank of Canada, Toronto,

The following comparative statement will show the progress of the bank from 31st May, 1897 :—

As on 31st May	Capital Paid Up	Rest	Deposits	Circulation	Assets	Dividend
1897.....	$ 700,000	$ 40,000	$ 4,235,331	$ 676,195	$ 5,886,855	6
1898.....	700,000	50,000	4,930,817	697,680	6,824,850	6

FOUNDRY AND METAL INDUSTRIES

A new mining company to develop the Ikokan iron mines has been formed at Duluth. Dr. McKenzie, A. Snyder, H. Cruso, and A. Mills, of Duluth, are the head of it.

The Canadian Metal Company's smelt at Frank, Alta., has been completed It is now producing and shipping zinc. This is the first smelter of its class in Dominion and it should prove to be great boon to the Canadian market.

The Canadian Mine & Smelter Supply mpany intend establishing a plant in toria to manufacture mining machin-

The London, Eng., Standard's New rk correspondent says that the Steel ist will not erect its proposed plant Canada in 1906 but has options on d at Hamilton and Collingwood. This incorrect as no such options are held the U. S. Steel Corporation.

The Ontario Iron & Steel Company making preparations for the erection their new plant at Welland, and have arge quantity of material on the und.

The Brandon Machine Works Company l build an office and wareroom build- at Brandon to cost $16,000.

The Moose Jaw Machine Works Com- y has been organized with a capital $50,000. They will manufacture eshing engines, gasoline engines and chinery.

LARGE INCREASE IN IRON PRODUCTION.

The production of all kinds of steel ots and castings in Canada in 1905 eeded the record of 1902 by 221,412 s. As compared with 1904, the in- ase amounted to 254,665 tons, or over per cent. Bessemer and open-hearth l ingots and castings were made in and 1905, the production of open- rth steel amounting in the latter r to over 59 per cent. of the total. ost all the open-hearth steel report- in 1904 and 1905 was made by the process. The Bessemer steel was made by the acid process. A few dred tons of steel were made in 1905 a special process. The direct steel ings made in 1905 amounted to 9,- tons, against 6,505 tons in 1904.

The following table gives the produc- of all kinds of steel ingots and cast- in Canada from 1894 to 1905, in s tons :

Years.	Gross tons.
1894	25,685
1895	17,000
1896	16,000
1897	18,000
1898	21,540
1899	22,000
1900	23,577
1901	26,084
1902	182,037
1903	181,514
1904	148,784
1905	403,449

The production of all kinds of finished rolled iron and steel in Canada in 1905 was also much greater than in any previous year, and amounted to 385,826 tons, as compared with 180,038 tons in 1904, the year of next largest production, an increase of 205,788 tons, or over 114 per cent.

The following table gives the production of all kinds of iron and steel rolled into finished forms in Canada from 1895 to 1905, in gross tons :

Years.	Gross tons.
1895	66,402
1896	75,043
1897	77,021
1898	90,303
1899	110,621
1900	100,690
1901	112,007
1902	161,485
1903	129,516
1904	180,038
1905	385,826

The production of Bessemer and open-hearth steel rails in 1905 amounted to 178,885 gross tons, against 36,216 tons in 1904 ; structural shapes, 885 tons, against 447 tons in 1904 ; name and spike plate, 4,110 tons, against 5,030 tons in 1904 ; plates and sheets, 4,944 tons, against 3,102 tons in 1904 ; all other finished rolled products, excluding muck and scrap bars, blooms, billets, sheet bars, and other unfinished forms, but including for 1905 1,120 tons of forging blooms or forging billets, 197,002 tons, against 125,243 tons in 1904.

The total quantity of all kinds of iron and steel rolled into finished forms in Canada in 1905, including forging blooms and forging billets, amounted to 385,826 tons, against 180,038 tons in 1904. Of the 385,826 tons of finished iron and steel reported for 1905, about 318,495 tons were rolled from steel and 67,421 tons from iron, as compared with 126,850 tons rolled from steel and 52,188 tons from iron in 1904.

Opportunity is something a fool waits for while the wise guy runs down the road to meet it.

PAINT, OIL AND BRUSH TRADES

THE CATALOGUE HOUSE VS. THE RETAILER

V. W. Hartman in the St. Paul Trade Journal.

This much-mooted question is of interest to practically every person in the United States, because it affects all of us more or less directly.

It is of first interest and importance to the retail dealers in the smaller centres of population, for the reason that the catalogue houses put in their "best licks" to secure the farmers' trade, which naturally belongs to the retail merchants in the small villages scattered over the country.

Aside from a few thoughts on the proposition in a general way, I am going to devote my attention more particularly to one feature, or, more properly speaking, a single branch of the mail order business.

It is a significant fact that not a single catalogue house sells a dollar's worth of goods to people living in the town or city where the business is carried on. It is not difficult to explain why this is true. The policy of all catalogue houses is to sell their goods by means of "descriptive" catalogues, filled with illustrations and elaborately worded descriptions of the various goods they have to offer. In other words, the purchaser "buys a pig in a poke," accepting the statements made in the catalogue as true. He pays cash in advance for goods, of the quality of which he knows absolutely nothing. Not even a sample is placed in his hands. It may be said that the catalogues tell the truth within prescribed limits, yet when the goods are received, in how many cases do they prove to be all that the purchaser had anticipated or been led to believe they were by the ingeniously worded descriptions printed in the catalogue sent him?

How many farmers would buy a horse or cow from a stranger and pay him good money for it without at least making a personal examination of the animal before handing over the money? Yet it would be no more foolish to do that than it is to buy goods from a distant part of the country, paying cash in advance for them, without first seeing what he is going to get.

Retailing Paint.

If there is one article in common use that should be purchased with more than ordinary caution, it is paint. It is practically impossible for the ordinary person to know whether he is getting good paint or bad paint. The manufacturer who caters to a restricted territory like the Northwest depends upon the permanent trade of practically the same people from year to year. He does not and cannot find a new market for his products from time to time, so he goes to, say, a hardware dealer in a town and says to him: "Mr. Smith, I am making a first-class, durable, honest line of paints. I want you to handle them for me in your town. I will advertise them for you, will guarantee them to your customers and co-operate in every manner possible with you to build up a permanent trade." In other words, the paint manufacturer builds his reputation on the quality of his goods—depends upon the fact that his paints, being good, honestly made and capable of giving perfect satisfaction, will cause people to purchase and use them from time to time as their needs demand. He has an expensive factory requiring an investment of thousands of dollars to install and the expenditure of many more thousands to operate and maintain. His customers and their friends are always welcome to inspect his plant and see for themselves how he makes his paints. In short, he is practically in personal contact with every user of his goods.

But how about the catalogue house? I have already called attention to one characteristic of the average catalogue house paint—its quality—showing from an analysis that the particular paint under discussion contained nearly 25 per cent. of water in the thinner, and 50 per cent. of absolutely useless and detrimental organic matter in the pigment.

The purchaser or consumer of paint is practically at the mercy of the manufacturer, because he cannot know whether he is getting real paint or a cheap and inefficient imitation. His only protection

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 21, 1906.

Several price changes have taken place during the past week. Pigments are considerably higher in tone, and advances have been declared in a number of lines. Red lead on the local market has at last responded to foreign conditions, and prices are now 25c. higher all around. English vermilion has also scored a sharp advance, the ruling figures this week being 5c. per pound above those which have been quoted for some time past.

As was to be expected, dry white lead has been forced up, as the result of a keen demand which cannot be satisfied by Canadian producers. An advance of ¼c. a pound is in effect this week.

Linseed oil and turpentine have both declined a cent. The former fluctuation somewhat surprised the dealers as, in spite of slight see-saws recently noted, this commodity had remained generally steady up to this time. The drop in turpentine was not surprising, as the supply appears now to be a heavy one, with the demand only fair.

TURPENTINE — Single barrels, 86c. per gallon; two barrels or over, 85c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

LINSEED OIL—Raw, 1 to 4 barrels, 54c.; 5 to 9 barrels, 53c.; boiled, 1 to 4 barrels, 57c.; 5 to 9 barrels, 56c.

GROUND WHITE LEAD — We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC—Our prices are: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD — Prices are firmly held as follows: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC — We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—We quote the following prices, which are subject to withdrawal or change: Barrels, 600 lbs., 19¼c. per lb.; kegs, 250 lbs., 19½c. per lb.; 50-lb. drums, 20c. per lb.; 25-lb. drums, 20½c. per lb.; 1-lb. pkts., 100 lbs. in case, 21c. per lb.; 1-lb. pkts., 50 lbs. in case, 21c. per lb.; ½-lb. pkts., 100 lbs. in case, 23c. per lb.; 1-lb. tins, 100 lbs. in case, 22c. per lb. Terms 2 per cent. 30 days.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at 24c. in bbls.

WINDOW GLASS—We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break, 50 feet, $2.05; second break, 50 feet, $2.25; first break, 100 feet, $3.90; second break, 100 feet, $4.30; third break, 100 feet, $5.25; fourth break, 100 feet, $6; fifth break, 100 feet, $7; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8.50. Double thick, first break, 50 feet, $3.20; second break, 50 feet, $3.50; first break, 100 feet, $6.25; second break, 100 feet, $6.50; third break, 100 feet, $8.25; fourth break, 100 feet, $9.50; fifth break, 100 feet, $11; sixth break, 100 feet, $12; seventh break, 100 feet, $13.50; eighth break, 100 feet, $16; ninth break, 100 feet, $17.50; tenth break, 100 feet, $19.50; eleventh break, 100 feet, $23.50; twelfth break, 100 feet, $28.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 2, 1906.

Rainy weather has affected the demand for paint stocks some, but a slackening off would be welcomed by many manufacturers, who have been having difficulty in filling orders promptly. Travelers have been taken off the road to work inside in at least one Toronto house, they reporting that every month this year had shown a tremendous increase in business, the increase for May being $7,000.

Call Loud Through Your Store—

"I Keep these Modern Wood Finishes"

More and more the advantages and artistic effects of finished floors and rugs are b ing realized, and if you would keep abreast of the times you should stock the following modern wood finishes:

Ark Brand Floor Paint—For inside or porch floors. It wears with the elasticity of rubber and dries over night.

Ark-a-Lac Floor Finish—Stains and varnishes at one application. Made to imitate all natural woods—and clear.

Grippin's Wood, Crack and Crevice Filler—For filling unsightly cracks in floors. The original and only time-tested crack-filler.

Ark-El-Ite Varnish Stains—For finishing all kinds of wood. Does not settle in the can like paint. A most popular line to carry.

Rex-Lac Wax Finish—The modern artistic finish for all woodwork. Produces by one application a handsome Wax-like finish, staining the wood any desired shade at the same time.

ALL PAINT OF MERIT

Must bear a price in proportion to the skill, taste, time and expense attending its manufacture. The Colors, Varnishes, Stains and Enamels bearing the label of THE CANADA PAINT COMPANY may cost a fraction more than the ordinary "get-rich-quick" compounds but,

THE VALUE IS THERE!

RUSKIN says:

"A composition for cheapness and not for excellence of workmanship, is the most frequent and certain cause of the rapid decay and entire destruction of arts and manufactures."

POOR PAINT RAPIDLY DISAPPEARS

INSIST upon the Painting Material made by

The Canada Paint Company, Limited

The Largest Color and Varnish Makers in the Dominion.

There are no changes in prices to report, oil and turpentine being held at the same figures as a week ago. Paris green stocks are low with some jobbers finding difficulty in filling booked orders.

WHITE LEAD— Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2c.; No. 2, $5.55; No. 3, $5.30; No. 4, $5.05 in packages of 25 pounds and upwards; 1-2c. per pound extra will be charged for 12 1-2 pound packages; genuine dry white lead, in casks, $5.40.

RED LEAD—Genuine in casks of 500 lbs., —$5.75; ditto, in kegs of 100 lbs., $6.60; No. 1 in casks of 500 lbs., $5.50; ditto, in kegs of 100 lbs., $5.75.

DRY WHITE ZINC—In casks, 7c.; in 100 lbs., 7 1-2c.; No. 1, in casks, 6c.; in 100 lbs., 6 1-2c.

WHITE ZINC (ground in oil)—In 25-lb. irons, 8c.; in 12 1-2 lbs., 8 1-2c.

SHINGLE STAIN—In 5-gallon lots, 75c. to 90c. per gallon.

PARIS WHITE—90c. to $1 per 100 lbs.

WHITING—60c. to $1 per 100 lbs. Gilders' whiting, 75c.

PARIS GREEN— Canadian Government standard, 600-lb. barrels, 19 1-4c.; 20c.; 25-lb. drums, 20 1-2c.; 1lb. packages, 21c.; 1-2 lb. packages, 23c.

SHELLAC VARNISH— Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

LINSEED OIL—Our quotations are: Raw, 1 to 4 barrels, 57c.; 5 to 9 barrels, 55c.; boiled, 1 to 4 barrels, 60c.; 5 to 9 barrels, 58c. Toronto, Hamilton, London and Guelph; net 30 days. Advance of 2c. for delivery to outside points.

TURPENTINE—Single barrels 90c., 2 to 4 barrels 89c., f.o.b. point of shipment, net 30 days. Less than barrels. 95c. per gallon.

GLUES—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2c. to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white 19c. per lb.; No. 1 American white, 15c. per lb.

PUTTY—Ordinary, bladders in barrels, $1.80; pure linseed oil, $2 to $2.10; bulk, in 800-lb. casks, $1.50; pure, $1.95 to $2; 100-lb. kegs, 25c. extra.

LIQUID PAINTS— Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gal.

BARN PAINTS—70c. to 80c.

BRIDGE PAINTS—75c. to $1.

CASTOR OIL— English, in cases, 8 1-2c. to 9c. per lb., and 10c. for single tins

REFINED PETROLEUM—Trade continues normal. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

CRUDE PETROLEUM— We quote: Canadian, $1.38; Pennsylvania, $1.64; Ohio, 98c.

THE CATALOGUE HOUSE VS. THE RETAILER.

(Continued from page 68.)

is the honor and integrity of the manufacturer.

This being true, is it not reasonable to believe that the reputable paint manufacturer, especially if his business is located in the heart of the territory in which his paints are sold, is going to make good paint"? He has got to do it if his business lives and prospers. His success depends upon the continued patronage of the consumers in his territory—not upon a single order from any one customer or set of customers. It is the steady demand of satisfied customers that insures his prosperity and the continuity of his business.

On the other hand, consider the position of the mail order paint houses. Their customers live in places far removed from the place where the paint is made and sold. Implicit dependence must be placed in the cleverly worded and often misleading statements in catalogues and letters. Cash in advance is demanded. When the paint fails to measure up the standard of quality the consumer has been led to believe it possesses, it is next to impossible for him to obtain redress. The mail order house has no local reputation to make or sustain. Its business is restricted only by the boundaries of the whole country, and in nine hundred and ninety-nine cases out of a thousand anything like a satisfactory adjustment of the customers' complaint is impossible. The mail order people don't care. They have the money, the customer has the goods. So far as they are concerned, the deal is closed, and they see to it that it remains closed.

Misleading Methods.

To illustrate some of the methods employed to impress upon the minds of paint consumers not familiar with the details of how paint is made, the alleged fact that theirs is the only and best kind of paint to use, I will quote several statements from an advertisement in the Saturday Evening Post of May 5, 1906, and then point out why they are misleading and impossible of accomplishment:

"My paint is unlike any other paint in the world.

"It's ready to use — but not ready mixed.

"After each order is received my paint is made to order, packed in hermetically sealed cans, with the very day it is made stamped on the can by my factory inspector. I ship my pigment—which is white lead, zinc, drier and coloring matter freshly ground and mixed after the order is received—in separate cans—and in other cans I ship my OIL—which is pure, old process linseed oil—the kind you used to buy years ago before the paint manufacturers to cheapen the cost of paint, worked in adulterations.

"My paint is made to order fresh for each individual order after the order is received."

The cost of production regulates in a large degree the price of any commodity in general use. In the manufacture of paints expensive machinery is required to mix and grind the raw materials to the proper consistency for use. An extensive and costly plant must be operated and maintained. It must be kept constantly at work in order to secure

the maximum output at the minimum cost. To do this it is necessary to make each color or kind of paint in large quantities, because the mixing and grinding machinery is necessarily of large capacity, and hundreds of gallons of paints must be turned out every day. To any one at all familiar with modern methods in vogue in the manufacture of high-grade paints, the claim made in the advertisement quoted from that every single order for 6, 8, 10, 12 or 15 gallons of paint is made up especially after the order is received is too ridiculous to receive even passing notice. But to the thousands and tens of thousands of consumers who read it the claim may and very likely does seem plausible. The intent and purpose of this article is to direct the attention of retail dealers to the fact, and request them to use the information given in such manner as will educate and convince all of the paint consumers in their respective localities that they will not get what they are led to believe is to be supplied to them when they purchase catalogue house paint. It is made to sell. Whether it wears well and gives the purchaser full value for the money paid is a matter of indifference to the people who sell it. They are too far away to be reached, and consequently have no particular reason for concern.

The average run of customers served by the retail merchants are both intelligent and reasonable. They naturally desire to get the best value for their money, and if a proposition like the one under discussion is put up to them in a direct manner there is every reason to believe they will see the force and truthfulness of the argument. They require educating, that's all, to become permanent customers for good paints sold and recommended by their local dealers.

It's a proposition every retail dealer should give thought and attention to.

Note. — Retail merchants everywhere should endeavor to secure the publication of this article in their local papers. —Editor.

SANITARY EFFECT OF PAINTS.

A study has recently been carried on in France to discover what effect, if any, wall paint has on bacteria, with the result that the tendency of wall paints was distinctly detrimental to the life of all bacteria. The colors of enamelled porcelain were found to be more sanitary than oil colors, particularly with regard to tuberculosis bacillus.

WALL PAPER.

At the present time the manufacturers are very busy with their samples for the next season. The season, according to what can be gleaned at this date, will be replete with novelties of every description. It is promised that the lines placed on the market this coming season will be better and of greater range than any seen heretofore. It is as yet a little too early to go into the matter of samples for the next season, that is to speak authoritatively on them, inasmuch as the manufacturers themselves have not yet completed their plans as to colorings; final decisions as to patterns and other matters still occupy the attention of many. A record season is anticipated on all sides, however, and steps are being taken which will place the trade in a position to fill all demands.

Possibly the outstanding feature of the new samples will be the brighter colorings. A richer coloring scheme is demanded and the mills have turned out already many neat designs. One large manufacturer stated he was convinced that red was a past favorite. Red, which has had such a run in the past, apparently has given way to greens, browns, and greys, which are expected to be excellent sellers. Greens and greys are held to be the favored shades by a great many, while others give preference to browns in place of greens.

Flat effects are prophesied for next season, many being of the opinion that they will be largely used. For the high-class trade German characters in fine coloring effects are being shown, among other lines.

The staple cheap lines do not show any great changes for the coming season. There are the usual number of new patterns and some good designs rather out of the usual will be shown.

Push hammocks and lawn goods in your advertising now. Water coolers are also a good seasonable line and a trip around the stores and public buildings should secure several orders for these goods.

FIGURE UP YOUR *SALES* OF

WALL PAPER

You will find that out of last season's sales you made your biggest profits on the Staunton lines. Two ways to prove it—selling price over cost price, and so little Staunton stock among the "left-overs." Another reason why Staunton Wall Paper is best to carry is that in originating the season's patterns and colorings Stauntons get closest to what the actual demands of the market will be.

Stauntons' Travellers

will soon be on the road with samples for 1907. Don't place an order until you see their new colorings, new designs and new prices.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

The Smart Bag Company, of Montreal, will erect a $50,000 factory.

The Dominion Textile Company will build a $50,000 factory at Montreal.

The Peterborough Show Case Company will erect a new factory in that city.

Port Hope electors will vote on borrowing $7,400 for a lighting system on July 4.

Barrie ratepayers carried a by-law to vote $27,000 to enlarge their water-power plant.

The Western Systems Company has been organized to manufacture loose leaf systems, office books, etc.

The Yale Columbia Lumber Company had their works at Nakusp, B.C., destroyed by fire. Loss $22,000.

The International Electric Company have asked Chatham for a loan of $20,000 to establish a new plant there.

The Hamilton Plate & Mirror Glass Company will go into the manufacture of plate glass and mirrors in Hamilton.

The Automatic Telephone Company will erect a factory at Brantford for the manufacture of telephone supplies.

The Berg Manufacturing Company contemplate manufacturing sand lime bricks and machines for making same in Brantford.

The Norton System Telephone Company are negotiating with Peterborough with a view to establishing a factory there.

The commercial travelers of Manitoba have joined the Dakota and Minnesota travelers in convention at Albert Lea, Minn.

George Townsend, of Chicago, has the contract for building the Hamilton, Ancaster & Brantford Electric Railway. Work will be commenced shortly.

The Blanchite Process Paint Company has been incorporated under Ontario charter with a capital stock of $250,000 for the purpose of manufacturing paints, varnishes, etc. The provisional directors are J. C. B. Blanch, O. C. Arlitz, B. M. Armstrong, J. E. Askwith and Andrew Haydon, with head office in Toronto.

The Canadian Wire Screen Manufacturing Company has been incorporated under Ontario charter with a capital stock of $250,000 for the purpose of manufacturing wire roller window screens. The provisional directors are G. B. Meadows, H. G. Hopkirk, F. A. Mansell, M. C. Mowry and A. T. Blackwell, with head office at Toronto.

The Dominion District Steam Heating Company has been incorporated under Ontario charter with a capital stock of $100,000 for the purpose of manufacturing lighting and heating apparatus and appliances. The provisional directors are W. E. Warburton, W. Seccombe, G. E. Bradshaw, H. L. Dunn and J. W. McDonald, with head office at Toronto.

The Superior Portland Cement Railway Company has been incorporated under Ontario charter with a share capital of $50,000 for the purpose of constructing an electric railroad from their works to an adjoining lake. The provisional directors are George McIntyre, D. B. Brown, G. E. Brown, W. H. Jackson and W. DeL. Wilson, with head office at Orangeville, Ont.

The Great Lakes Portland Cement Company have been chartered to manufacture cement at Port Colborne, Ont. The capitalization is $1,000,000 and the promoters claim it will be the largest cement industry in Canada. Work will soon be begun on a plant that will have an output of 1,500 barrels a day, which is three hundred barrels in excess of the largest cement industry at present in operation in Canada. One hundred men will be employed throughout the year from the beginning, and this number will be later increased to 150. The pay-roll will run from $75,000 to $100,000, and the initial investment will be $350,000. The Great Lakes Cement Company, it is claimed, from the first will turn out 1,500 barrels a day, which will be the minimum output. Twenty-five hundred barrels will be the maximum daily output. The capacity of the five largest plants at present in operation is as follows: International (Hull), 1,000; Canadian (Toronto), 1,200; Durham, 1,000; Lakefield, 800; and Raven Lake, 500.

BUILDING NOTES.

Vancouver permits for May represented $338,000.

The Bank of Commerce will build in Dauphin, Man.

Regina Masons contemplate building a $75,000 temple.

J. H. Haslam will erect a $25,000 block at Regina.

N. Blanchmien will erect a $15,000 block in Winnipeg.

The Sovereign Bank will build a branch at London.

Petrolia School Board asks tenders for a school house.

Narcisse Lord will build an office building in St. John, N.B.

The W. R. Brock Co. will build a warehouse in Calgary.

Sampson Walker will build a $10,000 residence in Winnipeg.

The Elks fraternity will build a $50,000 building at Regina.

John Lineham, Calgary, will put two extra storeys on his block.

The King Edward's Inn will be built at Kingston to cost $125,000.

Wm. Cousins will erect a four-storey theatre block at Medicine Hat.

Toronto's building permits are near $6,000,000 for this year already.

The Presbyterians of Fredericton, N.B., will build a $5,000 manse.

John Saul & Co. have the contract for Winnipeg's new fire hall, for $16,000.

St. Andrew's Church, Brantford, will

be enlarged at an expenditure of $[illegible]0,-000.

The Globe Printing Co., Toronto, have purchased a site for a new building.

The National Club, Toronto, has taken out a permit for a building to cost $90,-000.

Thos. Foley will make large additions to the Hotel Miramichi at Newcastle, N.B.

Work has commenced on the excavation for the new Union Station, Toronto.

Winnipeg's building permits for the year have amounted to $5,860,000 up to June 15.

The Excelsior Life Insurance Company, Toronto, will alter their premises to the extent of $25,000.

Hamilton permits include houses for J. Driscoll, $4,500; J. G. Davidson, $3,500; and Miss Edith Taylor, $3,000.

Plans are being prepared for a new $40,000 wholesale building for a confectionery and grocery business in Edmonton.

The Smart Bag Co. are building a factory 125 x 75 feet on Mullins street, Montreal. The structure will cost $50,-000.

The scarcity of unskilled labor in the Maritime Provinces is rather seriously affecting the output of the Dominion Coal Co.

P. Lyall & Sons, Montreal, have been awarded the contract for the construction of the new Emmanuel Church in that city.

The owner of the Caer Howell Hotel, Toronto, is at the head of a company who will build a new $150,000 inn on the present Caer Howell site.

The Dominion Textile Co., Montreal, have taken out a permit to build a seven-storey factory, at a cost of $50,-000, on St. Ambroise street, Ste. Cunegonde.

Calgary is experiencing a big building boom, and in the five months of this year there have been permits valued at $1,175,000. For last year they amounted to $1,250,000.

AN IMPROVED WINDOW SCREEN.

Extensible window screens as commonly made are formed of two overlapping screen sections, adapted to slide one upon the other, so that they can be adjusted to fit windows of different size. A recent invention provides for securing these sections at the desired adjustment by means of thumb nuts threaded onto bolts which are secured to one section and pass through slots in the other. For the purpose of enabling the sections to be extended to their limit without uncovering these slots, sliding plates are concealed in the frame, which are extended when the screen is extended so as to close these slots. The construction is clearly illustrated in the accompanying engraving. Fig. 1 shows the screen as applied to a window frame. A channel plate secured to the upper edge of one of the screen sections overlaps the other section, and affords a sliding connection between the two, while at the same time it closes the gap between the screen and the window sash. The screen sections are held together at the bottom in sliding rela-

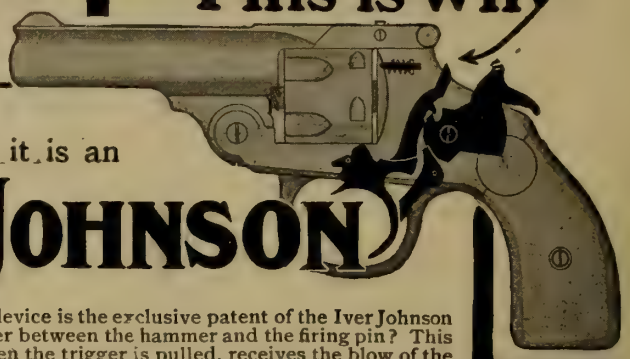
Pease-Waldon Co., Ltd.

WINNIPEG

tion by a pair of clips, as illustrated in Fig. 2. The frame of the rear section is marked(1) in the engraving, while that of the forward section is marked (2). The latter, as best shown in Figs. 2 and 3, is formed both at the top and at the bottom of two pieces, between which there is a recess. In each recess a plate (3) is adapted to slide. This plate is formed with a slot at one end, and a nib or head at the other end. The adjusting bolt is secured to the frame (1), and passes through the slots in the frame (2) and plate (3). In use when the screen is extended, the nib on the plate (3) will engage a shoulder in the recess of frame (2), and thus be extended to cover the slot. When the screen is closed, the end wall of the frame (2), bearing against the end of the plate (3), will push the latter back to its normal position. This arrangement permits of extending the screens

Improved Adiustable Window Screen.

to any desired limit and securing them, while closing any opening through which insects might crawl. A patent on this invention has been granted to Mr. Harry W. Tuthill, Middletown, N.Y.



TAKE YOUR DISCOUNTS.

Discounts are certain profits. Also, dealers who take their discounts are favored in many ways. This source of economy, which also insures prompter shipment of goods, is the beginning of success. In addition to making a good reputation, it enlarges your fortune and brings greater business opportunities. This custom is an index of business ability. Every business man desires prompt attention. Dealers who wish to get better service should form the discount habit and they will have their goods when requested, can have additional goods on short notice, and many other courtesies which are not valued in currency.

Count every day a loss in which no progress has been made.

Accidental Discharge Impossible-

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.

Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

FOR SALE.

HARDWARE, stove and tinware business for sale with set of tinsmiths' tools and locksmiths' outfit. Located between Sherbourne and Parliament—a splendid district. Stock runs about $2,500. Owner must devote his attention to other interests. Will sell in whole or in part. An excellent opportunity to pushing man with small capital. Apply R. Fair, 302 Queen street east, Toronto. [23]

THE largest and best paying hardware business in Western Ontario; stock will inventory $25,000; reasons for selling, owners have other interests. Box 522, HARDWARE AND METAL, Toronto. [26]

SITUATIONS WANTED

A COMPETENT builders' hardware salesman, open for a position 1st June; twenty years experience in Canada and the United States. Box 533, HARDWARE AND METAL, Toronto. [23]

THOROUGHLY energetic and experienced hardware clerk and bookkeeper, reliable, trustworthy. Competent as branch manager, or any position of trust. "Metals," 29½ Ann street, Toronto. (23)

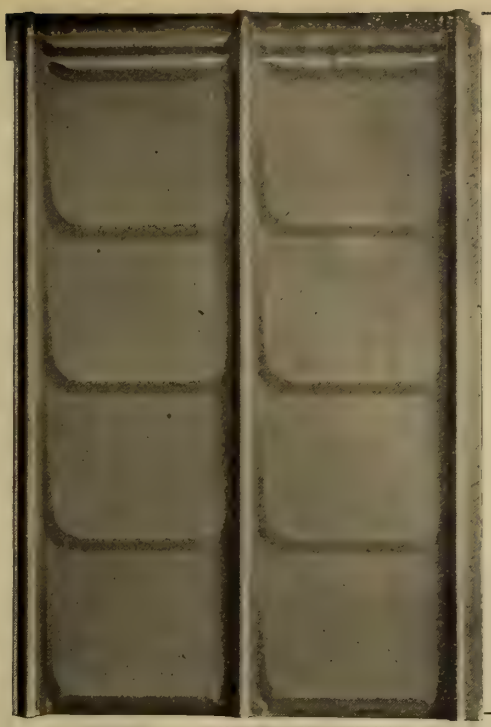
WANTED—A position as hardware clerk by young man; 4 years' experience; A1 reference. Box 534, HARDWARE AND METAL, Toronto. [24]

WANTED—Position by first-class hardwareman; over 10 years' experience in first-class general and builders' hardware; experienced in plan reading in large American city; best references. Box 535, HARDWARE AND METAL, Toronto.

METAL SHELF BOXES

DO you know that your customers are judging your stock by the general appearance of your store? It is absolutely impossible to keep your goods neatly arranged without using some kind of shelf boxes. Our system enables you to keep all goods of one kind together; you always know when your stock is running low, and you never have to tell a customer you are just out of what they want and then find the next day you had plenty in stock. The Bennett Metal Shelf Box has been on the market for years. Some of the best hardware stores in Canada have thrown away their old wooden boxes and put in our up-to-date metal box. Cameron & Campbell, Toronto.

SALESMAN WANTED.



SALESMAN—Strong, active young man, experienced in hardware, stoves and tinware. Must be willing worker and pushing salesman. References; state age and wages. W. A. Hillhouse, Shelburne, Ont. (24)

STEAM GAUCE

This injector is undoubtedly the most serviceable injector manufactured. Its compactness and strength make it particularly adaptable to the requirements of portable engines and the low pressure under which it will work and maintain a sufficient boiler feed is particularly satisfactory. When water supply is above or on a level with the injector it will operate at from 2 to 4 pounds of steam. Its action is thoroughly automatic; it has few wearing parts and these can be quickly and conveniently repaired.

Our stock machine is made up to cover the widest range of operation, but when the variation of conditions is greater than normal we have other patterns that will undoubtedly perform the duties required.

Morrison's gauges are universally considered leaders among users of high-class steam goods. For appearance, durability and accuracy the instrument has no superiors They are equipped with non-corrosive movements; the springs are made from carefully selected seamless drawn tubing. The letters and figures are cut deep and filled with black enamel on silvered brass dial. These gauges are carefully tested and stamped with our name, which warrants correctness. The Auxiliary Spring Gauge is particularly adaptable for use on traction engines where the constant jar of the engine requires a gauge of exceptional durability and accuracy.

These are manufactured any standard size and with customer's name if desired.

PLUMBING AND STEAMFITTING

THE PLUMBING OF A COTTAGE

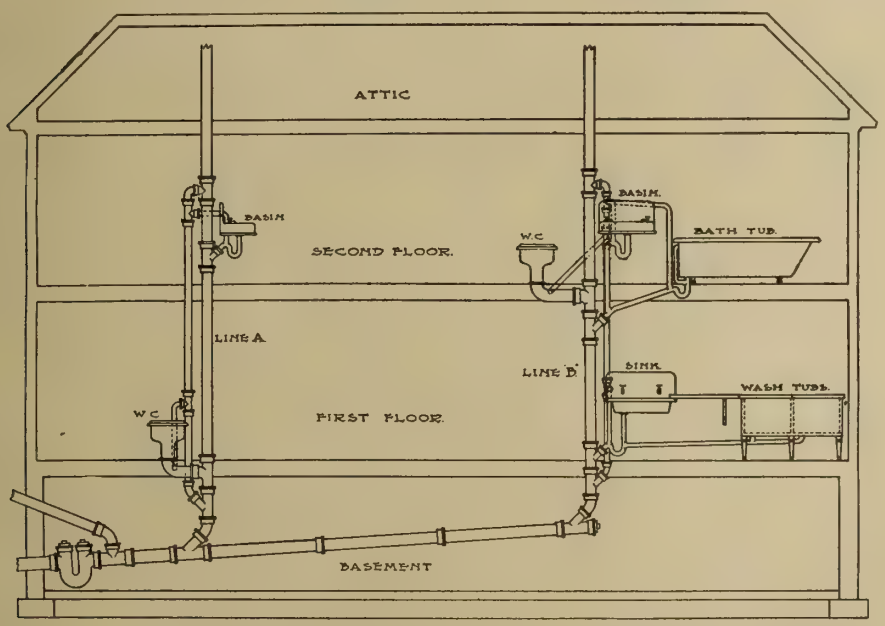
By J. A. F. Cardiff in the National Builder, Chicago.
Article VII. (Continued.)

Soil, Waste and Vent Stacks.

To further illustrate the two-pipe system of plumbing, we show this month a plumbing section showing the lay-out of a modern cottage.

Line (A) takes in a water closet in a toilet room on the first floor and a basin or lavatory between two bedrooms on the second floor.

Line (B) receives the discharge from the wash tubs and sink in the kitchen on the first floor and from the bathroom fixtures on the second floor.



Starting at the street sewer, a four-inch earthenware pipe house sewer is run into a point about two feet outside of foundation wall, from which point, into the rear of cellar, it is run full size in extra heavy cast iron. The front portion of the house drain, which is near basement floor, is supported on brick piers. The rear portion is hung from the first tier of beams. The house drain is carefully adjusted to a fall of at least one-quarter of an inch to the foot.

The main trap is located just inside the foundation wall and is provided with two clean-outs. Just inside the trap a tee fitting and an eighth bend are provided for the fresh air inlet connection, which pipe is carried up on the lawn and capped with a hood or a return bend, located at least fifteen feet from any windows or doors.

A clean-out is provided at the rear end of the house drain, at the base of the line (B).

Line (A) is a three-inch soil stack, increased to four inches just before it passes out through the roof, and connected to the drain at the base with a Y fitting and an eighth bend. The connection of the water closet to the vertical stack is made with D lead pipe. The vent stack is taken off of the soil stack below the water closet and taps into it again above the basin, which is the highest fixture. This stack is made up of two-inch extra heavy cast iron pipe. The vent pipe for the water closet is connected to the lead bend below the floor. The vent pipe from the basin is taken off the crown of the trap and connected to the vent stack just before it joins the soil stack again.

Line (B) is also a three-inch soil stack similar to line (A). One trap serves both the kitchen sink and wash tubs and is vented from the crown, as shown. The sink is provided with a grooved ash drain board, with one end supported on an iron bracket. The basin waste discharges into the bath tub waste just before it enters the Y fitting of the soil stack. The overflow from the bath tub connects to the waste of same, on the house side of the trap.

RANGE CLOSET POINTERS.

Of late years more range closets have been used in schools and other public buildings than ever before. Every maker sends out with each range a circular giving such information as he knows to be essential to setting up and favorable to perfect operation of his goods. These goods are not so often used as to make every plumber familiar with their principles and requirements, says G. Y. in the Metal Worker, who has had wide experience in this line of work and has saved the circular information relating to different kinds of range closets. He feels the following, based on the manufacturers' statements, together with personal knowledge derived from actual experience with the goods, will be appreciated :

Every closet range is made in lengths that make up evenly for 24, 27 or 30-inch seats, even though it is an open trough. The length over all is always the number of seats by the width of seat, plus the room required for the inlet and outlet pieces. The room needed for these can be kept on a page of pocket memoranda book. Such outlets as may be swiveled to shorten the length over all can be notated in the same way.

The lower trap seat with double trap ranges must be used. The range will not work without it, although some plumbers have laid them aside, hoping to save material and work, only to find it took extra work and material to correct the error.

The lower trap on double trap ranges must be vented to roof independently, or into the soil pipe stack above the highest fixture on the line, to prevent siphonage of the lower trap and insure proper syphonic action when the range operates. If the vent is carried through the roof independently it should be increased to at least 4 inches diameter just below the rafters to prevent stoppage by frost. The crown vent is no more necessary than for an individual closet so far as sewer air or odor is concerned, beyond the fact that the large body of water turned into the soil pipe at once is from 10 to 15 times more than the flush of a single closet and therefore more likely to siphon itself or other fixtures.

On pneumatic siphon ranges with continuous (double) trap and air pipe the air pipe should be run from the upper trap to the tank as direct as possible, using 45 degree fittings where practicable in the upright and securing the horizontal part so that it will remain straight permanently. A union should be placed near the trap so the air pipe can be separated easily. This type of range, like the individual pneumatic closet, has the habit of drawing bits of paper and soil up in the air pipe, causing stoppage. If the pipe becomes clogged the air cannot be drawn from the space between the traps, and as these ranges depend on rarification of the air for their siphonic action it is well to take every precaution to avoid trouble. If necessary to offset the pipe above the trap do so as high as possible and put in at least one foot of vertical pipe next the trap fully as large as the tapped opening in the trap.

When a pneumatic range is first put in action it is likely to fail to siphon during the first flush on account of the lower trap being empty. If erected according to plans and directions it should siphon properly at the second flush. Water poured in by hand to fill the

lower trap should insure flushing the first trial. The length of interval between flushes is obtained on most ranges by turning on a stop in the supply to tank more or less, to suit. If a range fails at all we may generally feel sure it is some fault in our work, as these fixtures are expensive and the factories to make sure of no hitch on the job actually assemble and test the range before shipping it. The joint between the upper and lower traps, and all the joints of the air pipe between the traps and tank of a pneumatic range must be perfectly air tight, or the range will refuse to siphon. The proper degree of vacuum is obtained by exhausting the air from between the traps by the action of the water leaving the tank, and it is obvious that if there are leaks in the joints no vacuum will be established. A range tank should be set as high as the flush pipe furnished will hold it. If the tank is moved out of line on account of cramped quarters use 45-degree fittings and add enough flush pipe to raise the tank to the height intended.

In cold climates if the range is erected in an exposed place a drain pipe with stop at tank should be connected to the plugged drain hole provided at the tank for the purpose, so that the range tank may be drained when necessary. A tapped and plugged boss will usually be found on side of trap for convenience of the plumber in providing a drain for the range and traps to prevent breakage by freezing in cold weather. When the lower trap is situated so that it will not freeze the upper trap can be drained into it by means of a stop and pipe connection from boss to boss. If both traps are likely to freeze separate drains with separate stops should be provided.

No increase in the length of air space between the traps should be made by the plumber. The space is of the proper size for the best service when range is erected as sent out from the factory. Some errors have been made by journeymen lowering the lower trap to avoid frost, much as they would the trap of a yard closet. Too much air space gives the same results as leaky joints. The tank is unable to handle more than a certain amount of air and the factories limit the space accordingly.

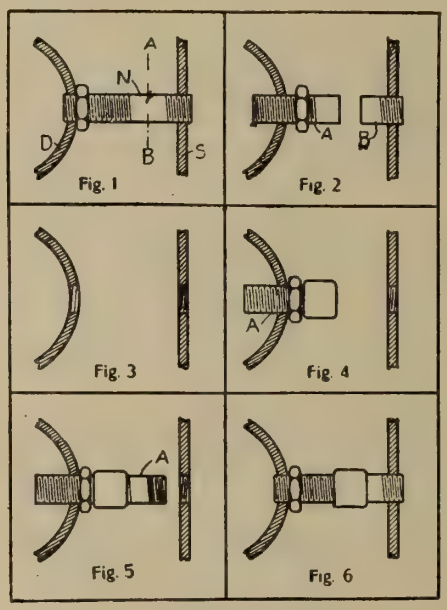
The floor upon which a range is set must be level and of a character that will permanently keep the range in perfect alignment.

Unless you are acquainted with the character of the water to be used order lead lined or enameled iron tanks.

If possible have nothing to do with home-made partitions, doors, etc. The factories are in that business and have the machinery to do it cheaper and better than you can.

Do not poke 14-inch vent pipes into 4x6 cold flues and expect to avoid odors and also ventilate a 12x30 foot room.

Run a 5-inch stack at least for one or more ranges with more than four seats.



Thoroughly crown vent all fixtures likely to be affected by the discharge of ranges.

ARMSTRONG'S NEW CHICAGO BRANCH.

In order to better serve the needs of a greatly increased western business in their steam, water and gasfitters' tools and machines the Armstrong Manufacturing Company, of Bridgeport, Conn., have lately opened a branch office and warerooms at 23 South Canal street, Chicago, Ill. The new branch is in charge of Hugh S. Laing, formerly assistant manager of the New York City branch. The premises include an office and show room, 18 feet wide by 150 feet deep, and a large basement for storage.

In addition to a complete line of the genuine Armstrong stocks and dies, there will be carried a full stock of Armstrong's pipe cutters, pipe vises, Bard adjustable bushings, ratchet attachments for die stocks and pipe wrenches. In the salesroom a full line of pipe cutting and threading machines taking up to 6-inch pipe are on exhibition. In the wareroom a full stock will be maintained to enable customers in the district to receive their orders promptly.

Buyers of pipe-fitters' tools in the west are invited to communicate (mentioning this paper) with the Chicago office for any particulars concerning the Armstrong tools.

A Problem in Piping.

A PROBLEM IN PIPING.

On testing a low-pressure boiler we had put up, writes Gus Cook, we found a defective nipple, (N), figure 1, which connected the section (S) and the drum (D). The distance between (S) and (D) could not be changed, so we cut the nipple on the line (A B), and ran the lock nut up to the end of the thread on piece (A), figure 2. We then screwed the half (A) into the drum, far enough to remove the piece (B). This made room enough to remove the half (A), thus leaving both openings clear as in figure 3.

We then made a running thread nipple (A), figure 4, with lock nut and coupling attached, and screwed it into the drum as far as possible (figure 4). Then we screwed a short nipple (A) figure 5, into the coupling, and unscrewed the running thread nipple, thus bringing the connection into the section, as shown in figure 6. The lock nut was then screwed tightly against the drum, as shown, and the job was complete.

QUESTIONS AND ANSWERS

Plumbers and steamfitters are requested to send in short questions or lengthy descriptions of problems which have arisen in the course of their work. Answers will be promptly given by experts in the trade. Communications for publication are also solicited regarding any subject which may arise.

Ques.—What is the advantage, if any, of increasing the size of a soil pipe stack after it passes through the roof? I am installing a system under an architect's specification which insists on this provision. I also desire to secure a recipe for making plumbers' soil.

Ans.—In answer to the first question we would say that, in this climate, all soil and vent pipe stacks should be not less than five, and preferably six, inches in diameter above the roof, and should be increased in size (if less than the said sizes) at a point at least one foot below the roof.

The reason for having a pipe of large diameter above the roof is that during very cold weather a sort of hoar frost forms on the inner circumference, sometimes as much as two inches thick, and, as will be clear, with frost two inches thick, a four-inch pipe would be entirely closed up.

It may, at first sight, seem absurd that, say, a two-inch pipe should be increased to five inch, but we think a little consideration will show the necessity of it, for it will at once be seen that should the smaller pipe, which almost always is a "vent," be frozen up solid, the taps connected with it are likely to syphon out and render possible the serious results attending such a condition.

Plumbers' soil may be purchased ready to use, or may be made in the following way: Mix gradually into a small pot containing a quart of water one package of lampblack; into this put a tablespoonful of good glue, which has been thoroughly dissolved, then stir constantly for one hour while boiling; when cold the soil should be ready for use.

The soil may be tested by putting a little on a piece of sheet lead, and when dry bending the latter back and forward. If the soil flakes off there is too much glue, while if it rubs off with the hand there is too much lampblack.

Ventilation of Residences.

Ques.—In constructing a small system of mechanical ventilation in a private residence, which is the better plan: To force fresh air in through a tempering coil, or suck the foul air out of the building, thereby creating a partial vacuum, and in that way compelling the fresh air to enter through the tempering coil?—Engineer.

Ans.—In constructing a ventilating system for use in Winter time, where only one fan is used the use of a suction fan is very poor practice, because just as soon as it reduces the pressure within the building the cold outside air comes in through the cracks around the windows and doors, and, indeed, through every opening, no matter how small, in the building, thereby chilling it and creating draughts.

With a pressure, or what is known as a plenum fan, the reverse conditions exist, and the building will be very much more comfortable to live in.

Heating Capacity of Large Radiators.

Ques.—Will 42 in. radiators give off as much heat per square foot as radiators 20 in. high; and if not, why not?—Fitter.

Ans.—No. High radiators are not as effective as low radiators, for the reason that the tendency of warm air is to rise up through the sections and to cling to the surface of the same, and as heating surface gives off heat just in proportion to the difference between its temperature and that of the air in contact with it, it follows that the coldest air will be that in contact with the first 20 in. of the radiator, and that the higher up it travels the warmer it gets, and consequently the less is the difference between its temperature and that of the radiator, so that its cooling power having been reduced considerably before it reaches the upper part of the radiator the latter is not called upon to give up as much heat as the lower portion.

Gas Range Troubles.

Ques.—I have had a lot of trouble with a gas range because of the explosions in the burners every time they are lit. Can you tell me what I should do with them?—A. M. Noble.

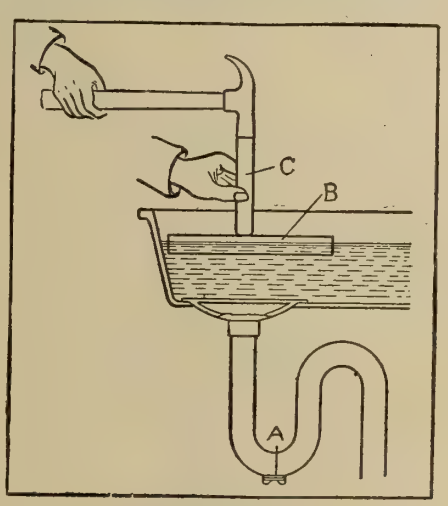
Ans.—Your difficulty is either too much air or too little gas. Gas explodes only when mixed with too large a quantity of air, so that if you can introduce a larger amount of gas, and thereby change the relationship in quantity between air and gas, at the same time making a larger flame, or attain the same results by reducing the air supply and making a smaller flame, you will find that the problem has been solved, always assuming, of course, that your burners are properly constructed.

TORONTO PLUMBERS' ANNUAL.

On Saturday last the master plumbers and steamfitters of Toronto held their annual outing at Grand Island, in the Niagara River, about 65 attending. The weather was threatening but that made no difference on the spirits of the party, who were out for a good time—and had it.

At Niagara Falls the Toronto contingent was met by a committee from the Buffalo master plumbers who had ready a special car to convey them to Edgewater, where they had a ferry boat awaiting to carry them over to Grand Island. The Buffalo plumbers, about seventy-five in number, came down from Buffalo in a house boat, accompanied by a tug, and had their own equipment of cooks and waiters, as well as a colored orchestra which kept everyone in good humor during the dinner. At the conclusion of the dinner the Americans took the opportunity of presenting their president, J. Wright, with a gold-handled umbrella, which came at a most opportune time, as it rained soon after.

After dinner was over all hands went to the grove, where a baseball match between the visitors and the entertainers was to take place. The rain, however, stopped the match when it stood 3-0 in favor of Toronto. But while the outdoor sport was stopped, there were other things that kept everyone on the go. The bowling alley was well patronized, and those who were unable to bowl in the alley, found other places equally entertaining.



With the Buffalo men came their city staff of plumbing inspectors, the Toronto officers not being on hand. Among the American inspectors was "Dean" Wilson, head of the department, who in spite of the fact that he has passed three-score and ten, could not resist the strains of a hornpipe, but got up and danced with the life and energy of a man of twenty-five. The "Dean" is a veteran of the Civil War and can recount many a tale of adventure.

The United Brass Manufacturing Company, of Cleveland, made themselves strong with the boys by presenting them with neat white caps, and United Brass cow bells.

No attempt was made at business or convention work. It was a picnic pure and simple and every Toronto man expressed himself as highly pleased with his day, and looked forward to the time when the Buffalos will come to Toronto, perhaps in August.

REMOVING OBSTRUCTIONS IN DRAIN PIPE.

When a drain pipe becomes stopped up unscrew the plug (A) and remove the lint or other substance with a bent wire

Clearing a Drain Pipe.

or old button hook. If the trouble is not remedied by this operation, it shows that the stoppage is at the other side of the plug. In this case draw three or four inches of water in the sink, and lay a board (B) over the outlet as shown. The board should be about 8 inches square and about 1 inch thick. Hold a stick (C) on the board and strike the end of the stick with a hammer. The shock of the hammer blow is transmitted through the drain pipe for a distance of many feet and will nearly always remove the obstacle.

PLUMBING ITEMS.

George Schram, a plumber, fell about 18 feet from McCoomb's building at Welland on Monday, and received serious injuries.

Toronto electrical workers are on strike for an increase in wages from 28c. to 35c. per hour.

R. J. Cluff & Co., Toronto, will move into their fine new building on Lombard street next week. It will have five floors, 80 x 90 feet, making in all nearly 40,000 square feet, and it will undoubtedly be the finest heating supply warehouse in Canada when all the fixtures are installed.

AMERICAN HEATING GOODS IN GREAT BRITAIN.

During the past decade heating devices of American manufacture have found a large market in Europe and in England particularly they have won great favor, only recently the announcement being made that the American Radiator Company would establish a plant in England in addition to its new one in Canada. Discussing this matter Francis H. Skidmore, member of the Institute of Heating and Ventilating Engineers, of Workington, Cumberland, states:

"Speaking as an engineer and not as a manufacturer, I consider that we have great cause to rejoice that the Americans introduced their goods here. The advent of the cast iron, sectional radiator, the neatness and taste displayed in the decoration of it, as well as the fine quality of the castings and cheapness, has done much to popularize hot water and steam as a heating medium in this country.

"Formerly our nearest approach to a cheap system of hot water heating was the unsightly and clumsy pipe coil, which we would now look upon as a disgrace for any manufacturer to turn out of his factory.

"The use of the cast iron radiator is universal. Our methods have completely changed, and I now find that architects and others who were averse to hot water heating owing to the unsightliness of the appliances then used, are now strongly in favor of the system where modern methods are employed, with the result that a good 'filip' has been given to our heating trade, and many buildings are now heated with hot water which otherwise would never have been. For this reason alone we owe something to our American cousins.

"The difference in the climatic conditions of the two countries no doubt explains why England has hitherto been so backward as regards the production of efficient and up-to-date heating appliances. America is essentially a country where some form of hot water or steam heating is an absolute necessity. In England even now this method of heating is regarded as somewhat of a luxury, with the result that heating engineers do not receive the amount of encouragement they deserve.

"In England we invariably find many hundreds of pounds spent on the decoration of a building, while the heating and sanitary conditions are left to take care of themselves and the least possible amount of money is spent in that direction. I must say, however, that Americans are educating our architects to a large extent in this direction with much better results.

"With respect to the cast iron sectional boilers, I might state that any prejudice which engineers once held with regard to cast iron as a suitable material for the construction of hot water and low-pressure steam boilers has now been swept entirely away; personally I now fix 100 sectional heaters to one wrought iron boiler. The introduction of the American heater has done great harm to the boiler trade in England, with the result that our manufacturers are now closely copying American types and methods in the production of their cast iron boilers. As to whether English makers will ever be able to successfully compete with Americans in this direction it is at present difficult to state, at any rate the Americans need have no immediate cause for alarm."

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 22, 1906.

The sales department of every Montreal supply house is a very busy one these days. Not only is there a tremendous amount of work for plumbers in the city itself, but even in the smaller towns the trade is experiencing a marked boom.

No prices have fluctuated since our last report, except that one or two of the jobbing houses have slightly shaded iron pipe. These, however, are firms who have never made a specialty of plumbing supplies and the general market has not been affected by their prices.

RANGE BOILERS—The volume of business is as usual, with quotations steady. We give prices: Iron clad, 30 gallon, $5 ; 40 gallon, $6.50 net list ; copper, 40 gallon, $22.50 ; 35 gallon, $27 ; 40 gallon, $30.75 net.

LEAD PIPE—Large quantities are being consumed by plumbers, and prices are firmly held. Our discount is: 20 per cent., f.o.b., Montreal, Toronto, St. John, N. B., Halifax ; f.o.b., London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS— Trade is brisk. We still quote: Discounts on all sizes of nipples up to 6-inch, 67 1-2 to 70 per cent.

IRON PIPE—In spite of shading in some quarters the market on the whole is as strong as ever. Our prices remain: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS—Business is being well maintained at unchanged prices. We quote: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list ; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—Lead has been very steady this week, and tin, though fluctuating constantly, has not been appreciably depressed. Consequently, the price of solder has remained stationary. We quote as follows: Bar solder, half-and-half guaranteed, 24½ to 25c. ; No. 2 wiping solder, 20c.

ENAMELWARE—There is no feature to report in this trade. We give the following prices: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, June 22, 1906.

Excellent business is being done by the supply houses and the half year's total is considerably over that of 1905 in spite of the dull business in the Spring owing to the clean-up of all last season's work during the mild Winter. Demand for all classes of materials is now keen and prices hold very steady.

In the cities the ranks of the master plumbers have been swelled greatly by the large number of men with small capital opening up business. This extra competition tends to encourage even greater competition than has resulted from the break-down of the association, but the supply houses protect themselves by giving very short lines of credit.

The market situation remains practically the same as a week ago.

LEAD PIPE—The demand is brisk with no change in price. We quote: Lead pipe, 8c., discount 20 per cent.

SOIL PIPE AND FITTINGS — Our quotations are as follows : Medium and extra heavy pipe and fittings, 60 per cent. ; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE—A good business is being done with prices continuing steady. Cutting seems to have ceased. We quote as follows: Black, 1 in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — We quote as follows: Cast iron elbows, tees, crosses, etc., 67½ per cent. ; cast iron plugs and bushings, 67½ per cent. ; flange unions, 65 per cent. ; nipples, 75 and 5 per cent. ; iron cocks, 60 per cent. ; Canadian malleable, 35 per cent. ; American malleable, 25 per cent. ; malleable unions, 65 per cent. ; malleable bushings and plugs, 60 and 10 per cent. ; C. I. ceiling plates, plain or N. P., 70 per cent. ; C. I. floor, 80 per cent. ; hook-plates, 65 per cent. ; expansion plates, 65 per cent. ; headers or branch tees, 65½ per cent. ; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote : 12 gallon capacity, standard, $4.50 ; extra heavy, $6.50 ; 18 gallon, standard, $4.75 ; extra heavy, $6.75 ; 24 gallon, standard, $4.75 ; extra heavy, $6.75 ; 30 gallon, standard, $4.75 ; extra heavy, $7.50 ; 35 gallon, standard, $5.75 ; extra heavy, $8.50 ; 40 gallon, standard, $6.75 ; 40 gallon, extra heavy, $9.50 ; 52 gallon, $11 ; extra heavy, $14 ; 66 gallon, standard, $18 ; extra heavy, $20 ; 82 gallon, standard, $21 ; extra heavy, $24 ; 100 gallon, standard, $29 ; extra heavy, $34; 120 gallon, standard, $34 ; extra heavy, $40 ; 144 gallon, standard, $47 ; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—New buildings are well under way and stocks are moving satisfactorily. We quote: Hot water, 50 and 2½ per cent. ; steam, 50 and 5 per cent. ; wall radiators, 50 per cent.

SOLDER—The situation shows no change, but prices quoted are being shaded. We quote: Bar solder, half-and-half, guaranteed, 26c. ; wiping, 22c.

ENAMELWARE — We quote as follows : Plate E1, 5 feet, first quality, $20.65, special $18.65 ; plate E11, 5 feet, first quality, $19.15, special $17.15 ; plate E21, 5 feet, first quality, $19.15, special $17.15 ; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

WATER SYSTEM FOR FERGUS.

The agitation for a system of waterworks at Fergus, Ont., is taking shape, and meetings are being held to boom the project. One plan is to buy out the electric light plant and use it to pump water, while another is to obtain spring water from the Ryan Company, letting them do all the work and charge on the meter system according to the amount of water pumped. Their present pump has a capacity of almost 60,000 gallons per day, and the engineer states that the pump has been on for ten days continuously during the whole twenty-four hours, and the supply never diminished. High insurance rates are being urged as one reason for installing a system.

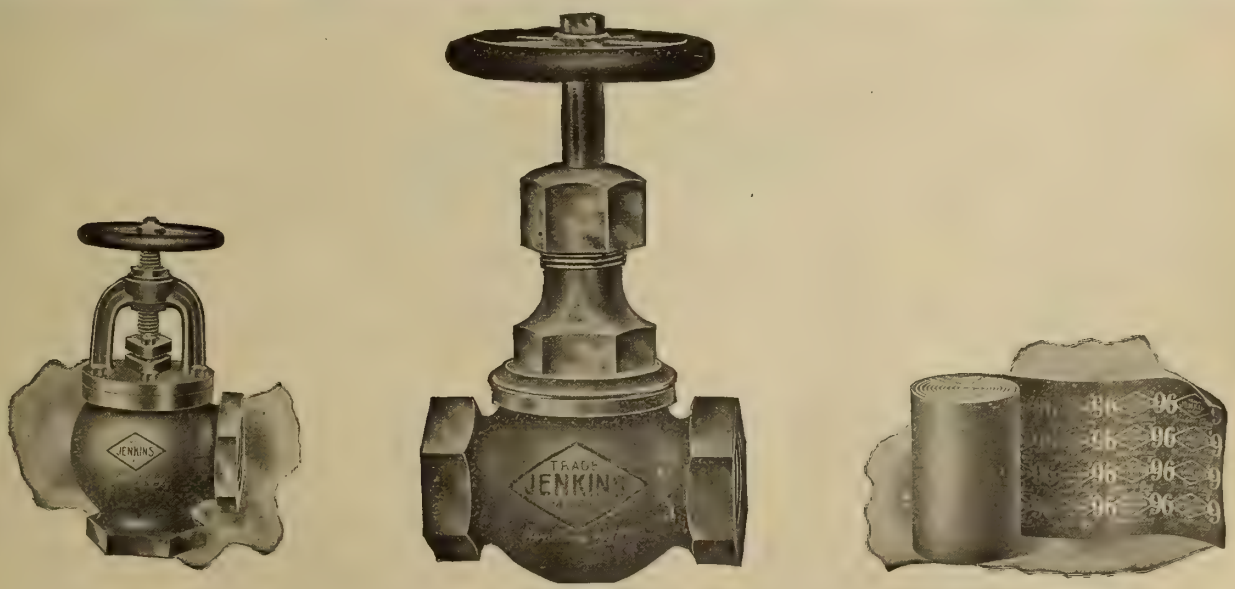
PIPE PRICE BOOK.

The Burns Pipe Price Extender, a means of obtaining instantly correct extensions at present list prices of all sizes and amounts of black and galvanized pipe, by Eugene Burns, is a booklet recently published by the David Williams Company, New York, the price being 50 cents. As the Canadian list is entirely different from the American list the tables in the booklet are of little value to Canadian users of pipe.

Prosperity often drops in the hand of those who are totally unfit to understand what it means.

"Standard" Plate P-1552

For PUBLIC INSTITUTIONS, ASYLUMS, SCHOOLS, FACTORIES, Etc.



Write for our 80-page catalogue FREE on request of "Standard" Modern Sanitary Appliances for Public Institutions, Schools and Factories. It is the standard reference on these subjects.

A sanitary fixture sold under the "Standard" guarantee label is absolutely the best for the particular use for which it is designed and planned. We manufacture a complete line of Range Closets, Urinals, Drinking Fountains, Sectional Lavatories for all kinds of Public Institutions.

The wear and strain to which sanitary fixtures in public institutions are subjected, makes it imperative that only the best goods be installed. "Standard" fixtures have withstood the test of hardest public service.

The Boiler that Makes Most Money for You—

The Oxford Hot Water Boiler

The Oxford is the easiest boiler to instal because it comes to you so far put together that a tenth the work connects it up ready for use.

It's the easiest boiler to sell because any buyer, whether he knows about boilers or doesn't, can see for himself the fuel-saving and work-saving value of the Oxford, due to the in-sloped firepot walls, the extra-deep firepot, the hollow triangular gratebars, the double-size first water section.

Why don't you ask for the Oxford Boiler proposition in detail? It will come to you by return mail—and it's worth reading pretty carefully.

CURRENT MARKET QUOTATIONS.

June 23, 1906.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

It Won't Cost You Anything

to know that Paterson's Wire Edged Ready Roofing is made from Pure Wool Felt saturated with Refined Coal Tar, and the different plies cemented together with the highest grade of Bitumen. Our Roofing contains nothing that will evaporate at less than 300° Fahrenheit, and that's why it lasts so long.

Mr. Hardware Dealer—

You will increase your business handling the

MONTREAL BEAUTY NIGHT LAMP

Used in preference to gas and electric light for halls, bedrooms, bathrooms, cellars, etc. It gives a beautiful soft light, burns coal oil, **costs but ¼c. per night**; one filling will burn 40 hours without odor. Size 4 inches by 6 inches. Retail at 75 cts. Liberal discount to the trade. Correspondence invited. Agents wanted.

L. J. A. SURVEYER,

6 ST. LAWRENCE MAIN ST. MONTREAL

NO URGING SHOULD BE NEEDED

The Features of the

Metallic Ash-Sifter

are so meritorious that no hardwareman should have to be told to order.

Because the features are there sales will be there.

The METALLIC ASH-SIFTER, selling at practically the same price as most wooden sifters, of course hits the latter hard.

Our Advice to you is "Get in a supply of Metallic Ash Sifters."

C. M. CUTTS & CO.

Sole Makers, - TORONTO JCT., ONT.

STAY-ON

Horse Blankets

The difficulty with most Horse Blankets is that no matter how you attach them to the horse, they will work off In the special make of our **STAY-ON BLANKETS** this difficulty is overcome. We have spent labor and money to perfect all kinds of horse clothing, and we are pleased to demonstrate to all the advantages derived from the use of our specialties. You pay no more for our goods than you do for inferior qualities.

West of Winnipeg

HARDWARE, DRY GOODS, GROCERIES

EDMONTON, ALTA.

OPPORTUNITIES

MANUFACTURERS and WHOLESALERS

LOOKING FOR OPENINGS WOULD DO WELL TO INVESTIGATE THE ADVANTAGES OFFERED AT

EDMONTON, ALBERTA

ALL THE ESSENTIAL ELEMENTS OF SUCCESS ARE PRESENT

Cheap Power

Edmonton is the centre of enormous coal deposits and will shortly be supplying a large portion of two or three provinces with coal. The electric light and power plant is operated as a civic enterprise, and the city is prepared to offer very attractive rates for power to approved industries.

Raw Material

for many industries is available in the immediate neighborhood. In many other lines it is cheaper to bring in raw material than to pay freight on the finished article.

A Practical Monopoly

Even at the present time over 700 retail stores look to Edmonton wholesale and industrial establishments as their source of supply. The number will double in the next three years. When railways now under construction are completed, over 150 railway towns and villages will look to Edmonton as their commercial metropolis. Eastern manufacturers have to pay freight for 2000 miles to reach this territory.

Ample Transportation Facilities

All the great transcontinental systems meet in Edmonton, ensuring favorable rates and efficient service to all parts of the world, permitting the assembling of raw material and the distribution of products.

HOW LONG do you suppose Western enterprise will be content to send Raw Material 2000 miles east, and pay freight back on the finished product?

Industries at Edmonton could put Eastern Manufacturers out of business in Western Territory.

THESE INDUSTRIES ARE NEEDED and would meet with phenomenal success:

Meat Packing Plant ***Soap Works*** ***Tannery***
Foundry and Machine Shop ***Biscuit Factory***

THERE ARE OTHERS for which there are also excellent openings.

AS A WHOLESALE CENTRE Edmonton offers opportunities second only to those afforded for industrial expansion.

The Secretary, Board of Trade, Edmonton, Alberta, invites correspondence.

WRITE FOR PRICES

THOS. BIRKETT & SON CO., LIMITED
OTTAWA, ONT.

Freezes two flavors of Ice Cream or an Ice or Sherbet and Ice Cream at one and same time, in one freezer.

SOMETHING ENTIRELY NEW —NEVER DONE BEFORE.

THE can is divided in two parts by a vertical partition. One flavor is placed in one, the other in opposite side of can, in each of which the scrapers, etc., operate. The can cannot be turned as in old style freezers, because of the partition. It is therefore swung to and fro by a rocking motion of the crank. This is a more comfortable and much easier movement. It is very much less tiresome than turning a crank. One can sit back in a chair with freezer alongside and rock the crank to and fro without discomfort or undue exertion and even read at same time. Although two flavors are frozen at once and with less exertion, no more time is required than in old style freezers.

The **Pails have electric welded wire hoops,** which are guaranteed not to break or fall off; Cans are of heavy tinplate with **drawn steel bottoms** that are guaranteed not to fall out or break and do not leak, the strongest and most durable Freezer Can made; the **Automatic Twin Scrapers** by their positive action insure perfect scraping of frozen particles from side of can. All inside parts are heavily coated with pure block tin, and outside parts all thoroughly galvanized.

SOLD BY LEADING JOBBERS.

SMOKELESS, ODORLESS OIL HEATERS

BRASS FOUNT AND BURNER, PORTABLE COVER, REMOVABLE FOUNT, FLOAT INDICATOR, STEEL CONSTRUCTION.

The Oil Heater has Come to Stay.

It's only a matter of a short time till they will be in use in more than half the households in Canada.

We have accepted the exclusive Canadian agency for **Aluminum Oil Heaters.**

The Best Oil Heaters Made.

This is not mere talk, but the truth. Owing to lack of space we can only show **a few of the superior points** of these heaters, but if you are interested enough to write us, we will send you full particulars.

Here's Where They Differ from All Others.

Perfect combustion, safety in operation, free from smoke and odor, easy re-wicking, simple cork float indicator, strength and durability, beauty.

How About the Agency for Your Town?

If you want it, write us to that effect, and tell us the largest quantity you would buy—will quote prices that will get the order.

We book orders now for delivery some time in August, and date Sept. 1st.

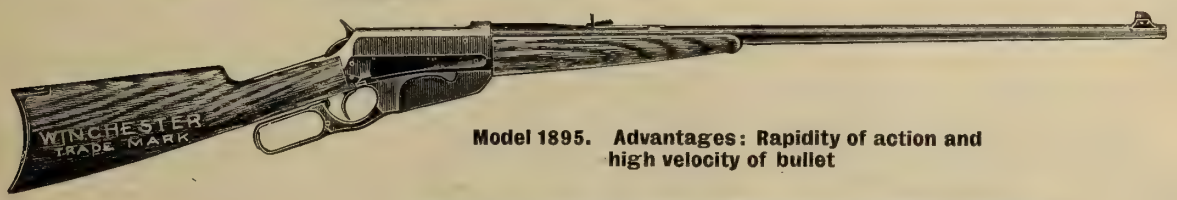
LONDON ***TORONTO***

What Rifle is Better Known than the Winchester?

It has been the standard for many years.
It was an important factor in the opening up of the Great West. Other rifles have come upon the market, but no other rifle has remained a steady favorite.
It is made in every desirable form of action and in every desirable calibre, suited to every purpose.
Why not handle goods with an established reputation? The trouble of selling them is less.
These are all good sellers, and up-to-date.



Model 1904. Single Shot, 22 calibre, "Take Down"

Model 1906. "Take Down," Light Weight Repeater, 15 shots

Model 1894. Carbine, 7 shots

Model 1895. Advantages: Rapidity of action and high velocity of bullet

Model 1903. Automatic Repeating Rifle, 10 shots

Model 1905. Self-Loading Rifle, 6 shots. Made for 32 and 35 calibre cartridges

Our new "Sporting and Fall Goods" catalogue describes these and many other rifles and guns.

M. L. G. Items

What Dealers are Doing. What Papers are Saying.

FIRST INSTALMENT

A carload of the glass arrived in town last night. Some of it can be seen at J. Hudon's store.

The new dwelling of the Bee Hive people will be built without a dark room. The architect has specified Maximum Light Glass.

"Billy" Chalney is off to London to see the Hobbs people about their glass specialties.

Fire broke out in Smith & Brother's leather works last night, and all the windows were destroyed through heat. The local hardwareman made a big scoop. He secured the contract for the glazing, which is to include a daylight diffuser called "Maximum Light."

We invite our patrons to inspect our re-modelled offices. Light in every nook and corner now they installed Maximum Light Glass.

Come and bring your friends.

Dillon Sales are Growing Bigger

A Hardwareman wrote the other day: "I sold twice as much of your fencing this year as I did last." No reason was given, but we think we know—"Dillon" merits are getting a wider recognition.

It is one thing for us to make first class fencing like

DILLON HINGE-STAY FENCE

and another thing for Hardwaremen to believe it is first-class fencing. But if people have faith in it they will make the purchase and if they cannot get the "Dillon" in their own town they will write for it. The fact that this is being done is the best evidence that "Dillon" sales are on the increase and the demand exceeds the number of dealers retailing it.

Are you going to secure the trade that rightly belongs to you?

H&R REVOLVERS

Are known around the world for their safety, accuracy, durability, perfect design and general superiority.

Only the most skilled mechanics and only the finest quality of material employed in their manufacture. Every piece is finished to the 1000th part of an inch and fits perfectly. ***No Rattle*** in "H & R" such as a quick shake reveals in other makes.

Every revolver that leaves the factory has passed the most rigid inspection and is guaranteed perfect. Barrel and cylinder drilled from solid piece of finest forged steel; solid steel frame; handsome rubber stock affording good grip.

Noted for smooth action, perfect accuracy and power. Don't experiment with an unreliable make because low price is offered as a tempting bait.

The retail price ranges from $2.50 to $8.00 and each model is the greatest value ever offered for the price. They are the kind that do not come back, but give permanent satisfaction.

Put in a full line and you will be pleased with the results. Your jobber can supply you.

Wood Turners and Enamellers

SCREW CABINETS

Save time, save space, save your stock.

This case which we illustrate is so well made it will last a life time. It takes up very little room and enables you to keep all your screws together. No danger of your stock getting scattered about or becoming dirty and rusty.

It contains 74 Bennett Dust-proof Steel Drawers, including divisions, so drawers can be divided into 150 compartments. Each drawer is fitted with brass pull and card clip, and has a depression in side for marking cost and selling price of contents.

The case has a steel back which prevents the case from warping and keeps contents in as good condition as if they were in the original packages.

This case is dust-proof. Size of case—26½ inches wide, 40 inches high, 11 inches deep. Weight—100 lbs.

Price—$20 00 All exposed wood is oak in either rich antique or golden oak finish.

ELECTRO-THERMIC SMELTING EXPERIMENTS

A History of the "Soo" Experiments, Based on the Preliminary Report, Recently Issued by the Mines Branch, Department of the Interior.

In December, 1903, the Dominion Government appointed a commission to go abroad and investigate the different electro-thermic processes for the smelting of iron ores, and the making of steel, then being operated in Europe. The only experiments, however, which the members were able to witness were those made by Dr. Heroult at La Praz, and Mr. Keller at Livet, France.

In the former case, the results were not such as to permit any reliable conclusion to be drawn, and, in the latter, experiments with widely divergent issues, were conducted on a very porous hematite ore containing a small percentage of sulphur. As Canadian ores are largely magnetite, with a comparatively high sulphur content, none of these experiments could be said to have been satisfactory, as they left undecided not only the amount of electric energy required per ton of product, but also the following important points, referring to Canadian conditions: "1st. Can magnetite, which is our chief ore and which is to some extent a conductor of electricity, be successfully and economically smelted by the electric process? 2nd. Can iron ores with comparatively high sulphur content but not containing manganese be made into pig iron of marketable composition? 3rd. The experiments made at Livet with charcoal as a reducing agent in substitution for coke having failed, could the process be so modified that charcoal, which can be cheaply made from mill refuse and other sources of wood supply useless for other purposes, could be substituted for coke? This is especially important since charcoal and peat-coke constitute home products, while coal-coke for metallurgical processes requires to be imported into the Provinces of Ontario and Quebec."

The solution of these problems was necessary before any judgment could be passed on the probable success of electric smelting in the Canadian ore fields, where water power is plentiful, but metallurgical coke is expensive, through lack of coal. Therefore, the Government authorized a series of experiments in electro-thermic smelting of Canadian ores, which were to be carried on under Government auspices. As the Lake Superior Corporation offered every facility for carrying out this purpose, the experiments were conducted at Sault Ste. Marie by Dr. P. Heroult himself.

Preparations for Experiments.

The furnace used for the experiments proved to be unfitted for some of the charges, and defects were shown which could be remedied in those of larger capacity should the process be applied commercially.

In charging the furnace, which was lined with common fire brick, a crucible consisting entirely of carbon, was adopted. The electrodes were manufactured in Sweden on the Heroult principle and the contact was conveniently arranged for regulation by hand. The current was led from the transformer to the bottom plate contact of the furnace by conductors consisting each of thirty aluminum cables 5-8 inch in diameter. Measuring instruments were provided so that it would be possible to exactly estimate the amount of electric energy consumed.

The Experiments.

About the middle of January the experiments began and were carried on almost continuously until March 5, with the result that some 150 casts were made, producing 55 tons of pig iron. Difficulty was experienced in stoking, as the space between the walls of the furnace and the electrode was too narrow. It was shown, however, that in a furnace so constituted that the electrode could be kept isolated from the charge, production might be considerably increased by the introduction of an air blast.

The ores treated in the experiments included hematite, magnetite from various sources, roasted pyrrhotite and titaniferous iron ore, the latter being from Quebec Province.

The preliminary report on these experiments contains interesting analyses of the raw materials used, and iron produced in many of the most important runs. Experience proved that the use of charcoal or coke as a reducing agent, instead of briquettes, decreased the quantity of slag produced, and materially increased the output. Even though the charcoal was of poor quality, improperly carbonized, this result was shown, and hopes are expressed that by modifying the furnace and using a better quality of charcoal, still better results might be obtained. The smelting of the roasted pyrrhotite produced such a valuable metal that, in this case, the Government experimental plant requires no further modification than an increase in capacity to render the process an immediate commercial success.

Cost of Production.

It is estimated by Dr. Haanel, superintendent of mines, that the largest unit which can at present be constructed on the model of the furnace employed in the experiments, will not exceed 1,500 h.p. On this basis, allowing for a normal annual production and assuming cost of developing 1 electric horse power as $50, the production of pig iron by electro-thermic smelting would approximate $10.69 per ton.

Summary of Results.

The actual conclusions reached from the "Soo" experiments are thus summarized in the preliminary report:

"1st. Magnetite can be as economically smelted by the electro-thermic process as hematite.

"2nd. Ores of high sulphur content not containing manganese can be made into pig iron containing only a few thousandths of a per cent. of sulphur.

"3rd. The silicon content can be varied as required for the class of pig to be produced.

"4th. Charcoal, which can be cheaply produced from mill refuse or wood which could not otherwise be utilized, can be substituted for coke as a reducing agent, without being briquetted with the ore.

"5th. A ferro-nickel pig can be produced practically free from sulphur and of fine quality from roasted nickeliferous pyrrhotite.

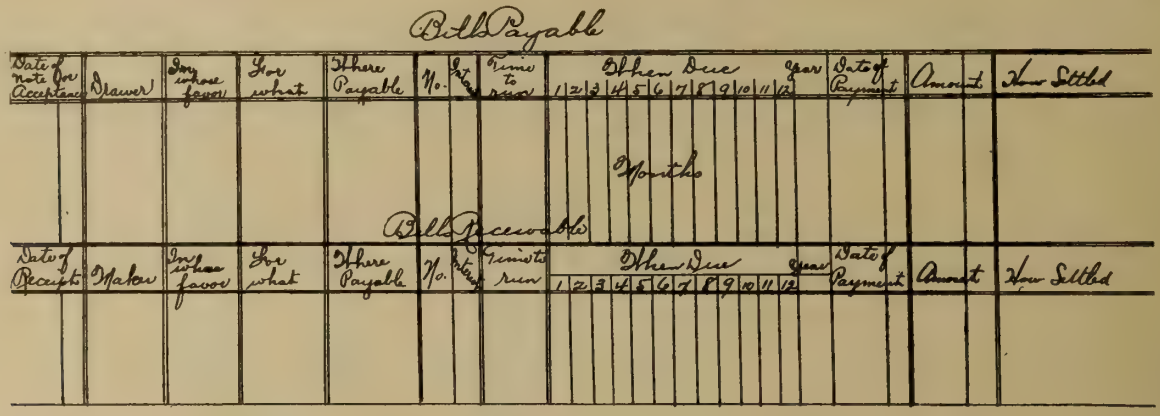
"6th. The experiment made with a titaniferous iron ore containing 17.82 per cent of titanic acid permits the conclusion that titaniferous iron ores up to perhaps 5 per cent. titanic acid can be successfully treated by the electric process."

Apparently all that remains to assure the success of electric smelting of Canadian ores is a furnace of altered model, which will obviate the difficulties experienced in the experimental plant. The future of our northern ore fields is staked on the outcome of efforts along these lines. If they are satisfactory, the presence of abundant water power and unknown quantities of magnetite ores will off-set the absence of coal, and there will be nothing to prevent the rapid building up of Canada's iron and steel industries.

CHANGE IN ACETYLENE BUSIESS.

The arrangement of the Shawinigan Carbide Company with the Continental Heat & Light Co., Montreal, by which the latter company acted as sole selling agents for the former, has recently expired. The Shawinigan Company have taken advantage of this fact to secure the interests and good will of their former agents in carbide and acetylene matters.

A sales department has now been established by the Shawinigan Carbide Co. in their new offices, Bank of Ottawa building, Montreal, and they are undertaking on their own behalf the exclusive sale of Shawinigan carbide for domestic and export use. They will carry in stock at their Montreal warehouse a large supply of carbide and acetylene accessories, thus enabling them to make prompt shipments at all times.



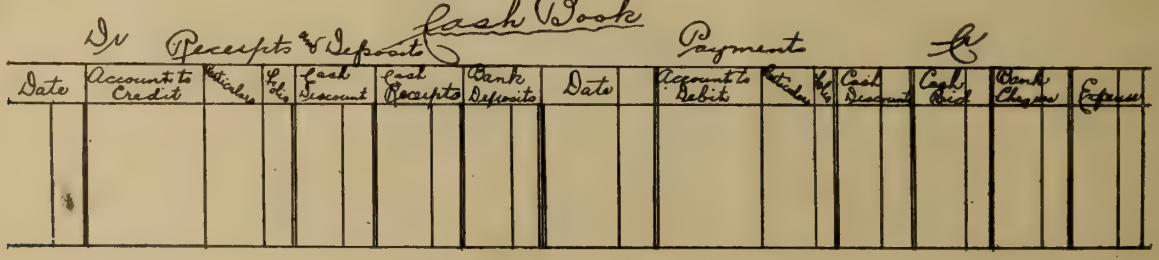
BUSINESS MANAGEMENT

Article III.—By Howard R. Wellington

RETAIL MERCHANTS' ACCOUNTS AND RECORDS.

It might be well to introduce here the different books to be used in recording the transactions of a comparatively small business—the journal, cash book, ledger (as shown in last issue), and, if found necessary, the bill book. The various methods of recording sales will be taken up in a later issue.

As this method necessitates writing the various lines sold three times — first when the salesman takes the order, secondly when the lines are posted in the ledger, and thirdly when the monthly statement is sent out — systems have been devised whereby one additional writing only will be necessary by using a loose-leaf ledger with a monthly invoice or statement form in duplicate inserted opposite each ledger account. The lines sold are entered from the original sales slip to this invoice form, and the total of each sale posted to the ledger opposite. The original is sent to the customer as a statement and invoice combined, and the duplicate remains for reference in the ledger. (Illustrations will appear in a subsequent issue.)



The ledger is used for the final summing up of all business transactions, where all information as to balances at the debit or credit of accounts may be ascertained.

Debit.

When there is a balance at the debit of an account it must be one of two things—an asset to the business or a loss. Anything of value to the business, such as real estate, cash on hand, merchandise on hand, accounts owing to the dealer, is an asset. Any other balance at the debit of an account must be in the nature of an expense, and is therefore a loss. Debit what is received.

The Journal.

This book, sometimes termed "the day book," is abandoned by the majority now-a-days so far as recording daily transactions of cash or sales, etc., is concerned, the cash book and sales records being used for posting direct to the ledger. However, when opening a set of books the journal is used, or in making entries which, by their nature could not properly be made through the other mediums, the journal is a necessity. Entries adjusting differences in accounts, writing off bad debts, closing entries, etc., should all be made through the medium of the journal.

Credit.

When there is a balance at the credit of an account it must be either a liability or a gain. If the balance represents a personal account owed by the dealer, or an acceptance made by him, it is a liability; if other than an amount owed it must be a gain. Credit what is given.

In a retail business it is very desirable to have, in addition to the date of sale and the amount, a full description of the goods in the ledger, in order that these particulars may be readily obtained for customers when rendering statements.

The Bill Book

In a business where accounts are settled by note mostly, it would be advisable to have a bills receivable and bills payable account in a separate book ruled specially for that purpose, the bills receivable in one end of the book and the bills payable in the other.

At the end of a period the total of bills payable book may be posted to the credit of a bills payable account in ledger, and the total of bills receivable posted to the debit of bills receivable account in the ledger, if desired, or the amounts taken from the bill book itself for the trial balance.

This form combines the cash and bank accounts. When cash is received from a customer, he is credited with the amount received, the cash being entered in "cash receipts" column, and cash discount (if any) is entered in column headed "cash discount." When a deposit is made in the bank the amount is entered in the "bank deposit" column on the debit side and in the "cash paid" column on the credit side. When cash is paid out the creditor or expense account is charged, the amount being entered in the "cash paid" column or "expense" column, as the case may be, the total of the latter column being posted to the ledger at the end of each month instead of posting each entry separately. When a cheque is made on the bank, or a bill accepted payable at the bank, the amount is entered in the "bank cheques" column. At the end of the month the amount on hand and in the bank may be readily ascertained by adding the cash and bank columns on the receipt side and deducting the total of the cash and bank columns on the payment side.

(To be continued.)

THE ADVANTAGE OF SYSTEM IN BUSINESS.

Systems in business have been used from time immemorial as aids to right progression. Joseph, of old, averted a famine through a system of storing grain, and since his time every one has acknowledged that where any sort of work can be reduced to a system it is all the better for it to be so. It is not always a fact that systems are admired. The young head is much more inclined to advance in business by enthusiasm and personal effort. As he gets older he perceives that some things, at any rate, are best tackled by system, and from that point he gradually comes to include more and more in the system category.

Extremes to be Avoided.

It is to be feared that this admittance has its reverse side; older heads sometimes come, by sheer habit, to include everything in system methods, to the exclusion of individual enterprise and new ideas. It is unfortunate when this is so, because it generally means that activity is deadened until some change is made in the personality. On the whole, however, more danger results from neglect of system than from its over-adoption, and if a warning is needed at all it is to the effect that a famine in success may be averted by a judicious dependence upon system. Systems are, however, treacherous things, almost as treacherous as figures themselves. A system sometimes begins to percolate on a man's ideas until he no longer recognizes anything out of the usual groove, and he becomes an automaton in his methods. However much it may benefit his bookkeeping and his stocktaking, no amount of argument will make it plain that such an effect is an advantage for his business success. The individual who is proprietor of a business has to remember that, at a pinch, he can obtain assistance for his systematic work, but he cannot obtain a new supply of energy and enthusiasm. These must not be allowed to rust for any system at all, otherwise the neglect may come to be dearly paid for.

Two Sides to a Business.

The most advantageous way of utilizing system without the risk of much loss of initiative power, is probably to recognize from the first that trade consists of two parts; that which can be systematized, such as bookkeeping, stocktaking, prices, and buying work, and that which can decidedly not be systematized, such as selection of neighborhood, specialty of goods, personal participation, and other features of initiative work. Within the sphere of the one, system must be supreme; any laxity of adoption quickly tells its tale in unpleasant leakages, inexplicable losses, and all sorts of errors and confusion. Within the other sphere, inventiveness must be supreme, and any attempt to supplant it by automatic aggrandizement and bulk increase ends in confusion.

To take an example, a turnover, provided it is of a healthy nature at all, will of itself increase from month to month according to the expansion of the needs; but it is a very unambitious method of courting success, by waiting for it to come to your very doors. The probability is your neighbor will not — which means a confession of comparative failure. On the other hand, to neglect in any way the systematic checking and utilization of the figurative part of the business is obviously to court danger. It is safer for an individual to be too systematic rather than unsystematic, but it should be recognized that to be either extreme is not necessary.

Initiation must have a place in any concern, and initiation from its very nature is not system; it is above system, it must not be trammelled by system. No one yet, it may be said, made a fortune by systematically planning to make it; the system may have secured success when it has come, and may do, moreover, the inestimable service of preventing any serious slipping back, but the real penetrative power has been the fertility of ideas and enthusiasm of enterprise.

Let it be believed, therefore, that system must only be used within its sphere but that within that sphere it is supreme; and inventiveness has only to be used within its province, and likewise within that province it is supreme. Admittedly the two spheres are not easily adjusted; at one time it appears that it is all system which is required, at another that nothing but inventiveness will help matters. The point with each one is to attempt to realize the boundary between the two, and not to neglect or misuse the one at the expense of the other, and it is a point worth trying.

A SIMPLE METHOD OF FIGURING PROFIT.

A business writer has added another article to the list of those recently published on the subject of how to figure a profit in the retail business, and as a practical method of figuring he suggests the following methods:

Subtract the cost from the selling price, the difference, of course, being the profit. Divide the latter (decimally) by the selling price, and the result will be the true profit, thus: Cost, $5; selling price, $8; profit, $3, and $8 is contained in $3 .375 times, showing the profit in this instance to be 37½ per cent.

Below will be found a table that may be helpful to the man in a hurry:

To make a profit of 16 2-3 per cent., add 20 per cent. to cost.

To make a profit of 20 per cent., add 25 per cent. to cost.

To make a profit of 15 per cent., add 33 1-3 per cent. to cost.

To make a profit of 33 1-3 per cent., add 50 per cent. to cost.

To make a profit of 50 per cent., add 100 per cent. to cost.

TRAVELERS' OFFICERS.

The following officers were elected at the thirteenth annual grand council of the United Commercial Travelers' Association of Minnesota, Dakotas, Manitoba, Alberta and Saskatchewan, held at Albert Lea, Minn.: Grand counsellor, H. J. McGarvey, Huron, N.D.; junior grand counsellor, C. A. Van Dever, Minneapolis; grand past counsellor, Walter G. Jacobs, Aberdeen; secretary, J. M. Dresser, St. Paul; treasurer, E. C. Walters, Minneapolis; grand conductor, C. W. Sutton, Duluth; page, F. J. C. Cox, Winnipeg; sentinel, James F. Ells, Minneapolis.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

736. Lawn mowers. — A Manchester firm asks for catalogues and best prices of lawn mowers from Canadian manufacturers.

737. Garden spades.—A Manchester firm wish to get prices of garden spades from Canadian manufacturers.

740. Spokes.—A Lancashire firm wish to get prices of spokes all sizes dressed and rough from Canadian manufacturers.

755. Oil engines, etc.—A large Yorkshire engineering firm, manufacturers of oil engines, gas engines, and suction gas producers, desire to place their goods in Canada, and invite correspondence.

FUNNEL FOR FILLING TANKS AND BARRELS.

When tanks, barrels, kegs or cans are being filled with gasoline or any other liquid, when the new funnel shown is being used a bulb in a heavy glass tube from the pipe of the funnel rises and can be seen from both the inside and outside, so that there is no danger of waste or overflow. A splash guard and sieve are provided also, and it is not necessary to watch the bung-hole, as of old—a glance at the funnel tells it all.

New Barrel Funnel.

NEW FACTORY FOR OIL TANKS.

S. F. Bowser & Co., the only manufacturers of self-measuring oil outfits in Canada, whose factory is now located at 530 Front street west, Toronto, have just awarded contracts for the erection of a very fine office and factory building on Fraser street, one block south of King street west. It will be a two-storey and basement brick building, 50 by 125 feet. The office and machine shop will be on the first floor and the finishing department on the second floor. The motive power will be electricity with individual motors for the various machines. Factory and office will be steam-heated. In connection with a large and well appointed office there will be a display room. The building will have a plate glass front, affording plenty of light. One reason for the increase of the company's business is probably found in the fact that the insurance regulations in regard to the storage of oils of different kinds are becoming more rigid and it devolves upon the users of oils to provide storage which the insurance companies will recognize as being safe under all conditions. This applies not only to the hardware and paint dealers, but to the manufacturers as well, and that branch of the Bowser business which covers a line of adjustable measure cabinets for lubricating oils has assumed large proportions within the last two years.

RETAIL HARDWARE ASSOCIATION NEWS

Official news of the Ontario and Western Canada Associations will be published in this department. All correspondence regarding association matters should be sent to the secretaries. If for publication send to the Editor of Hardware and Metal, Toronto.

Officers Retail Hardware and Stove Dealers Association of Western Canada:

President—A. J. Falconer, Deloraine.
First Vice-President—J. B Curran, Brandon.
Second Vice-President—W. M. Gordon, Winnipeg.
Secretary-Treasurer—J. E. McRobie, Winnipeg.

Executive—Alberta, A. E Clements, Olds; C. F. Comey, Calgary; A. R. Auger, Okotoks.

Manitoba—H. S. Price, Boissevain; A. P. Macdonald, Winnipeg; O. Gilmer. Winnipeg.

Saskatchewan—G. K. Smith, Moose Jaw; S. A. Clark, Saskatoon; J. R. Fox, Weyburn.

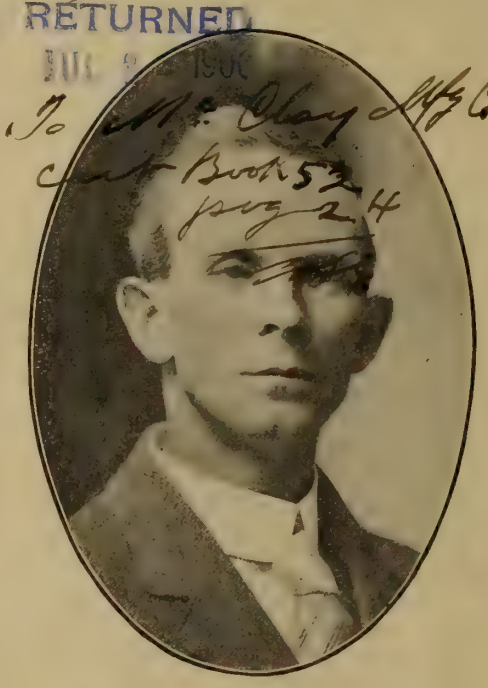
Officers Western Board (elected by general merchants and hardwaremen in joint session): President, W. G. McLaren, Souris, Man.; vice-president, G. K. Smith, Moose Jaw, Sask.; H. C. Hamelin, Winnipeg, Man.; secretary, W. A. Coulson, Winnipeg, Man.; treasurer, J. E. McRobie, Winnipeg, Man.; auditor, J. A. Lindsay, Winnipeg. Man.
Association offices, 53 Scott building, Main street, Winnipeg.

Officers Ontario Retail Hardware and Stove Dealers' Association:

President—A. W. Humphries, Parkhill.
1st Vice-President—W. G. Scott, Mount Forest.
2nd Vice-President—J. R. Hambly, Barrie.
Treasurer—John Caslor, Toronto.
Secretary—Weston Wrigley, 10 Front St. East, Toronto.

Executive Committee—The officers and J. W. Peart, St. Mary's; M. R. Marshall, Dunnville; D. Brocklebank, Arthur; F. W. Jeffery, Midland; E. P. Paulin, Goderich, and Frank Taylor, Carleton Place.
Auditors—J. W. Peacock and C. F. Moorhouse, Toronto.

ANOTHER EXECUTIVE MEMBER.



The illustration this week introduces E. P. Paulin, of Goderich, and lately of Dashwood, to the members of the association who did not meet him at the May convention—when he was chosen a member of the executive committee after having proved himself a capable worker on committees and an able debater on the convention floor.

Mr. Paulin is a tinsmith by trade, having served his apprenticeship with Harland Bros., of Clinton, and since then having worked in a number of large towns and cities in Ontario and in the United States. In 1897 he joined Mr. Young in a hardware, stove and tin business in Wingham, the firm being styled Young & Paulin, and for four years an unusually large business was done. At the end of that time Mr. Young took over the business and Mr. Paulin located in Dashwood, a prosperous farming village, where he carried on a successful hardware, stove and tinsmithing business for five years. He is now located in Goderich, having recently bought the hardware business of J. B. Hawkins.

Before the convention was held in Toronto, May 15 and 16, Mr. Paulin was somewhat doubtful as to the outcome of a permanent organization, but after attending the convention he wrote that he was assured of the ultimate success of the association, adding, "No hardware dealer can afford to be on the outside of this organization."

IMPROVING SALESMANSHIP.

At the convention of the Kentucky Retail Hardware Association, Frank Semple, of the Simmons Hardware Co., St. Louis, delivered an address on "Salesmanship," saying in part: "The way to increase profits in business is to increase the efficiency of the selling end. We all know that a salesman who understands his business will sell goods whether the customer wants them or not. If you want to increase your earning power, increase the selling power of your men. Have the salesman who sells your goods get your clerks together and explain how and tell why the particular article he is selling possesses merit. Then when a clerk gets to understand the merits and demerits of a specific class of goods give him that line and he will handle it at a profit. Cultivate affability in your clerks and a desire to please." One speaker said he sent one of his men to the plant of a stove manufacturer to acquire a knowledge of the construction and operation of a gasoline stove and with good results. "Where customers, particularly ladies, had formerly been prejudiced against the gasoline stove, considering it dangerous, the young man clerk in taking the stove apart is able to make its construction and operation so simple that he is now hardly missing a sale. This experience also increased his capacity for selling coal oil stoves." The speaker thought the idea could well be adapted in many other hardware lines to advantage.

E. P. PAULIN, Goderich,
Member of the Executive Committee of the Ontario Association.

A QUESTION BOX.

At the recent convention of the Illinois Retail Hardware Association the following were a few of the questions taken out of the "Question Box" and discussed:

Ques.—Does it pay a hardwareman to display 5 and 10 cent articles in his store?

Ans.—This was discussed by several of the members, and it was their opinion that it was unwise for retail merchants to install a 5 and 10 cent department, inasmuch as they believed that such a line of goods was out of place in the hardware store.

* * *

Ques.—Is it good policy to make concessions in prices to farmers' clubs on staple articles?

Ans.—One of the members stated that he did not believe in making a reduction on regular stock. However, a granger in his district came to him and wished to have reduced prices on a large amount of twine, wire, nails, etc. The orders were placed directly with the manufacturers, and the commission on this business was given to this dealer. In this way the benefits were derived by the merchant himself, and the odium of making reduced prices was not known in the community as it would have been had the stock been taken from the store.

* * *

Ques.—Should a merchant make his remittances by local check or bank draft?

Ans.—Half of the merchants that discussed this question were paying by local checks and found that remittances by bank drafts were more satisfactory and that no exchange was charged, as the banks were only too glad to extend them that courtesy.

* * *

Ques.—What is a healthy limit for the expense account as compared with total sales, or what proportion should be figured between the two?

Ans.—One member carefully outlined his method of recording all expenses whereby at the end of the month he was in a position to tell at a glance the expense attached to conducting his business. One of the delegates said that he figures his expense at only 10 per cent., but this was considered very low. Another stated that he always added 10 per cent. to the cost of his goods as the expense for conducting his business and then added a further per cent. for his profit. Another merchant said that he had a talk with a large hardware retailer in Chicago who employs 60 people, who told him that his average expense was 25 per cent.

STOVES AND TINWARE

AN AMERICAN TELLS HOW TO TO SELL A STOVE.

At the convention of the Arkansas Retail Hardware Association recently some good points on stove salesmanship were given in an address delivered by W. N. Brandon, of Little Rock. The speaker said a dealer should confine himself to one make of stoves and ranges as far as possible, for in so doing he would show to his customers that he had confidence in that make or he would not have taken it up. He laid stress upon the necessity of having confidence in the stove, without which it was hard to establish confidence in the prospective buyer. Some of the tactics used by American merchants are new to Canadians, but they are worthy of the consideration of those who would pursue an aggressive policy of salesmanship. In speaking of how to get the customer, the speaker said: "There is no success without advertising, but all advertising is not successful, first have something to advertise, get a list of all the householders in your town and vicinity, then send them circulars, send them letters, send them prices, invite them to your store, advertise in the newspapers, keep your name before the public, sell good goods, and get good prices. Keep something new continually before the trade, and get directly into the home of the farmers, get some advertising feature that is beneficial to the housewife, cook books, etc. Use the manufacturer; he is always ready and willing to assist you and give you his ideas of many years' experience and study. Many times the manufacturers send advertising matter to their customers, express charges prepaid, and instead of being properly distributed, it goes under the counter, or in the waste box in the alleys, etc. Can you, under these conditions, blame the manufacturers for being slow in pushing the advertising matter on the customers. But don't wait for them to send it, but get after them and demand what you want and get it. Advertising brings prospective customers to your store, but does not sell the goods, it is then up to you. You must show him that you have his interest at heart; not only must you show it, but you must have it, and that you are not merely trying to make a sale, but a customer. One sale does not constitute a customer or build up a business, but a sale made in such a manner as to gain confidence does. As soon as the salesman learns what is wanted he should show the cooking equipment desired, going to the exact stove or range to start with. If not satisfied as to what is wanted, do not show the best or cheapest article to begin with, but go to some neat medium-priced piece of goods, for we oft-times misjudge our customer. This information can frequently be obtained without boring the customer before reaching the stove exhibit.

"They should be neatly displayed on the platform from ten to twelve inches high. You will find this elevation adds immeasurably to the perspective. Stoves and ranges should be kept nicely polished, going over them daily as the lady of the house goes over her parlor furniture. On approaching this stove, swing open the oven door; that is a matter of moment, for the size of a capacious oven makes a most pleasing impression. Call attention to the general appearance of the stove or range: smoothness of castings, lustre of nickel work (if any), dimensions of the fire box, size of feed door, the convenience of arrangement of loose hearth and outside shelf, if any, increasing heating capacity, tight-fitting joints. Show plates to be well molded and mounted. Take off the covers and cross pieces, showing out long centres, if any. Call attention to the ridge molding on bottom of the cover, giving rigidity and lessening warpage. Work on any other argument that occurs to a salesman, keeping up a running fire of the advantages that particular stove or range possesses. Then you finally come, as a last resort, to the subject of prices. Do not mention this until every argument is set forth. While you may think they are interested in the cost of the stove or range, the truth is they want the best service for the price, without regard to money involved. Who would think of asking the physician the cost of the cure?

"How to handle the customer when the wife wants one stove and the husband another.

"Take sides with the wife and at the same time use a little diplomacy in explaining to him that she is the one to use the goods and should be pleased, or in other words, have her choice.

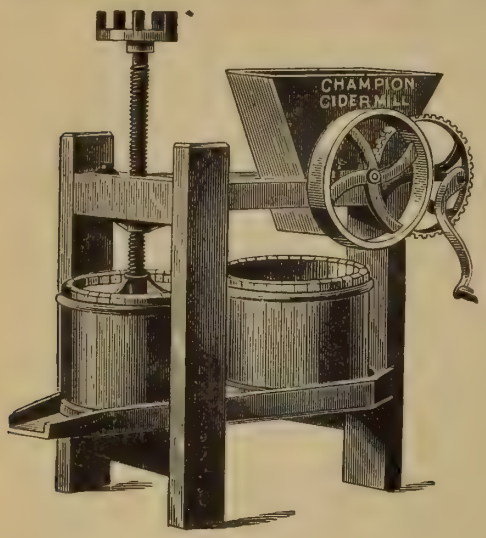
"How to handle the farmer who has not looked around. Show him through your line, if possible get him interested and at the same time avoid pricing him, but urge him to look around and come back and look over your goods, that you can please him with the price.

"A point of imperative importance is to follow up the stove transaction after the sale is made. If possible to do so, have it set up by an experienced stove setter and demonstrate its service. Always urge that your customer advise you promptly if anything arises about the stove or range that is not fully understood, for a word or two in time may spare a disputed account or the baneful influence of a dissatisfied user. I consider this a superb investment, even though some cost be incurred. To place a satisfactory stove or range in any group of homes is sowing a good seed and the soil upon cultivation will invariably bring forth good fruit manifold."

GAS STOVES FOR ONTARIO.

United States Consul James M. Shepard, of Hamilton, responding to a Pennsylvania inquiry, says that while there are several makes of Canadian gas stoves and ranges on the market, investigation in the three principal cities in that consular district shows that American makes have the decided preference. Mr. Shepard continues:

The manager of the natural gas company here informs me that they expect to make 3,000 connections this year, and my reports from Brantford and Galt show proportionate prospects. Those considering this market should send representatives through the whole territory supplied by the Dunnville gas fields at an early day, visiting the cities named and others farther south. The demand is on, and this section is prosperous and progressive. The tariff on stoves is 25 per cent. of the actual selling price at point of origin, and the so-called "anti-dumping clause" recently added to the customs regulations provides severe penalties for undervaluation or "export prices"; hence representatives should become thoroughly familiar with laws and regulations governing imports.



It would certainly seem that with this protection and with such a growing demand for gas stoves as will be created in the natural gas sections of Ontario, Canadian manufacturers should be able to get a large portion of this trade.

HEATING AND COOKING IN JAPAN

The Japanese cooking apparatus is of two kinds—one the "shichirin," a small portable construction of metal or earthenware, costing from 25 cents to $1.25, and heated by means of charcoal; the other the "kamado," a kind of stationary furnace, built of brick and mortar, the price varying from $1.25 to $10, and burning wood as fuel. The houses are usually heated by charcoal braziers, costing from 50 cents to $15, the fuel in use being charcoal, wood, coal, coke and kerosene oil.

Foreigners use cooking stoves, of which some are imported from America, England and France, but the greater number are of Japanese make, while their residences and offices are heated by grates and stoves, most of which are of Japanese manufacture, though those houses built by foreigners are usually fitted out with American or English grates. Only a few furnaces and steam-heating plants are in use. Very creditable stoves and grates are made in Japan, and though somewhat inferior in quality and finish, they are largely taking the place of the imported article on account of the cheap prices at which they are sold. The prices of Japanese manufactured stoves and grates show a great variation, the approximate figures being: Office stoves from $3.50 to $48, cooking stoves from $7.50 to $98, oil stoves from $3.50 to $39.50, and grates from $3.50 to $40.

QUEBEC TRAVELERS' TAX.

A further amendment to the sliding scale tax on foreign commercial travelers doing business in the Province of Quebec, in the form of a six months' license, has not received adequate publicity, and the full import of the change is, as a consequence, not appreciated.

The sliding scale which took effect last March provided for the abandonment of the straight three hundred dollars yearly tax on all foreign travelers except those soliciting for liquor firms, and the substitution of a tax of one hundred dollars yearly on travelers selling only to the wholesale trade, two hundred dollars for those calling upon both wholesale and retail, and four hundred dollars for those selling consumers. The six months' privilege, in effect since May 1, provides for a license from 1st May to 1st of November, or from 1st of November until the 1st of May following, by paying one-half the amount of the full yearly tax. Thus a traveler for a firm outside of Canada calling on the wholesale trade in the Province of Quebec, instead of paying $100 pays only $50 for a six months' license, and a traveler calling upon the wholesale and retail pays $100, while one selling consumers pays $200, instead of $200 and $400 respectively.

This latter provision is decidedly more equitable as it practically cuts in half the obnoxious tax. To avoid taking out more than a six months' license foreign travelers must arrange their trips so as not to overlap the dates mentioned. Thus a traveler might enter the province in October and stay after the 1st of November, which would necessitate him securing another license good until the 1st of May following. Even where the retail trade is called upon, dry goods travelers never spend as long as six months in the province. While the principle of the tax, as has been pointed out in these columns many times, is in restraint of trade, the amendment which really halves the tax has been received with favor because it points in a measure to the final repeal of this revenue-making tax.

Foreign commercial travelers still make strenuous objections to the tax, but the Provincial Revenue Department is closely watching its collection, and evasions, which were at first effected, are now impossible. When interviewed in Montreal, the collector of Quebec provincial revenue outlined clearly the exact interpretation of many dubious points. For instance, a firm outside of Canada desiring to send a traveler to work the Province of Quebec, to avoid paying the tax must have a bona fide place of business in the province at some centre where stock is carried and books kept. A favorite form of evasion, which is useless in this respect, is for a foreign firm to establish an agent in either Montreal or Quebec. While the resident agent has not to take out a license, a traveler from the headquarters of the firm, or any of its foreign branch offices, coming to the province to call on the trade with the agent, must pay the tax.

ELECTRIC SMELTING EXPERIMENTS.

When the first unofficial announcement was made of the results accomplished by electro-thermic smelting in the experiments recently conducted at Sault Ste. Marie, it was thought that a most satisfactory solution had been found to the problem of economically preparing magnetite ore for the market. Such being the case, the future of Northern Ontario as an iron and steel centre would have been assured. But the preliminary report on these experiments, which has just been issued by the Mines Branch of the Department of the Interior, scarcely justifies such a rosy outlook.

It is shown that the ores which are common in Northern Ontario can be successfully smelted by this method, but unless some facts are withheld for a later and fuller report, there is no mention of a saving in the cost of production. The estimated cost per ton of producing pig iron by electro-thermic smelting, which constitutes an item in the report, is as follows:

Ore (55 per cent. metallic iron) at $1.50 per ton	$2.70
Charcoal, ½ ton at $6 per ton	3.00
Electric energy, amortization, etc.	2.43
Labor	1.00
Limestone	.20
18 lbs. of electrode at 2c. per lb.	.36
General expenses	1.00
Total	$10.69

There are, nevertheless, some very satisfactory results arising from the experiments. One which permits of immediate application is the smelting of roasted nickeliferous pyrrhotite by the electro-thermic process. The product of this experiment was so valuable that the only modification of the Government's experimental plant required to make it practical is an increase in its capacity. It was further shown that, despite the conductivity of magnetite, the inductance of the furnace was not increased by its presence, and good commercial iron was produced from it. Another valuable point established was that charcoal and peat coke, which can be produced in the Provinces of Ontario and Quebec, without being briquetted with the ore could be used instead of coal coke.

It is to be hoped that when the more exhaustive report is produced it will give more promise of economical production by the electro-thermic process of smelting.

NEEDS TRADE AGENTS.

Canada during the fiscal year ending June 30, 1905, imported from the United Kingdom for home consumption, goods to the value of $60,342,704, and from the United States goods to the value of $152,431,626. The London (Eng.) Miller draws attention to the fact that the United States have in Canada 189 consular and trade agents, and continues:

"This country has no agents in Canada, and offers no official assistance to our exporters to that colony. A condition of things almost as bad prevails with regard to Australia, South Africa and India, and it is time a reform were instituted. We do not advocate sending a number of highly-paid, expensive and useless officials to these colonies, to idle away their time in attending receptions and balls, but we do need in our colonies a staff of capable and shrewd men, with a grasp of business possibilities, to assist home manufacturers and exporters. It is surely possible to find a number of such men in our country, and we hope that the question will be brought to the front in the next session, so that the existing reproach can be removed."

THE SITUATION IN METALS.

A flutter in antimony last week gave promise of disappointing general expectations. The fact that all the large Montreal houses had at last secured stocks of the metal seemed to accentuate a slight temporary depression on foreign markets, and Canadian prices declined somewhat. A recovery was soon made in Montreal, but Toronto prices remained slightly lower. So far as the Montreal market is concerned, it is reasonably certain that no real decline in value will take place until new deposits of antimonial ore are discovered.

Ingot tin appears, at most recent reports, to be firming up again, but the situation is a confusing one. Many circumstances have combined of late to force the price down. In the first place, arrivals from the producing centres have been much heavier than was expected, thus rendering a high market more difficult to maintain. Moreover, the group of speculators who had been holding the London stock, being satisfied with the figures which tin was commanding, seized the opportunity to unload, and values were immediately depressed.

It is difficult to understand from what sources the extra supplies of tin have been coming. The Straits mines seem to have brought out all their unsold tin when the recent extravagant price was reached, and such outlying districts as Siam and Burmah are also figuring in the visible supply. The Banka situation, however, is not perceptibly improved, and the question of labor there still presents considerable difficulty. Straits shipments for June will aggregate 4,750 tons.

From this mass of contradictory data it is difficult to deduce anything which would definitely show the trend of the market. Two other factors have to be considered, and they are equally contradictory—the consumption and the speculative account. So far as the first is concerned, there is and can be no decrease, in spite of a fluctuating market, when buyers are inclined to hold off their orders. That might look like a higher market again, but there is the compensating fact that many leading operators who were instrumental in manipulating the rise have now turned bears, and are decidedly against any further boom.

Zinc spelter on the Canadian market is now being maintained at a higher price, in response to the great activity in the United States and other foreign countries for some time back. Even at that it is practically impossible to secure spot deliveries for quantity orders.

Pig lead declined this week, prices being about 5 cents per hundred pounds below those given in our last report. There is a good demand, however, and no sign of a much weaker condition is at the moment evident.

Little activity is manifest in the pig iron market, though prices are firm. This is the time of year when few large lots are ordered, and it must be expected that such a condition will continue for a month or so.

INSPIRE YOUR CLERKS.

It is a rare gift for a man to be able to inspire in others the spirit of enthusiasm which invariably carries all before it. But it is one of the most necessary gifts for the retail merchant who would make a real success of his business.

In too many cases clerks are left to work up their own enthusiasm, to learn about the goods they handle from their own research, and to adopt their own selling methods. And it generally happens that this enthusiasm soon dies out, killing also the desire to learn. Apathy in the employer is followed by apathy in the clerk, and necessarily sales are not so large as they should be.

In a great many stores the clerks are actually afraid of "the boss." There is no spirit of fellowship between them, and in such circumstances clerks who are accustomed to work hard in the presence of their employers will shirk as much as possible once they are away from his watchful eye.

Every store should have a definite business policy which can only be adhered to when the proprietor takes the clerks more or less into his confidence, and endeavors to inspire them with his own enthusiasm in selling goods.

Are your clerks afraid of you? Do you notice a scramble when you come among them? Then fraternize with them, and do not be afraid of teaching them something valuable.

BRITISH CONSULS AND CANADIAN TRADE.

The enterprise of Supt. F. C. T. O'Hara, of Canadian commercial agencies, Ottawa, in enlisting the active support of the hundred and sixty odd British consuls throughout the United States in favor of Canadian trade extension, should be highly appreciated, and marks Mr. O'Hara as a man for his job. During the month of March, according to official figures just issued, Canada imported from the United States fifteen million dollars worth of goods, a million and a quarter more than in March last year. In the same time Canada sold to the States a little less than six and a half millions worth, just a million and a half more than in March, 1905. This shows in the first place that Canada's sales to her big neighbor are capable of expansion, and that is the main issue here. Taking the figures for the nine months ending March 31 the increase is even more notable. For three years they are: 1904, $52,000,000; 1905, $55,000,000; 1906, $67,000,000.

In another article some excerpts from replies of the consuls to Mr. O'Hara's circular letter are given. They are all enthusiastic in tone. All of them recognize that in increasing the trade of any part of the Empire they are serving the whole. It is broad ground and as sound as it is roomy. It now remains for Canadian enterprise to take advantage of the way prepared for it.

AMERICAN GOODS IN COMPETITION.

U. S. Consul Geo. N. West, writing from Sydney, N.S., to the Daily Consular and Trade Reports, published by the Department of Commerce and Labor, Washington, and distributed in great numbers throughout the States, after telling of a marked revival of trade in that district, says:

"The value of having personal representatives of American manufacturers visit merchants here has been shown in a strong manner by a statement made to me by a representative of an American firm visiting here lately, when he was successful in opening up six new accounts, whereas during the past two years he had difficulty in retaining former customers, owing to the depression.

"In visiting the different merchants I note in almost every instance the display of American goods in their stores, which have been, with few exceptions, purchased through Canadian wholesale houses, in some instances coming in direct competition with goods of the same class manufactured in Canada. If representatives of American firms visited here, they could no doubt largely increase their sales.

"Within a radius of 20 miles of Sydney there is disbursed for wages to employes of the coal, iron and steel companies, and other manufacturing enterprises, about $500,000 monthly, and this sum will rather be increased than decreased in the future."

This is the way the American consular service is working for the extension of trade in United States manufactured products. Canadian manufacturers and wholesalers should be able to so supply the Cape Breton merchants and miners that they would have no room for American products.

HARDWARE TRADE GOSSIP

Ontario.

C. J. Harper, plumber, of Goderich, was in Toronto during the week.

R. W. Dunn, plumber, of Port Hope, was in Toronto for a day or two.

P. M. Young, hardware merchant, of Almonte, is ill with a hemorrhage.

Fred Bailes, of John Bailes & Son, hardwaremen, of Oshawa, has a son and heir.

Harry Clucas, Toronto, manager for the Canada Paint Co., took a run up to Guelph.

Fred Cooper, accountant for Dunlop & Co., hardware, Pembroke, spent a day or two in Toronto.

J. Karley, of Karley & Gibson, Athens, has been sick with a hemorrhage, but is now on the mend.

Williams, Madison Mfg. Co., mill machinery, Port Perry, Ont., are advertising business for sale.

James King and Louis Payette, of the Warden King Co., Montreal, were in Toronto, during the week.

Thomas Irwin, for many years in the metal roofing business in Hamilton, died suddenly at the age of 71.

J. W. Rork, of Rork & Johnson, hardwaremen, of Norwood, has a new hardware clerk, two weeks old.

S. T. Hadley, of the James Morrison Brass Manufacturing Co., Toronto, is representing his firm in Western Ontario.

Julian Boyd, son of C. E. Boyd, hardwareman, of Simcoe, has passed his first year medical examination in Toronto, with honors.

H. W. Mitchell, commission and manufacturers' agent, of Winnipeg, called on Hardware and Metal during the week on his return from New York and Montreal.

John M. Tait, of Tait & Co., plumbers, Pittsburg, Pa., has been in Toronto for a day or two. Tait & Co. are putting in some plumbing in Cobourg houses belonging to Americans.

R. J. Bruce, of Port Perry, who sold his hardware business some time ago to A. J. Carnegie, has purchased the business of Hope & Nodden, of Toronto Junction, the stock of which amounts to about $16,000.

Q. D. McCulloch, secretary of the Bennett & Wright Co., Toronto, died on Tuesday from a self-administered dose of carbolic acid. Worry caused by the civic investigation and other matters is said to have preyed on his mind. He was 50 years of age and had been with Bennett & Wright for 20 years.

Quebec.

Donald Alexander Bethune, plumber, etc., Montreal, has registered.

Denman & Bethune, plumbers, Montreal, have dissolved partnership.

The assets of Huet & Co., hardware merchants, Montreal, are to be sold.

W. H. Evans, of the Canada Paint Co., Montreal, spent part of the week in Toronto.

Major Lockerby, of Lockerby & McComb, is at the Three Rivers camp with his corps.

The Hardware Specialties Mfg. Co., Chambly, have assigned; meeting of creditors on July 4.

J. W. Richardson, of Caverhill, Learmont & Co., Montreal, is making the best of a fortnight's vacation.

W. S. Leslie, of A. C. Leslie & Co., metal merchants, Montreal, is taking a western trip this week.

Chas. Edmonds, of Frothingham & Workman's staff, Montreal, is enjoying his vacation at Morin Flats and Ste. Agathe.

Geo. E. Drummond, of Drummond, McCall & Co., Montreal, sailed for England on the Empress of Britain last Saturday.

J. W. Harris, president of the J. W. Harris Co., contractors, Montreal, is visiting Western Ontario points in connection with some of the firm's contracts.

A. Dancausse, of A. Dancausse & Son, general merchants, Apple Hill, Ont., was in Montreal on business this week and called on some of the hardware jobbers.

J. A. Gordon, of Montreal, secretary of the National Plumbers' and Steamfitters' Association of the Dominion, is attending the convention of the United States plumbers at Atlantic City.

F. D. Robinson, who for the past several years has been a member of the office staff of B. & S. H. Thompson & Co., Montreal, has been promoted to represent the firm as their city traveler in Montreal.

Building Inspector Chausse sailed for Europe last Saturday on the Empress of Britain. He will investigate conditions in Old World cities with a view to adopting improved methods in his department.

The business of H. G. Eadie, manufacturers' agent, Montreal, has increased so largely that he has decided to put a man out on the road. He has engaged G. W. Meldrum for this purpose and Mr. Meldrum will start out on his trip July 1.

Montreal paint and oil men have received notice of the annual convention of the Master House Painters' and Decorators' Association in Windsor, July 24, 25 and 26. This will be the third convention of this body, the first and second having been held in Montreal and Hamilton respectively.

J. A. Warren, of Henry Warren & Sons, hardware merchants, Stirling, Ont., spent a couple of days last week in Montreal, the guest of Herbert Seybold, of the Seybold & Sons Co. Mr. Warren was much impressed with the possibilities of the Canadian metropolis.

A window that stops all passers by has been arranged by H. Silvestre, of H. Silvestre & Fils, the St. Lawrence street hardware merchants, Montreal. The centre of attraction is a clock whose pendulum is a large kalsomining brush with a six-foot handle, which swings slowly to and fro. The dial of the clock has a paint brush at every division.

Western Canada.

J. W. Carrol, plumber, Winnipeg, Man., has been burned out.

R. E. Hale, agricultural implements, Souris, Man., has sold out to Wenman & Green.

Mr. J. R. Henderson, of Henderson & Potts, Halifax, is expected in Winnipeg next week.

J. E. Menzies, agricultural implements, Minnedosa, Man., has sold out to W. Drummond.

W. H. Smith & Company, hardware merchants, Didsbury, Alta., are succeeding Corbett & Pearson.

Mr. John A. Thomson, hardware merchant, of Elm Creek, Man., has joined the ranks of the benedicts.

James Munro, hardware merchant, of Chilliwack, B.C., has made improvements in his store, including a new plate glass front.

Mr. Geo. D. Wood is in England, where he will act as one of Winnipeg's representatives at the Congress of Chambers of Commerce of the Empire.

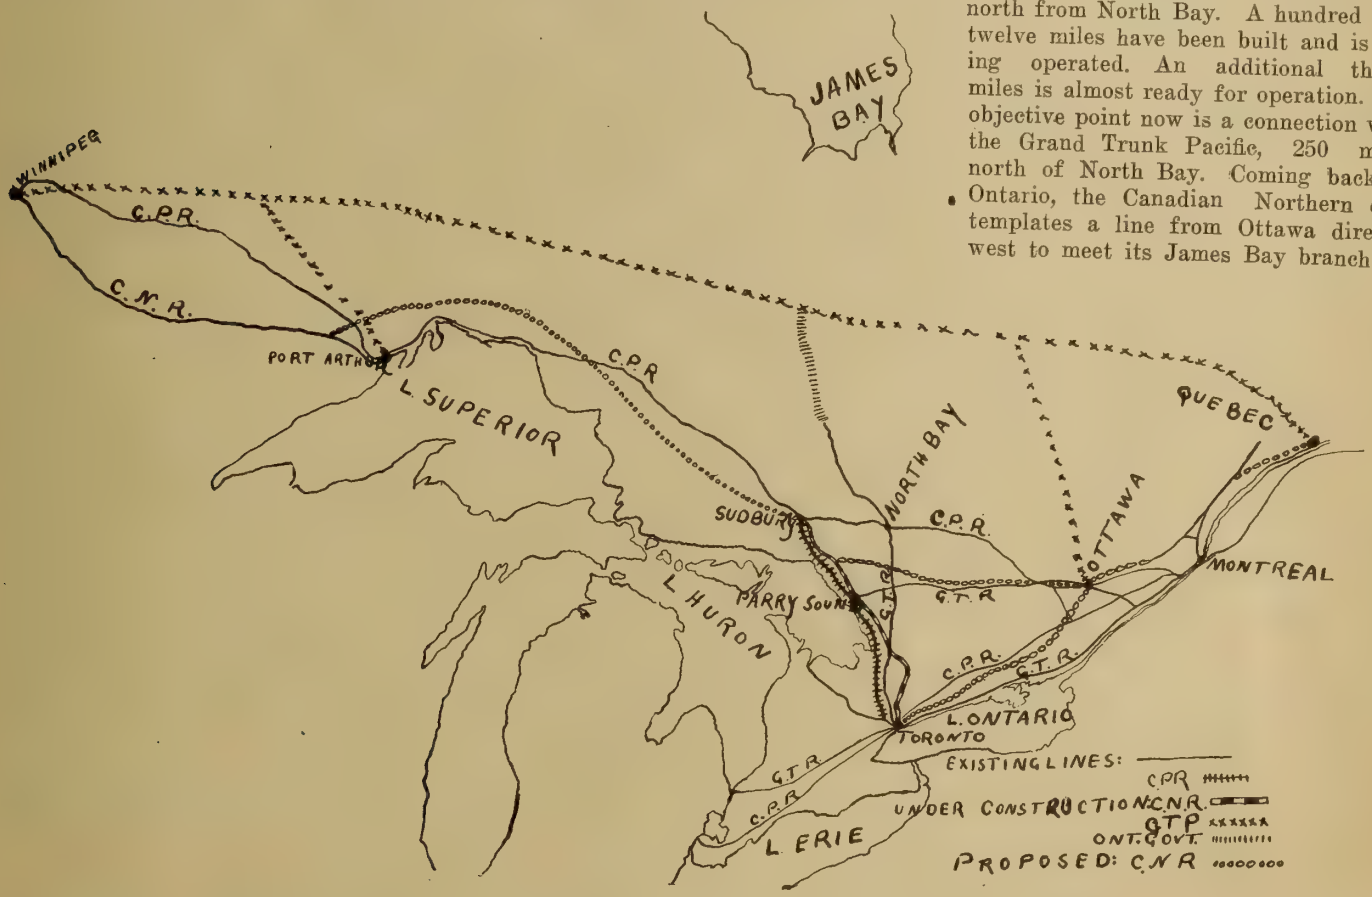
Messrs. W. G. Jones and J. Hunter, of the Pease Foundry Co., Toronto, are in Winnipeg this week consulting with Mr. C. D. Waldon, manager of the Pease-Waldon Co.

Mr. R. R. Kinread, Winnipeg manager of the Record Foundry & Machine Co., went east last week to Moncton on a matrimonial mission. Hardware and Metal extends congratulations.

Secretary J. E. McRobie, of the Western Retail Hardware Association, is planning a visit to Edmonton next week to attend a meeting of hardwaremen to be held in that city during the fair.

J. E. Lundy and J. B. McLeod have opened a hardware store in Edmonton. They were formerly employes of the Bond Hardware Company, of Guelph, but have been in Edmonton about four years.

The Kelly Hardware Company, of Brandon, has been incorporated with a capital stock of $15,000. The incorporators are H. C. Kelly, G. F. Williamson, of Brandon, and W. L. Garland, H. Ormond and A. Anderson, of Winnipeg.



Mr. H. V. Lawlor, paint specialist for Henderson & Potts Co. and Marshall-Wells Co., was in Winnipeg last week. Mr. Lawlor has recently recovered from a rather severe attack of typhoid fever whith kept him in the hospital in Calgary for the regulation length of time. He blames it all on Alberta water and promises to desert the water wagon whenever in future he visits the trade in the western province.

RAILWAY BUILDING FROM WINNIPEG TO QUEBEC

There could be no more convincing evidence of the phenomenal industrial development and settlement now going on in Canada than the railway building and extension under way and immediately contemplated.

In the west, that is west of Lake Superior, a second great railway system, the Canadian Northern, has grown up in ten years with 1,200 miles of main line from Port Arthur to Edmonton, and many branches. This year it will enter Toronto and in a very few years will be the second Canadian transcontinental. The third transcontinental, the Grand Trunk Pacific, is being made to the order of the Government and Grand Trunk interests. The C.P.R. is building extensively in Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, every province from the St. Lawrence to the Pacific.

How many thousand miles of new railway are here indicated is not to the point and need not be made a memory test. Take, as a concrete example, the operations in Ontario, looking to improved communication with the west and larger outlet for the prairie products. Until now the only direct all-rail route from Toronto to the west was by the Northern division of the Grand Trunk to North Bay. The C.P.R. sent its passengers that way. To-day both C.P.R. and Canadian Northern are each building as rapidly as posible a line from Toronto to Sudbury. The C.P.R. expects to be operating its new line as far as Coldwater, 100 miles north of Toronto, in a little over a month. This Summer, probably sometime in August, the Canadian Northern will be operating its line as far as Parry Sound, thus affording an additional lake and rail route to and from the west in time for the moving of this year's crop. By August next year it is expected the C.P.R. line will be finished to Sudbury. The Canadian Northern also expects to complete its line to Sudbury next year.

Short Way to the Sea.

Another very important project which the C.P.R. has in hand is the construction of an air line from Victoria Harbor on the Georgian Bay, near Midland, to Peterboro to improve their facilities for handling the western crop. Their present Georgian Bay port is Owen Sound. This new line will lessen the distance between the bay and tide water by about a hundred miles.

Within a fortnight the Canadian Northern filed with the Railway Commissioners plans for a line between Toronto and Ottawa. The Canadian Northern will have this year, when work under construction is completed, the most extensive railway system in Nova Scotia. The extensions building are from Liverpool to Barrington on the east coast, and from Middleton to Victoria Beach on the Bay of Fundy. In Quebec they have 200 miles of line from Grenville and Montreal to Riviere a Pierre Junction and are building from Grand Mere on that line 75 miles to Quebec. When completed this will give a third trunk line from Quebec to Montreal. The company have a charter to build from Quebec to Pugwash, N.S., but that part of the transcontinental plan is not yet under way.

A Government Line.

The Government of Ontario, several years ago undertook to construct a line north from North Bay. A hundred and twelve miles have been built and is being operated. An additional thirty miles is almost ready for operation. The objective point now is a connection with the Grand Trunk Pacific, 250 miles north of North Bay. Coming back to Ontario, the Canadian Northern contemplates a line from Ottawa directly west to meet its James Bay branch between Parry Sound and Sudbury and from Sudbury to a point on its line west of Port Arthur, making the middle link of the system across the continent.

The accompanying map shows the main features of present railway development between Winnipeg and Quebec. Of existing railways only main lines are indicated.

Canadians, spread out in a thin line across the American continent, are bred to such conceptions of distance that these immense railway undertakings appear as ordinary everyday matters, but they portend development that means a readjustment shortly of the world's trade. They are outlets for the coming mammoth product of the Canadian west.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Pig Lead—Declined to $4.40 to $4.50.
Pig Iron—Clarence, No. 1, $18.50.
Carriage Bolts — New discount on 7-16 and larger.

TORONTO.

Solder—Declined 1 cent.
Turpentine—Declined 3 cents.
Castor Oil—Advanced 1 cent.
Ingot Tin—Declined 1 cent.
Old Copper Wire—Declined ½ cent.
Old Light Copper—Declined ¼ cent.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 29, 1906.

Midsummer weather has as yet made no difference in the volume of business being done by the Montreal hardware jobbers. Throughout the country hardwaremen seem to be doing a fine trade.

Prices are all very firmly held in every branch of the trade. The new discount lists recently issued by the rolling mills on bolts have slightly altered the situation of carriage bolts, size 7-16 in. and larger. On these goods the discount to hardware dealers is 55 and 10 per cent., with the customary change for carriage makers. It will be seen that these quotations mark an advance on the old discounts.

AXES—Sales are fair. Prices are being steadily maintained as follows: $7.60 to $9.50 per dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

HANDLES—The usual trade for the season is shown. We are quoting: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a doz.; adze handles, 34-inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

LANTERNS — Turn-over is satisfactory, with no special feature to mark the trade. Our price is $4.25 for cold blast.

RIVETS AND BURRS—No change in price is recorded, though stocks are said to be light. We still quote the following discounts: Best iron, rivets, section, carriage, and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 35 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 per cent., subject to usual charge for half-pound boxes.

HAY WIRE—Orders are lively. Prices are unchanged, as follows: No. 13, $2.45; No. 14, $2.55; No. 15, $2.70; net cash, f.o.b. Montreal.

MACHINE SCREWS—There are many good orders for this line coming in. We quote the following discounts: Flat head iron, 35 per cent.; flat head brass, 35 per cent.; Felisterhead iron, 30 per cent.; Felisterhead brass, 25 per cent.

BOLTS AND NUTS—The recent advance in bolts 7-16 and larger has held steadily. Our prices are to the carriage-making trade, and hardware dealers obtain an extra 10 per cent. discount from these figures. We quote: 3-8 and smaller, 60 per cent. and 10 per cent.; 7-16 and larger, 55 per cent.

HORSE NAILS—The discounts generally ruling are as follows: C brand, 40, 10 and 7 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

WIRE NAILS—Sales have been large for some time past, though it can scarcely be said that trade conditions are satisfactory. The nominal price remains at $2.05 per keg f.o.b. Montreal.

CUT NAILS—Business is featureless, with the current price stationary at $2.20 per keg f.o.b. Montreal.

HORSESHOES—No change in the situation has been noticed. Business is heavy and prices remain firm. We quote: P.B. new pattern, base price, $3.50 per 100 lbs.; M.R.M. Co. latest improved pattern iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15. Light steel shoes, No. 2 and larger, $4; No. 1 and smaller $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes 25c. per 100 lbs. extra.

SPORTING GOODS—Guns and ammunition are now in great demand. All other lines are also experiencing a good inquiry.

BUILDING PAPER — Manufacturers and jobbers report that there has been no very decided change in conditions. Prices are the same as for some time past.

CEMENT AND FIREBRICK — Prospects for a continued heavy trade are of the brightest. There is no sign of a let-up in the very large demand now shown. We still give the following prices: "Lehigh" Portland in wood, $2.54; in cotton sacks, $2.39; in paper sacks, $2.31. Lafarge (non-staining) in wood, $3.40; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars; Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American $30 to $35; White Bros.' English cement, $1.80 in bags, $2.05 in barrels in round lots.

COIL CHAIN—Business is fair. Prices remain as follows: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

FREEZERS—Good sorting orders are now appearing in every mail, showing that retail merchants have had no trouble in getting rid of their stocks. We still quote: American Twin, 2 quart, $2.30, 3 qt. $2.65, 4 qt. $3.25, 6 qt. $4.15, 8 qt. $5.10, 10 qt. $6.40, 12 qt. $7.75, 15 qt. $9.95, and 20 qt. $13; Gem, 1 pt. $1.35, 1 qt. $1.60, 2 qt. $1.75, 3 qt. $2.15, 4 qt. $2.60, 6 qt. $3.25, 8 qt. $4.20, 10 qt. $5.45, 12 qt. $6.50, 14 qt. $7.25; Blizzard, 1 qt. $1.25, 2 qt. $1.70, 3 qt. $1.95, 4 qt. $2.35, 6 qt. $2.95, 8 qt. $3.70, 10 qt. $4.80, 12 qt. $5.75, 14 qt. $6.75.

GREEN WIRE CLOTH—This is another line which is a steady seller just now. We quote $1.45 per hundred square feet.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 29, 1906.

There is nothing new in the market conditions this week. All prices remain the same as previous quotations, and an unusually good business for this time of year, when there is ordinarily a slackness felt, is being done.

Harvest tools are the principal deliveries at present, but all goods that are required with the advance of the season or the hot weather are moving freely.

Sorting orders never were better, which is a good indication of trade conditions throughout the province.

AXES AND HANDLES—Trade conditions normal, with no price changes.

CUTLERY AND SILVERWARE — The largest business in many years has been done during June.

SPORTING GOODS — Baseball and lacrosse goods and fishing tackle continue in good demand, and guns, ammunition, etc., are selling well.

SCREEN DOORS AND WINDOWS — An increasing trade is experienced in screen doors and windows, as the season advances.

HAMMOCKS—The hot weather has created a large sale of these goods. A better class of hammock than usual is being asked for, and manufacturers are kept busy getting out stock.

LAWN MOWERS — Lawn mowers continue to sell well. Some jobbing houses report being nearly depleted.

LAWN HOSE—The hot weather has greatly increased sales in all garden sizes.

REFRIGERATORS AND FREEZ-

ERS—A big business is reported in these lines, particularly the former, for family use.

WASHING MACHINES—This is a line that shows a wonderful increase this year.

CHAIN—We quote as follows : 1 inch, $6.60; 5-6 inch, $4.55; ⅞ inch, $3.95; 7-16 inch, $3.80; ½ inch, $3.65; 9-16 inch, $3.55; ⅝ inch, $3.45; ¾ inch, $3.35.

EXTENSION AND STEP LADDERS —Prices continue as follows : Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot, for 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent.

POULTRY NETTING—Sales are reported large. We quote : 2-in. mesh, 19 w.g., discount 55 and 5 per cent. All others 50 per cent.

GALVANIZED WIRE — We quote : $2.17½ f.o.b. Cleveland.

BARB WIRE — Prices remain the same. We quote : On gauge 9, $2.40; gauge 12, $2.55; gauge 13, $2.65, f.o.b. Toronto.

OILED AND ANNEALED WIRE — (Canadian)—Gauge 10, $2.31; gauge 11, $2.37; gauge 12, $2.45 per 100 lbs.

WIRE NAILS—The open market continues, with the usual business. We quote : $2.05 base.

CUT NAILS—We quote : $2.20 base, f.o.b. Montreal. Toronto, 20c. higher.

HORSENAILS—"C" brand, 40, 10 and 7½ off list. "M.R.M." brand, 55 per cent off. "Monarch" brand, 50 and 7½ off. "Peerless," 50 per cent. off.

HORSE SHOES — Our quotations continue as follows : P. B. base, $3.65; "M.R.M. Co., latest improved pattern" iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7. Packing, up to three sizes in a keg, 10c. per hundred lbs. extra; more than three sizes in a keg, 25c. per hundred lbs. extra.

RIVETS AND BURRS—As yet prices remain the same but very firm, with no heavy stocks.

SCREWS—We quote : On gimlet point 70 and 5 per cent. off ; on cone point, 70 and 10 per cent. off list.

BOLTS AND NUTS—Prices are held firm at the recent advance. We quote : 55 and 10 per cent. off list.

CEMENT — We quote : For carload orders, f.o.b. Toronto, Canadian Portland, $1.95. For smaller orders ex warehouse, Canadian Portland, $2.05 upwards.

FIRE BRICK—English and Scotch fire brick, 27c. to 30c.; American low-grade, 23c. to 25c.; high-grade, 27½c. to 35c.

HIDES AND WOOL—Prices have advanced ½c., not because of market conditions, but because buyers are competing for the goods.

Hides, inspected, steers, No. 1	0 12½
" " " No. 2	0 11½
" " cows, No. 1	0 12½
" " " No. 2	0 11½
Country hides, flat, per lb., cured	0 11

" washed fleece	0 27

Canadian Metal Markets.

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 29, 1906.

Although our price for ingot tin shows the same figures as in our report of a week ago, there have been several fluctuations since that time. Down, up, down, and up again is the record, and at the present time it is a difficult proposition to quote any definite price which will hold good until it can get into print. And so the majority of the large dealers still prefer to quote nominal prices and deal with individual orders solely on their merits. Speaking generally, the tone of the market is now somewhat weaker.

A big business is being done in pig lead, which is perhaps due to the lower prices quoted this week. The present situation would not indicate that any further decline is an immediate possibility.

Spelter and copper are very firm at unchanged prices. In both of these metals a strong demand exists and from all appearances there is as yet no sign of relief from the shortage reported some few weeks ago. The tendency in these metals is undoubtedly upward.

Antimony is on the same footing as last week. Montreal dealers state that there is a brisk demand and they have no difficulty in obtaining the price asked, high though it may seem.

All sheet metals are very strong just now. Montreal merchants who are Canadian agents for the largest foreign manufacturers, state that their mills are all exceedingly busy, and have orders booked away ahead.

Pig iron is quiet this week. Of course, there are fair quantities going out, and prices are steady, but no large bookings are being made at this season. It is to be expected that for the next month few large orders for immediate shipment will be received.

COPPER—The firmness of the market is rendered more acute by the scarcity of supplies in first hands. We still quote: Ingot copper, 21c. to 21 1-2c.; sheet copper, base sizes, 25c.

INGOT TIN—Prices are still nominal, jobbers dealing with orders according to their size and the price ruling at the moment. Fluctuations are numerous. We are quoting tentatively, 44 1-2c. to 45c. per lb.

INGOT ZINC—The price as advanced last week, is very firm, and stocks are light. We quote: 7 1-4c. to 7 1-2c. per pound.

ANTIMONY—Dealers here are still selling at last week's figures and are receiving numerous orders. We quote 30c per pound.

PIG LEAD—The market this week is easier in spite of an active inquiry. We now report a decline of 5c. per hundred pounds. Our quotation now is $4.40 to $4.50 per hundred pounds.

PIG IRON—Inquiries this week are rather light. We give the following prices:

"Dom.," No. 1, $19.50 to $20.00 delivered Montreal
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	20.50	"	"
Carron No. 1	22.00	"	"
" (special)	21.00	"	"
Summerlee No. 1	22.00	"	"
" No. 3 (soft)	21 00	"	"
Clarence No. 1	18.50	"	"
" No. 3	18.00	"	"
Cleveland No. 1	18.25	"	"

BOILER TUBES—We quote : British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 3-4c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

TOOL STEEL—Our prices are unchanged : Colonial Black Diamond, 8c. to 9c.; Sanderson's 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's 10c. to 20c.; "Air Hardening," 65c. per pound; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c. ; Jowitt's Diamond J., 6 1-4c. to 7c.; Jowitt's Best. 11c. to 11 1-2c.

MERCHANT STEEL—Trade is good in nearly all lines. Prices remain as follows : Sleigh shoe, $2.17½ ; tire, $2.27½ ; spring, $2.75; toecalk, $2.82 1-2; machinery iron finish, $2.27 1-2; ruled machinery steel, $2.75; mild, $2.17 1-2 and upwards; square harrow teeth, $2.27 1-2. Net cash 30 days. Rivet steel quoted on application.

COLD ROLLED SHAFTING—We are still quoting: 3-16 inch to 1-4 inch, $6.80; 5-16 inch to 11-32 inch, $5.78 ; 3-8 inch to 17-32 inch, $4.76; 9-16 inch to 47-64 inch, $4.08; 3 1-8 inch to 3 7-16 inch, $3.60; 3-4 inch to 1 7-16 inch, $3.75; 1 1-2 inch to 3 inch, $3.50; 3 1-2 inch to 3 15-16 inch, $3.75; 4 inch to 4 7-16 inch, $4.08; 4 1-2 inch to 4 11-16 inch, $4.42.

GALVANIZED IRON— In common with all sheet metals this line is showing great strength. The demand is large and mills are heavily booked with orders. We give the following prices: Queen's Head, 28 gauge, $4.35 to $4.60 ; 26 gauge, $4.20; 22 to 24 gauge, $3.65; 16 to 20 gauge, $3.50; Apollo, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Comet, 28 gauge, $4.25 to $4.50; 26 gauge, $4.10; 22 and 24 gauge, $3.55; 16 to 20 gauge, $3.40; Bell brand, 28 gauge, $4.40 to $4.45; Fleur-de-Lis, 28 gauge, $4.20 to $4.45; 26 gauge, $4.05; 22 and 24 gauge, $3.50; 16 to 20 gauge. $3.35; Gorbal's "Best Best," 28 gauge, $4.20 to $4.45; "Windmill Best," 28 gauge, $4.15; Sword and Torch, 28 gauge, $4.15; Colborne Crown, 28 gauge, $4.20 to $4.45. In less than case lots 25c. extra.

BLACK SHEETS—The market is very firm. We quote: 28 gauge, $2.40; 26 gauge, $2.35; 22-24 gauge, $2.30; 19-20 gauge, $2.30; 8-10 gauge, $2.45.

CANADA PLATES—An active inquiry is being maintained. Prices are steadily held. We quote: 52's, $2.60; 60's $2.65; 75's, $2.75; full polished, $3.75 to $4; galvanized, 52's, $4.10; 60's, $4.35.

TIN PLATES—Large sales are reported. Our prices remain: Cokes, base size, 1C 14x20, $4; charcoal, base size, 1C, 14x20, $4.25.

TERNE PLATES—We are still quoting $6.85.

SHEET ZINC—Quotations, as advanced last week, are now very steady and there is a big demand. We quote: $8 in casks, $8.25 in less than casks.

SHEET LEAD— The decline in pig lead has not yet affected this line. Demand is good and we quote: 2 1-2 lbs., 5½c. by the roll; 3 lbs. and heavier, 5¼c. by the roll; small quantities, 25c. per hundred lbs. extra.

BAR IRON—Trade is brisk, the price being steady at $2.05 f.o.b. Montreal.

OLD MATERIAL— Dealers buying prices are as follows: Copper wire, 15 1-2c.; light copper, 14 1-2c.; heavy red brass, 14 1-2c.; yellow brass, 11 1-2c.; light brass, 7 1-2c.; lead, 3 1-4c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $10.50 to $11; mixed rags, $1 to $1.20 per 100 lbs.; old rubbers, 7 1-4c.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 29, 1906.

Iron on the local and the English markets is decidedly firm, and mills report being well supplied with orders. The effect of the dissolution of the Southern Furnace has resulted in a drop of a dollar in southern iron, but the market is recovering again and as far as home conditions are concerned the drop was not felt.

Ingot tin may be said to be weaker generally, although the usual fluctuation is prevalent. Reports from London express a good opinion of the market, but against this the New York prices for July and August delivery are low. Copper is a trifle easier but still firm, with a limited quantity for sale. Tin plates are unchanged. Galvanized sheets are still active but with no price changes. Old metals remain unchanged with the exception of heavy copper wire which is ½c. lower, and light copper, ¼c. lower.

PIG IRON—Market is still firm and mills have plenty of orders. We quote: Radnor at furnace, $30; Hamilton at furnaces, No. 1, $20.50; No. 2, $20; Londonderry, f.o.b., Toronto, No. 1, $21.50, No. 2, $21; Middleborough, $21.50.

BAR IRON—The good demand keeps up with stocks light. We quote: $2.15 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

INGOT TIN—The general tone of the market is weaker. An active business continues to be done. Quotations remain steady at about 42c. to 44c. per pound.

TIN PLATES—There is a good demand for plates and we quote: Cokes, base size, 14x20, $4; charcoal, base size, 14x20, $4.50.

GALVANIZED SHEETS — More activity is developing, the effects of the prevailing high prices not seeming to be felt very much. We quote: 16 to 20 gauge, $3.45 up.

BRASS—The market continues firm with no price changes. Buying is active and quotations 23c. to 24c. per pound.

COPPER—Deliveries are still hard to get but prices are easier a little. Ingot copper, $20 per 100 lbs., and sheet copper, $25 per 100 lbs.

LEAD—Firmer conditions exist, the demand being more active and prices held stronger. We quote $4.50 for imported pig, and bar lead at $5 per 100 lbs.

ZINC SPELTER—The outside market is firm but prices locally remain unchanged. We quote: 7¼c. per lb. for foreign and 5¾c. to 6c. per lb. for domestic.

BOILER PLATES AND TUBES — The demand is steady and we continue to quote: Plates, per 100 lbs., $2.35; heads, per 100 lbs., $2.60; tank plates, 3-16 inch, $2.45; tubes, per 100 feet, 1½ inch, $8.50; 2, $8.80; 2½, $10.75; 3, $12; 3½, $15.80; 4. $20. Terms, 2 per cent. off.

ANTIMONY—A half cent reduction has been made and 28c. is quoted as a result of the easing off.

OLD MATERIAL — Dealers' buying prices are as follows: Heavy copper and wire, 15c. per lb.; light copper, 13½c. per lb.; heavy red brass, 13c. to 14c. per lb.; heavy yellow brass, 11c. per lb.; light brass, 8½c. per lb.; tea lead, $3.25 per 100 lbs.; heavy lead, $3.50 per 100 lbs.; scrap zinc, 4¼ to 4½c. per lb.; iron, No. 1 wrought, $10.50 to $11; No. 2 wrought, $3 to $5; machinery cast scrap, $13.50 to $14; stove plate, $10; malleable and steel, $5; old rubbers, 7¼c. per lb.; country mixed rags, $1 to $1.25 per 100 lbs., according to quality.

COAL—Quotations remain as follows: Anthracite in cars at bridges, egg, stove and nut, $5.20; grate, $4.95; pea, $3.50, per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.50; ¾ inch, $1.40; run of mine, $1.30; nut, $1.25; N. P. and S., $1; slack, 75c.; box cars, 10c. per ton additional.

Youghiogheny soft coal in cars, bonded at bridges: 1¼ inch, $2.50; ¾ inch, $2.40; mine run, $2.30; slack, $2.05.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

LONDON METAL MARKETS.

From Metal Market Report, June 27, 19 6

PIG IRON—Cleveland warrants are quoted at 50s. 1½d., and Glasgow standard warrants at 49s. 10d., making prices as compared with last week ¼d. higher for Cleveland warrants and 1d. lower for standard warrants.

TIN—Spot tin opened firm at £176 10s., futures at £176, and after sales of 280 tons of spot and 320 tons of futures closed firm at £177 for spot, £176 5s. for futures, making price compared with last week £1 15s. lower on spot, £1 5s. lower on futures.

COPPER—Spot copper opened firm at £51 15s., futures £80 5s., and after sales of 300 tons of spot and 500 tons of futures, closed firm at £81 17s. 6d. for spot, and £81 for futures, making price as compared with last week £2 12s. 6d. lower on spot, and 2s. 6d. lower on futures.

LEAD—The market closed at £16 12s. 6d., making price as compared with last week 2s. 6d. lower.

SPELTER—The market closed at £27 making price as compared with last week 7s. 6d. lower.

UNITED STATES METAL MARKETS.

From the Iron Trade Review, Cleveland, June 28, 1906.

The immediate effect of the dissolution of the southern furnace agreement was the sale of approximately 100,000 tons of southern iron at from $13 to $13.25 Birmingham for No. 2 foundry. With that, however, the force of the movement was apparently spent, and prices promptly advanced to $13.50, which is the prevailing quotation to-day, with little chance of shading. With southern iron at this figure the northern situation is unaffeeted and a generally firmer tone is prevalent. Both Bessemer and basic are exceedingly scarce, 8,000 tons of the former selling for last half at $17.75 valley, and some 15,000 tons of basic for third and fourth quarter at $17. In certain districts the scarcity has extended to foundry irons and a number of interests have advanced quotations sharply, though $16.50 for No. 2 is the prevailing price in the valley. The situation is complicated by the large number of furnaces now out of blast for repairs, as the result of the terrific pace at which they have been driven of late. The new Bessemer plant of the Youngstown Sheet & Tube Co., which will be ready for operation August 1, will require some 35,000 tons of iron per month, but this has been provided for by an arrangement closed with four furnaces about a year ago.

Ore interests report numerous inquiries from furnaces which failed to provide for the unusually heavy requirements of the season, or which are endeavoring to change their mix. Practically no ore is to be had, however, and the furnace which secures relief is fortunate, although shipments are proceeding at an unprecedented rate. The movement for July will doubtless reach 6,000,000 tons.

The scarcity of crude steel continues, and the expected advance of $1 per ton on sheet bars has been announced. It is probable that there will also be an advance on the finished product, although new business at present is not heavy. The contract for cast iron and steel pipe for the new waterworks system of the City of Philadelphia, aggregating over $1,000,000, has been awarded.

Plates have improved in both new contracts and specifications, especially in the Chicago district. The requirements for the two new battleships, on which contracts have been awarded, will be 7,500 tons of plates for each vessel and 3,000 tons of armor plate.

The demand for wire and wire products continues to be very active. Fence makers and other interests have contracted for 100,000 tons and producers are being pressed for delivery.

Coke contracting is proceeding rapidly. The Lackawanna Steel Co. has taken 60,000 tons for the last half, and the Cleveland Furnace Co. has covered requirements.

U. S. IRON AND METAL TRADES.

From the Iron Age, June 28, 1906.

The flow of orders in the finished trade continues very large. No better proof of this can be furnished than the fact that during the first 22 days of the current month the United States Steel Corporation booked orders at the rate of 37,000 tons per day. This compares with 18,600 tons per day during the corresponding period of 1905, thus showing practically double the quantity. The pressure from buyers abroad is particularly noteworthy and foreign markets have been responding. During the week American rail mills have booked 35,000 tons of steel rails, chiefly from Mexican and Japanese roads, and negotiations are pending for further quantities with South America. There is some chance of this work being taken, because it permits of Winter rolling. There is no hope of accepting any of the large Canadian tonnage, part of which has just been placed with local works.

The plate trade has shown increased activity and new work is flowing in from a number of channels. In connection with the Torresdale filter plant of Philadelphia over 100,000 feet of steel pipe has been awarded. The steel for only a part of this, say 6,000 tons, has been provided for under an old arrangement. The balance of the steel plates has not yet been arranged for. The announcement is made that the 48-inch mill of the Cambria Company is now in operation. The movement in sheets is very heavy.

The wire trade is displaying activity, and it is reported that the American Steel & Wire Company will start full operations with the beginning of July.

Steel making pig irons are scarce. The Steel Corporation has secured 10,000 tons for September delivery, but it is not quite certain yet whether any additional tonnage will be available for August. In the east a leading interest has purchased about 10,000 tons of basic pig. We note also the sale of one lot of 5,000 tons of foreign low phosphorus pig at about $23.25, duty paid, Baltimore, for steel founders.

Somewhat conflicting reports are at hand concerning the foundry pig iron situation. So far as can be learned the leading southern furnace interests have sold to a few large founders an aggregate of from 100,000 to 125,000 tons, for early and forward delivery, with some additional large business pending. It is asserted that in some instances a moderate further concession was granted. From all the markets come the report of quite a considerable number of sales of smaller lots of southern iron for fairly prompt delivery, at better figures than those realized on large long time contracts.

The Tennessee and Republic companies announce officially that the system of quoting foundry iron on the Birmingham basis has been abolished and that henceforth prices will be made, delivered, in the different markets in which the iron is sold. In other words, the companies will meet local market conditions, east, west or south, as they exist.

Nova Scotia Trade News.

Halifax, N.S., June 27.

The slack season is now coming on in the hardware trade, and very little business is doing. Prices throughout the list are steady and no changes are noted. Jobbers are now devoting their attention to builders' lines, for which there is a fair demand. Some small sales of haying tools are reported, and there is a fairly good demand for wire screens and wire netting.

The big hardware store of A. M. Bell & Co. it again to the fore with an attractive and novel window display. The principal feature of the display is a modern locomotive constructed entirely of tinware and hardware, is 10 feet long, 5 feet 4 inches high, 3 feet wide and consists of 231 separate pieces. It is wired together, thereby defacing none of the pieces used other than one plate, one cup and a few patty pans, value 14c. One of each article used in construction bears a distinct label which makes it more interesting when viewed. The boiler consists of four round No. 9 wash boilers, the cab of bread boxes, wheels of rubber hose with butter spades for spokes. All minor parts used are to be found in every model kitchen. On front of boiler are to be seen two white and gold flags on which is painted "The Bride's Special," and decorated with white satin bows. On left of locomotive is easel supporting an artistic sign which reads: "We carry everything essential to furnish the new kitchen." The balance of window is occupied with high grade enamelware, etc.

For originality and perfectness this display eclipses anything heretofore attempted in this line hereabouts, and it must be seen to be appreciated. Crowds daily assemble outside of the firm's window, and the only thing that seems necessary about the locomotive is the power to set it in motion. Every detail has been carefully considered, and it is amazing to see how well the different articles suit the purpose. Perhaps the most realistic part is the cow-catcher, which is constructed of pokers.

The engine was designed and constructed by Mr. Stuart Wetmore, the firm's window dresser, and in this, his latest achievement, he has won new laurels.

Mr. Wetmore is going to Newfoundland shortly in the interests of his firm, and if he returns in time he is going to New York to take in the Merchants' Record and Window Dressers' Convention, which will be held in New York on August 6, 7 and 8.

GOOD OFFICE HELP SCARCE.

"We are experiencing the greatest difficulty," said a member of a large Montreal firm of manufacturers' agents, "in securing expert office help. Three men whom we have tried lately gave up in a few days, being quite unable to do the work. Again, when one of our office veterans changed his position some time ago, we had to put two tyros on the same work, and with indifferent success at that."

CHANGE OF NAME.

The Munro Wire Works, New Glasgow, N.S., are about to increase their capital and facilities to handle their growing western trade, and will be known hereafter as Munro Steel & Wire Co.

NEW CONTRACTS.

The James Smart Mfg. Co., Brockville, have been awarded contracts for placing the Kelsey system of warming and ventilating in the Empress Avenue Methodist church, London; public school, Castleton, and the high school at Wingham.

STOVE FOUNDERS IN SESSION.

The Maritime Stove Founders' Association held their regular meeting at Sackville, N.S. W. B. Dixon, president, occupied the chair. There was a full attendance. Matters of general interest to the association were discussed.

A STRANGE ADVENTURE.

They were talking of strange adventures. The big man from the Northwest told of one which astonished his hearers.

"Some years ago," he said, "I was sleighing in the country, and my way lay across a frozen river. I knew the ice was thin, but I was determined to cross. The team scurried over the river under whip, and we were midway between the shores when the ice suddenly gave way, and the sleigh, horses and myself sank to the bottom within a second. However, the speed of the horses was so great that we were carried by the momentum safe upon the other shore, a little wet, to be sure, but not much the worse for that."

The thin, silent man had listened with great interest to the story.

"It is strange," he said, "but the same sort of an accident happened to me. The issue, however, was more tragic."

The big man squinted at the speaker. "And what was the issue?" he asked, suspiciously.

"Well, I was drowned," said the thin man, seriously.

TENNIS.

Tennis was first played in the early part of the sixteenth century in England and France. Matches for considerable wagers were frequently held, and rather than give up the game many men played for parts of their wearing apparel after their money was gone.

In England, toward the last of that century, covered tennis courts were erected, and nearly all the nobility played, including the women. Henry VII was a devoted follower of tennis, and Henry VIII was also fascinated by the sport.

The first royal tennis match was played between this monarch, with the Emperor Maximilian for a partner, against the Prince of Orange and the Marquis de Brandenborow. Charles II was the first person to adopt a tennis costume.

Hardware and Metal Conditions in Manitoba.

Market quotations corrected by telegraph up to 12 a.m. Friday, June 29, 1906.)

Office of HARDWARE AND METAL,
Room 511, Union Bank Building,
Winnipeg, Man.

PRICE CHANGES—

Turpentine—Reduced 10c. per gallon.

All staple building lines are in sharp demand at present from both city and country trade. Prices are steady, the only change of importance being a decline in turpentine.

GREEN WIRE CLOTH—Quoted at $1.55 per 100 square feet.

LANTERNS—Prices are quoted as follows: Cold blast, $5.25; coppered cold blast, $7.25; cold blast dash, $7.75; lift, $4.25 per doz.

WIRE—Retail competition is still reported as being very keen. Jobbing prices are steady. We quote as follows: Barbed wire, 100 lbs., $2.90; plain galvanized, 6 to 8, $3.39; 10, $3.50; 12, $3.10; 13, $3.20; 14, $3.90; 15, $4.45; 16, $4.60; plain twist, $3; staples, $3.50; oiled annealed wire, 10, $2.96; 11, $3.02; 12, $3.10; 13, $3.20; 14, $3.30; 15, $3.45. Annealed wires (unoiled) 10c. less.

HORSESHOES — Quotations are as follows: Iron, No. 0 to No. 1, $4.65; No. 2 and larger, $4.40; snowshoes, No. 0 to No. 1, $4.90; No. 2 and larger, $4.65; steel, No. 0 to No. 1, $5; No. 2 and larger, $4.75.

HORSENAILS—Revised list and discounts are now as follows: No. 10, 20c.; No. 9, 22c.; No. 8, 24c.; No. 7, 26c.; No. 6, 28c.; No. 5, 32c.; No. 4, 40c., per pound. Discounts are quoted as follows: "C" brand, 40, 10 and 7½ per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

WIRE NAILS—Steady at $2.60 per keg.

CUT NAILS—Quoted now at $2.70 per keg.

PRESSED SPIKES—Prices are as follows: ¼ x 5 and 6, $4.60; 5-6 x 5, 6 and 7, $4.25; ⅜ x 6, 7 and 8, $4.10; 7-16 x 7 and 9, $4.00; ½ x 8, 9, 10 and 12, $3.90; ⅝ x 10 and 12, $3.75.

SCREWS—Discounts are as follows: Flat head, iron, bright, 85 and 10 p.c.; round head, iron, 80 p.c.; flat head, brass, 75 and 10 p.c.; round head, brass, 70 and 10 p.c.; coach, 70 p.c.

NUTS AND BOLTS — Discounts are unchanged and continue as follows: Bolts, carriage, ⅝ or smaller, 60 and 5; bolts, carriage, 7-16 and up, 55; bolts, machine, ⅜ and under, 55 and 5; bolts, machine, 7-16 and over, 55; bolts, tire, 65; bolt ends, 55; sleigh shoe bolts, 65 and 10; machine screws, 70; plough bolts, 55; square nuts, case lots, 3; square nuts, small lots, 2½, hex nuts, case lots, 3; hex nuts, smaller lots, 2½ p.c.

RIVETS—Quoted now as follows: Iron, 60 and 10; copper, No. 8, 34½; copper, No. 12, 40 p.c.

COIL CHAIN — Unchanged in price. We quote: 3-16 inch, $9.25; 5-16, $5.20; 7-16, $4.45; ⅜, $4.10; ¼, $7.20; ⅜, $4.60; ½, $4.30; ⅝, $4.

SHOVELS—Discounts on spades and shovels continue 40 and 5 p.c.

HARVEST TOOLS — Discounts continue 60 and 5 p.c.

AXE HANDLES—Quoted as follows: Turned, s.g. hickory, doz., $3.15; No. 1, $1.90; No. 2, $1.60; octagon, extra, $2.30; No. 1, $1.60.

AXES—Prices quoted as follows: Bench axes, 40; broad axes, 25 p.c. discount off list; Royal Oak, per doz., $6.25; Maple Leaf, $8.25; Model, $8.50; Black Prince, $7.25; Black Diamond, $9.25; Standard flint edge, $8.75; Copper King, $9.00; Columbian, $10.75; handled axes, North Star, $7.75; Black Prince, $9.25; Standard flint edge, $10.50; Copper King, $11 per doz.

BUTTS — The discount on wrought iron butts if 70 p.c.

CHURNS— The discounts from list continue as before: 45 and 5 per cent.; but the list has been advanced and is now as follows: No. 0, $9; No. 1, $9; No. 2, $10; No. 3, $11; No. 4, $13; No. 5, $16.

CHISELS—Quoted at 70 p.c. off list prices.

AUGER BITS—The list on "Irwin" auger bits is now the same as on common bits. Discount on "Irwin" is 47½ per cent., and on the common bits 70 per cent.

BLOCKS—Discount on steel blocks is 35 p.c. off list prices; on wood, 55 p.c.

FITTINGS — Discounts continue as follows: Wrought couplings, 60; nipples, 65 and 10; T's and elbows, 10; malleable bushings, 50; malleable unions, 55 p.c.

GRINDSTONES — The price is now 1¾c. per lb.

FORK HANDLES — The discount is 40 p.c. from list prices.

HINGES—The discount on light "T" and strap hinges is 65 p.c. off list prices.

HOOKS — Prices are quoted as follows: Brush hooks, heavy, per doz., $8.75; grass hooks, $1.70.

STOVE PIPES—Quotations are as follows: 6-inch, per 100 feet length, $8.50; 7-inch, $9.25.

DRAW KNIVES—The discount is 70 per cent. from list prices.

RULES—Discounts are 50 and 10 p.c.

WASHERS—On small quantities the discount is 35 p.c.; on full boxes it is 40 p.c.

WRINGERS—Quotations are: Royal Canadian, $33; B.B., $37.75 per doz.

FILES—Discounts are quoted as follows: Arcade, 75; Black Diamond, 60; Nicholson's, 62½ p.c.

BUILDING PAPER — Prices are as follows: Plain, Joliette, 40c.; Cyclone, 55c.; Anchor, 55c.; pure fibre, 60c.; tarred, Joliette, 65c.; Cyclone, 80c.; Anchor, 65c.; pure fibre, 80c.

TINWARE, ETC. — Quoted as follows: Pressed, retinned, 70 and 10; pressed, plain, 75 and 2½; pieced, 30; japanned ware, 37½; enamelled ware, Famous, 50; Imperial, 50 and 10; Imperial, one coat, 60; Premier, 50; Colonial, 50 and 10; Royal, 60; Victoria, 45; white, 45; Diamond, 50; Granite, 60 p.c.

CORDAGE—Quotations are as follows: Rope, sisal, 7-16 and larger, basis, $11.25; Manila, 7-16 and larger, basis, $15.75; Lathyarn, $11.25; cotton rope, per lb., 21c.

SOLDER—Quoted at 27c. per pound. Block tin is quoted at 45c. per pound.

VISES — Prices are quoted as follows: "Peter Wright," 30 to 34 14½c.; 35 to 39, 14c.; 48 and larger, 13½c. per lb.

ANVILS—"Peter Wright" anvils are selling at 11c. per lb.

CROWBARS—Price has been reduced ½c. per lb. Quoted now at 4c. per lb.

POWER HORSE CLIPPERS — The "1902" power horse clipper is selling at $12, and the "Twentieth Century" machines are sold at $13.60.

AMMUNITION, ETC. — We quote as follows: Cartridges, Dominion R.F., 50 and 5; Dominion, C.F., pistol, 30; military, 20; American R.F., 33½; C.F., pistol, 5 p.c.; C.F., military, 10 p.c. advance. Loaded shells: Dominion Eley's and Kynoch's soft, 12 gauge, black, $16.50; chilled, 12 gauge, $17.50; soft, 10 gauge, $19.50; chilled, 10 gauge, $20.50. Shot, ordinary, per 100 lbs., $7.00; chilled, $7.50; powder, F.F., keg, Hamilton, $4.75; F.F.G., Dupont's, $5.00.

IRON AND STEEL—We quote: Bar iron (basis), $2.70; Swedish iron (basis), $4.75; sleigh shoe steel, $2.75; spring steel, $3.25; machinery steel, $3.50; tool steel, Black Diamond, 100 lbs., $9.50; Jesson, $13.00.

SHEET ZINC — The price is now $8.50 for cask lots, and $9.00 for broken lots.

PIG LEAD—As noted last week the price has been advanced to $5.25 per cwt. with a reduction of 25c. per cwt. for ton quantities.

AXLE GREASE—"Mica" axle grease has been advanced to $2.75 per case and "Diamond" to $1.60.

BLACK IRON PIPE—Quotations are: ¼ inch, $2.45; ⅜, $2.85; ½, $3.15; ¾, $4; 1, $5.75; 1¼, $7.85; 1½, $9.40; 2, $12.90.

GALVANIZED IRON — Quotations are: Apollo, 16 gauge, $3.90; 18 and 20, $4.10; 22 and 24, $4.45; 26, $4.40; 28, $4.65; 30 gauge or 10¾ oz., $4.95; Queen's Head, 24, $4.65; 26, $4.65; 28, $4.90.

TIN PLATES—We now quote as follows: IC charcoal, 20 x 28, box, $9.50; IX charcoal, 20 x 28, $11.50; XXI charcoal, 20 x 28, $13.50.

TERNE PLATES—Quoted at $9.00.

CANADA PLATES—Prices have been steady since the recent decline. We quote: Canada plate, 18 x 21, 18 x 24, $3.15; 20 x 28, $3.40; full polished, $3.90.

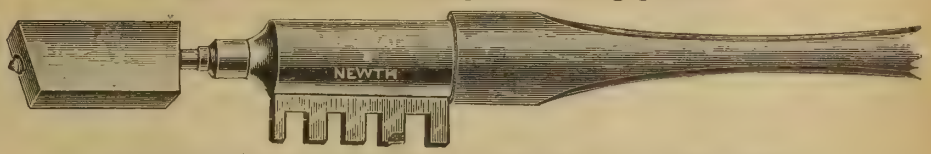
BLACK SHEETS—Prices are: 10 to 16 gauge, 100 lbs., $3.50; 18 to 22, $3.75; 24, $3.90; 26, $4.00; 28, $4.10.

PETROLEUM AND GASOLINE — Prices are steady. We quote: Silver Star, per gal., 21½c.; Sunlight, 22½c.; Eocene, 24½c.; Pennoline, 25½c.; Crystal Spray, 24½c.; Silver Light, 22½c.; Gaso-

Good Glue

It pays to use good glue. It's ten to one if you use an inferior brand the glue won't work. And that's where trouble begins for you.

Makes Customers Stick Fast



Cox's Scotch Glues are good glues. There is no refuse used in the making—nothing but pure hides. Glues that have been on the market for over a century have stood a pretty good test. Every order produces a "repeat" order, too. They are sold in Bags.

"Cox's" Scotch Glues

Arthur P. Tippet & Co.,
Agents,
Montreal

Sharratt & Newth's Glaziers' Diamonds

are unequalled for cutting and wearing qualities.

To be obtained from the principal Dealers in Glass, Hardware, and Painters' Supplies.

Contractors to H. M. Government and the principal English Sheet and Plate Glass Works.

C.S., double, in 100-ft. cases—26 to 40 united inches, $7.35; 41 to 50, $8.40; 51 to 60, $9.45; 61 to 70, $10.50; 71 to 80, $11.55; 81 to 85, $12.60; 86 to 90, $14.75;91 to 95, $17.30.

BRASS WORKERS ON STRIKE.

About sixty brass workers in the employ of the Robert Mitchell Company, Montreal, went on strike early in the week and have not yet returned to work.

The cause of the strike is the refusal of this firm to grant a revision of the wage scale, as requested in a memorandum presented May 1. The chief request is that the minimum wage of brass workers should be twenty-five cents an hour.

The order for the strike was issued by the International Union, and the men besides drawing strike pay from that body are receiving a voluntary contribution of ten per cent. of their earnings from 260 other members of the union in Montreal.

The fight threatens to be a long one, neither party being willing to grant concessions. Secretary Shaw, of the Robert Mitchell Co., stated to a Hardware and Metal representative shortly before our going to press that no steps had been taken towards coming to an understanding by either men or employers.

LEAD WORKS UNDECIDED

Brandram Bros. have not yet decided upon the location of their Canadian plant. The City of Halifax agreed to subsidize the company at the rate of $10,000 per year for ten years, on condition that they should pay out $50,000 annually in wages, and employ 75 hands. This offer the lead company have declined to accept, and unless still further concessions are made by that city, it is probable that the works will yet be located in Montreal, where an option is held on suitable land.

NEW STOCK AND DIE.

M. G. Cornell, jr., New York City, has secured a patent on a new stock and die, one of its purposes being to provide a construction wherein the die is provided with openings in its side edges leading directly to the threaded aperture for reception of the article to be threaded and wherein the socket of the stock receiving the die is provided with corresponding openings, enabling a lubricant to be readily introduced through said openings to the cutting-threads of the die where they are in engagement with the article being threaded.

WINDOW AND INTERIOR DISPLAYS

MONEY VALUE OF WINDOW DISPLAY.

Telling of the value of window display as advertising, an English advertising magazine says:

To appreciate their value you should do a little figuring. How many people pass your place in a day? If the average is ten a minute in the eight busiest hours of the day 4,800 people would pass your window. This number, 4,800, represents what, in newspaper parlance is called "daily circulation." Now, your show window occupies, say, 100 square feet surface, and in it you can display attractively quite a line of goods, changing the display as often as you wish. In a daily newspaper, with an actual circulation of 4,800, 100 square inches (not square feet) would cost approximately £2 per day, and in this space you can put only illustrations of the articles themselves, and, as a rule, the illustrations but imperfectly represent those articles. Now, your window space presents a surface 144 times as great as your £2 newspaper space, has depth, in addition to surface, and in it can be displayed the articles themselves, true to life as to color, size, shape, and everything, and, furthermore, they are seen at the entrance to your establishment, inside of which a salesman stands ready to give additional information and exercise his ability in making a sale. This window space is yours every day and all day, it presents wonderful possibilities as an advertising medium, and it's up to you to get those possibilities out of it. If newspaper space, properly used, is worth its cost (and we are firmly convinced it is) how important it is that so valuable an advertising medium as the show window should not be neglected.

A BRIGHT, ATTRACTIVE WINDOW.

The decoration of show windows, it seems, is looked upon from the standpoint of expense by very many merchants and not from any beneficial results that may accrue; in fact, they have not as yet been convinced that it pays, that it is one of the best advertisements to attract and maintain trade there is, which has been proven time and again by grocers who have made a thorough test of the practice. Neither will they be convinced until they, too, have given the method a like test.

Of course, it is good business to take into account the cash expense of outgoes, but it is equally good business to consider the financial benefits derived from investments, whether it be two dollars or two thousand, and the time expended in arranging a window display is an investment, likewise the stock and fixtures. But the above class of merchants are not yet ready to look at it that way and whatever display they do chance to make is just so much time lost to no object, or at least no more so than sweeping the floor or keeping the stock in place. But those are essentials which facilitate trade; other dealers there are who consider window displays in the same light as hanging up pictures at home or decorating the mantleshelf with evergreens, while others follow the practice simply because the neighboring dealers do so or because it is the custom, losing sight of or ignoring the main count in the transaction, that it is an investment and pays. But the old saying has it that "ignorance is bliss and it is folly to be wise," so we presume this sentiment must be admitted until the dawn of light, yet it is pretty hard medicine to swallow and those who are enlightened have a duty to perform in delivering their fellow-tradesmen from this fallacy.

The up-to-date business man tries to see his store as strangers see it and realizes that a bright business place suggests prosperity while a dismal store gives an impression of a failing business and the desirable customer shuns it as a place not only gloomy but unlikely to be properly stocked.

Notice how the brightest store in the block attracts the attention of the people passing along the street. Even the man in a hurry will unconsciously turn his face toward the bright places along his route, and if he remembers anything at all about the way he has come it is of those cheerful spots that flashed across the sidewalk and attracted his attention.

SITUATION VACANT

EXPERIENCED hardware and stove salesman for British Columbia town; must be energetic and understand the business; apply with reference and last employment; good salary to man who can fill the position; correspondence treated confidentially. Box 538, HARDWARE AND METAL, Toronto. (26)

DAVID REID & CO.

MANUFACTURERS' AGENTS

22 Stanley Block, - Winnipeg, Man.

Invite correspondence from firms wishing representation in Winnipeg who are makers of the following goods:—Bar, hoop, and sheet iron; galvanized, plain and corrugated iron; steel of all kinds; tinplates; sheet lead and zinc; ingot tin; iron pipe and fittings; black and galvanized soil pipe and fittings; carriage springs and axles; bolts, nuts and rivets; anvils, vises, forges, and smiths' bellows; spades and shovels; wire and cut nails; enameled hollow ware; paints, oils and varnishes; Portland cement; roofing materials; stoves, ranges, furnaces, etc., etc.

30 Years' experience in Hardware and Iron trade.

CATALOGUES AND BOOKLETS

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

By mentioning HARDWARE and METAL to show that the writer is in the trade a copy of these catalogues or other printed matter will be sent by the firms whose addresses are given.

Rifle Catalogue.

The Birmingham Small Arms Co., of Small Heath, Birmingham, show in their catalogue some very fine rifles and give some valuable hints regarding shooting and sighting. It will be sent upon request.

Asbestos Sad Irons.

The Dover Manufacturing Co., of Canal Dover, Ohio, have a new sad iron catalogue just off the press, which should be in every dealer's hands before selecting a stock. A feature this company makes is the family assortment of irons, in a wooden case, which are constructed to handle all classes of work. A card brings the catalogue.

A Fine Catalogue.

An unusually attractive catalogue is that which Frothingham & Workman, Montreal, have just placed in the hands of the trade, to show their sporting and

Fall goods. The cover is very apt, and is one of the most "fetching" yet published by a Canadian jobbing house. It is in colors, and the striking feature is a watchful fox apparently observing the approach of the hunters.

The catalogue contains 88 copiously illustrated pages, and is printed on heavy book paper. It should be on every hardwareman's desk.

For Tourists and Sportsmen.

The New Brunswick Tourist Association, under the auspices of the St. John Board of Trade, has issued a folder entitled "The Tourist and Sportsman's Paradise," that will be interesting to anyone contemplating a holiday. It is richly illustrated with views of scenic attractions of the Maritime Provinces. From end to end Canada is an ideal holiday land, but the Maritime Provinces think they have the best of it and the people down there like to tell about nature's liberality with them. They have enterprise down by the sea. They believe in publicity and going after business. They want more tourists and Summer visitors and they are going the right way about getting them.

THE "HAYES" PATENT STEEL LATH

NO CRACKED WALLS

NO FALLING PLASTER

Everybody knows that Metallic Lathing is better than wood

Most people know—do you? That of all Metallic Lathing, "HAYES" PATENT gives best results. It requires less mortar, can be applied more quickly and easily, and has greater rigidity than others.

It holds the mortar firmly, is fire, water and vermin-proof, and gives enduring satisfaction. These are some of the reasons why practical builders everywhere commend it.

Let us give you further information. Actual tests and comparisons have proved all these claims.

The METALLIC ROOFING CO., Limited,

WHOLESALE MANUFACTURERS, TORONTO.

Mine Ventilating Fans.

I. Matheson & Co., New Glasgow, N.S., have made arrangements with G. M. Capell to manufacture the Capell mine ventilating fan for Canada and invite correspondence from those interested.

Screw-Cutting Tools.

The E. F. Reece Co., of Greenfield, Mass., have published a new catalogue of screw-cutting tools and machinery. It illustrates the very newest in this line of plumbers' and steamfitters' appliances, besides containing useful information on general matters.

NEW BOARD OF TRADE.

A board of trade has been organized at Cupar, Sask., with the following officers: Honorary president, W. R. Motherwell; president, Mr. Thomas Baker; vice-president, Mr. W. J. Swaisland; secretary-treasurer, Mr. John Hubbs, jr.; executive, Mr. J. C. McLaughlin, Dr. Stewart, Mr. L. E. Ellis, Mr. T. J. Shore and Mr. C. B. Smith.

BUSINESS SHORT CUTS.

An article entitled "Goods Wanted Records," which has been favorably commented upon, appeared in Hardware and Metal of March 24. It was originally published in "Business Short Cuts," a book published by the Bookkeeper Publishing Co. Detroit, Mich., and readers who desire to secure the balance of the series can do so from the above named company.

FOUNDRY AND METAL INDUSTRIES

The C.P.R. will erect a steel train shed at Winnipeg.

The output of the Rossland mines so far this year has exceeded 150,000 tons.

The Crucible Steel Casting Company have surrendered their charter and are now dissolved.

The Dominion Steel Company's works at Blue Bonnets will be enlarged to the extent of $60,000.

Brantford City Council have decided on a fixed assessment of $12,000 for the Brantford Screw Company.

Glace Bay, C.B., offers for sale the machinery of its electric plant. A new and larger plant will be installed.

The shareholders of the Canadian Westinghouse Company have approved of the proposed increase of capital stock from $2,500,000 to $5,000,000.

Finnie & Maclaren are at the head of a company who will build a foundry and machine works at Ottawa. They have purchased property and will build at once.

K. Nakamura, of Osaka, Japan, has been looking over the nickel mines in New Ontario with a view to directing some of the output to Japanese markets.

The net earnings of the Lake Superior Corporation for the fiscal year ending June 30, 1906, will be $1,100,000. They are now producing from 600 to 650 tons of steel rails daily.

The Dominion Steel report shows a surplus for the year of over $600,000. They received a similar amount in bonuses, but will receive less this year, the bonus being reduced.

G. B. Dennis, of Spokane, and others closed negotiations for the purchase of twenty mining claims in the Boundary country, B.C., for $225,000. Development work will go on at once.

It is said that the Dominion Iron & Steel Company is to get 33,000 tons of the National Transcontinental order for steel rails, and the Lake Superior Company 32,000 tons at $35 per ton.

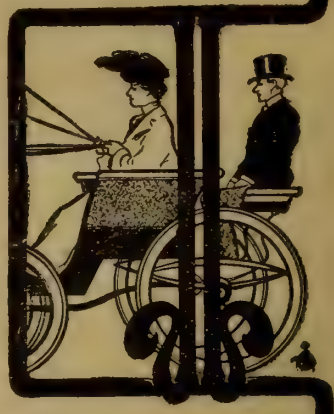
The Canadian Iron & Foundry Company entertained prominent citizens of Fort William at a banquet in that place. The company heads expressed themselves as well pleased with their prospects.

The Dominion Iron & Steel Company have secured a contract for 50,000 tons of 60-pound steel rails from Mackenzie, Mann & Company. This is the largest single contract ever secured by this company.

In the annual report of the Dominion Iron & Steel Company the statement was made that the company were preparing to erect a furnace similar to that used in the production of Bessemer steel, for the preliminary treatment of pig iron.

MAY DEPORT CANADIANS.

The Hoopeston Horse Nail Company, of Hoopeston, Ill., are charged with importing three Canadian workmen in violation of the United States immigration laws. Their defence will be that they could not find suitable men in the States to operate certain new machinery for the manufacture of horse nails. The Canadians came from St. John, N.B.



A Seasonable Specialty for the Dealer

SHERWIN-WILLIAMS

BUGGY PAINT

ESPECIALLY DESIGNED FOR BRIGHTENING UP OLD VEHICLES

For the dealer who has a demand for good buggy paint—a paint that is durable and one that will withstand outside exposure and hard wear—*S-W. Buggy Paint* has no equal. It is a varnish gloss paint of the greatest durability and has splendid covering capacity. There are eight attractive colors, all sharp, clean and bright. It comes ready for use in convenient sized packages and is a ready seller.

S-W. Buggy Paint is good, too, for porch and lawn furniture, and many dealers have built up a paying trade on this point alone.

We have strong advertising helps to introduce it to your trade and create a demand. Write us about this profitable specialty.

Warehouses: 86 York St., Toronto; 147 Bannatyne St., East, Winnipeg, Man.

1630

DOMINION IRON & STEEL CO. MAY MAKE NAILS.

The Dominion Iron & Steel Company are said to be contemplating the manufacture of nails and wire fencing at Sydney, N.S. The market for steel rods has been insufficient to keep the rod mill in steady operation and the new branches are to supplant the rods to some extent.

TO WRITE ON METALS.

To write on iron, steel, silver or gold mix together 1 oz. muriatic acid and ½ oz. nitric acid and use as follows:

Cover the place on which you wish to write with melted beeswax; when the beeswax is cold write the name or words plainly with a file point or an etching needle, carrying it through the wax and cleaning all the wax out of the letter. Then apply the mixed acids with a feather, carefully filling each letter. Let the acid remain for from one to ten minutes, according to the appearance desired; then put on some water, which will dilute the acid and stop the process. Either of the acids separately would cut iron or steel, but it requires the mixture to take hold of gold or silver. After the acids are washed off it is well to apply a little oil.

When a customer comes in and asks for the special bargain you are offering in your window don't forget you have it there and look blank. Impress upon him the fact that it is a real bargain.

PAINT, OIL AND BRUSH TRADES

TURPENTINE OPERATORS ORGANIZE.

Fifty prominent turpentine manufacturers of Florida, Alabama and Mississippi, met at Mobile, Alabama, a few days ago and completed the organization of the Southern Turpentine Operators' Association. They will extend their work and influence to all other turp producing states as soon as possible, but for the present will have their centre at Mobile.

WILL NOT GO TO HALIFAX.

The Halifax City Council have received a letter from the Brandram-Henderson Co., stating that they cannot agree to the stipulations imposed by the civic committee in regard to manufacturing white lead in Halifax. The city agreed to subsidize the company at the rate of $10,000 a year for ten years, provided they employed 75 men and paid annually $50,000 in wages.

READY MIXED VS. SHOP MIXED.

There is a professional prejudice against ready-mixed paints, while there is a decided popular opinion favorable to them, says the National Builder. It is easier to account for the latter than the former. The public judges by results, the professional man, too often, from theoretical grounds or from precedent.

On the face of the matter the probabilities are all in favor of ready-mixed paint and against the shop-mixed product. The former is the result of accumulated and multiplied experience fortified by technical knowledge; the latter, a product of tradition, inexact methods and necessary ignorance of technical conditions. As a class, painters are resolutely opposed to the use of these modern factory products. In some cities the local associations have adopted resolutions binding themselves mutually not to apply them. Is it a spirit of philanthrophy or of scrupulous probity that prompts such extremes? Perhaps so, but such a conclusion is open to suspicion.

As a matter of simple fact, this widespread opposition is prompted by two considerations — first, the assumption that the convenience and comparative cheapness of ready-mixed paints will deprive the painter of his profit on part of the materials used in painting and on the labor employed in mixing them; and second, the less excusable opposition to any material that lasts too long and thus defers repainting. The last mentioned motive probably prevails to a far less extent than the first.

In the country and the country towns of 1,000 inhabitants or fewer, probably two gallons of ready-mixed paint are used to one gallon of shop-mixed; in cities of 5,000 inhabitants and upwards shop-mixed products are the rule. The reason for this disparity is found in the fact that in the city the architect rules the specification and the painter (or what amounts to the same thing, painters' tradition) rules the architect.

Note the sweeping condemnation of the painters' associations, embracing in one category of denunciation every mixed paint of every type and kind. Painters who openly boast of their superior success with certain proportions, let us say of zinc and lead, crudely combined in a paint bucket, condemn among mixed paints precisely the same formula ground to uniformity in a paint mill with oil and driers that are necessarily above suspicion; whereas the oil and driers bought by the painter in the open market are generally open to question.

Paint, no matter what its character or composition, will sometimes fail inexplicably. This is true of hand-mixed lead and oil as well as of the most approved brands of ready-mixed paints; but the records of actual service—not isolated records, but the mass of experience all over the country—will show a far higher average of durability (and consequently of economy) for the better grades of ready-mixed paint than for shop-mixed paint. Moreover, the painter who without evidence of data condemns any ready-mixed paint, simply because it is ready-mixed, is an irresponsible and unsafe adviser.

TURPENTINE FOR JAPAN.

An inquiry from British Columbia to the Canadian commercial agent in Yokohama, Japan, regarding turpentine, has brought the answer that comparatively little turpentine is used in Japan, as the Japanese do not paint their houses. The market is growing, however, and last year 27,648 gallons were imported, most of which came from New York. The answer to the correspondent states that if the right quality could be brought over at about 75c. per gallon, c.i.f. Japan ports, some market might be found.

A hardware dealer in Kansas is making a run on refrigerators and advertises free ice with every one sold. With a $50 refrigerator the buyer gets 2,500 pounds of ice and with cheaper ones smaller amounts are given, down to 250 pounds, which is given with a $7.50 refrigerator.

PAINT AND OIL MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 29, 1906.

After last week's many changes in price the situation since our last report has not furnished any sensations. Quotations have all held very steadily, the recent drop in turpentine and linseed oil having left those articles with a firmer tone than they have exhibited for some time.

Business is keeping up in a remarkable manner, all the big paint manufacturers here being deluged with orders.

TURPENTINE — Single barrels, 86c. per gallon; two barrels or over, 85c. per gal.; for smaller quantities than barrels, 5c. extra per gal. is charged. Standard gallon is 8.40 lbs., f.o.b. point of shipment, net 30 days.

LINSEED OIL—Raw, 1 to 4 barrels, 54c.; 5 to 9 barrels, 53c.; boiled, 1 to 4 barrels, 57c.; 5 to 9 barrels, 56c.

GROUND WHITE LEAD — We quote: Best brand Government standards, $6 to $6.25; No. 1, $5.65 to $5.90; No. 2, $5.30 to $5.65; No. 3, $5.05 to $5.30, all f.o.b. Montreal.

DRY WHITE ZINC—Our prices are: Red seal, 7c. to 8c.; French V.M., 6c. to 7c.; Lehigh, 5c. to 6c.

WHITE ZINC (ground in oil — We quote: Pure, 8c. to 9c.; No. 1, 6½c. to 7½c.; No. 2, 5¼c. to 6¼c.

PUTTY—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 2-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

ORANGE MINERAL—We quote as follows: Casks, 7¼c.; 100-lb. kegs, 7½c.; smaller quantities, 8½c.

RED LEAD — Prices are firmly held as follows: Genuine red lead in casks, $6; in 100-lb. kegs, $6.25; in less quantities at the rate of $7 per 100 lbs.; No. 1 red lead, casks, $5.75; kegs, $6, and smaller quantities, $6.75.

GUM SHELLAC — We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

SHELLAC VARNISH — We quote: Pure white, $2.90 to $2.95; pure orange, $2.70 to $2.75; No. 1 orange, $2.50 to $2.55.

MIXED PAINTS—Prices range from $1.20 to $1.40 per gallon.

CASTOR OIL—Firsts in cases, 8½c.; in barrels, 8c.; seconds in cases, 8c.; in barrels, 7½c.

REFINED PETROLEUM — We quote as follows: American water white, 17c.; Canadian prime white, 15½c.; astral, 20c., ex warehouse.

PARIS GREEN—We quote the following prices, which are subject to withdrawal or change: Barrels, 600 lbs., 19¼c. per lb.; kegs, 250 lbs., 19½c. per lb.; 50-lb. drums, 20c. per lb.; 25-lb. drums, 20½c. per lb.; 1-lb. pkts., 100 lbs. in case, 21c. per lb.; 1-lb. pkts., 50 lbs. in case, 21c. per lb.; ½-lb. pkts., 100 lbs. in case, 23c. per lb.; 1-lb. tins, 100 lbs. in case, 22c. per lb. Terms 2 per cent. 30 days.

GASOLINE—The ruling quotation at present is 24c. in bbls.

BENZINE—Market is steady at 24c. in bbls.

WINDOW GLASS—We quote: First break, 50 feet, $1.85; second break, 50 feet, $1.95; first break, 100 feet, $3.50; second break, 100 feet, $3.95; third break, 100 feet, $4.25; fourth break, 100 feet, $4.50; fifth break, 100 feet, $4.75; sixth break, 100 feet, $5.25; seventh break, 100 feet, $5.75; eighth break, 100 feet, $6. Diamond star, first break, 50 feet, $2.05; second break, 50 feet, $2.25; first break, 100 feet, $3.90; second break, 100 feet, $4.30; third break, 100 feet, $5.25; fourth break, 100 feet, $6; fifth break, 100 feet, $7; sixth break, 100 feet, $7.50; seventh break, 100 feet, $8.50. Double thick, first break, 50 feet, $3.20; second break, 50 feet, $3.50; first break, 100 feet, $6.25; second break, 100 feet, $6.50; third break, 100 feet, $8.25; fourth break, 100 feet, $9.50; fifth break, 100 feet, $11; sixth break, 100 feet, $12; seventh break, 100 feet, $13.50; eighth break, 100 feet, $16; ninth break, 100 feet, $17.50; tenth break, 100 feet, $19.50; eleventh break, 100 feet, $23.50; twelfth break, 100 feet, $28.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East.
Toronto, June 29, 1906.

Turpentine shows a further decline of three cents this week, although it cannot be said to have been looked for. The market has been uncertain for some weeks past, conflicting reports coming from the primary markets as to the yield.

Linseed oil is about the same as last quotations. American seed has gone across the water in large quantities lately but at present the foreign demand is not a factor. Stocks of seed are still large, and the new crop gives appearance of being heavy, so that a weakness in price would not be surprising.

The weather during the last few days has been very conducive to the breeding of potato bugs, and it is said that there will be a demand for paris green shortly that will be hard to meet.

Business has never been better than during this month, and the prospects are for a continuance of the same.

WHITE LEAD— Ex Toronto, pure white, $6.30; No. 1, $5.92 1-2c.; No. 2,

We Blow Again

That Dealers May Know About

"ARK BRAND" Inside Gloss Paints

A High-Class Enamel at Mixed Paint Prices. A Money-Maker for You. A Money-Saver for Your Customers.

CRUDE PETROLEUM— We quote: Canadian, $1.38; Pennsylvania, $1.64; Ohio, 98c.

It is a good policy to leave a few things unsaid.

The time for fruit preserving approaches. It's not too early to think about preserving kettles and other utensils.

PREVENT LEAD POISONING.

This subject has been often spoken of and is one which, practically speaking, is of the greatest importance to the worker in the manufacture of paint and its uses. How carelessly is the advice of the physician heeded by painters, plumbers, and all those exposed to the danger of lead or arsenic poisoning? remarks a writer in the Painter and Decorator. How many have gone to their last home with the verdict of peritonitis, inflammation of the bowels, or appendicitis, when in reality it was very often a case of lead poisoning?

The word for painters to remember is "asepsis," or in other words, a condition of absolute cleanliness; it is better to take time to clean your hands than to allow yourself to swallow deadly poisons. The inhalation of lead fumes is poisonous, but not any more so than the contact of the human skin with red lead, white lead, chrome oxide and turps. The continued use of turpentine will stiffen the articulations of the bones and eventually produce paralysis. The primitive signs of lead poisoning are constipation, deranged appetite, general lack of ambition and vigor. The signs of a well developed case are wrist drop, loss of power in the wrist and fingers, headache, accompanied with fever, a dark blue line at the margin of the gums.

Persons coming in daily contact with lead in any way ought to abstain from tobacco and alcoholic beverages of all kinds. Milk can be used ad libitum. The bowels must be kept open. Castor oil is a valuable remedy, but other laxatives will do, such as the elixir of cascara. A tablespoonful of olive oil before retiring is of utmost benefit to the stomach and bowels.

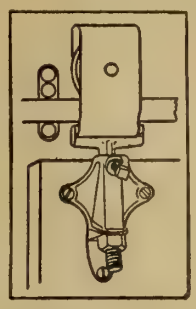
Alum is an efficient remedy for the colic. Take a pint of boiling milk and add 90 grains of "powdered alum." The addition of the alum will curdle the milk. Remove the curd and sweeten with sugar. Give a wine glass full every hour. The constant use of iodide of potassium is the only cure and preventive of lead poisoning. It is easily eliminated from the system; is an excellent diuretic, keeping the bladder in condition, thereby counteracting the formation of uric acid in the blood and warding off all forms of rheumatism.

The following is a harmless and efficient dose of iodide preparation: Take one ounce of potassium iodide to four ounces of water, carry same with you, and with a pipette take ten drops in a little water three times daily. In dangerous cases 30 drops of the saturated solution may be given three times daily.

THE BISCHOF WHITE LEAD PROCESS.

Another new method of manufacturing white lead is in operation in Brimsdown, near London, Eng., which is said to take only forty-eight hours to convert pig lead into white lead. The process was patented by Gustav Bischof, and was slowly developed from laboratory experiments by trial upon a small manufacturing scale until a satisfactory product as regards color and covering qualities was obtained. The method has been found so successful that the Brimsdown Lead Co. have

taken the matter up and have erected a 20-ton per day plant.



The initial operation is to convert the metallic lead into litharge by the usual plan of heating in an oxidizing atmosphere. The litharge is then ground and converted into sub-oxide of lead by heating to 300 degrees C. in a current of water gas. The gas, in order to exclude deleterious sulphur compounds, is made by passing steam through heated charcoal. The ground litharge is carried by dust-proof conveyors to the top of the reducers, and the sub-oxide escapes below. The sub-oxide is transferred to a mixing mill, where it is moistened with water and continuously stirred until oxidation and hydration have taken place. This hydrated oxide is charged into a vessel containing a weak solution of lead acetate, and is there converted into a basic lead carbonate or white lead. The bulk of the acetate solution is drained off and used again, and the remaining traces are washed out of the lead with water. When the white lead is mixed with linseed oil the water is, as a result, separated, and the oil paste is packed into casks.

It is said that this lead has a covering capacity of a proportionate value of 14 to 10 as compared with lead produced by the old systems, and chemically is the same.

The Brimsdown Lead Co. have used the Bischof process for two years, and believe they have sufficiently demonstrated the new method as to warrant them going into the manufacture on a large scale.

ADJUSTABLE DOOR HANGER.

The new barn door hanger shown in the accompanying cut may be adjusted both vertically and laterally, by means of the nut at the bottom and the set screw at the middle. If the door sticks at the bottom the nut is tightened, and if it binds on one side the set screw is either tightened or loosened, depending on which side binds.

Adjustable Door Hanger.

POWER SPRAYER.

A new and effective form of power sprayer outfit is now ready for sale. It consists of a double acting sprayer, with a Deyo air cooled gasoline engine. The rapidly revolving fan on the side of the engine cylinder forces a current of air about the radiating flanges of the cylinders, keeping them cool. This does away with the circulating tank, simplifies the mechanism, removes danger of freezing in cold weather and reduces weight. The engine is very simple, requiring no engineer to run it, and when not required for spraying can be detached from the pump by removing one bolt from the driving gear. It can then be used for a variety of purposes about the farm. The gasoline tank is in the base of the engine and requires from one to two gallons per day to run the machine continuously, according to the size of the engine selected. The outfit is said to be of ample capacity for eight nozzles, maintaining a pressure of 125 pounds. It is fitted with a 200-pound pressure gauge and a relief valve that can be adjusted for any pressure.

OPPORTUNITY.

There's a moment that comes 'twixt too soon and too late,
And to miss it is almost a crime;
Yet how many there are, and they blame it to fate,
Who are never exactly on time,
It is then opportunity, almost in sight,
Glides away and returns not again;
None to blame but ourselves for the vanished delight
That we seek for hereafter in vain.
Be alert for its coming, nor let it pass by—
Be awake when the moment arrives!
Opportunity comes only once ere we die;
'Tis the turning point of our lives

TO THE VARNISH BUYER

the most serious considerations are quality, reliability and uniformity, and these qualifications are of special importance to the dealer who is trying to build up a permanent varnish trade.

Berry Brothers' label or brand may be safely relied upon as ensuring the above conditions.

Our varnishes are the safest goods to handle and the surest and most reliable goods to use.

BUILDING AND INDUSTRIAL NEWS

HARDWARE AND METAL would be pleased to receive from any authoritative source building and industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

Arden, Man., residents will build a $10,000 hotel.

The Winnipeg Icelandic lodges will build a hall.

Vegreville, Alta., will build a hospital to cost $6,000.

The Y.M.C.A., Edmonton, will build a $60,000 building.

Mayor Buscombe, of Vancouver, will build a business block.

Fraser, Fraser & Co., of Truro, N.S., will build a large store.

La Banque Nationale will open a branch at St. Raymond, Que.

The Standard Bank of Canada will open an office at Lindsay, Ont.

S. H. & W. H. Edwards, of Colborne, Ont., will build an opera house.

Buntin, Gillies & Co., will build a four-storey block in Hamilton.

Fort William has issued permits to the extent of $260,000 this year.

McClure's Magazine publishers will build a printing house in Montreal.

A large hotel will be built at Port Arthur, it is said, by the C.P.R.

The Royal Bank of Canada will build a five-storey block at St. John, N.B.

Osler, Hammond & Nanton will erect a $200,000 office building in Winnipeg.

St. Cyprian's congregation, of Toronto, will build a church to cost $16,000.

The Queen's Hotel at Prince Albert will be remodeled to the extent of $4,000.

Bathurst Street Methodist Church, Toronto, will build a $20,000 Sunday school.

Additions costing $145,000 will be made to the Miserecordia Hospital at Winnipeg.

St. Mary's (Ont.) capitalists are contemplating starting a rubber works in that town.

The Dominion Packing Co., of Charlottetown, P.E.I., asks tenders for its entire plant.

The new hotel to be built by the Castle Hotel Co., at Edmonton, will cost $70,000.

A New York firm is contemplating establishing a pulp mill at Charlton, in New Ontario.

The Peterborough & Chemong Auto Car Co. have been formed, with a capital of $5,000.

The German Cardboard & Photo Mount Co. will build a factory at Peterborough.

The Eastman Cutlery Co. are negotiating with London with a view to establish there.

The Brantford Roofing Co. are installing machinery in their new factory and will be ready to start in a short time.

John McCullough, of Joliet, Mont., is at the head of a company who will build a 1,000-barrel per day flour mill at Vancouver, B.C., which will cost $100,000.

The Canada Machine Telephone Co., who have a competitive franchise in Brantford, have started to install their system.

The new power plant at Winnipeg, it is said, will be able to deliver power at $16.31. At present the market price is $35 per horse-power.

Kenora, Ont., has let contracts to the value of $85,000 to Peterboro and Montreal firms for construction and equipment of their power plant.

The Ottawa Electric Co. and the Ottawa Gas Co. have been consolidated. They will hereafter be operated under one management, but with no change of stock.

Maissonneuve, Que., is having a building boom. Among the larger buildings to be erected are : Viau, Freres & Co., biscuit factory, $250,000; Warden King & Sons, $100,000; new school, $40,000; Bank of Toronto, $30,000; fire station, $25,000; tenement house, $500,000.

Gallagher Iron Mining Co. have been incorporated under Ontario charter, with a capital stock of $500,000, to carry on a general mining and reduction business. The provisional directors are F. P. Sullivan, J. J. Gallagher and F. H. Hughes, with head office at Sault Ste. Marie.

The Portland Cast Stone Co. have been incorporated under Ontario charter, with a capital stock of $40,000, to manufacture and deal in cement, limestone, plaster, etc. The provisional directors are W. F. Colwill, J. T. Colwill and W. W. P. Colwill, with head office at Guelph.

North Ontario Reduction & Refining Co. have been incorporated under Ontario charter, with a capital stock of $500,000, for the purpose of carrying on a general mining and reduction business. The provisional directors are J. A. Young, jr., H. B. Ritchey, J. J. Wright, D. G. Bremner and J. S. Tomlinson, with head office at Toronto.

Thursday of last week was a great day in the building inspector's office in Montreal, as permits for buildings issued aggregated the large sum of $801,000. First on the list was the extension to the Windsor Hotel, the cost of which is estimated at $500,000. The Ecole Polytechnique obtained permission to erect a laboratory of three stories, on St. Denis street, at a cost of $33,000. The Temple Congregational Emmanuel, Drummond street, is erecting a structure of brick and stone with frontage of 72 feet and depth of 175 feet, at a cost of $77,000. The Northern Electric Co. propose to erect a shop on Guy street, two storeys in height, of brick construction, to cost $13,000. A new apartment house on Sherbrooke street is being erected to cost $80,000, and H. Bedard secured permission to build two dwellings on St. Catherine street, at a cost of

$3,000. The day's business in the office was brought to a close by issuing a permit to the Montreal Street Railway Co., for a power house in Hochelage Ward, to cost $95,000.

BUILDING NOTES

N. Deslauriers, Montreal, will build a $6,000 house.

B. J. Strachan, Montreal, will erect a $5,000 home.

Jeremie Duclos, Montreal, will build a $6,000 residence.

George Benwell, of Brantford, will renovate his hotel.

Queen's College, Kingston, will have a new medical building.

A new school will be built in Toronto East, to cost $47,000.

Peterborough will have an isolation hospital to cost $10,000.

Calgary asks for tenders for a normal school to be built of stone.

A new hotel will be built at Claresholm, Sask., to cost $15,000.

Fort William permits have amounted to $250,000 already this year.

Winnipeg will build its nineteenth public school, which will cost $48,000.

J. E. Pepper will build a large addition to his hotel at Swan Lake, Man.

An addition to Huron street school, Brantford, to cost $15,000, will be made.

W. Bentham is erecting an apartment house in Montreal which will cost $80,000.

Pither & Leiser, of Victoria, B.C., will build a four-storey business building to cost $50,000.

Edmonton's building permits this year represent $721,000, which is as much as all last year's.

P. Lyall & Sons have the contract for the new Windsor Hotel, Montreal, which will cost about a half million.

The new Royal Bank of Canada building at Montreal will be of stone, five storeys high, and 40 by 103 feet in size.

Some of the larger residence permits in Winnipeg during the last few days are: M. J. Dalton, $9,000; F. Thorpe, $13,500; D. Fisher, $8,000; W. S. Beecher, $10,000; W. T. Carson, $4,000, and F. Archibald, $4,000.

Some of the recent building permits issued in Port Arthur are: Port Arthur telephone building, $20,000; George Mooring, store building, $16,000; Scandinavian Church of St. Ansgorius, $6,000; D. F. Burk, store building, $8,000; Municipal Baths, $7,000; Alex McComber, residence, $10,000; Algoma Hotel, improvements, $6,500; James Sheppard, residence, $5,000.

A PORTABLE ROTARY HAND-SAW.

A patent has recently been secured on a portable hand-saw with revolving blade. This saw may be used for cutting grooves of any desired depth in places where an ordinary saw cannot be conveniently used, for example, in cutting grooves in window sills for various kinds of weather strips or for cutting grooves in floors at the lower end of a partition. The saw is secured by a nut to the end of an axle which is mounted to turn in a suitable hub. Se-

Boiler Beacons

By E. CONOMY.

Signal 2.--The Outlet

After heating water to the **highest** temperature possible, the **aim** is to **deliver** it into the **mains**, thence into the **radiators** at **that** temperature.

Obviously, the **greater** the **facilities** for **permitting water** to **escape without** friction **after** it is **heated**, the **greater** the **efficiency** of the **boiler**.

This Boiler leads them all.

Most direct outlet for water, **largest area** of outlet, **least friction** in connection with outlet are characteristics of the

"Economy"

Hot-Water Boiler

In the "Economy" the **outlet** is from **centre** of boiler, where **water** is **always** the **hottest**.

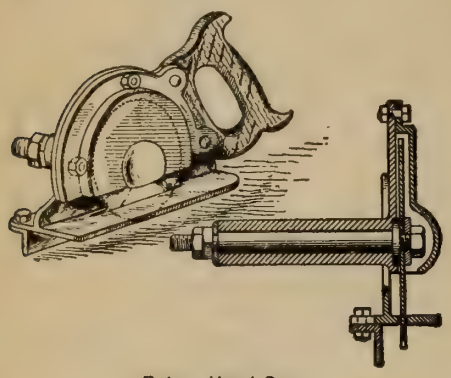
In **most other** hot-water boilers the **outlet** is from **back of boiler**, where **water** is **always** the **coolest**.

The **difference**, then, between the "**Economy**" **Boiler** and **other** boilers is the **difference** between **Perfect** and **Imperfect** construction. **Which** boiler do you think it will **pay you** to sell?

☞ More "light" will follow.

Pease Foundry Co., Ltd.

TORONTO



Pease-Waldon Co., Ltd.

WINNIPEG

cured to the hub is a guard which covers the saw. To this guard a handle is attached. The guard is adjustably mounted on a bracket by means of bolts engaging slots therein and thus permitting the saw to be set for the desired depth of cut. As a means for revolving the saw the inventor proposes to use a small electric motor mounted on the device and coupled to the axle.

COMBINATION TOOL.

S. Morkent, Querida, Col., has invented a tool which is especially useful in the construction or repairing of wire fences. It is manipulated as a wire-cutter and hammer and operates in this connection substantially like an ordinary hammer. Used as a screw-driver, the hammer-head operates as a handle to facilitate using of the driver. If leverage is not sufficient the lever of the cutter may be thrown out from the handle and used as a lever to facilitate the turning of the driver.

Rotary Hand Saw.

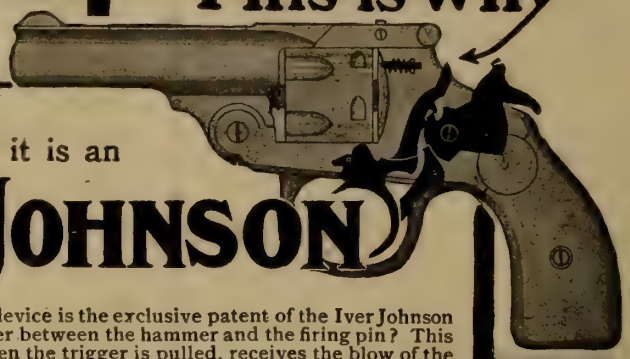
AN AMUSING LETTER.

The following letter, with only the names changed, was lately received by a firm of bicycle manufacturers from one of their customers in a little village. It reads:

mister t, j, jones and companee
notre dame street
Montreal

Deer sur,—

i receev de bicykel witch i by frum you alrite but for why you dunt send me no sadel. wat is de use of de bicykel when she don have no sadel. I am lose to me my customers sure ting by no having de sadel and dats not very pleasur to me. wat is de matter wid you mr. t, j. jones and companee? Is not my moneys so good like anudder mans? you lose to me my trade and I am very anger for dat and now I tells to you that you are a dam fools and no good mister t. j. jones and companee. I send to you back at wunce your bicykel tomorro for shure becawse you are a dam foolishness peoples.



Yours respectfullee
J. B. DENIS.

P.S.—Since I rite this letter I find de sadel in de box; excuse me.

Listen to the man who says things, but believe in the one who does things.

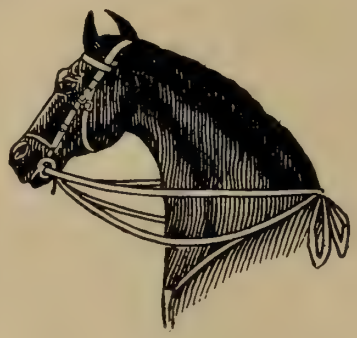
Accidental Discharge Impossible—

This is why

True only if it is an

IVER JOHNSON

The positive safety device is the exclusive patent of the Iver Johnson Revolver. See the lever between the hammer and the firing pin? This lever is raised only when the trigger is pulled, receives the blow of the hammer and transmits it to the firing pin. **That's why** you can throw a loaded Iver Johnson against a stone wall without fear—no discharge can possibly follow, as the hammer **never** touches the firing pin. An Iver Johnson never fails when you **pull the trigger** and never "goes off" when you don't.



Iver Johnson Safety Automatic

Prices—Hammer $6.50, Hammerless $7.50.

Iver Johnsons are sold by dealers the world over, or direct from us if your dealer won't supply

THE JAMES MORRISON BRASS MFG. CO., LIMITED

89-97 WEST ADELAIDE STREET, TORONTO

PLUMBING AND STEAMFITTING

VENTILATION BY OPEN FIRE PLACE.

Judging from the various schemes for ventilating buildings which have come under my notice, says W. Harman, in a paper recently read before the Architectural Association, I am surprised to find what little attention is given to even the most elementary calculations, as to the probable results which will be attained, notwithstanding that certain data have been arrived at which experience proves to be fairly reliable and so simple that there is no excuse for neglecting to employ them. Failure, where it takes place, results generally from underestimating the supply of air necessary for securing efficient ventilation, and from the employment of restricted areas of inlet or outlet channels, openings or ducts. An ordinary room is provided with one fire place flue, and, as previously stated, when a fire is lighted that flue is practically the only outlet of air from the room. Consequently, by ascertaining the velocity of air passing up the flue and the sectional area of the flue, it is easy to find how much air will pass through the room in a given time.

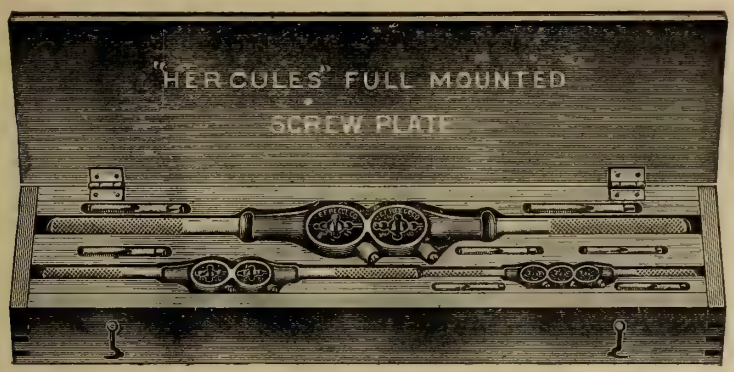

Fig. II.—Assortment of Hercules Full Mounted Screw Plates.

Fig. I.—Full Mounted Hercules Screw Plate.

Several influences will be at work at varying times which will affect the velocity of air passing up the flue, such as more or less fire in the grate, more or less force of wind outside, etc.; but under medium conditions, a flow of about 5 cubic feet per second may be taken as the volume passing up an ordinary 14x10 inch flue. Kindly note that I give the volume at about 5 cubic feet. I do this for the purpose of simplicity, and because it is near enough for practical purposes and can easily be remembered. If 5 feet be multiplied by 60 times 60, the result—namely, 18,000 feet—will be the volume of air passing through the room in an hour, and if change of air be demanded at the rate of six times per hour, the cubical capacity of a room with only one fire place flue should not exceed 3,000 feet, say, 20 feet by 15 feet by 10 feet.

A point to which I have given some consideration is the size of a special inlet relative to that of an ordinary fire place flue. A good rule is to have it of ample dimensions, with easy means for its regulation. It is then the fault of the occupants if care be not taken to adjust it to requirements. The difficulty, however, is that people are generally careless in paying attention to so simple an appliance—on a windy day the opening will be closed to prevent discomfort from drafts, and no one thinks of opening it in calmer weather. I have, therefore, come to the conclusion that when the inlet is placed as I advise—on the same side as the fire place, and as nearly central thereto as possible, about 2 feet below the ceiling—a clear opening of about one-half the area of the outlet flue will suffice, for the following reasons:

(1) If the inlet is simply through an external wall there will be less friction than in the long outlet flue, therefore the velocity can be greater. (2) Because, with a properly formed and louvred inlet, the additional velocity in the upper and unoccupied portion of the room will distribute the air throughout better than if entering at low velocity. (3) Because variations in the force of wind outside will not be so much noticed within the room when the area of inlet opening is not excessive.

It is easy to breakfast in bed if you will be satisfied by a few rolls and a turnover.

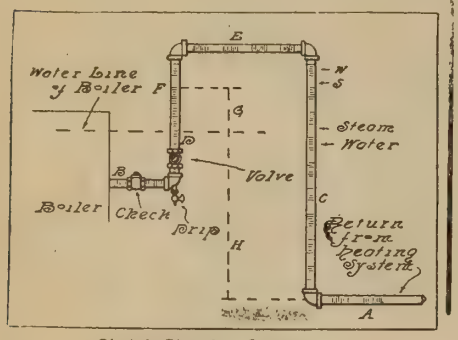
HERCULES SCREW PLATES.

The E. F. Reece Company, Greenfield, Mass., is introducing full mounted screw plates, as shown in the accompanying cuts, the distinctive feature of which is that no changing of dies is required, as a stock is provided for each die, so that dies are always ready for instant use. These goods are put up in sets or complete assortments, including stocks, dies and taps, as illustrated in figure 2. The plates are alluded to as being strongly and substantially constructed, but at the same time correctly proportioned and not too heavy. In this connection it is pointed out that the stocks are rightly proportioned for all of the different sizes which a set is intended to cut. The stocks have knurled handles, to insure a firm hold even when the handles are oily. The stocks contain the Reece adjustable dies, the same as are furnished in the Reece adjustable guide screw plates. The manufacturer explains that one advantage in having more than one die in a stock is that the screw plates can in this way be furnished at a low price, because less labor and material are required in making them, while not reducing the efficiency of the plates. The goods are furnished in four standard assortments and may be obtained with or without the wooden cases. Decatur, Bull & Co., Montreal, are Canadian representatives of the Reece Company.

NOTICE TO MASTER PLUMBERS.

The following is a copy of a letter from the president of the National Association of Master Plumbers to provincial vice-presidents and others throughout Canada in regard to the coming convention at Ottawa in July:

At a meeting of the executive of the National Association of Master Plumbers of Canada held in Montreal June 4 last, it was deemed advisable, after consideration, to hold the eleventh annual convention at Ottawa in July. As it is necessary for me to place as full a report as I possibly can obtain, before the convention, I would impress upon you the importance of filing with me all information that will prove of interest, such as (1) state of organization in your city; (2) if any strikes have occurred; (3) recommendations of any kind that will be of benefit to the association or its members.



I hope to hear from you as soon as possible—say not later than the end of June, to enable me to make out my report. I would also urge that you have your local associations appoint their delegates for the convention, as I anticipate that this will excel all previous meetings.

I am, yours truly,

A. J. HAMMOND,
President,
National Association of Master Plumbers.

THE STEAM LOOP.

A short description of the steam loop may be of interest to the steamfitter who does not understand it, writes Thomas Tait in the Plumbers' Trade Journal. The steam loop is intended to return condensation to the boiler from below the water line, without the use of valves, floats, or any other devices. It will lift the water to great heights vertically, and will be found very effective for high pressure heating work. It is made entirely of plain pipe and fittings, practically as per sketch. The loop consists of a riser (C) and a drop leg (D), which are connected by a horizontal pipe (E). The riser is connected at the bottom with the return end of the heating system, so that all the return condensation will go directly into the riser. The drop leg is connected to the boiler below the water line by the pipe (B). When the system is in use it becomes filled with bubbles of steam (S), and slugs of water (W), and these travel up the riser (C) and along the horizontal pipe (E), finally dropping into the drop leg steadily. The steam bubbles constantly losing their heat and contracting is the cause of this movement, and they finally condense in pipe (E) and drop into the drop

Sketch Showing Steam Loop.

leg (D). The pressure in the heating system steadily forces the contents of the riser upwards and fills the spaces made by condensation, and this upward movement goes steadily on as long as there is any condensation. The water which is carried up in pipe (E), with that which is formed by condensation, will run by gravity into the drop leg, where it will form a water line (F), above the water line of the boiler. The pressure due to the head of water between the water line in the boiler and the water line in the drop leg, plus the steam pressure already in the heating system, becomes greater than the pressure in the boiler, and the water in the drop leg will run into the boiler. As only a portion of the contents of the riser consists of water, the riser can be carried very high and is practically only limited to the height at which the weight of its contents will balance the steam pressure in the heating system at the foot of the riser. The water will back up in the drop leg until it balances the difference between the pressures in the boiler and in the return pipe of the heating system which connects to the riser, plus the weight of the contents of the riser. The actual lift (H) will be the difference between the return pipe of the heating system and the water line in boiler.

Condensation should not take place in the riser, but only in the horizontal pipe and in the drop leg. The horizontal pipe serves as a condenser, and may be made long or short to suit local conditions. It may be necessary, in some cases, to cover the riser where exposed to cooling influences, but the horizontal pipe needs only to be protected from freezing. The riser and pipe (A) should not be larger than one and one-quarter inches, nor less than three-quarter inches, as in large pipes the water plugs become an uncertain article. Two or more risers may be used where the condensation is too much for one riser to take care of. Pipes (E) and (D) may be made as large as required. A drain cock, valve, and a light swinging check valve should be placed at boiler.

The dimensions of a steam loop can be found as follows:

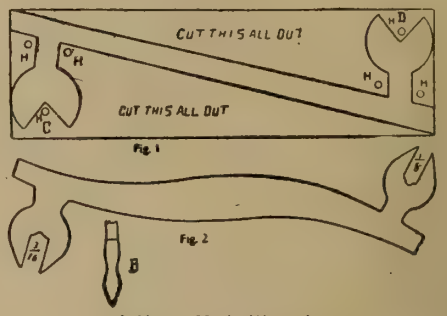
Question.—The steam pressure in the boiler is 30 pounds absolute, and the pressure at the end of the heating system is 20 pounds absolute. The proportion of steam to water in the riser in 3 to 1; how high may the water line in the boiler be above the return of the heating system? Consider the weight of a column of water 2.3 feet high to be one pound.

Solution.—The pressure at the foot of the riser will balance a column of water $20 \times 2.3 = 46$ feet high. The contents of the riser being one part water to three parts steam, the column may be four times that height, or $46 \times 4 = 184$ feet high. The pressure in the boiler will support a column of water in the drop leg $30 \times 2.3 = 69$ feet high. If the condensation in the horizontal pipe would be perfect, the highest lift will be $184 - 69 = 115$ feet. Answer.

Question.—How high must the riser extend above the water line in the boiler to lift the condensation 21 feet, the difference between the boiler pressure and the pressure at the foot of the riser being 7 pounds per square inch? The proportions of steam to water being 3 to 1.

Solution.—On the supposition that the loop is full of steam, the water will rise in the drop leg $7 \times 2.3 = 16.1$ feet, to balance the difference in pressure. Adding this height to the required lift, the column of water will stand 16. $+21 = 31.7$ feet above the foot of the riser when the pressures are balanced. If the riser is filled with steam and water in the proportions of 3 to 1, the water column must be lengthened to balance it, the length required being equal to the water contained in the riser. The contents being one part water and three parts steam, it follows that one-quarter of the total height will be above the present height of the water column, and three-quarters below it. The added height will be $37.1 \div 3 = 12.4$ feet. Adding this to the present height of the water column, the final height above the boiler water level is $37.1 + 12.4 - 21 = 28.5$ feet. Answer.

In case there should be an increase of the difference in pressure between the boiler pressure and the pressure at the foot of the riser, five feet should be added to the height of the loop.



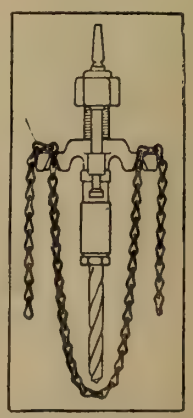
The steam loop is used where it is not desirable to waste the condensation from the heating system.

A PIPE-THREADING KINK.

Often when threading pipe with a solid die from 1 inch down, it requires considerable muscular exertion with the ordinary small stock. To save strength, make a square of wood to fit any larger stock with larger handles, or have the piece made of iron if preferred. Use the proper bushings and it will work to perfection.

MAKING A WRENCH.

It is just as important that a wrench should be balanced as that a hammer should be. In making an S-wrench, do not give it too much hook, as you can not handle it so fast. The illustrations show how to make a tire-bolt wrench,



A Home-Made Wrench.

called a side wrench. It is made of a piece of spring plate $1\frac{3}{4}$ in. by 6 in. Parts (C) and (D) are worked over the hardy, having care not to punch the holes at these points too far back. (H) indicates holes punched in material to be cut away. Part (A), figure 1, should be beveled from the centre and made as wide as the material will allow. (B), figure 2, shows the pointed jaw and how it is beveled on the handle. This wrench will work in places that other wrenches will not.

AUTOMATIC CHAIN DRILLING ATTACHMENT.

A recently invented device will be of great service to machinists, plumbers, steamfitters and other mechanics, who find it necessary to use a breast drill. The old method of applying bodily pressure is done away with, and in its place

Automatic Chain-Drilling Attachment.

an automatic feed pressure is introduced, which depends on the operation of two small gears, enclosed in the case at the top. These gears have 23 and 24 teeth respectively, and act like a differential hoist, thereby slowly feeding the drill into the work. The chain is used for holding the work, and can quickly be adjusted by means of the notches which hold it.

PLUMBING MARKETS

MONTREAL.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, June 29, 1906.

Business in plumbing goods has settled down to a steady flow of orders, which keeps all the interested firms very busy. There are so many good jobs under way and in prospect that almost every branch of the trade is sharing in the general activity.

It has surprised many dealers that iron pipe prices have remained stationary for so long a period. For some time the natural condition of the market has been such as would have justified an advance in quotations, but as some jobbers have apparently been content with a very small margin of profit, the larger dealers could not change their prices. At present the condition is uncertain.

All prices are held firm, but there are no changes this week.

RANGE BOILERS—The normal turnover is the rule. We give prices: Iron clad, 30 gal., $5; 40 gal., $6.50 net list; copper, 40 gallon, $22.50; 35 gallon, $27; 40 gallon, $30.75 net.

LEAD PIPE—Pig lead is weaker than at our last report, but this change of condition in the primary market has not affected the price of lead pipe. We still quote prices as follows: 20 per cent., f.o.b., Montreal, Toronto, St. John, N. B., Halifax; f.o.b., London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

IRON PIPE FITTINGS—Business is good at the following prices: Discounts on all sizes of nipples up to 6-inch, 67 1-2 to 70 per cent.

IRON PIPE— No changes in price have occurred. It is understood that the shading practiced by some firms with limited trade in this line has prevented advances. Our prices and discounts are: Standard pipe in lots of 100 ft., regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27; 2 inches, $36.50; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12; 3-4 inch, $15; 1 inch, $22; 1 1-4 inches, $30; 1 1-2 inches, $36; 2 inches, $50. The discount for black pipe is 71 per cent., and for galvanized, 61 per cent.

SOIL PIPE AND FITTINGS — A continued brisk demand is shown. Our quotations are as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

SOLDER—As both tin and lead are weak, easier prices in this line may be expected. For the present, however, we are still quoting: Bar solder, half-and-half, guaranteed, 24 1-2 to 25c.; No. 2, wiping solder, 20c.

ENAMELWARE—Inquiries are satisfactory and prices are well maintained. We quote: Canadian bath tubs, plate E1, 5 feet, 1st quality, $20.65, special $18.65; plate E11 and E21, 5 feet, 1st quality, $19.50, special $17.15; plate E35, 5 feet, 1st quality, $24.65, special $22.40. American baths, rolled rim, 5 feet 2 1-2 inch rim, $22.25; 3 inch rim, $29.25. Lavatories, discounts, 1st quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, 1st quality, $2.60, special $2.45.

TORONTO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, June 29, 1906.

With the exception of solder, which is again weaker, the market is the same as last week. Just now it is selling at 25 cents for the best half and half and 21 cents for wiping.

The usual rumors of cutting in iron pipe are prevalent, but Toronto jobbers all state that it is done by outside men and not by them. Those who were in a position to buy pipe when it was down have a pretty good supply on hand, so that while there is a lot being used the sales are not so heavy as they might be.

Sales of heaters and fittings are growing weekly, the month of June showing much larger sales than June, 1905.

LEAD PIPE—The demand is as usual. No price changes. We quote: Lead pipe, 8c., discount 20 per cent.

SOIL PIPE AND FITTINGS — Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

IRON PIPE — A steady business is being done. We quote as follows: Black, 1 in. pipe, $4.37; galvanized, 1 in. pipe, $6.02. See current market quotations for other sizes.

IRON PIPE FITTINGS — We quote as follows: Cast iron elbows, tees, crosses, etc., 67½ per cent.; cast iron plugs and bushings, 67½ per cent.; flange unions, 65 per cent.; nipples, 75 and 5 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 and 10 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hook-plates, 65 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65½ per cent.; ring hangers, black or galvanized, 70 per cent., American list.

GALVANIZED IRON RANGE BOILERS—We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, $6.75; 24 gallon, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $4.75; extra heavy, $7.50; 35 gallon, standard, $5.75; extra heavy, $8.50; 40 gallon, standard, $6.75; 40 gallon, extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

RADIATORS—Business is on the increase and a good season is looked for. We quote: Hot water, 50 and 2½ per cent.; steam, 50 and 5 per cent.; wall radiators, 50 per cent.

SOLDER—Prices are weaker again. We quote: Bar solder, half-and-half, guaranteed, 25c.; wiping, 21c.

ENAMELWARE — We quote as follows: Plate E1, 5 feet, first quality, $20.65, special $18.65; plate E11, 5 feet, first quality, $19.15, special $17.15; plate E21, 5 feet, first quality, $19.15, special $17.15; plate E35, 5 feet, first quality, $24.65, special $22.40. Fittings extra.

A NEW FUEL SAVING DEVICE FOR BOILERS.

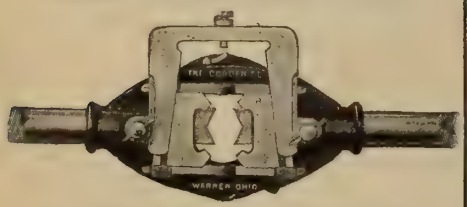
A. J. Raynor, of Toronto, has secured a United States patent on a water tube boiler that he has been working on for a considerable time, and also has applications in for patents in Canada, Great Britain and elsewhere. Mr. Raynor was allowed 58 claims on his patent, each claim representing a feature not included in any other water tube boiler; and has been receiving commendation for his work from many in a position to judge of its merits. His original application made only 47 claims, and the fact that the patent department has allowed 58 is exceptional. A defect that is ordinarily found in water tube boilers is that the tubes being rigid in the water heads are easily affected by contraction and expansion strains, with the result that their life, at the best, is not long. The principle adopted by the patentee is that of making the tubes in the shape of an elongated S, the claim being that the natural elasticity of such a shaped tube will be sufficient to allow all contraction and expansion without the strain that results from a rigid tube. Another feature is that the shape of the tubes allows more of them to be used, for the reason that only a limited

number of straight tubes can be used on account of the many connections they require, which weakens the heads. The result of this is a much greater heating surface without increasing the size of the boiler, which, of course, means that a greater volume of steam or heat than is ordinarily obtained can be generated by a given amount of fuel.

Mr. Raynor's boiler is adapted for both steam and hot water heating, and he claims a third saving in fuel from its use. He has not decided yet whether he will sell his rights or manufacture himself.

LAWSON HEATERS.

The Lawson gas and gasoline water heaters are having large sales since the Summer weather has come. The gas heater for range boilers is made from a coil of seamless copper tubing inside of a Russia iron or brass jacket, which is lined with asbestos to prevent the escape of heat. The gasoline heater is constructed along similar lines, to be used in places where there is no gas. They are particularly adapted to Summer use, as it takes but a few minutes to heat a boiler of water with one of them, and they are also very convenient for any season of the year.



NATIONAL ASSOCIATION MEETS.

Over one thousand delegates are in attendance at the annual convention of the National Association of Master Plumbers at Atlantic City, N.J. The advocacy of a national sanitary law that will improve state and municipal conditions and a fight for apprentices, now forbidden by union laws, are among the measures to come up during the four days of the meeting. A resolution to admit Canada and Mexico to membership is also being submitted to the meeting.

STEAM CONDENSATION.

A writer in the American Machinist stated recently that a steam pipe of 6 inches to 8 inches diameter was covered with a wooden box of 12 inches diameter which was filled with a sawdust mortar, one barrel of lime to five of sawdust. Before covering the pipe — nearly 700 feet in length—it condensed 1,440 pounds of water hourly ; after covering it condensed 195 pounds hourly.

It Won't Cost You Anything

to know that Paterson's Wire Edged Ready Roofing is made from Pure Wool Felt saturated with Refined Coal Tar, and the different plies cemented together with the highest grade of Bitumen. Our Roofing contains nothing that will evaporate at less than 300° Fahrenheit, and that's why it lasts so long.

STAY-ON

Horse Blankets

The difficulty with most Horse Blankets is that no matter how you attach them to the horse, they will work off In the special make of our **STAY-ON BLANKETS** this difficulty is overcome. We have spent labor and money to perfect all kinds of horse clothing, and we are pleased to demonstrate to all the advantages derived from the use of our specialties. You pay no more for our goods than you do for inferior qualities.

"Redstone"

High Pressure

Sheet Packing

A packing that will hold. For use in highest pressures for steam, hot or cold water and air. Packs equally well for all.

From actual tests, we believe that this packing is the most durable and satisfactory of any on the market. Try a sample lot and see for yourself.
